Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Wilson Idealism Lives Again," published in the Northfield, Minn., News of August 15, 1957. This editorial is most thought provoking, and I commend it to the attention of my colleagues. It deals with a book being being written by Herbert Hoover regarding the 3 years he served under President Woodrow Wilson.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILSON IDEALISM LIVES AGAIN

It is typical of the breadth of understanding and the intellectual honesty of Herbert Hoover that on his vigorous 83d birthday the announcement was made that he is writing a book about the 3 years that he served directly under President Woodrow Wilson during the first World War and the peace negotiations which followed. Excerpts of his views indicate that the great living ex-President will testify in highest praise, albeit in tragic retrospect, of the great war president and his passion for peace. Mr. Hoover's work will be a contribution to recorded American history of future as well as contemporary importance.

It must be apparent to many, in the light of what subsequently happened, that President Wilson stands vindicated today. He forewarned his countrymen that unless the balance of power theory was eliminated from world affairs, there could be no lasting peace, and that the answer rested in a concert of nations for peace. "We must provide a machinery of readjustment in order that we may have a machinery of good will and friendship," he said.

A great tragedy in President Wilson's fight for the League of Nations was his own physical collapse at the height of his effort to rally public support, and he saw his countrymen officially turn away from the pledges he had made to an attentive world and prevent American participation in the League of Nations. How large a factor this was in the events that subsequently transpired, with the rise of brutal dictatorships and a devastating second World War, with its tense aftermath, may be a matter of conjecture among historians, but the fact remains that without the power and prestige of the United States behind it, the League of Nations was doomed to impotence in the successive crises which enveloped the world.

Mr. Hoover, who describes President Wilson as "the embodiment of the ideals of the new world," sees an inspiring epilogue to the Wilson tragedy: "In the years after he proclaimed his freedom of men and his self-determination of peoples, 25 nations achieved independence. Some lost it again to Hitler and Stalin. But 25 years later, after another great war, the nations assembled in San Francisco to draw up a new covenant to establish lasting peace. The United Nations Charter in its every major part was a plagiarism, less well expressed than the League of Nations. The spirit of Woodrow Wilson had risen again to lead the world."

Why Mr. Hoover's forthcoming book is important to Americans generally, as well as to those who will especially appreciate his generous evaluation of Mr. Wilson, is well summed up in his own words: "The supreme purpose of history is a better world. History gives a warning to those who would promote war. History brings inspiration to those who seek peace. In short, history helps us learn. Yesterday's records can keep us from repeating yesterday's mistakes."

One of the Specious Claims for H. R. 8002

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. CANNON. Mr. Speaker, one of the foremost arguments being distributed to Members to secure support for H. R. 8002, the accrued expenditure bill, is that the Congress does not now, but should, directly control the annual rate of disbursements from the Treasury. Direct annual control is the point being stressed. The argument is:

H. R. 8002 will provide a means for congressional control over the annual rate of Government expenditures.

Emphasis is on the words "annual rate." The inference of course is that

the present system affords less annual control than would H. R. 8002.

Of course, this completely misses the point. The time and place to control is when agencies request authority to obligate the Government. It is too late to try to effectively control spending after the contract is entered into. Trying to control the precise amount to be disbursed in a particular year accomplishes nothing because, once the contracts are made, they have to be honored sooner or later—if not one year, then the next, or the next. An executed contract inevitably means an expenditure.

But, how valid is the persistent contention that H. R. 8002 will impart closer direct annual control of spending? The answer is simple. If Members will turn to table 6 of the 1958 budget, page A11, the first three columns show that $48 billion of the $72 billion spending budget is from new authorizations, that is, from current 1958 authorizations. The next three columns show that the remaining $24 billion is out of unexpended carryovers from prior years. In other words, two-thirds of spending in 1958 is from authorizations for 1958 and one-third is from carryover balances.

So, as to two-thirds of the spending budget, direct annual control of actual spending is as readily had under the present system as would be possible under the H. R. 8002 system. There is not an iota of difference. Under the present system a cut in this part of the appropriations for 1958 means a direct cut in the spending estimates for 1958, just as would be the case under the H. R. 8002 scheme.

Now, what about direct annual control as regards the remaining one-third, or $24 billion, of the $72 billion total? By far the greater portion represents amounts contracted under authority granted in earlier years, especially in defense. An obligation created in an earlier year falling due in 1958 must be paid regardless of the system used. Would the Congress, under the accrued expenditure scheme, refuse to appropriate to cover goods and services to be received in 1958 under obligations entered into in earlier years?

The answer is that H. R. 8002 will procide little if any additional opportunity to effectively control annual spending rates.

The cold, hard reality remains. To reduce drain on the Treasury requires reduction in authority to first commit the Treasury. Statements from the executive branch corroborate this simple fact.

Former Treasury Secretary Humphrey said:

> It is not the size of any particular budget which is our paramount concern. It is control of the upward march of total Government spending which is of greatest importance to all of us on a long-run basis.
>
> The biggest budget problem, as I see it, is one of seeking out long-term savings.

And here is a statement in point from the Executive Office of the President:

> Because obligational authority foreruns expenditures, it is necessary to exercise control over the amount of new authority voted for Government agencies in order to keep expenditures within receipts. If in any year the Government obligates itself to pay more money than it is receiving, it is courting future deficits.

Mr. Speaker, as indicated, the way to reduce spending is to reduce authority to commit the Government. Bookkeeping schemes, such as H. R. 8002, will not keep the money in the Treasury or the taxpayers' pockets.

Inflation and the Tight-Money Policy

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, August 19, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid article which was published in the Oklahoma City Times of Friday, August 16, 1957, written by Allan Cromley, the Oklahoman-Times Washington Bureau correspondent. This fine article relates to the fight which the distinguished senior Senator from Oklahoma [Mr. KERR] has been making against inflation and the tight-money policy, which is causing the inflationary spiral.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFLATED? NOT OUR BOB

(By Allan Cromley)

WASHINGTON.—Gather around and we shall talk about a commodity dear to everyone—money.

Our expert is a man who has more than a nodding acquaintance with that wonderful stuff. He's Senator ROBERT S. KERR who lately has been giving the administration you-know-what for its high-interest-rate policies.

He was on the NBC-TV show Meet the Press the other day and told several well-known reporters they didn't know what they were talking about. Got away with it, too.

Inasmuch as he has been something less than hesitant to criticize the way Ike is doing things, KERR was asked what he would do if he lived at 1600 Pennsylvania Avenue NW.

He said he would be glad to, but there was insufficient TV time to explain it.

We gave him the chance the other day, and he almost talked our arm off.

It gets pretty technical, but don't be alarmed if the snow gets deep. We're in this together.

Okay, Senator, what would you do to cure what you consider a threatened, if not an outright, recession?

Well, he's ready to do battle with anyone who claims that high interest rates check inflation.

All it does, he says, is to make it more expensive to produce the things we buy, and the producer just passes the added cost to us consumers.

For example, current policies of the Federal Reserve Board have caused Bell Telephone Co. to pay 4 percent interest on the more than $5 billion it has borrowed.

The rate used to be 2¾ percent. That means it is costing Bell $125 million more to do business. The telephone customers—that's us—pay the difference in higher phone bills.

Or take steel. It went up $6 a ton recently. Industry moguls said the cost of producing it had gone up. One of the major expenses was interest on borrowed money.

Result—a bigger price tag on the new car you had planned to buy next year.

The big error, according to KERR, is the assumption that when you raise interest rates you discourage borrowing and thus discourage overproduction.

It doesn't work that way, according to the Kerr theory. The big corporations are going to borrow money whether they have to pay 2 percent or 4 percent, just as you and I are not going to quit eating if the cost of food rises.

We "gotta" have bread, and the big money borrowers "gotta" have credit. They have the wherewithal to outbid smaller borrowers in the auction of credit.

Well and good, Senator, but what specifically would you do if you were running the show?

"I would restore an environment in which agriculture could prosper.

"I would restore the environment in which home building could go forward at a rate required to meet growing needs.

"I would operate the Federal Reserve System to provide the increase in the flow of money required for the normal growth of the economy.

"After all, population is increasing at the rate of 3 million a year, and there's continued improvement in the standard of living of 170 million people.

"I would operate the Federal Reserve System so that money could flow into the bloodstream of the economy, with interest rates on long-term bonds finding their natural level, as they did in 1951 and 1952.

"I would stop the issuance of rapid tax writeoff certificates for all but the factories which produce defense goods in short supply (This is being done in current legislation.)

"I would change the income tax laws so as to increase the individual personal exemption."

He said this would cost about $2 billion a year in revenue, but the Government will save that much in changing the tax write-off rules.

Tapping a heavy finger on our notebook, KERR said, "Economic charts show that there's a great increase in income of those who collect interest and dividends. They represent a small percentage of our consumers.

"The great mass of consumers are workers, farmer, and small-business people. Economic charts show substantial decreases in the income of farmers.

"They show a slight decrease in the income of small-business men, and they show a much less increase in wages than in the income of those who collect interest and dividends.

"That accounts for the surplus now existing both in inventory and production of consumer goods. * * *"

In other words, the Senator says there are more things on the store shelves than the consumers are able to buy and high interest rates are not slowing down the rate at which those goods are being produced.

We have inflation but it isn't the type we've known before, says the Senator. This is perhaps his major premise on which his whole argument stands or falls.

"Historic inflation is where too many dollars are chasing too few products. To cure it you need to increase the cost of credit and syphon off the surplus with taxes.

"This inflation is a different kind than we had in 1946, 1947, and 1948, because today we have a surplus of consumer goods.

"For the first time in history the cost of living continues to rise despite a surplus inventory and actual reduction in the rate of industrial production."

Bathtubs are in surplus, for example. The reason is that people can't borrow money to buy homes to put the bathtubs in, argues KERR.

But don't misunderstand him. He wouldn't just shower the country with money.

"I'm just as much opposed to too much increase in the money supply as I am to its being too restricted. You can produce inflation by either too much or too little credit."

He says the administration is pushing interest rates above their natural level. The administration, particularly the recently departed Secretary of the Treasury, George M. Humphrey, says KERR would depress interest rates below their natural level.

"Credit is a manufactured product," he says. The Government is in competition with private business to get it.

Jack up the interest rates and the smaller businesses are outmatched in the bidding for credit, maintains KERR.

That's just a start, but if you are unconvinced or want more, write Senator ROBERT S. KERR, Senate Office Building, Washington, D. C.

Our bet is that he'll deluge you with statistics until you cry "Uncle," as we did.

Tour Kentucky

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, August 19, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Tour Kentucky," written by Jacqueline Anderson and published in the American Motorist for July 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOUR KENTUCKY

(By Jacqueline Anderson)

Year after year Kentucky bluegrass thoroughbreds thunder down the racetracks of America to become the victors of over half our Nation's major stake winnings. Annually, millions of schoolchildren read about Daniel Boone's pioneer exploits, Abe Lincoln's American success story, Jefferson Davis' Confederate presidency, and Henry Clay's senatorial achievements. Our people learn My Old Kentucky Home in childhood and sometimes drink Kentucky bourbon before maturity; we burn 80 million tons of Kentucky coal yearly and smoke 370 million pounds of Kentucky tobacco. And we've probably all listened to stories of Kentucky's mammoth underground caverns and its TVA wonder—the world's largest manmade lake.

Yes, Kentucky's rich personality has left an indelible mark on our past, and it wields a powerful influence in American life today. Now, for the first time, in its history, this State is welcoming a tremendous surge of eastern vacationers, who are happily discovering the wealth of scenic allure, historic fascination and recreational excellence which 1957's Kentucky has to offer.

Variety is the keynote for Kentucky scenery. Topographically, the countryside gradually changes from open sloping plains in the western purchase area to forest-covered mountains in the east. Between these areas lie rolling knoblands, winding river valleys, massive manmade lakes, and the fertile bluegrass region.

A well-developed park system encompasses many of Kentucky's most scenic and historic areas, and fine highways invite motorists to tour the Commonwealth via the park circuit.

Starting in western Kentucky, visitors will find 3 State parks situated along the winding 2,300-mile shoreline of Kentucky Lake, a 184-mile long manmade wonder created by TVA's impoundment of the Tennessee River waters. These parks, Kentucky Dam Village State Park, Kentucky Lake State Park, and Cherokee State Park, offer fine lodge and cabin accommodations which average from $3 per person daily up to $6. (This rate structure holds true with only slight variations for all of their parks.) Especially recommended is Kentucky Lake State Park's Kenlake Hotel, a $600,000 architectural masterpiece which stands on a low hill overlooking the lake. Boating, swimming, hiking, horseback riding, golfing and year-round fishing are feature park attractions.

Going east through Hopkinsville, the traveler passes by Jefferson Davis' Monument, a 351-foot high, concrete-cast monument which stands in quiet memory to a Kentucky son who became the South's Confederate President. Here it may be remembered that no State suffered greater emotional conflict within its borders during Civil War days than did Kentucky, for she gave to our Nation, not only its southern President but its northern President, Lincoln. And the irony and tragedy of this situation was written with the blood of broken households where fathers took up arms against sons, and brothers against brothers. Lincoln's birthplace, which lies 3 miles south of Hodgenville on U. S. 31E, has now become a 116½-acre national park, at whose center, enshrined within a beautiful pink and granite marble structure, stands the primitive, log-walled, slab-roofed cabin where our Union President was born.

Between these two historical landmarks lies Mammoth Cave National Park which covers 51,000 acres of scenic countryside and makes available 95 unit accommodations. The cave itself comes by its name honestly. With more than 150 miles of explored corridors, it offers a mammoth underground panorama of unusual rock formations, rivers, and lakes. For hardly spelunkers, a day-long trip through the cave is offered—in addition to four shorter tours—with a stopover for lunch at a subterranean cafe.

FIRST WESTERN SETTLEMENT

Kentucky's "Jamestown" lies slightly northeast of the cave, at Harrodsburg. Here is a reconstruction of Old Fort Harrod, first permanent English settlement west of the Alleghenies. Countless relics of pioneer life are on display in the many log-cabin museums which make up this authentically reproduced replica of the original fort.

The barrenness and simplicity of everyday conveniences in this picturesque village stand in stark contrast to the beautiful colonial-style homes which lies east of the mountains; and they constitute solemn reminders of the courage and sacrifice which these early pioneers demonstrated when they left the eastern comforts of gracious living to venture into unexplored, Indian-infested territory.

Surrounding the fort is a region which will forever be linked with the name of Daniel Boone. It was he who blazed the first trail into this wilderness paradise and helped the settlers who followed him to successfully repel the fierce Indian attempts to protect their "happy hunting ground." Many historic markers along the roads retell this heroic tale to the motorist as he travels through the area.

Passing south to Russell Springs on Kentucky 35 and 55, the motorist will reach the Lake Cumberland region. Here, in the heart of towering mountain and forest scenery, lies Cumberland Falls State Park, a 1,098-acre reservation bordering man-made Cumberland Lake. Practically all types of outdoor recreation are offered in this park, as well as de luxe accommodations at Du-pont Lodge which has 75 rooms plus 47 cottages and cabins. Cumberland Falls, 125 feet wide and wih a drop of 65 feet, is the park's outstanding natural feature. On bright moonlight nights, a moonbow can be seen in the midst of the falls. The only other known moonbow in the world is in South Africa.

BLUE GRASS COUNTRY

Swinging directly north, the motorist comes to Lexington, which lies in the heart of the bluegrass section. Here, beneath the turf, lies a layer of rare Ordovician limestone which supplies the soil and water with a high percentage of phosphorus and calcium. It is these minerals which give the grass its bluish color (hence the name "Bluegrass") and to the horses who feed upon it the strong tendons, solid bones, and elastic muscles which invariably carry them to racetrack victory.

Surrrounding Lexington are the palatial horse farms where past, present, and future champions live in air-conditioned luxury. No commerical tours through this area are available. However, visitors are welcomed at nearly all of the farms where they may wander around the paddocks, into the barns, and through the famous horse cemeteries.

OTHER KENTUCKY ATTRACTIONS

Louisville, Kentucky's largest city, is the northwest gateway for travelers entering the Bluegrass State. Situated on the Ohio River, it is connected by bridges with Jeffersonville and New Albany, Ind. Fine highways lead into the city from every point of the compass, and an airport offers regular flights to and from all parts of the country.

In 1779, Col. George Rogers Clark and 13 families came down the Ohio River and settled Corn Island, opposite the present site of the city. The following year these colonists moved to the mainland, and Louisville, as the settlement was named—after Louis XVI of France—became the base of supplies for Clark's expeditions which culminated in the conquest of the Northwest. Today this thriving city distills 25 percent of all the liquor made in the United States and it manufactures many nationally known brands of cigarettes, including Viceroy, Kools, and Spuds. It is also the gathering place for some 100,000 race-track fans who assemble at nearby Churchill Downs on the first Saturday of every May to watch our Nation's annual racing classic—the Kentucky Derby.

Other interesting objectives for a motor tour of Kentucky should include the following: Bardstown, where the beautiful Georgian-style mansion in which Stephen Foster supposedly wrote My Old Kentucky Home is kept open for public inspection; Berea, a unique college town where mountain youth can obtain higher education through a work-as-you-go program, and where Pulitzer Prizewinner Paul Green's historical drama, Wilderness Road, is currently being shown at Indian Fort Amphitheater; Frankfort, founded as capital of the Bluegrass State in 1792; and "Ashland," Lexington, home of Kentucky's famous "pacifist" Senator, Henry Clay, father of the Missouri Compromise and the Compromise of 1871.

If Kentucky is best known for its thoroughbreds, its renown for fine bourbon probably runs a close second. So, Mr. and Mrs. Motorist, before you leave the Bluegrass State and all its many attractions behind, make a farewell toast to this beautiful land with a real Kentucky mint julep. This frosted concoction of bourbon and mint, sweetened by a little powdered sugar and served with southern hospitality, will put the finishing touches on a memorable trip to the East's newest 1957 vacationland.

Closing the New Inflationary Gap

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a sound statement by Clifford F. Hood, the president of the United States Steel Corp., given before the Committee on the Judiciary.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CLOSING THE NEW INFLATIONARY GAP

(By Clifford F. Hood)

I share the concern about inflation which I am sure that you gentlemen have in your minds. In fact no other matter so seriously and adversely affects the operations of United States Steel. An increasing number of people are coming to understand that one part of this problem—a part that I must face every day—is the failure of production to rise as rapidly as production costs.

Aside from taxes, and as in any manufacturing concern, the cost per unit of production in United States Steel is determined by the unit costs of man-hours, machines, and materials and the combined effectiveness with which all of these factors of production are utilized; in other words, unit prices and productivity. The unit prices United States Steel has had to pay for man-hours, machines, and materials have been increasing at rates far in excess of increases in productivity, thus creating a disparity which has resulted in steel price increases. Many other enterprises are confronted with a similar disparity which we might think of as the new inflation gap, a problem of nationwide scope.

This problem threatens the long-range security of our business, and of every individual who gains his living, in whole or in part, from our business. It poses a similar threat not only to every other steel producer but to every other industry and, in fact, to every other group in America. It is a national problem of great importance.

Heretofore the great problems with which this Nation has been confronted have been solved in ways determined by the will of the people, following the development of adequate public understanding of the problems and needs for solution. I have an abiding faith that this will continue to be our way of life, and I am sure that the activities of this subcommittee will contribute to the growth of that public understanding.

To the furtherance of that purpose I would like briefly to present certain views on the new inflation gap, particularly with respect to what individual companies or industries can and cannot do about it.

Without professing to understand all of the complex economic aspects of inflation, it nevertheless seems clear to me, and I presume to many others as a matter of ordinary arithmetic, that the way to close the gap is either to step up the overall rate of productivity increase, or to lower the overall rate of cost increase, or both. Out of that simple observation comes one responsibility that I think rests squarely upon the individual managements and employees of every business enterprise, big and little. It is to manage their affairs and perform their jobs so as to bring about the maximum possible increase in overall productivity, and put a stop to the production cost increases which are within their power to control.

This is, of course, not a new responsibility. It is one, however, worth emphasis in view of the national predicament in which we find ourselves. I say it is not new, because fortunately the American competitive system makes it necessary for management to develop ever more efficient methods of producing or lose out in the competitive race. The wonderful byproduct has been an ever-rising standard of living, for it is only as we develop more efficient ways of producing today's goods and services that we can free manpower and resources to provide tomorrow's more abundant, new, and better products.

This is the result of a productivity rise over the long stretch of American history of slightly over 2 percent per year on the average, according to the National Industrial Conference Board calculations. In order to have a stable price level, it follows that there cannot be sustained increases in the Nation's wage levels at a much greater rate without inevitably forcing up prices. But now we are faced with the fact that employment costs per hour have been compounding for many years at much greater rates than that—over 8 percent per year in the case of United States Steel. It follows that to close this new inflation gap something has to be done about the over-rapid increase in employment costs throughout American industry. The managements and employees of individual enterprises can help solve this problem, but clearly the real solution of the matter lies beyond the power of management of any one enterprise or any single industry. Its solution will require concerted effort on the part of all managements and all employees. We in United States Steel are doing what we can.

The management of United States Steel has no desire whatever to withhold justified wage increases. But we do not want the employees of United States Steel, through their collective bargaining representatives, to demand and strike for unjustified wage increases. Our real desire is to raise our rate of productivity increase, with the cooperation of our employees and their collective bargaining representatives, to the highest attainable level, reduce our costs, and, as we progress, to negotiate wage increases which respect the related interests of the employees, owners, and customers of United States Steel.

The management of United States Steel cannot reach this objective without full cooperation of the employees and their collective bargaining representatives. And the development of such cooperation does not come about overnight. But we think we have made a promising start in this direction, and based on the mutuality of interest, believe we can continue to progress.

The labor agreement of August 1956 was negotiated with this in mind. Whereas the employment cost per man-hour had been increasing at about 8 percent per year compounded, the company's offerings, short of strike settlement, contemplated a 5-year agreement and employment cost increases at approximately 4 percent per year. This offering was based on a planned program to move in the direction of closing the gap we have been discussing. The settlement arrived at through force of strike involved a 3-year agreement and employment cost increases amounting to about 6 percent per year compounded, exclusive of the unknown factor of cost-of-living.

These terms, far short of the obectives sought by United States Steel and obtained only after a costly strike, were accepted as a matter of general public necessity. And cost-of-living increases of unforeseen size have already nullified a substantial proportion of the anticipated gain.

Nevertheless, this agreement marked a step forward. It provided, hopefully, 3 years of industrial peace in which: the customers could count on uninterrupted supply of steel; the employees could count on a strike-free period of employment and steady income; the company could plan and proceed with facility replacement and modernization in more orderly fashion; and of paramount importance, the management of United States Steel would have reasonable opportunity to seek better understanding with the employees of United States Steel and their collective bargaining representatives.

Upon execution of this labor agreement the management of United States Steel moved to further concentrate and accelerate its long standing efforts in two directions, namely:

1. Develop improved understanding with the employees and their union representatives as to the mutuality of interest involved.

2. Increase the productive effectiveness of United States Steel in every possible way.

With respect to improved understanding, we are conducting concentrated and planned programs to acquaint each member of our management organization with the facts concerning our basic problems, so that they in turn can do likewise with respect to their employee associates. We have used the occasions of public utterances to describe our inflation problem for the knowledge of employees and the public.

To date the union has not seen fit to help us clarify this problem in the employee and public minds. But we live in the hope that it will not always be thus, and that a point will be reached where we will be able to conduct our bargaining in light of the applicable facts and conditions. Only in this manner, we believe, can our collective bargaining truly serve the individual and related interests of the employees, stockholders, and customers of United States Steel.

With respect to the second line of endeavor, namely, management actions to improve the productive effectiveness of United States Steel, we have a number of carefully planned programs now going forward.

Through research and technology, we are constantly searching for new methods, processes, and products to lower the cost of production and improve the products and services supplied to our customers.

Extensive research and experimentations go on continually in our efforts to make better use of available raw materials.

Our facility planning is conducted on an organized and effective basis, designed to make the most productive use of funds invested in them.

We continually employ a number of ever more modern management procedures or tools, all of which endeavors are coordinated and directed toward the objective of being a low-cost producer of the products and services offered for sale by United States Steel.

These are contributions that management can make in the directions of productivity improvement, dealing primarily with making possible such improvement.

This brings us to the all important matter of employee performance.

In one way or another the human equation is involved at the core of every operation in steel and that equation includes both those who direct and those who are directed. The machines and processes do not operate themselves. They must be regulated by people.

The owners of the enterprise can supply the tools of production; the management can acquire the raw materials, employ the people, and plan the most efficient operations; but at that point, under the given circumstances at the given time, the productive result depends entirely upon the employees and the way they perform the available work.

Constant improvements of the tools of production tend steadily to reduce physical labor in the steel industry through the substitution of mechanical and electrical equipment. This places greater premiums upon employee teamwork and effective coordina-

tion of the actions of huge pieces of equipment through pushbutton or lever controls.

With these ever-increasing amounts of the tools of production, made available and acquired by use of the investor's money, it becomes increasingly important that such tools be operated at their most productive rates. This can be accomplished only through the most efficient employee performance consistent with safety, good health, and sustained effort. The attainment of this objective is as much in the long-term interest of the employees as of the owners. Only by the most effective use of the tools of production can investment in them be justified, and only by such justification can new tools and the related jobs of their operation be supplied.

In United States Steel we recognize that efficient employee performance in total accrues from the initiative and actions of the employees as individuals. Thus we strive continuously to generate an employment environment conducive to good employee attitudes, individual initiative, and high performances. Widespread use is made of monetary incentives applied to work performances, and a cash-award suggestion plan has been installed to encourage the contribution of ideas for cost reduction, improved safety, improved products, and others.

In all of these endeavors we seek to make it crystal clear that:

1. It is in the interest of the stockholders that there be equitable compensation for the employees.

2. It is in the interest of the employees that there be equitable return for the stockholders.

3. It is in the interest of the customers, the employees, the stockholders, and the public that, after payment of employee compensation and other costs, and stockholder dividends, there be a remaining profit to maintain United States Steel in healthy financial condition to meet the new and ever-expanding needs of this Nation.

4. Anything that operates against the attainment of these objectives is contrary to the best interest of all concerned.

5. The way to meet these objectives is to solve the problem at hand and close the gap between rapidly rising costs and slowing rising production.

Mutual understanding and cooperation in these endeavors is the American way to solve the problem. The understanding of this problem must not stop with the employees of United States Steel and its management. It must be extended to a broad public appraisal of the problem such as I indicated earlier, with broad public understanding that the problem cannot be solved by one company or one industry—it will require the concerted efforts of all employees and all managements.

Without placing a definite time table on these objective accomplishments, we do have hope that the present trends may be arrested and brought into balance.

The Uncertainty of Canadian Natural Gas

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. VAN ZANDT. Mr. Speaker, despite the desire of applicants to speed up the Canadian gas cases, the Federal Power Commission's presiding officer followed tradition and recessed hearings for the closing days of July and the greater part of this month. This decision is commendable, for it indicates that the Commission regards the case as far too important to hurry it through to completion at the possible expense of the wisdom and justice that come with assiduous investigation and consideration.

The Commission has insisted on deliberate action despite the international pipeline people's hurry-up attempts, including an offer of bargain rates to American consumers if applications are approved by November 1 of this year.

Obviously, Mr. Speaker, Canadian gas cannot be permitted to enter the United States until a lot of questions are answered. For my part, I strongly object to any effort to import a fuel which will cost American workers their jobs. I want to go on record in favor of legislation to bar imports on natural gas into areas which already have abundant domestic fuel resources.

Perhaps it will eventually be necessary for Congress to enact a law spelling out this position. It is my feeling, however, that the Federal Power Commission will dispose of this particular case in favor of American industry and labor; at least the Commission cannot in conscience approve the applications so long as the issue is in such complete chaos. From all indications, it will be a long, long time until the complications centered about the pipeline in Canada are neutralized. The material which I am going to insert in the RECORD at this time is a calendar of confusion assembled from Canadian publications.

For the sake of brevity, I shall go back no more than 2 months in listing excerpts that partially reflect the sharp divergencies attendant to the pipeline project.

In Babel, Noah's descendants set out to build a tower to reach to heaven. For this presumption their words were made incomprehensible. The pipeline across Canada, with its proposed outlets to the United States, has produced a variety of opinions that place the whole Canadian gas case in a state of incomprehensibility, particularly when viewed from this side of the border.

One need not be a subscriber to Canadian newspapers to uncover this intelligence. The evidence may be obtained at out-of-town newsstands or in the Congressional Library. You need only to pick up almost any Canadian newspaper to read all about it.

The Montreal Star of June 24, 1957, reprinted an editorial from La Tribune, Sherbrooke, Quebec, which includes this item:

As the CCF (Conservative Commonwealth Federation) attitude was quite categorical in pushing for nationalization, the Diefenbaker government may well find itself in an embarrassing situation if the CCF profits by its balance-of-power position to demand acceptance of its pipeline policy. After examining the question the government will perhaps see that the previous administration's pipeline policy may not have been theoretically the best but was undoubtedly practical in the circumstances.

The same issue of the Star carried this quotation from Le Droit, Ottawa, Ontario:

Because the CCF (Conservative Commonwealth Federation) more than social credit, will command the situation in the next Parliament, we presume it will put pressure on the Diefenbaker government to change the pipeline administration and push for its expropriation. We do not intend to raise again the arguments we used in support of our attitude, but we sincerely hope, for the good of the country, that this colossal and monopolistic enterprise will come into the hands of the state and be administered by a state commission. * * * Only expropriation of this enterprise at a fair price seems to us to be the logical and definitive solution of the pipeline crisis which played such a part in the Liberal defeat and the political demise of its protagonist, C. D. Howe.

The Stratford (Ontario) Beacon Herald June 25, 1957:

An oil expert foresees an early expansion of the capacity of the Trans-Canada gas pipeline. But not, it is hoped by the Brantford Expositor, with the aid of Government loans, mixed up with fat profitmaking share options for a few individuals.

The Hamilton (Ontario) Spectator of July 3, 1957, printed the following dispatch from Ottawa:

OTTAWA TO INVESTIGATE SOME PIPELINE DEALS RESPECTING CONTRACTS

(By Warren Baldwin)

OTTAWA.—The new government is expected to open a thorough investigation into the Trans-Canada pipeline deals with particular attention to the price being paid Alberta producers in relation to the proposed price to be paid for export gas at Emerson, Manitoba.

The contract between Trans-Canada Pipelines, Ltd., and Tennessee Gas Transmission Co., still dependent on Federal Power Commission approval, calls for an initial price at Emerson of 27.27 per thousand cubic feet escalating to 29.64 cents by 1981. The Trans-Canada is buying from the Alberta producer at a price of 10 cents at the wellhead escalating to 15.75 cents by 1981.

BUYS FROM MEXICO

Meanwhile Tennesese has contracted to buy gas from the Gulf of Mexico producers at an initial price of 22.4 cents escalating to 34.4 cents by 1982. The distance from delivery points to Tennessee's markets is about the same and it could prove to be that Tennessee, which is a one-third partner in Trans-Canada, has made a very advantageous deal for the 200 million cubic feet a day which it will receive at Emerson if and when the FPC has approved the import and Canada has issued the necessary export permit.

Trade Minister Howe had committed the Liberal Government to issue this permit as soon as FPC approval was obtained. In a letter to Trans-Canada dated September 1955, which was filed as evidence with the FPC, Mr. Howe states:

"Your company has also made an agreement with Tennessee Gas Transmisison Co. to sell 200 million cubic feet daily to Tennessee at Emerson, Manitoba; to sell additional gas to that company when available at Niagara Falls, Ontario, or any other designated point, and to purchase gas from Tennessee for distribution in eastern Ontario and Quebec.

"For the Emerson export Tennessee must obtain an import permit from the United States Government. When this has been issued action will be taken by the Canadian Government under the exportation of power and fluids and importation of gas act to authorize export at Emerson, Manitoba, of 200 million cubic feet of gas daily for a period of 25 years from the date of the first delivery of gas."

MAY IGNORE DEAL

The new Canadian Government will not consider itself bound by this undertaking of a defeated minister which is said to have no legal status. One aspect which is likely to be investigated is whether competing gas

companies such as Northern Natural, Peoples Gas, or Michigan Wisconsin, all of them opponents of the Trans-Canadian-Tennessee deal, might bid a higher price for the gas at Emerson. It has been suggested that any 1 of 3 companies which have distribution systems in the midwest states could afford to pay at least 3 cents more per thousand cubic feet and might be glad to do so. It would not be surprising if the new Government informs Trans-Canada that it is not standing behind the Howe undertaking and that it would like to see the door opened to competitive bidding for Canadian gas before it will agree to the export.

Mr. Speaker, I think it is particularly important that both Congress and the Federal Power Commission take especial notice of the paragraph which points out that the new Canadian Government will not consider itself bound by the undertaking made under a defeated minister. This factor should at all times be given a prominent place in every discussion regarding proposals to establish a fuel dependency upon Canadian gas in areas of the United States.

The dispatch from Forbes Rhude, Canadian press business editor, which appeared in the Winnipeg, Manitoba, Free Press on June 29, 1957—and presumably in other Canadian newspapers—presents so many problems involved in the pipeline project that I consider it important to reprint the entire article in the RECORD. It follows:

SETTING ALLOWABLE GAS FLOW COMPLEX TASK

(By Forbes Rhude)

JASPER, ALBERTA.—Important decisions lie ahead for all concerned in the natural-gas industry, it was indicated in both formal and informal discussions at this week's annual meeting of the Canadian Gas Association.

The decisions—which presumably will arouse some controversy—concern such matters as follows:

An adequate supply of natural gas for what Trans-Canada Pipe Lines, Ltd., expects to be growing requirements for its pipeline now being built from the Alberta border to Montreal.

How much gas may be made available for export to the United States via two pipelines now in the discussion stage and which at the moment appear to have differing interests.

The wellhead price for gas.

ALBERTA POLICY

Part of the background to these matters is the long-standing policy of the government of Alberta that gas may not be sold outside Alberta unless the Province's requirements are assured for a reasonable term of years.

Federal Government policy has been along the same lines—that no gas may be sold outside Canada until Canadian requirements are similarly assured.

This means that Alberta's gas may not be sold outside the Province, even in Canada, without approval by Alberta, and even if Alberta is willing, it may not be sold outside Canada without Federal approval. Additionally, it may not enter the United States without approval of the United States Federal Power Commission.

There seems little difference of opinion concerning the Alberta and Federal stands as basic principles.

OPINIONS DIFFER

There are differences of opinion, however, as to what constitutes adequate supply for both the Province and Canada; and as to what may reasonably be exported to the United States.

One side of the argument is that the gas should be retained—except for minor export—for use of Alberta and Canada.

The other side is that the whole industry will be held back—even from the Canadian point of view—if a sufficiently large market is not developed to encourage producers to spend the money necessary to find further gas.

This side holds that in view of forecasts of the reserves which will ultimately be found in Alberta, it is unrealistic to hold down export severely.

In general, in assessing reasonable supplies, gas people seem to be thinking in terms of 25 years or so. If, in future, there should be no more gas, there would be other sources of power from oil, coal, or nuclear developments.

TANNER VIEWPOINT

At this week's convention statements by three people seemed of special interest.

N. E. Tanner, chairman of Trans-Canada Pipe Lines and former Alberta minister of mines and minerals' who had much to do with framing the Province's policies on oil and gas, said:

"The Federal Government's policy is to serve Canadians first, and Trans-Canada Pipe Lines has been chosen as the vehicle to supply eastern Canadian markets."

At the same time, Mr. Tanner quoted figures to indicate that Canada, over the years to 1980, could export one-third of its gas production.

Mr. Tanner didn't say so, but there are indications that Trans-Canada, though not opposing export if there are ample supplies, would like to see a conservative look taken at applications for export of gas beyond those now contracted for.

WANTS PRIORITY KEPT

Another interesting statement was made by D. K. Yorath, president of Canadian Western Natural Gas Co., Ltd., Calgary, and Northwestern Utilities, Ltd., Edmonton—Alberta's major gas distributors. He said:

"It is absolutely essential that no additional quantities of natural gas be permitted to be withdrawn from Alberta unless the permit is contingent upon the Alberta market having prior call if the gas is needed for Alberta consumption."

At the same time he presented figures which seemed to indicate that probably reserves are beyond Alberta's or Canada's needs and he expressed belief that within the next 5 years a third pipeline (additional to the 2 now building) would be built to export Alberta gas.

IN EL PASO MARKET

Mr. Yorath didn't expand on this, but reference to the various existing geographical, economic and other factors would indicate that California and probably San Francisco would be the logical aim of such a line.

If this is so, it would offer competition in an area in which El Paso Natural Gas Co. now is dominant.

Pacifica Northwest is the company which will take gas—starting about next September—from Westcoast Transmission Co., Ltd., which is building a 650-mile pipeline from the Peace River area of British Columbia and Alberta to Vancouver, and to the international border south of Vancouver.

El Paso, incidentally, owns a large block of Westcoast shares.

This brings up the remarks to this week's meeting of Frank M. McMahon, president of Westcoast.

He proposes a pipeline from Savanna Creek in southwestern Alberta to the British Columbia-Idaho border to connect with a line which Pacific Northwest would build from Spokane, Wash.

This would give Westcoast two connections with Pacific Northwest

ADDITIONAL REQUEST

To supply increased demand from the Westcoast line and the new demand from the proposed Savanna Creek line, Westcoast, is applying for permission to take out of Alberta an additional 400 million cubic feet of gas a day, about double the amount of its present permit.

This situation envisages two applications involving increased export to the United States—that of Mr. McMahon's Westcoast and the line mentioned by Mr. Yorath.

At present the two lines would appear to be in opposition to one another.

Some observers see a similarity to the situation which once existed between Westcoast and Pacific Northwest. They opposed one another until the United States Federal Power Commission turned down an application by Westcoast and approved one by Pacific Northwest. Then the two companies got together.

The wellhead price paid to producers may be involved in the developing situation.

Trans-Canada pays about 10 cents a 1,000 cubic feet which, it is said, nets the producer between 6 and 7 cents. A pipeline, if built to San Francisco, might be able to pay a higher price.

SEE RESERVES GROWING

Current known Alberta natural gas reserves are estimated at around 20 trillion cubic feet. They are expected to be more than double that by 1986 and may ultimately reach 100 trillion cubic feet.

Alberta to date has given permits for withdrawal from the province of 5,750,000,000,000 cubic feet. Trans-Canada's part of this is 4,350,000,000,000 cubic feet. About a quarter of this would be exported to the United States at the Manitoba border and the rest would be to meet its needs across Canada from Alberta to Montreal.

Trans-Canada is understood, however, to expect that growing markets will raise its requirements to 3 or 4 times this amount.

Its exports to the United States would be to Mid-Western Gas Transmission Co., which would build a 1,400-mile pipeline to connect with the big Tennessee corporation.

The United States Federal Power Commission has not yet given a permit for this import.

Alberta's own requirements in the period 1957 to 1986 are estimate at 7,600,000,000,000 cubic feet.

Of equal importance to Congress and to the Federal Power Commission is the following editorial entitled "Questions on Natural Gas," from the Vancouver, British Columbia, Province, reprinted in the Edmonton, Alberta, Journal, July 2, 1957:

QUESTIONS ON NATURAL GAS

News that still another gas pipeline is being planned to carry natural gas from the Savanna Creek area in Alberta into the United States raises a question of utmost importance.

The public would like to know exactly how much Canadian natural gas will be shipped to the United States when these pipelines are completed, compared with how much is to be used in Canada.

Some 4 years ago this newspaper first raised the question of use of Canadian natural gas resources. The Paley report, then before the President of the United States, had underlined the fact of rapidly diminishing supplies of natural gas in the United States. We forecast the United States would try to take over the Canadian supply. We wanted a policy that would insure preservation of adequate supplies of Canadian natural gas for Canadian use.

Since then elaborate plans have been set afoot to market natural gas, and it is clearly indicated that the bulk of our gas will be sold in the United States.

This is a public resource. The people of Canada are entitled to a clear statement of the position. Who is making the decisions about how much of Canada's natural gas will be exported? What is the basis of decision?

We know there is no additional preservation policy. The individual provinces have made their own calculations about proven reserves and their own probable needs, and export licenses are no doubt granted accordingly. The conservation role of the Board of Transport Commissioners is vague.

What is the criterion? How will these decisions affect the overall Canadian requirement in the future? Has anyone ever troubled to make a careful estimate of what Canada will need for herself in 25, 35, or 50 years?

This is a depleting resource. When it is gone it is gone.

Is this great Canadian resource to be used mainly to enrich promoters of the present era, or is it to be fitted into Canada's economic development program?

There are a lot of questions to be answered about natural gas policy. There is grave suspicion that the boomers are running away with the issue, at the expense of Canada's own future. This should be a priority issue with the new Conservative government.

Here is an important paragraph from the July 5, 1957, Sarina, Ontario, Observer, in its report of a Toronto district labor council meeting:

The labor council also called on the Conservative government to take over construction and operation of the trans-Canada gas pipeline. It said the pipeline should be completed and operated by the Dominion Government to ensure adequate supplies of gas to areas in need of it and to prevent the creation of enormous private profits out of public subsidies.

The (Calgary) Albertan's July 11, 1957, edition carried the following news story under the headline, "CCF (Conservative Commonwealth Federation) Leader Foresees Second Pipeline Debate:"

CCF LEADER FORESEES SECOND PIPELINE DEBATE

OTTAWA.—Among slippery spots on the minority government tightrope being walked by the Progressive Conservatives is the trans-Canada natural gas pipeline.

"We are not through with this pipeline business," CCF Leader M. J. Coldwell said recently, explaining that he believed it would again go before Parliament when the company sought an export permit.

If it does go before Parliament again, he added, the CCF will resume its demand that the controversial project be placed under public ownership.

Conservative spokesmen concede that this could put the government in a delicate spot. There are several reasons for this.

The CCF with 25 commons seats, holds the balance of commons power.

WANT NO CHANGE

Since they got the project going, the Liberals would be unlikely to favor any changes in the pipeline's status. The 19-member social credit group backed the Liberal government in the bitter pipeline debate last year.

In that debate, the Conservatives opposed the Liberal government's proposal. But they did not favor the CCF's demand that the pipeline be taken from private enterprise and built as a publicly owned project.

A decision to permit gas export could be taken by cabinet order, informants say. But that still would not keep the matter from coming up in commons.

Or any opposition party could bring up the matter in the commons throne speech debate; as an amendment to the address in reply to the throne speech; on a supply motion, or as a private member's notice of motion. It also could be brought up on a motion to adjourn normal debate for consideration of a matter or urgent public business.

From the column, Minding Your Business, in the Toronto Globe & Mail, July 18, 1957:

That old parliamentary horror, the pipeline, could be making another appearance in Parliament early next year. It depends on how quickly the Federal Power Commission in Washington rules on a case now before it, and what happens thereafter.

The important part of that case for Canada is that contained in it is an application by Tennessee-Midwestern for permission to import Canadian gas into the United States via a spur line from the Trans-Canada pipeline, south of Winnipeg.

According to an American source, the FPC might be in a position to grant a certificate by December. If it does—that is, if it gives Tennessee-Midwesten a go-ahead—the opponents will probably challenge the certification in the courts.

That probably wouldn't stop Trans-Canada Pipe Lines, Ltd., from going ahead with an application here in Ottawa to export to Tennessee-Midwestern. It would, however, make a difficult decision more difficult.

On top of that, the Government already has been advised by CCF leader Coldwell—not formally, but in a newspaper interview which he gave—that when the question of an export permit arises, he will again press the CCF's contention that the pipeline should be nationalized.

The last plainly hasn't been heard of the subject which, in 1956, produced the greatest parliamentary upheaval in Canada in decades.

After reviewing pipeline matters as they now stand, C. J. Harris wrote in the Toronto Clip Sheet of July 31, 1957:

At the moment western Canada's gas reserves are estimated at 18 to 23 trillion cubic feet. Exploratory drilling has been increasing the estimate by about 2 trillion cubic feet a year. But a field marked out is not a field finally measured and considerably more drilling is essential before a final figure is possible. Also, the question of Canada's own needs is far from settled.

The Federal law proclaimed on June 20, 1955, specifically states that "the quantity * * * to be exported shall be limited to the surplus remaining after due allowance has been made for distribution to customers for use in Canada." Thus, no gas export license may be issued by Ottawa until Canada's own needs are known, and provided for.

From the Toronto Globe and Mail of July 13, 1957:

The rapidly expanding market potential of Trans-Canada Pipe Lines, Ltd., and Westcoast Transmission may be expected to force careful consideration of the gas reserve situation, by both the Alberta and the Federal Government before approval is granted for further outlets for gas export.

Mr. Speaker, I do not believe it necessary to continue the list at this time. The statements which I have presented fully document my argument against granting permission to open American markets to Canadian natural gas. The Federal Power Commission is unquestionably aware of what has been transpiring in Canada in relation to the pipeline project, but I shall nevertheless transmit a copy of my statement of today, including the quotations from the Dominion's press, to Chairman Kuykendall in order that he may include this material in the RECORD if he chooses to do so.

Meanwhile I trust that every Member of Congress will keep in mind that the running battle over the pipeline in Canada has turned into a free-for-all that cannot possibly resolve itself for long into the future. The controversy that is taking place north of the border is important because it emphasizes the futility of any program to project the importation of Canadian natural gas on a firm basis and with any degree of stability pricewise.

To those of us who would resist foreign competition that takes away American jobs, the import proposal is all the more repugnant. Coal miners and railroad workers have suffered perhaps more than any other segment of the working population in the past decade. Exposed to the inequitable competition of imported residual oil, the coal industry has lost millions of dollars in revenue that would have gone into expansion of properities and further mechanization of equipment and operational methods. The wages lost to miners because of this deluge of a foreign fuel on east coast markets can never be regained. Almost identical losses have occurred on the railroads, which normally move—at least for a substantial part of its journey—all the coal that is used in seaboard utility and industry markets.

The losses to coal and railroads are of course reflected in every business establishment where these industries comprise an important part of the economy. Pennsylvania has been plagued by unemployment, to which foreign competition has contributed immeasurably, from the time that immediate postwar industrial activity began to recede. The congressional district which I represent has since 1949—except for a brief period during the Korean war—been certified by the United States Department of Labor as a labor-surplus area. Since 1954, when surplus food was first made available to needy families, an average of 70,000 persons in the 3-county area of Pennsylvania's 20th Congressional District have been receiving surplus commodities. Under the circumstances, it would be completely illogical to initiate a program that would deprive the bituminous coal and anthracite industries of their natural markets through admission of another foreign fuel into this country.

Food Additives

EXTENSION OF REMARKS

OF

HON. WILL E. NEAL

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. NEAL. Mr. Speaker, an oldtimer visiting a modern food market cannot help reminiscing. Seeing fruits and vegetables from many different climates, of

many varieties, clean, fresh, and appetizing, packaged to appeal to the eye, and emanating nostalgic odors, elicits comparisons of conditions in the earlier days when things were different.

Only those who remember the wellhouse or the earth cellar in the garden where a few seasonal products could be preserved from freezing and early spoilage, can fully appreciate the transition from methods common to our fathers.

Meats were smoked and salt cured for year round use. Potatoes kept in cool places could be available until the early spring planting. Onions, subject to early decay, were planted in the fall to supply spring relish containing that vital health ingredient we now know as vitamin C. For the most part, fruits were sun dried, home canned, or preserved in sirup. Milk products demanded meticulous and timely care. Bread was made from homegrown grain. Time consuming, yes, but hungry stomachs were fully satisfied and physical energy seldom lacking.

Not only do concentrations of people make these old methods impractical, but modern advances in production and distribution of food products make it unnecessary. The scientists and the creative artists have joined mass producers to evolve methods that combine abundance, variety, and safety of foods readily available at the corner grocery store.

Without the use of chemicals used in processing, preserving, coloring, and industrial chemical products used in packaging of human foods, large groups of people living in densely populated cities could no longer boast of being the best fed people in the whole world.

But, it seems that well-fed and well-nourished people suffer from fears and frustrations among which is worry about "things that have not happened yet." Sensational lay writers for popular periodicals and magazines need only suggest that some chemical used in food may be poisonous or capable of generating cancer, to create, a fear psychology that is more detrimental to the peace and happiness of many than the actual incidence of such unusual dreaded diseases other than those experienced only in the minds of individuals.

As a matter of fact, there are several hundred chemical substances and derivatives used by food processors, some of which have been utilized for a long period of time. Some of these are known to be poisonous in large doses. But in the infininitesimal amounts used in the preparation of food, there is absolutely no danger as shown by experience over a long period.

Food processors and industrialists producing chemical additives for use in foods maintain competent research chemists and scientists at great expense to conduct such studies and experiments as will insure the harmlessness of any drug or chemical proposed to be used in the packaging of foods. More recently considerable attention has been given to so-called carcinogens. Animal experimentations show that some chemicals applied to or ingested by animals do sometimes result in the formation of tumors but as yet none, even cigarette smoke, has been proven to be the direct cause of cancer in the human body.

So, I would like to ease the minds of fearful consumers of processed foods of their discomforting fears of chronic disease or cancer. Just forget these imaginary dangers and enjoy your food and give thanks for its purity and abundance.

The Pure Food and Drug Administration has been policing food processors for many years. The food producers have been uniformly cooperative in ceasing to use any additive even suspected of causing harm to human beings. The rapid advances in chemistry, the discovery of new and untried chemical products that promise further advantage to the food industry add new responsibilities to both the industry and to the guardian agency.

The Interstate and Foreign Commerce Committee has recently held exhaustive hearings on matters pertaining to the use of additives to foods. Out of these hearings the committee has concluded that protection for the food-consuming public can best be assured by demanding that all chemicals intended for future use in the processing of foods be thoroughly pretested for safety before they can be used as food additives for any purpose whatsoever.

With such a statute faithfully executed by the Pure Food and Drug Administration, our people can enjoy all the luxury and conveniences of processed foods without fear or worries. These words from a recent column written by Dorothy Thompson are apropos:

Excessive concern with one's health, anxieties about diseases one doesn't yet have, continuous watching for symptoms, perpetual pulse-taking, trepidation about everything one takes into one's mouth, be it a cigarette or a piece of chocolate cake, is very unhealthful indeed. Phychosomatic research (a new name for a very old observation) registers that anxiety and fear cause body derangements. One can scare oneself into one's grave.

One also can be bored to death. And all the talk of illness, disease, diets, and death has become, for this writer, hideously boring.

Everybody's going to die of something. "One out of five will die of cancer," the placards proclaim. Well, then, 4 out 5 won't. Meanwhile, as the motto of my high school class proclaimed, "Let us live while we live."

Processing Costs Cut Farmers' Share of Consumers' Dollar

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 19, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Processing Costs Cut Farmers' Share of Consumers' Dollar," written by Ovid A. Martin, and published in the Washington Sunday Star of August 18, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROCESSING COSTS CUT FARMERS' SHARE OF CONSUMERS' DOLLAR

(By Ovid A. Martin)

For decades the farmer was the major stockholder, so to speak, in the Nation's food industry.

That is not so today. He has been relegated to a position of a minority holder. He has been forced by developments to trade places with processors and distributors.

When the farmer was the top man, the bulk of the money consumers spent for food went to the tillers of the soil. In the early years of the country, processing and transportation played minor roles. This was particularly true of processing.

Consumers bought most of their food in the raw or unprocessed form. The curing, the canning, the drying, the preparation, and the cooking were done in the home.

But as the years went by, service units were set up outside homes to do more and more of the processing and preparation. Along with this went increasing shares of consumer expenditures for food. There came the meat-packing plants, the flour mills, the butter- and cheesemakers, the canning companies, the bakeries, and more lately the food freezing and cooking plants.

No longer does the farmer get the major portion of the consumer food dollar. This portion now goes to the processing, transporting, and distributing phases of the food industry.

ON THE SHORT END

Latest Government figures show that in 1956 consumers spent roughly $48 billion for foods produced on American farms. Of this amount, the farmer got about $19 billion. The remainder—$29 billion—went to processors, transporters, and distributors.

Stated in a different way, the farmer got about 40 cents from each food dollar and others got 60 cents. Developments indicate that the farm share may drop even lower this year, as well as in the years to come.

Much of this change reflects the desire of today's housewife to turn over to others the task of preserving, preparing, and even cooking the family meals. This is reflected in a steady increase in retail sales of cakes, pies, and other pastries which once were baked in the home.

It is reflected in prepared cake and pie mixes, canned and frozen soups, preprepared meats and vegetables, and numerous other food preparations once made up in the home.

In other words, the food industry is selling maid and cooking services along with the foods produced by the farmer.

RESTRICTS BUDGETS

Some farm leaders say this hurts farmers—at least to some extent. They say that in the case of lower income families this purchase of these services restricts the total volume of food such families are able to buy. They argue that if more families bought more food in the unprocessed form, they could purchase a much larger and perhaps more selective volume.

The amount received by labor employed in processing, transporting and distributing farm-produced foods was not too far behind the amount farmers received. The Government estimates labor's share at nearly $14 billion.

Labor's share has been going up as the farm share has been declining. This is a reflection principally of the fact that consumers are buying more and more maid and cooking services with their food. It is taking more and more workers to handle the job of getting the food from the farmer to the dinner table.

Labor's share also has been increasing under a long-upward movement in the wage scale, as well as the addition, in recent years, of such worker benefits as social insurance, private pensions, welfare grants and compensation for injuries.

WAGE RATES RISING

Government reports show that the average hourly earnings of food-industry workers increased an average of 5 percent last year and now are 50 percent higher than in the 1947–49 average.

Total profits before income taxes of corporations from processing, wholesaling and retailing farm-produced and domestically consumed food products are estimated by the Government at $1 billion for 1956. Figures were not available on profits of unincorporated firms. Profits of corporations after taxes were estimated at $900 million compared with $800 million in the 1947–49 period.

Other costs in getting food to the consumer were estimated at a total of $9.9 billion last year compared with $7.3 billion in the 1947–49 period. These costs include fuel, electric power, containers, supplies, depreciation, rents, taxes other than income, interest on borrowed capital and profits on unincorporated marketing firms.

What has happened to farm prices since 1947–49—a period of rising returns for other segments of the food industry? They have gone down 8 percent. Net farm income dropped from an average of $16 billion in the 1947–49 period to about $12 billion last year. But this decline has been offset to some extent by the fact that there is a somewhat smaller farm population now.

Congress Has Responsibility To Curb Labor Racketeering

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the Washington Daily News carried an interesting editorial on August 17 entitled "They Got Rights, Ain't They."

Congress should not attempt to shirk its responsibility. Under the guise of protecting the labor movement, they have been protecting racketeers. The editorial referred to is inserted at this point:

THEY GOT RIGHTS, AIN'T THEY

Time was when the industrious hoodlum had to keep an eye peeled for the cops. But this here labor-leading racket they're on to now is strictly legitimate. It's blessed by both Wagner Act and Taft-Hartley, fortified by court and Labor Board decisions which tolerate anything from mayhem to assault and battery—so long as the victims are "enemies of labor."

And if anyone is indelicate enough to question the ethics of the system, these goons can always "respeckfly decline to chat about it ona grounds it might 'criminate them. They got constitutional rights ain't they?"

As Senate committee testimony clearly proves, this sanctimonious racket has been used mainly for extortion but also to prevent honest organization of workers. It has established a new form of "gangster union" far more vicious than any "company union" we had in the old days.

This racket works better with a charter; and the ability of notorious Sing Sing alumni to get these useful pieces of paper from some of the national unions is interesting.

A picket line is thrown around the target plant. A picket line is legal, see. It needn't include any of the plant's employees who haven't been consulted anyhow and maybe never heard of this particular union. This is known as organizational or educational picketing. The latter term is apt. It educates the boss and the workers too, as to what they all have to do to stay in business. The cops will protect the demonstration. They have to. It's the law.

A few known gangsters in the picket line help prove you mean business. Any employee still brave enough to go through the line is a strikebreaking scab. He also is liable to need a new set of teeth.

Perhaps the boss is in on the deal—trying to keep away an honest union. Honest or not, he can't hold out long, particularly if the teamsters honor the picket line and shut off his supplies. So he signs a contract which places the sheltering arm of these labor-leading gangsters around his employees—far enough around to get into their hip, or wallet, pocket.

And this also is legitimate because what comes out of the wallet is known as initiation fees and dues.

Maybe the workers get a little raise in pay, and maybe they don't Maybe the raise is enough to offset the dues. And maybe the boss splits the dues with the union organizer as a reward for cooperation. The workers have to stay in the union and pay their dues to keep their jobs.

Technically the employees can vote themselves out of this trap but there are ways to get around that, as testimony before the Senate committee has shown. It is particularly easy to use these dodges among the foreign-born and low-wage workers who are the most pitiful victims of this racket.

And so the money rolls in. The prohibition racketeers were gentlemen and pikers compared to this mob, which has perverted well-intended labor legislation to its own vicious ends.

It is to the eternal credit of President George Meany, and other decent men in the AFL–CIO, that they have backed the work of the McClellan committee, even at the risk of weakening the labor federation.

But Mr. Meany really can't do a great deal about it. That's up to Congress.

Address by Maj. Gen. Alfred B. Denniston, the Deputy Quartermaster General, United States Army, Representing the Department of the Army, Washington, D. C., at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States Held at Harrisburg, Pa., July 10 Through July 14, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. VAN ZANDT. Mr. Speaker, at the 38th annual encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States held at Harrisburg, Pa., July 10 through July 14, there were several outstanding addresses delivered by prominent officials of the Federal Government in keeping with the theme of the encampment, Defense Means Freedom.

On July 11, 1957, the following address was delivered by Maj. Gen. Alfred B. Denniston, the Deputy Quartermaster General, United States Army, representing the Department of the Army, Washington, D. C.:

ADDRESS OF MAJ. GEN. ALFRED B. DENNISTON, THE DEPUTY QUARTERMASTER GENERAL, UNITED STATES ARMY, REPRESENTING THE DEPARTMENT OF THE ARMY, AT 38TH ANNUAL ENCAMPMENT, DEPARTMENT OF PENNSYLVANIA, VETERANS OF FOREIGN WARS, HARRISBURG, PA., ON JULY 11, 1957

When I received the invitation to join you in the 38th annual encampment of the Department of Pennsylvania, I am frank to say that my reaction was a bit mixed.

It is my feeling that there are many others more competent to speak for the Army before this gathering of veterans.

On the other hand, I am a native of Pennsylvania. I was reared in this great State, have been imbued with its history and traditions. I know of the great contributions which Pennsylvania has made to our Nation in peace and war. I know that in the love of country and the support of its liberty and institutions, our native State stands second to none.

My first military experience was as a horseholder. As small boys in Uniontown, we looked forward to Memorial Day. On May 30 of each year we could watch the parade of the GAR and the Veterans of Foreign Wars. When the parade reached the cemetery where homage was paid to those veterans who had given their lives for our country, the leaders dismounted and we had the rare privilege of holding their horses.

It has not been my privilege to serve our country on the field of battle. I have had to be content, in peace and war, to exert all the abilities I possess to the end that the American in combat, in the face of the enemy, is the best equipped, the best supported, and the best led fighting man in the world. And I say to you combat veterans of our past wars, if we could return to the Veterans Day and Memorial Day ceremonies of a past era, it would be as rare a privilege today as it was 40 years ago to hold your horses while we pay tribute to those veterans who gave their lives so that we can assemble here today as freemen.

I am here, not as a proponent of the Army at a time when the Army needs all the support it can muster, but as one of you who are interested in what is best for the United States.

It goes without saying, that the first concern of every true American is the survival of our country as a great democracy—the noblest and most successful demonstration of self-government the world has ever known. With all its faults we would not trade it for any other form of government now in existence, or that has existed since the dawn of civilization. We know that we are making it better each day and there is no limit to what we will accomplish in the interest of the common man and woman in the future.

Having all the things we have today, and with unlimited prospects for our children and our children's children, we would like to insure that they will never be taken away from us, or that we will lose them through our own neglect. Our insurance against foreign attack, of course, lies with our armed services. It is upon our military strength that we must depend for protection against those who would destroy us or take us over. If we remain strong enough, we are most likely to deter the ambitions of a would-be aggressor, and so preserve peace through strength. I believe we have all learned through past experience in lack of preparedness, that failure to maintain a strong defense would be the sheerest folly.

We who are in active service look to organizations like the Veterans of Foreign Wars to lend active and aggressive support toward keeping our country strong. This, I know, you have always done. From Valley Forge to Gettysburg, from the Revolution to this day, the people of Pennsylvania have done their full share and much more, in helping to preserve our sacred heritage.

If I may digress again and reminisce, the Veterans of Foreign Wars and I started out with something in common. We came into existence at about the same time shortly after the turn of the century—one in Denver, I believe, and the other, I am told, in Mount Pleasant, Pa. I would that I had grown in body and spirit as your great and dynamic organization has grown. My birthplace was the small town from which Company E of the 10th Pennsylvania Volunteers went to the Spanish-American War and to which the survivors of that gallant band returned. The ones who returned were among the early members of your organization, who banded together in the interest of alleviating the hardships faced by the disabled veteran and by the widows and orphans of those who did not return. It is impossible to exaggerate the pride, the remaining few of those early pioneers must feel when they look at your organization today.

But while we maintain our military defenses, we must guard against the forces, both subtle and overt, which can undermine our unity as a people, and so weaken our strength as a nation. This is a problem much more intangible than military organization, and its solution lies in the home, the school, and the church. It may be expressed in the one word—patriotism. Here is another field in which your organization has been highly effective, and, I am certain, it will continue to command your best thought and action throughout the years ahead.

For the Army I would like to say that it recognizes it is but one element of the triservice military team, all of which are essential to our national security. But I want to emphasize that the Army is an indispensable element of that team. The Army respects the roles and missions of its sister services and supports their development and maintenance at appropriate levels of strength. The Army neither seeks controversy nor avoids honest differences of professional opinion. It accepts its proper subordination to civilian authority and cheerfully executes the decisions of that authority.

A strong, combat-ready Army, as an essential element of the triservice team, helps deter general and local wars by its oversea deployments under the shadows of the Iron and Bamboo Curtains; by its role in the antiair defense of the United States; by the existence of the Army Strategic Reserve; by its capability as an instrument for the application of measured force; and by the training and material assistance it provides the ground forces of our allies. The United States Army, joined by the armies of the free world, provides visible evidence that communism's ground forces will be resisted effectively.

I can report to you that your Army is a forward-looking, progressive instrument of ground combat. While retaining many of the so-called conventional weapons, it is also being armed with organic atomic weapons, including missiles, all of which may be required to insure victory in a future conflict.

The Army sees the necessity for increased mobility to facilitate the application of its versatile strength. It has taken steps to augment and increase its own or organic aviation, but still looks to the Air Force and Navy for tranhport outside the battle zone.

The Army recognizes the ultimate importance of good people in its organization. Competent leadership is in increasing demand, and the Army must continue to attract its share of the country's most promising young men. In this respect I can do no better than quote a great leader well known to all, who, while temporarily residing with us in Washington, has become an adopted son of Pennsylvania, who said: "Americans, indeed all freemen, remember that in the final choice a soldier's pack is not so heavy as a prisoner's chains."

The Army believes that it should have the reserve strength to insure victory and a viable peace.

The Reserve components of the Army—the Army National Guard of the United States and the Army Reserve—are indispensable parts of the Army. Our active forces represent the minimum requirements to satisfy the Army's day-to-day responsibilities. The Reserve components must provide the trained units and individuals to support and reinforce our regular Army, which in time of peace is never in perfect balance. They must provide replacements for active Army units ordered overseas in time of emergency. And they must provide for the generation of additional strength necessary to execute our war plans and fulfill our commitments to our allies.

Today's National Guard is the best citizen force in the history of the world. It is now organized to provide 21 fully modern infantry divisions, 6 armored divisions, 9 armored cavalry regiments, and 9 regimental combat teams, plus additional armored, artillery, engineer, quartermaster, and other nondivisional organizations. With a strength of over 400,000, the Guard is at its highest peacetime strength.

The United States Army Reserves also provide a ready force of troop units as well as pools of experienced individuals with specialized or technical knowledge.

The major objective of the Army Reserve program is to create a network of units consisting of trained men established in local communities throughout the United States. The training programs of these units are designed to permit them to attain as fast as possible the state of readiness required by their mobilization assignments. These requirements vary from being ready for commitment immediately upon mobilization to a degree of readiness which will permit their use in war or other emergency within a few months after D-Day. The present organization of the USAR includes infantry divisions, training commands, maneuver area commands, and numerous other types of combat, combat-support, and service organizations.

We in the active Army are deeply appreciative of the support which the Veterans of Foreign Wars have given to the Army Reserve program. Located as you are in communities through the State where National Guard and Reserve units are maintained, you are in an excellent position to aid this vital element of our defense organization in many ways.

I have attempted to given you some of the highlights of what your Army of today is doing to meet its responsibilities of the present and the future. It is a flexible Army, alert to its responsibilities. It has the capability of applying military power with weapons of great adaptability. It stands ready to meet Communist aggression, wherever, whenever, and however it may come. In developing its purpose and mission it appreciates the unfailing support it has received from the Veterans of Foreign Wars. I know I voice the Army's sentiment when I say we are confident that your organization can be counted on to back your Army in the future as it has in the past.

Statement of Crete Anderson, Chairman, Subcommittee on Immigration and Naturalization of the National Americanism Commission of the American Legion

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Crete Anderson, chairman, subcommittee on immigration and naturalization of the national Americanism commission, the American Legion, before the Subcommittee on Immigration and Naturalization of the Senate Judiciary Committee:

Mr. Chairman and members of the subcommittee, the following statement is in accordance with existing mandates of the American Legion on immigration and naturalization as adopted at the 1956 national convention held in Los Angeles, Calif., September 3 to 6, 1956, resolution No. 5.

In previous statements before the Subcommittee on Immigration and Naturalization of the Senate Committee on the Judiciary, and before other subcommittees on immigration of the Congress, the American Legion has quoted from the Americanism Manual of the American Legion, page 41, as follows:

"The American Legion has consistently opposed any great influx of immigrants and has insisted that immigration should be on such a moderate and regulated scale that immigrants may be readily absorbed into the lifestream of our country. The Legion has insisted that immigrants should not be admitted in such numbers that they would displace veterans from either employment or housing. Thirty years ago it supported the National Origins Quota Act of 1924 and, more recently, Public Law 414 (82d Cong.), commonly known as the McCarran-Walter Act, which set a quota for immigration from the respective countries, based on a selective and restrictive system—in proportion to the number of United States citizens, who themselves or through their ancestors originated in the respective countries. The Legion has vigorously opposed exceptions to this quota system, except (1) as they applied to honorably discharged wartime veterans of the United States Armed Forces, their wives, or immediate dependents, and, except (2) emergency admission of 400,000 displaced persons and German ethnics as the United States fair share of the humanitarian task."

NATIONAL ORIGINS QUOTA SYSTEM

The American Legion will firmly oppose, as in the past, any and all efforts to alter, weaken, or destroy the national origins quota system, or the original intent of the system, as expressed by the House Committee on Immigration and Naturalization of the 68th Congress, in part, as follows:

"It is obvious that a change in the character or composition of the population must inevitably result in the evolution of a form of Government consonant with the base upon which it rests. If, therefore, the principles of * * * a constitutional government created on this continent nearly a century and a half ago, is to endure, the basic strain

of our population must be maintained and our economic standards preserved."

CHANGE OF BASE YEAR

The proposals before you to advance the base date, on which the annual quota is computed, from 1920 to the 1950 census year (using the figure one-seventh of 1 percent of the inhabitants in the United States instead of the figure "one-sixth," as used in the present law) would increase the number of quota immigrants by 65,000 annually; 92,251 quota and 143,113 nonquota immigrants, making a total of 235,364, entered the United States for permanent residence in the fiscal year ending June 30, 1957. Refugee Relief Act and Hungarian parolees admitted bring the total admissions to 344,738 for the last fiscal year—more admissions for permanent residence than in any of the past 30 years.

It should be noted that the number of nonquota, in proportion to the number of quota immigrants in the past fiscal year, approximated 1½ nonquota to 1 quota immigrant. Applying this reasonable formula to the proposed increase of 65,000 quota numbers annually, through the change of the base date to 1950, the figure 65,000 becomes 162,500, including those nonquota immigrants accompanying, following to join, or otherwise entering for permanent residence. The future number of quota and nonquota admissions would, by this proposed amendment, be increased by two-thirds over the last fiscal year to a grand total of 398,000 admissions annually for permanent residence.

TRANSFER OF UNUSED QUOTAS

The proposal to transfer the unused portions of all quotas to quota areas not exceeding 7,000, to be allocated in the following fiscal year, would increase the number of quota immigrants by an additional 65,000. Applying the aforementioned formula of 1½ nonquota to 1 quota immigrant, the figure 65,000 again becomes 162,500 quota and nonquota immigrants annually admitted for permanent residence. This total of 162,500 added to the preceding total of 398,000 swells the permissible permanent admissions to 560,500, an increase over the fiscal year ending June 30, 1957, of 325,000, based on these two proposed amendments; namely, "Change of the base year to 1950" and "Transfer of unused quotas."

EXPANSION OF NONQUOTA CATEGORIES

The proposals to repeal provisions in the Immigration and Nationality Act making orientals chargeable to oriental quotas, and permitting them to use the quota of the country in which they are born, opens the door to the admission of an unlimited number of Asiatics from the nonquota countries of the Westen Hemisphere, principally from South America and contiguous islands. An estimated more than 600,000 Asiatics now in the Western Hemisphere would thus be potentially eligible for immigration to the United States under the nonquota status accorded those countries.

These proposals have dire implications when viewed in the light of the recent influx of Puerto Ricans (more than 800,000 in the past few years) and the economic and housing problems this migration has created in the metropolitan centers of the East, principally in New York City.

The possibility of subversive infiltration from Communist China is, likewise, dangerously present in the admission of large numbers of Chinese. The recent cases in the Federal district courts of New York City and San Francisco on the fraudulent entry of hordes of Chinese (40,000 estimated): the difficulty in returning indictments against the leaders of this fraudulent paper fatherson ring due to language differences and difficulty of locating these illegal Chinese entries once they were in the United States—all point to the dangers to our security and welfare attendant on the enactment of these proposals.

Present immigration laws permit the admission for permanent residence, on a nonquota basis, of children and spouses of citizens of the United States.

Proposed amendments expanding these nonquota categories to inclue brothers, sisters, and other relatives establishes another chain reaction factor, the extent of which is impossible to accurately estimate. These proposals further augment the swelling totals permitted to enter the United States for permanent residence under the pending amendments to the McCarran-Walter Act.

Estimates on the additional permissible admissions through these two proposals (orientals and expanded nonquota categories) run as high as 90,000 to 100,000 annually.

DESTRUCTION OF NATIONAL ORIGINS SYSTEM

Inherent in the three preceding proposed amendments is the virtual destruction of the intent and purpose of the national origins system, as expressed by the House Committee on Immigation of the 68th Congress, at the time this nonpolitical, mathematical formula was devised. The proposed readjustment of quotas from northern to southern and eastern Europe, and to Asia, ostensibly within the framework of the national origins system, would make the system so flexible as to destroy its controlling effect.

Deep inroads have already been made on the balances established by the national origins system, through the Displaced Persons, Refugee Relief and other acts. To extend those inroads, as proposed in pending amendments, is a further move toward nullification of the Origins System, reducing it to a mere token section in the McCarran-Walter Act.

In a press release July 13, 1957, Congressman FRANCIS E. WALTER stated:

"I would be opposed to destroying the National Origins System. I haven't heard of anything else to take its place. I think it would be a mistake to have an official or a commission make the allocations. I am opposed to anything outside a formula. As I have said many times, immigration is something for a mathematician and not a politician. We can't absorb anymore than are coming in under the existing law."

REMOVAL OF MORTGAGES AGAINST QUOTAS

Amendments to eliminate the mortgages charged against certain quotas under the displaced persons and other acts (totaling 320,000) constitute proposals to twice use these individual quotas numbers. When the Displaced Persons Act was enacted, it was presented as doing our fair share toward resettlement of these victims of Communist oppression. The American Legion supported this act for humanitarian reasons.

These mortgages are now classified as inequities and the reuse of these quota numbers is again presented as a fair share requirement.

When the refugee relief bill was proposed it, likewise, was labeled a fair share bill, despite the fact that the United States had taken, up to that time, more escapees, expellees, and refugees than any other nation in the world.

The term fair share has thus become one of expediency to be used when efforts to bypass the McCarran-Walter Act are being proposed. The American Legion does not favor these proposals.

PERMANENT PAROLEE PROVISIONS

The American Legion opposes proposed amendments to empower the Attorney General to parole into the United States a number of aliens, annually, equal to one-ninth of the total admitted since June 25, 1948, under the Displaced Persons Act, the Refugee Relief Act and other special acts. The numbers to be admitted under these proposals have been estimated to be 68,000 annually, with some estimates being considerably higher. These and other proposals to delegate to the Attorney General discretionary powers now vested in the Congress, places arbitrary authority in the hands of one man, inviting political pressures and otherwise endangering a fair and equitable administration of our vital immigration laws.

The American Legion is of the opinion that emergency powers are, at present, granted the Attorney General in respect to parolees under section 212 (d) 5 of the McCarran-Walter Act, and that no extension of these powers should be granted.

There had been admitted to the United States, as of July 1, 1957, a total of 33,542 Hungarian refugees, 6,130 of these came in as permanent residents under the Refugee Relief Act of 1953. As of the above date, 27,412 Hungarians had entered as parolees to the Attorney General, ostensibly when all visa numbers in the act had been exhausted. However, it now appears that 18,000 unused numbers remain under the refugee act.

The foregoing paragraphs illustrate the discretionary powers presently vested in the Attorney General in respect to parolees; hence, the proposals to establish another category, outside the McCarran-Walter Act, is just another back-door evasion of the act and an obvious effort to additionally increase, by 68,000, those permitted to enter the United States without respect to the national origins system. Further, there would be the additional numbers accompanying, or following to join.

FINGERPRINTING

The American Legion is opposed to granting the Attorney General discretionary power to waive the requirements of fingerprinting of aliens entering the United States. Such requirements are standard practice in the United States and, for security reasons, our standards should prevail.

We, likewise, oppose the waiver of travel documents for aliens coming from all Western Hemisphere countries and, on a basis of reciprocity, in the case of all visitors and crewmen. This proposal is extremely dangerous to the internal security of our Nation.

AMERICAN LEGION APPROVALS

We will not oppose, but warmly approve, the admission of orphans under proper adoption procedures.

We approve the legalizing of illegitimate children of American GI's.

We approve the entry of tubercular cases, when they are spouse, parent or child of a United States citizen and when required conditions and controls apply.

We will not oppose the use, under the McCarran-Walter Act, of some 18,000 visa numbers remaining when the Refugee Relief Act of 1953 expired. We strongly urge, however, that these numbers be returned to the countries to whom they rightly belong, principally Western Germany and Holland.

SUMMATION

The American Legion urges thoughtful consideration of serious internal population problems certain to confront us in the next few decades.

Let's take a look at some of the facts and projections. Our present population has now passed the 170 million mark; by 1981 it will be 250 million; by 1993 it will reach 300 million and by the year 2000 we will have more than 330 million inhabitants. These figures are high level projections of the United States Census Bureau and other expert projectionists. Bear in mind that they do not give consideration to the proposed substantial increases in immigrants permitted to enter the United States. Should the proposed amendments to the McCarran-Walter Act, and the proposals outside the act, become law, a fair estimate would be the addition to these figures of 30 to 40 mil-

lion within the next 4 decades. Thus, we would be further compounding a vital problem that has our population and economic experts puzzled to a degree of near frustration.

Our present explosive birth rate (4,207,000 in 1956) is certain to increase annually, since "the bigger we get the faster we grow" and problems of food, water, jobs, housing, and sustaining our American standards and our American way of life, multiply in proportion, and become increasingly difficult of solution.

The American Legion has, for the past 38 years, continuously studied, and taken a deep interest in our protective immigration laws. In view of the certain and rapid increases in our native population, we are therefore of the firm opinion that these proposed amendments, designed to multiply our present influx of immigrants, are not in the best interests of our country at the present time, and create dire forebodings for its future welfare.

The United States has taken its stand. That stand is within the confines of four inflexible walls—the Atlantic, the Pacific, the Canadian border, and our southern boundaries. Here our children and generations to come must cast their lot and mold the future destiny of our Nation. We seek no satellite conquests in the name of breathing space, or bread-baskets. We covet no other lands or possessions.

We cannot arrest or change God's immutable laws of nature as they apply to the perpetuation of the human race. We, therefore, are confronted with complex future problems of population pressure of our own, without endeavoring to alleviate the age-old over-populations of the world, thus, jeopardizing our own progeny and future national welfare.

The American Legion urges serious consideration of its position, on the part of the Subcommittee on Immigration and Naturalization of the Senate Committee on the Judiciary, to the end that these dangerous amendments and other proposals be rejected.

More Bargaining Power for Farmers

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. JOHNSON. Mr. Speaker, farmers belonging to the Wisconsin Farmers Union were recently asked in a poll to pick one of a group of approaches by which they might increase their bargaining power. By far the largest number of them favored the establishment of national cooperative marketing associations. The results of the poll were published in the Eau Claire (Wis.) Leader as follows:

STATE FU MEMBERS FAVOR CENTRAL CO-OP MARKETING

CHIPPEWA FALLS.—Wisconsin Farmers Union members have cast an overwhelming vote for centralized cooperative marketing associations as the best means for obtaining more bargaining power for farmers, it has been learned here.

Results of the farm bargaining power ballots, which were distributed among all Farmers Union locals in the State, reveal that 70.4 percent of farmers responding favored marketing co-ops of national scope over three other suggested approaches.

Farmers were polled on the question: "Which of the following approaches do you favor as being, in your opinion, the best way of obtaining more bargaining power for farmers?" Here are the results:

National cooperative marketing associations: 70.4 percent;

Nationwide strikes on farm commodities: 8.4 percent;

Self-help programs with production controls: 8.4 percent;

Government programs with production controls: 9.6 percent;

None of these methods: 3.2 percent.

Size of farm operations apparently had little influence upon the farmers' choices. A breakdown of farm-size figures shows that 17 percent of farmers who reported their acreage have farms of 100 acres or less; 54 percent are in the 100-to-200-acre class, and 29 percent operate farms of over 200 acres. No significant differences were found between the small and larger farmers in regard to their preferences.

Age of the farmer also had little effect upon selections, with two exceptions. Farmers over 50 cast over half of all votes for Government programs and had the smallest proportion choosing nationwide strikes.

Results of the poll seem to substantiate the fact that a growing percentage of Wisconsin farmers are in the upper age brackets. Forty-two percent of the farmers who gave their ages were over 50; 43 percent were in the 35-50 group, and 15 percent were under 35.

Of the 3 percent who listed other preferences, little less than half (46 percent) selected combinations of the 4 suggested approaches, and 39 percent listed the Brannan plan. Only one answer was critical of the proposals on the ballot. "Get the Government mules out of farming" was this farmer's comment.

Federal Aid Is a Mirage

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. HENDERSON. Mr. Speaker, as the number of Federal-aid programs increase, it is sometimes assumed that the National Government is more and more responsive to the needs of the people. That this assumption is not necessarily correct becomes clear when we realize that these programs syphon off tax funds into the Treasury in Washington to pay for their support. With each new program, sources of revenue for activities which are legitimate provinces of the States and local communities are further reduced. This, of course, increases the vassalage of State and local governments to a swelling Federal colossus in Washington.

Too often, we are prone to forget that Federal-aid programs are very costly, indeed, and that the benefits received from them are not simple largesse from a responsive Federal Government. More often, such programs erode local and State initiative and responsibility and remove Government one more step away from the people to increase the growing and costly national bureaucracy.

I wish to call to the attention of my colleagues an editorial from the Marietta Daily Times, of Marietta, Ohio, for August 14 which analyzes the "mirage of Federal aid." The editorial is as follows:

FEDERAL AID IS A MIRAGE

Whatever aid States such as Ohio and communities such as Marietta get from the Federal Government is a pittance compared to what both State and city lose every year to Washington, where the idea of give it to us and we'll send some of it back got started.

Financial aid to States and local governments, divided among several of the general appropriation measures, has long been a major item of expense in the Federal budget and has been increasing. According to a Tax Foundation report, it was $2,657 million in 1954, $3,124,300,000 in 1955, $3,752,600,000 in 1956, and $4,454 million in 1957. It will go above $5 billion in fiscal 1958. The amount is not certain at present but will at least be somewhat less than it would have been had the proposed school construction assistance program been enacted.

There are right now 83 programs of Federal aid. New ones are continually being proposed, but fortunately not all of them get beyond the proposal stage.

Most of the Federal assistance is in the form of grants-in-aid, or outright gifts from the Treasury of tax money collected in the local communities throughout the land. The remainder consists of loans and repayable advances. In contrast to the billions handed out in the last fiscal year, collections of $492,736,000 (estimated before the year's end) were credited against the expenditures.

Principal factor in the big increase for 1957 over the previous year was the aid to States from the newly created highway construction trust fund. This amounted to $1,136,800,000. The corresponding item for fiscal 1958 is $1,654 million. These still are not as big as the sums allotted for the numerous programs coming under the heading of social security, welfare and health, which have long been the dominant fields of Government's do-gooders.

The total in these fields for 1957 reached $1,920,600,000, the Tax Foundation reports. That tops highway aid and dwarfs aid to education and research, $207,500,000, and to housing and community development, $243,400,000.

One of the newest programs in the public health field is that of grants for construction of local sewer facilities. In 1957 an estimated $7 million of the authorized $50 million was spent. The remainder was carried over into the new fiscal year, making $93 million available.

Government aid is a mirage that has been created to soften objections to bigger and bigger Federal spending. Since there really is a limit to the amount of money that can be wrung out of the taxpayer, who must support government on all levels, it follows that every city and State could have more tax money available if Washington spent less on aid. Only Congress can cut down its flow.

Technology, a Threat to Democracy

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an arresting article by Assistant Attorney General of Missouri

Hugh P. Williamson, reprinted from the summer issue, 1957, of the American Journal of Economics and Sociology, as follows:

TECHNOLOGY, A THREAT TO DEMOCRACY

(By Hugh P. Williamson)

Among the many and diverse factors which today are threatening the good health of democracy in the United States must be counted that electronic device, which is able to transmit the voice and image of one individual into the presence of numberless other individuals, at great distances and over vast areas, simultaneously, thus enabling a mortal person to approximate ubiquity. Television will accomplish this seeming miracle for anyone who has, and is willing to expend the financial resources necessary to command its services.

It is obvious that television, with its unique qualities of personality projection, is an ideal medium for political campaigning, or for any other propaganda effort. Its effect upon the traditional concept and pattern of our democratic process as it directly relates to office seeking, and only a little less directly to governmental control, is, however, disturbingly disruptive.

This traditional concept is that, in this free land, any person who possesses the statutory qualifications may seek, with reasonable hope of success, any office in this Nation from the lowest to the highest. These legal qualifications are few and simple and are possessed by the vast majority of our adult citizens. From the formal beginning of this Government in 1789, and for many years afterward, this concept that any office was within the reach of any citizen was more actual than theoretical. That ideal was realized in numberless instances. This concept remains today as one of the cornerstones of our governmental house. But it has become far more theory than fact, an illusion rather than an actuality. The reasons for this change would seem to be two, a vastly increased population, and technology, of which television is the most recent and dramatic expression. Due to these developments, all offices above the county level, which throughout much of our national history could be attained without the expenditure of big money, no longer can be. Let us look at the reasons for this change:

I

Long political experience has firmly established the political principle that the great objective of every candidate should be to be seen and heard by as many voters as possible. The soundness of this principle has been repeatedly demonstrated by the fact that in the large majority of instances, and in the absence of unusual circumstances, those candidates are successful who are seen and heard by more people than are their opponents. The reasons are obvious. One is that a majority of voters do not compare, analyze, and determine in their minds, by a dispassionate intellectual process, the candidate best qualified for office. On the contrary their vote is cast for that candidate with whose face and name they are most familiar. That greater familiarity is, of course, achieved by the simple process of more frequent impressment, which is effected by simple repetition. The same policy is also effective, although perhaps in somewhat less degree, with the thinking, or egg-head voters because if the candidate has any substance in his campaign, and most candidates do have, its presentation will usually have some effect. This is partiularly true if rival candidates, through negligence or lack of opportunity, do not present their cause for the consideration of the intellectual voter.

Until the advent of technological devices there was substantial equality of opportunity among candidates in this respect. This was true, for example, when the recent juvenile hero, Davy Crockett, ran for Congress in Tennessee. He was, reputedly, a financially poor man, but even so he was able to obtain and maintain an adequate riding horse, since the horse cost very little and its maintenance almost nothing. And Crockett's opponent, although he may have owned half of the State of Tennessee, had no better means of transportation than Davy, because horseback was the best means extant, and that means was available to almost everybody who wanted to seek office. And Davy certainly could ride as far, and being a superman, probably much farther, and see as many voters in a day, and probably many more, than his opponent. The opponent, being rich, could buy more whisky for electioneering purposes. But in the more basic things of imprinting upon the mind of the voter a name, a face, a personality, and presenting a cause, there was substantial equality of opportunity. Which candidate saw more voters, made the better impression, and so gained more votes, was a matter that depended directly upon the respective powers, abilities, energies, and fundamental worth of the respective candidates. Neither had much if any artificial advantage over the other. This, then, surely was democracy in very nearly a pure form. Strangely enough, almost every technical advance made by us since Crockett's time has lessened this equality and increased the part played by money, to the ever-increasing advantage of the candidate who had the most of it.

The coming of the railroads, and the great increase in the production and distribution of newsprint, were great factors in this process of democracy's debasement. The wealthy candidate could travel much farther and faster and so contact many more people than could his financially poor opponent, since train travel was far more costly than riding a horse about the country. In addition to this, money could buy advertising in newspapers. Enough advertising in the period of the political press, could usually gain for the advertiser the editorial support of the paper and a certain amount of free advertising, since almost all editors were human beings, possessed of the usual human weaknesses.

The general use of automobiles, which improved roads made feasible around 1910, gave the candidate greater mobility. They quickly became a campaign necessity, and also placed a greater financial burden upon the candidates.

Following the factors of railroads, newsprint, and motor vehicles in the campaign field, was radio. Candidates had been tentatively experimenting with it for several years prior to the general election of 1932, but until that time radio could not be said to have been a major campaign medium. However, in the presidential race that year it became of vast importance. Franklin Roosevelt, the Democratic candidate, and radio seemed to be expressly designed for each other. Not only did he use it with great effectiveness in his initial campaign, but to an even greater degree in maintaining, consolidating, and increasing his popularity with the American people. His inaugural address, delivered on March 4, 1933, in which he said, "We have nothing to fear but fear itself," calmed the panic feelings in millions of his fellow countrymen. And his famous fireside chats made him a welcome and familiar visitor in almost all American homes that had radio sets, which included most homes. Meanwhile, however, the candidate for nomination in a party primary campaign, who had limited financial resources, very severely felt the strain of technology's latest contribution to electioneering. While it was highly effective, it was also exorbitantly, and for extensive use, prohibitively, costly. And so the former Davy Crockett era of substantial equality of election opportunity between rich and poor receded yet farther into the background as the role of money loomed ever larger. While primary candidate John Poorman was addressing, in person, a group of 50, 75, or a few more, voters, his opponent, Bill Moneybags, or perhaps someone more talented and personable, was sitting in a radio booth presenting his case in his behalf, to thousands and perhaps to hundreds of thousands of voters.

II

With the coming of television, which amazingly stimulates the appearance to the viewer of the person projected by the machine, the climax of technology has seemingly been reached, as has also the disparity of election opportunity between the rich and the poor primary candidates, because, as compared with the cost of television, radio campaigning is a dime-a-dozen medium. Furthermore the enormous increase in population, an increase which steadily continues, makes it increasingly difficult for a candidate to see personally more than a small percentage of voters, a percentage which is decreasing in general ratio to the increase in the number of voters. This fact of course increases the value of the electronic devices by which means a candidate can come into the presence of a million persons as easily and as quickly as he can come into the presence of a hundred.

The specific result of this situation is that to make an adequate primary campaign on a statewide level, the candidate must spend, or have spent in his behalf, a very large sum of money, a sum so large that the man of even better-than-average financial condition cannot even start to do it. This means, it would seem, that in the future candidates will largely be of two kinds only. One will be the very wealthy person who can afford to risk the expenditure, and the loss, of anywhere from $50,000 to $100,000 in a primary campaign. The other kind of candidate will be the person who, unable to finance his campaign himself, permits it to be subsidized by special interest groups. Such groups do not put money into a campaign out of admiration for the candidate, or because they believe that he will make a good public official. They do so only after a thorough and ironclad understanding with the candidate that if elected he will do the bidding of the group that financed his campaign, and will use all power of his office to further the objectives of the group, even though such objectives are contrary to public policy and the general welfare. Every dollar spent by such a group is spent in the expectation that it will return, manifold.

Thus, in the future, it seems inevitable that candidates for office on the State level, and to only a somewhat lesser degree on the State senatorial and congressional levels, will be either men of great wealth, or men of no principle who go into office in chains and fetters. This is a far cry from the times of Davy Crockett, and presents but a bleak outlook for democracy, of which indeed it makes a solemn mockery. It represents a rather amazing return, after a long departure, to a part of Alexander Hamilton's concept of government by the rich and well-born.

Certainly the possession of great wealth does not always, and necessarily, mean that a person will not make an excellent public official, as many wealthy public officials have amply demonstrated. But, on the contrary, it cannot be denied that the viewpoint of the man of average income is not that of the wealthy man, and that the immediate interests of the two are not the same. And no one, of course, would take the position that a situation in which only a wealthy person could seek public office was democratic or good. It is too obvious to need elaboration that a person such as the subsidized candidate, who uses all the resources of an office for the benefit of a special interest group, to the extent of his influence completely defeats the democratic objective.

For a good many years prior to the turn of the century observant persons of good in-

tent had discerned this evil and had recognized its threat to the democratic process. General recognition of it was strong enough, in Missouri, as early as 1893, to result in the passage of an act "to prevent corrupt practices in elections, to limit the expenditures of candidates."

In 1921 this law was amended and the amount of permissible expenditure was increased.

In 1952 the attorney general of Missouri, at the request of the secretary of state, rendered an official opinion holding that the amount which a candidate could lawfully spend in a primary campaign for United States Senator was $16,786, exclusive of actual traveling expenses. This same figure would also be applicable to candidates for all other offices on a statewide level. Due to some increases in population this amount will be slightly higher in 1956, but not much. It is an amount which is wholly unrealistic inasmuch as strict compliance with it would not enable a candidate to do much more than makes the initial moves in his campaign. However, the corrupt-practices law is so framed that the candidate can remain, technically, within its narrow confines at the time that vast, and completely unlimited, sums of money are poured into his election effort.

As a solution to this situation it may be suggested that the corrupt practices law be so rewritten that no evasion of it is possible. The answer to this is that, even if that could be done (which, for many reasons, is highly doubtful), it is not entirely certain that it would be desirable to do so. It is true that a primary campaign expenditure of $16,786, in addition to traveling expenses, would place such a campaign within the reach of many would-be candidates, and in that respect it would we highly desirable. However, it is also highly desirable, from the viewpoint of functional democracy, that as many voters as possible know as well as possible the candidates from among whom they must make a choice. If, as stated, every primary candidate were limited to a total expenditure of the sum which is now fixed by law, the voters, to a very large extent, would have to choose blindly because the candidates would not be able to make themselves generally known. If the permissible amount were raised to around $50,000, the bare minimum now necessary for a serious campaign, then automatically many worthy potential candidates of limited financial resources would be eliminated.

It would appear that we are in a curious situation. In radio and television, we have the devices that could do much to make the democratic process effective insofar as by these media practically all voters could become thoroughly familiar with candidates for public office. This, as I stated, is highly desirable. But instead these media, for the reasons discussed above, are highly corruptive of the democratic process.

III

It might seem that this very undesirable situation, which appears to be incapable of change by any method now available, would call for State and Federal control. The only way, it would seem, in which this could be done (at least on the State level) would be for the State to allocate to every primary candidate, of every party, an amount of money sufficient to enable the candidate to make a campaign of such a nature as would enable the voters to become familiar with them.

Such a procedure would appear to have some features to recommend it. It would very largely eliminate the present situation of vast inequality of election opportunity and would, in this respect, go far toward a return to the democratic times of Davy Crockett, in which the success of every candidate would largely depend upon his qualities of body, mind, and spirit. It would facilitate the democratic process by enabling the voters to be familiar with all candidates for office and so to make a more intelligent choice. Furthermore the amount of public money which would be required for such a plan would not be, comparatively, very significant.

But such a plan would have numerous obvious weaknesses and dangers. Government control can be impartial and dispassionate; in the hands of partial and selfish public officials, it can also become highly discriminatory and oppressive. Many apparent difficulties would present themselves in its actual administration. Doubtless, if a primary campaign could be made without expense to the candidate, many frivolous candidates would appear and demand an allocation of money from the State for campaign purposes. Eliminating such persons would present serious difficulties. It would appear that such a plan would be much more easily followed in a general election, after party candidates had been elected. Such a plan, however, is also far less necessary in a general election because there the major political parties are usually able to muster enough money to get their candidates and their issues before the voters. It is in party primaries, where each candidate for nomination is very largely dependent upon own resources, that the great disparity of opportunity exists.

It is suggested that the situation here discussed is a serious threat to the democratic process, which it has already seriously debased. Certainly a solution to the situation can be found. Finding it is very much worth our time and thought. If democracy is to withstand the enormous stresses and pressures which are being brought to bear upon it, and to function in a manner which will, by example, persuade the doubtful peoples of the world that it is the best of all possible forms of government, it must not be cheapened, weakened, or adulterated.

Mr. Speaker, in the same vein, and further emphasizing the effect on our democratic processes, Senator JOHN F. KENNEDY, of Massachusetts, in the introduction to his recent book, Profiles of Courage, says:

Our everyday life is becoming so saturated with the tremendous power of mass communications that any unpopular or unorthodox course arouses a storm of protest such as John Quincy Adams—under attack in 1807—could never have envisioned. Our political life is becoming so expensive, so mechanized and so dominated by professional politicians and public relations men that the idealist who dreams of independent statesmanship is rudely awakened by the necessities of election and accomplishment.

Only the very courageous will be able to keep alive the spirit of individualism and dissent which gave birth to this Nation, nourished it as an infant and carried it through its severest tests upon the attainment of its maturity.

Labor Racketeering Embarrasses Union Members

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial from the Janesville (Wis.) Daily Gazette under date of August 14 which calls attention to the fact that the present exposé by the McClellan committee is quite embarrassing not only to the people but to the rank and file of union members. The editorial follows:

DORIA, DIO, HOFFA & CO.

Members of labor unions and the public are getting a new look at a sinister coalition of rackets and labor leaders that has put big labor in a most embarrassing light. The Senate Rackets Investigating Committee under Senator MCCLELLAN, Democrat, of Arkansas, is turning the spotlight on hoodlum-labor alliances that are liable to be costly to union labor's power.

The public, rank and file union members and many employers have been the scapegoats of rackets, as brought out in the hearings. Anthony Doria, former secretary of the Allied Industrial Workers, for example, admits that he kept thousands of dollars in a secret strongbox in his office in Milwaukee, but never accounted for it to his union members.

Doria protested that New York racketeer Johnny Dio, the convicted hoodlum extortionist, wanted to go straight but that a "cruel society" wouldn't let him. It was Doria who brought Dio into labor union affairs.

Dio is just a good, softhearted fellow who broke down and cried when his henchmen were caught thieving, Doria told the Senators. He is a frustrated man, poor fellow, who only wanted to be an honest labor leader, Doria insisted. But the investigators were tracing Doria's financial wizardry and what became of $9,620 of union funds he deposited to his own map-making company, and other union funds he controlled.

Dio has denied he had any connection with the acid blinding of labor columnist Victor Riesel, but he is under indictment for that act.

Dio took over local 102 of the UAW–AFL after 1952 when the local was chartered to organize New York taxi drivers. But this local became a nest of hoodlums, the committee shows, and these hoodlums spread out into teamsters' locals. They were especially chartered to elect a man picked by Jimmy Hoffa, Midwest boss of the teamsters, to control teamster affairs in the New York area, the testimony indicated.

There is an alliance between Dio and Hoffa, the committee contends, to build up Hoffa's power on the east coast. Hoffa is in line to succeed Dave Beck as teamster international president. He has declared that he will bring all transport workers into one giant union to control transport everywhere, big and little.

Certainly, with this kind of tieup between the rackets and labor, and with Hoffa in command of transport unions the Nation over, the whole country could soon be strangled. Surely, the Senate and Congress must take into consideration the dangers posed by such monopolistic power, especially power in the hands of such gentlemen as Doria, Dio, Hoffa & Co.

Farmers Are Caught Between More Than the Cost-Price Squeeze

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, a constituent, Mr. Virgil Knudson, of Gully,

Minn., has most clearly described the critical situation in which a good, efficient, and responsible family farmer finds himself when caught between the present administration's antifarmer farm program and the uncontrolled forces of nature, in the form of floods which wipe out entire crops. Between the lack of flood control in these areas and the cost-price squeeze, farmers are being "sucked under." The family farmer—the symbol of our way of life—cannot long survive against the onslaughts of both the sliding scale parity and the uncontrolled forces of nature.

Under leave to extend my remarks, I insert this excellent letter which so clearly describes a tragic situation, which need never have been.

The letter follows:

GULLY, MINN., *August 15, 1957.*

COYA KNUTSON,
Member of Congress, House Office Building, Washington, D. C.

MRS. KNUTSON: First, I would again thank you for the ardent representation you are giving us. We do appreciate your every effort.

To quickly brief you in our status, you will perhaps recall that my father (C. M. K.) and I are partnership farming 1,040 acres north of Gully on the Lost River. This enterprise was started upon my return from the service 11 years ago. We started with one quarter section of cheap land and have sweat up to our present status. In these 11 ensuing years we have lost 3 entire crops from the flooding of Lost River—11 years we have promoted and waited for the channeling of the river. With the present price-cost squeeze and this year's entire crop loss, we have been forced deep in debt. The situation we are facing is critical in our lives. Should be discontinue while we are still able to sell and leave farming with more assets than which we started? Mr. Benson would say, yes, of course. Perhaps you would say it depends on your individual situation. We find it hard to find a basis for clear, clean-cut facts upon which to establish a definite decision. Everyone desires to help us (the family farmer) but no one can do anything basically constructive. Perhaps I am unduly pessimistic today since yesterday we visited with Mr. Anderson, our district FHA representative, and found they have no money applicable to our situation. Well Coya, it summarizes to this. Dad and I have concluded we can no longer survive the combined elements of a price squeeze and Lost River floods. Without one or the other we will continue in our life's ambition—farming.

We have only one hope. The passage of the rivers and harbors bill, including Lost River. Should this bill be rejected by either Congress or the President, two more farmers hang up their hats to make room for Mr. Benson's farm barons.

I am sincerely sorry to take of your time for another tale of woe, but you have expressed a desire to know the facts. We realize your situation and your efforts. The only further request we might make is that you would please keep us informed as to every move this rivers and harbors bill makes. You see so much depends on that bill for us—our future.

Our: C. M. Knudson, father; Alice Knudson, mother; Mona Knudson, wife; Julie Knudson, daughter; Gail Knudson, daughter; Virginia Knudson, daughter; Jack Knudson, son.

Yours truly,

VIRGIL KNUDSON.

Birthday of the Honorable Bernard Baruch

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. ROOSEVELT. Mr. Speaker, it is a great pleasure for me to remind my colleagues that today marks the 87th birthday of one of our greatest living Americans, Bernard M. Baruch, whom we all admire as a master mobilizer of our national strength and security.

Warm congratulations are due this vulnerable elder statesman whose lifetime of devoted service to his country and his oft-repeated recommendations over the years may be aptly symbolized by the phrase: peace through strength.

Not alone, however, is this his birthday, but it is also the publication date of the first volume of his autobiography entitled "Baruch: My Own Story." This book is an absorbing record of events that molded Mr. Baruch's life and, in a larger sense, many of the events that are recounted had a significant impact on our American history and the days since the Civil War.

On the occasion of Mr. Baruch's 87th birthday and the publication of his book, I consider it an honor to offer public tribute to this stalwart American. It is with a feeling of admiration and deep respect for him that, under unanimous consent, I place in the Appendix of the RECORD the excellent review by Arthur Krock of Mr. Baruch's book which appeared in the New York Times of August 18, 1957:

LOOKING BACK UPON A RICH LIFE—BERNARD BARUCH RECALLS HIS ADVENTURES IN WALL STREET AND IN PUBLIC SERVICE

(By Arthur Krock)

This is the first volume of the autobiography of an American whose prescience, integrity and disciplined mind brought him fame and fortune—"at 32 I had in cash $100,000 for every year of my life." But, except under Woodrow Wilson, as Chairman of the War Industries Board in World War I, Bernard Baruch, for all his miraculous prescience, though often called on, was almost as often disregarded. He accurately forecast events for succeeding Presidents who summoned him to counsel and public service, and he told how popular action would be shaped by these events. Yet, save for programs for stockpiling essential raw materials and regulating their prices and a brief adherence to his plan for checking the atomic weapons race, most of his warnings and formulae in the areas of economics and diplomacy were not acted on until it was too late to realize their full potentials.

That is the dismal history of Baruch's efforts to prepare the Nation for World War II, to dispel the awful threat of nuclear war and to head off this conflict and the war in Korea. But Baruch makes no lament for this irony in his experience. Elaboration of the point would be alien to his trait of looking forward; also, it developed after the period in which this volume comes to an end. But to a reviewer familiar with Baruch's Government services after Wilson's time, the anomaly comes strongly to mind in reading the last chapter, wherein Baruch gives his view of the qualities the American people and their public servants will require to meet the tests of the times and his formula for saving civilization from atomic war.

As a financier, in contrast to his larger role as a statesman, Baruch also knew disappointments. From the time when, as a lad in Camden, S. C., he watched the trains go by he always wanted to own a railroad. He almost attained his ambition in the struggle for control of the Louisville & Nashville. Once he came nearer to his goal.

This opportunity arose during an evening at bridge. The matter of Baruch's ambition having been mentioned, Thomas F. Ryan and to James B. Duke, "Why don't we buy the railroad for Bernie and let him run it?" The road was the Atlantic Coast Line, and Henry Walters, principal owner of its stock, was willing, but the purchase, which Baruch was resolved to finance himself, was canceled by the bankers of the ACL.

In each instance the frustrating power was J. P. Morgan, Sr. As the book makes plain, one of Baruch's great aspirations was an association with Morgan he could never attain. So much did he desire this that on an occasion when Morgan was supporting a panicked market, Baruch decided to hand the great banker in person a certified check for $1,500,000 in support of the effort. He ended by sending it through the mails to a committee.

On another occasion he offered Morgan participation in the fabulous Texas Gulf Sulphur enterprise that made Baruch and William Boyce Thompson many millions. When Baruch told Morgan, "I personally will gamble $500,000" on the project, the banker coldly replied, "I never gamble," and turned away. And once, when Baruch had produced a miracle of raw materials investment, Morgan sold a large block of shares in it to Baruch's partner without giving Baruch the chance to buy that to which he felt he was entitled. None of this experience, however, affected the judgment expressed in this book that Morgan was the greatest mind and most constructive force in our financial history.

Self-discipline and organization he puts high among the requirements for a financial career such as his, and for the United States in this perilous world. He writes: "We should ask nothing of our Allies that we are not prepared to do ourselves. * * * The friendship of other nations cannot be bought * * * I for one will never concede that we cannot do as much in defense of our freedoms as any enemy may be doing to destroy them."

Lest an erroneous impression of the autobiography may be given by stress on these aspects, the prospective reader should be notified at once that this is an exciting tale of men and millions, of titanic conflicts, speculations and panics in Wall Street and of reconstruction times in South Carolina. It also is a tale of tender family relations and parental reverence. And it is sufficiently salted with humor and peppered with anecdote to produce a literary item of absorbing interest.

Appropriately, the major part of the book relates the American financial story from the panic of 1893 to the beginning of World War I. The characters are giants—Morgan, Jacob Schiff, James J. Hill, Edward H. Harriman, John W. Gates ("I saw him bet $1 million at baccarat in the old Waldorf"); James R. Keene ("easily head and shoulders above any speculator I ever knew"), Eugene Meyer, Jr. ("a man of the highest integrity"), Daniel C. Jackling, and the Guggenheims.

And there are quieter folk; but of equal importance to the narrative, and more charming.

Among these was Prof. George B. Newcomb of the faculty of the College of the City of New York. He taught young Baruch economics, hammering at the inevitable workings of the law of supply and demand, and "10 years later I became rich for remembering his words."

There are the simple Negroes on Hobcaw, the South Carolina plantation bought by Baruch in his thirties out of sentiment for his native State: Moses Jenkins, whose favorite sermon was about Phar-a-oh and De Chillun; Abraham, who failed to attain his repentent wish to join the church, late in life, because he could not believe with the deacon that "dem hongry African lions done spared de Prophet Dan'l."

And there are the late Senator Key Pittman, of Nevada, and Justice Richard Lydon, of New York, who rushed into the flaming manorhouse at Hobcaw in the agonized remembrance that a fine barrel of corn licker was about to be consumed with the rest of the property.

Mr. Baruch describes the conflicts among the giants of finance in the greatest stock market wars of history. This extract from an account of the fight for control of the Northern Pacific is an example: "On the exchange floor fear had completely taken the place of reason. Stocks were being dumped wildly, dropping from 10 to 20 points. There were rumors of corners in other stocks. In a panic it is not easy to avoid being swept along with the mad tide * * *. However, having made my plans in advance, I was able to step aside and keep my wits. When stocks were dumped I bought—my net profit that day was more than I made on any other day, before or after."

"On father's side I am the son of an immigrant," Baruch writes, in an early mention of the gallant surgeon of the Confederate Army who labored with the wounded at second Manassas, Sharpsburg, Gettysburg and the Wilderness, and lived to found, with his son's help, healing institutions of hydrotherapy in his adopted city and State of New York. "On mother's side I am descended from a family which came to America in the 1690's" is the author's first reference to Belle Wolfe Baruch, for whose sake he observed the Jewish ritual, and in her memory still observes the holy days (though "I hold to no creed"); whose reminder that "tomorrow is Yom Kippur" was enough to make him abandon a promising "short" drive in the market (incidentally to his unexpected profit), and whose forgiveness of his early propensity to visit games of chance contrived to turn his steps to Wall Street.

"New York City at first overwhelmed and terrified me," writes Baruch of his first view, at the age of 11, of the city where he was to become a legend. There too, he had his first encounter with a discrimination, unknown in Camden, "which I was to experience many times in my later life." It barred his Episcopalian daughters from their mother's dancing class, and would have excluded them from the private schools they attended had it not been for their rector's intervention. "But laws," he comments, "will not wipe out bigotry and oppression."

He got his first job at $3 a week with a wholesale supplier to druggists, and, taking some securities downtown, "I first saw J. P. Morgan's famous nose and tawny eyes. "Then as a runner in Wall Street, still at $3 a week, he became an expert at arbitrage, amassed a few extra dollars and began his acquaintance with the stock market. ("It is merely the register of human reactions to events as affecting the future * * * it is merely people trying to read the future.") And in this reading the most proficient ultimately was B. M. Baruch.

His real start came when he joined the firm of A. A. Housman at $5 a week and attended night school to study bookkeeping and contract law. Then he took to the study of railroads, especially those reorganized after the panic of 1893, and chose the ones whose bonds he believed would surely rise. He urged them on the firm's customers, and himself would buy 10 shares at a time on a 10-percent margin.

Part of the first substantial capital he made—$60,000— was acquired by alert exploitation of an advantage none can have in this electronic age. Baruch, at Long Branch, heard from his partner of Admiral Schley's victory at Santiago and decided that stocks would rise. The pair, at Baruch's suggestion, chartered a locomotive to take them to New York; at sunrise, having telephoned customers for orders, they bought stocks on the London market and then sold them at a high profit on the expected rise in New York.

Later came the association with Ryan and Duke that paid out in millions. Later came the day when Baruch, asking to see James Stillman, president of the National City Bank, and, referred to the cashier, opened an account with a certified check for $1 million; the furious and profitable episode of the Northern Pacific "corner" by Harriman; and then (mark the date), in September 1929, with a vast fortune in securities, the decision to turn into cash "everything I had."

This review of a book may fittingly conclude with the story of another book. It is a copy of Oliver Twist, and it was presented to a schoolboy by Miss Katherine Blake, teacher at Public School 69, New York City. The citation describes as well as any a life that now has spanned 87 years. It reads "To Bernard Baruch, for gentlemanly deportment and general excellence, June 1881."

Performance Record Speaks for Itself

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. PELLY. Mr. Speaker, by Wednesday it should be clear as to whether or not we will have an opportunity to act on a civil-rights bill at this session—and perhaps likewise we will know if the bill is to be a gesture or if it will actually protect the voting right of southern Negroes.

As for me, I shall continue to the last trying to strengthen as much as possible any bill before the House; but let me make it clear that when the chips are down on final passage I shall vote in favor of any measure we have before us, if I believe such legislation is better than no legislation, because any step in the right direction is better than standing still as we have for 82 years.

As to all this hue and cry about a delay for political advantage, let me say that nothing said or done by the Democrat propagandists can whitewash their party record or brainwash the public.

President Eisenhower and the Republican Party have a performance record that speaks for itself.

Not a Republican voted against this year's civil-rights bill in the Senate. In the House, 168 Republicans voted for the civil-rights bill and only 19 against, while 107 Democrat Members voted "no" and only 118 "aye." In other words, the record shows the membership in this House is: Republican about 9 to 1 in support of civil rights; Democrats not quite half and half.

In 1956, in connection with last year's civil-rights bill, the Republicans voted 168 in favor and 24 against, whereas the Democrat vote was 111 in favor and 102 against.

So it has been in the period 1933 through 1952. During those many years that the Democrats controlled the Government, of the 19 important Senate votes on civil rights, the Democrat majority voted against civil rights in every case except 2. Twice not one single Democrat voted favorably; twice only one Democrat joined the Republican majority supporting civil rights.

During those same years, 1933 to 1952, here in the House of Representatives in 7 out of 14 votes the majority of Democrat Members failed to give civil rights their vote in favor. On these same 14 recorded votes a majority of from 68 percent to 100 percent of Republican Members supported civil rights.

The Senate record shows in 3 cases Republicans were 100 percent in voting for civil-rights legislation. Only once in 19 important votes did Republican Senators fail to give a majority of their votes in support of a civil-rights issue so vital to minority groups.

So, Mr. Speaker, if anyone fails to credit the Republican Party, and the party of Lincoln, from a continuing effort to establish the freedom of voting franchise, I say let the record speak for itself.

As for me, I have been a part of the bipartisan effort to get a bill passed. Let no one say that my efforts and interest in that direction in any way have diminished.

I am for a strong civil-rights bill, yes; but I am for a civil-rights bill, and I am for a civil-rights bill this year. And as for the false and misleading statements about the Republican Party, as I said, look at the record—the record of the past and the record of the future.

Soil and Surplus

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Soil and Surplus," which appeared in the August 14, 1957, issue of the Park City Daily News, of Bowling Green, Ky.

The editorial is as follows:

SOIL AND SURPLUS

The administration's soil-bank program, now in its second year, is aimed, of course, at reducing the Nation's huge farm surpluses. The somewhat limited record so far indicates that it may not prove too effective in achieving that result.

The bank involves six main commodities—wheat, corn, cotton, tobacco, rice, and peanuts. The biggest portion of the bank is an acreage reserve, created by farmers taking land devoted to these crops out of cultivation. The law specifies, too, that land thus set aside cannot be used to grow other crops.

Last year the act was adopted too late for full effect, but about 12.2 million acres (10 percent) of the total allotted to the 6 listed crops went into the acreage reserve. Most of this was taken from wheat and corn allotments.

Farmers' payments for participation in this program came to $260 million. They got another $25 million for taking part in the other aspects of the soil bank plan—the conservation reserve.

But despite the acreage withdrawals, wheat and corn in 1956 both registered 7 percent production increases. Output of the other 4 crops dropped varying degrees from 15 to 1 percent. Most experts ascribed the declines, however, to widespread drought rather than to the soil bank.

As of April 30 this year, Government price supports on 1956 crops had fallen 17 percent below the previous year to a figure of $2.8 billion. And commodities in Federal inventory or pledged for farmers' loans down to $7.8 billion from $8.8 billion the year before.

But the record suggests that sharply boosted exports of wheat and cotton were more responsible than the soil bank for the whittled surpluses.

In 1957 the amount signed up for the acreage reserve is 21 million acres, against last year's 12.2 million. About three-fifths comes out of the wheat allotment.

It's too early to say how 1957 production will turn out. But first indications for wheat are that output will fall perhaps just 3 percent below 1956, despite the fact that nearly 13 million out of a 15-million-acre allotment are in the soil bank.

As so often before with other efforts to cut back production, experts are finding that farmers set aside their poorest acres and step up output to new highs on the remaining. It's a hard game to lick.

Equal Rights Amendment

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following information, which I received in a letter from Mrs. R. N. Longwell, of Los Angeles, Calif., California chairman of the National Woman's Party. This material expresses ideas with which I am glad to be associated:

When our Founding Fathers drew up the Constitution they did not "remember the ladies." This may not have been an intentional oversight on their part. We are not certain that they deliberately bequeathed this legal handicap upon their great, great, great granddaughters. But, even if they did, we must be careful not to do our Founding Fathers an injustice, for their world was not ours. Their way of life no more resembled our way of life than an oxcart resembles a rocket ship.

To the 1789 woman, gazing out her curtained window at horse-drawn carriages on cobbled streets, our modern world would have seemed more improbable than Gulliver's tallest tale. How could she imagine 23 million women marching each morning to salaried jobs outside the home? How could she visualize women attending college, becoming lawyers, doctors, scientists? How could she know that women, someday would be driving cars, flying planes?

Old Father Time, in exchange for progress, ever demands adjustments. And if, as the Supreme Court decrees, our Constitution has excluded half the population, let us bring it up to date.

Millions of women are working for a constitutional amendment that would put them in that great document on equal legal footing with men and bestow upon them full citizenship. The 19th amendment gave them the right to vote. Now, by passing the equal rights amendment, let us finish the job.

Investment in Freedom

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of August 16, 1957, on the subject of our mutual security program:

INVESTMENT IN FREEDOM

President Eisenhower used dramatic language when he cited the case of Korea in justification for the insistence that in our mutual security programs there be no further cut. He said that we had "invested" 135,000 casualties in Korea. This "investment," he said, was "required from us in order to support our security in the world and to stand firmly behind the cause of freedom." He went on to ask: "Are we going to nullify all those casualties by failing to recognize the position of Korea, facing a long battlefield of 155 miles, and without adequate support from us?"

We don't always think of it just that way. Obviously the House Appropriations Committee was not thinking in those terms when only a few hours later, it voted a still further and drastic cut in mutual-aid appropriation, nor were other House Members when the full body affirmed the committee's cut. The President had said that such further cuts would imperil the whole program and with it our own security. Economy-minded legislators apparently felt that they could take the risk that the President had so clearly set forth. We doubt their wisdom.

Perhaps one difficulty is that there has not been enough realization of the real significance of that word "invest." We have always talked about "aid," "help," "assist," and in some quarters there has always been stress upon "give" or "giveaway," often in an unfriendly context. Of course, there is nothing wrong about giving, helping, or assisting. We could well be proud and happy that it is in our means to carry out this role. But what is implied is that we are giving to no good purpose and possibly giving beyond our means.

The investment idea is the best answer to this form of disbelief in ourselves and in our friends and allies. We invest, in any field, something that we have in the expectation that we will eventually receive a compensatory return for what has been expended. We don't give out of mere goodness of heart. We want a return and a profit.

That return and profit, in the case that President Eisenhower cited, is support for our own security. It involves also our standing firmly in the cause of freedom. The assurance of our security and the advancement of human freedom—our own and that of others—is a substantial return on the investment. To quote the President again, mutual aid is not supported by any "special pressure group"; this is "a case where the welfare of all of us is involved—every single one of us, and our children."

It should be noted that in each of the "frontline" cases that the President noted—Korea, Greece, Turkey, Formosa, and Vietnam—we are not the only investors. Our casualties are small, for example, compared to those of the Koreans who have died for freedom, theirs and ours. This is not "giveaway." It is joint effort with its joint sacrifice. The term "mutual" security is correct.

This certainly is too important to us, and to those who are our allies, to become a mere political football. Attention has been focused upon whether a special session of Congress would have to be called. There has been a curious mathematical focus upon what percentage of the program could be lopped. Such approaches are basically wrong. We are working the field of investment, not aid. The focal point should be what we hope to gain, and, indeed, what we must gain by what we do at this time. There is still time to reconsider in the House and Senate the rash action taken yesterday. We are coinvestors in freedom with our allies. We cannot afford to fail them and to fail ourselves.

Lt. Col. Emma Jane Riley

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. HULL. Mr. Speaker, men of Missouri rank second to none in the art of soldiering. Their heroic conduct in every one of our great conflicts bear eloquent testimony to the fact that Missouri is a "home of the brave."

From the Civil War's Jo Shelby—if that great soldier had been from Massachusetts or Virginia, the libraries would not be able to contain the books written about him—to General Pershing in World War I and Gen. Omar Bradley and Maxwell Taylor in the Second World War era, Missouri has contributed very substantially to the ranks of great and courageous men who have led American boys to victory on battlefields which gird the globe.

Missouri now is making a great feminine contribution to our military forces in the person of Lt. Col. Emma Jane Riley, a native of the community of Plattsburg in Clinton County in northwest Missouri.

On September 1, Colonel Riley will officially assume the duties of Director of

the Women in the Air Force, commonly known as the WAF.

Colonel Riley is the daughter of Mr. and Mrs. H. R. Riley, of Plattsburg, and she attended the University of Missouri. She joined the military in 1942 as a private and in only 15 years has climbed to the top position she will assume on September 1.

Missouri is proud of Col. Emma Jane Riley and wishes her well in her important new post.

Under leave to extend, I include the following fine article written by John R. Cauley and appearing in the August 11, 1957, edition of the Kansas City Star:

WASHINGTON, August 10.—One day last May, Lt. Col. Emma Jane Riley and her sister, Miss Dorothy Riley, of Plattsburg, Mo., were vacationing in Italy and picked up a copy of the Paris edition of the New York Herald Tribune.

Their attention was attracted by a short news item which reported that a disastrous tornado had wiped out a small community near Kansas City. There were no other details.

The two girls were greatly alarmed. Could the small community be their hometown, Plattsburg? Their parents, Mr. and Mrs. H. R. Riley, live there, and their father is president of the First National Bank. After all, they recalled, Plattsburg was only about 30 miles north of Kansas City.

When they returned to Wiesbaden, Germany, on May 26, there was a cable awaiting Colonel Riley. Fearfully, she began to open it. Here, she thought to herself, is the bad news from home.

GOOD NEWS IN A CABLEGRAM

As she read the cablegram, her expression of fear turned into a joyous smile. It was a note from a friend in the States congratulating Colonel Riley on her appointment as director of the women in the Air Force.

"I could hardly believe the news," she said in her office in the Pentagon here. "I knew a new director was going to be appointed, but I did not think that it was going to be me."

The next day when she returned to her desk in Wiesbaden as staff director of the women in the Air Force in Europe, she was officially notified of her selection.

In her new job, which she officially assumes September 1 as successor to Col. Phyllis D. S. Gray, who is retiring, Colonel Riley will be in charge of more than 8,000 WAFS, as they are called. Her principal responsibilities are to advise the Air Force chief of staff on the recruiting, training, and utilization of women in the Air Force.

Colonel Riley is 45 years old. She appears much younger. She has a smooth complexion, sparkling green-blue eyes, dark hair sprinkled with gray, and an easy and mobile smile. She weighs 130 pounds and is 5 feet 6 inches tall.

She keeps her figure trim, she explains, "by watching my diet. You have to do that after you're 40."

Colonel Riley was born in Plattsburg on January 11, 1912, and attended the grade school and high school there. From Plattsburg, she went to Sullins College in Bristol, Va., and then entered the school of journalism at the University of Missouri as a junior student. She was graduated from Missouri University in 1934. She completed work on her master's degree the following year.

HER MEMORIES OF MISSOURI UNIVERSITY

She has many happy memories of the university. She vividly remembers having cokes in Gabler's and working for 25 cents an hour stuffing envelopes in the office of Dean Frank Martin. Sororities she eschewed, and chose instead to live in the home of Mr. and Mrs. Curtis Rollins.

"I got out of the university at a bad time," she recalls. "Newspaper jobs in those depression days were nonexistent. I went home and did odd jobs around my father's bank and on the side wrote space rate stories for the old Kansas City Journal Post and helped the Associated Press cover election returns.

"In 1937 I went to Peoria, Ill., and worked on a historical magazine which was just starting. The magazine and I both struggled along for about 3 years and finally I got tired of the battle and returned home."

In August 1942 Miss Riley enlisted in the Women's Auxiliary Army Corps as a private and was graduated from the WAC Officer Candidate School at Des Moines, in December of the same year.

Thereupon following a wide range of assignments in this country, each one growing in importance and responsibility. She activated and commanded one of the companies at Fort Oglethorpe, Ga., shortly after that base was opened as a third WAAC training center. In April 1943 she was made a battalion commander.

In 1943 she was assigned to duty with the Army Air Force, performing various duties in personnel and administration at Mitchel Field, N. Y., Langley Field, Va., Boca Raton Field, Fla.; Grenier Field, N. H.; Fort Totten, N. Y.; and Washington, D. C.

PLANNED TRAINING COURSE FOR WAFS

After 2 years as WAC staff director with the Air Transport Command she was assigned in 1948 to the Office of Procurement and Training, Headquarters, United States Air Force, as chief of the basic military and officer candidate school section. In this capacity she monitored plans for all phases of Air Force training of WAFS, which started in October 1948, at Lackland Air Force Base, Tex.

In 1952 she took on a dual position of WAF staff director and chief of the Career Actions Branch, Headquarters, Military Air Transport Service, and later as Chief, Promotions and Separations Division, Deputy Chief of Staff and Personnel within that headquarters. In August 1956 she was assigned to Wiesbaden.

Colonel Riley was one of the first 8 WAF officers selected for the rank of permanent lieutenant colonel in the Air Force in 1950. Retroactive seniority went back to July 1948.

She said she had no idea of making a career of the military service until after the war was over.

"I liked the orderly pattern of life in the service and was attracted by the opportunity of making some contribution to the country," she says. "I was just plain lucky to be assigned to the Army Air Corps in 1943, and I wanted to stay with that branch of the service."

BUT NO COMBAT DUTY

The women in the Air Force serve principally in the fields of weather forecasting, communications, secretarial work and as flight attendants on the planes of the Military Air Transport Service. By law, they cannot be assigned to combat aircraft.

"There is a chance," she explains, "to enter a career which later can be translated to civilian life. There are opportunities for world travel and for a high-school graduate to get a college degree after 1 or 2 terms of enlistment."

Besides the United States, WAFS are assigned to air bases in Hawaii, Puerto Rico, England, France, Germany, and Italy. There are also WAF officers in Alaska.

Colonel Riley herself has been in Denmark, England, France, Germany, and Italy.

Naturally, Colonel Riley never has commanded men, but she has been around long enough to observe that there is little difference in handling the problems of men and women in the Air Force.

"The women are more interested in their housing quarters, but no more interested in their clothing than the men," she says.

She has had little time for her hobbies since she returned from Germany to familiarize herself with her new duties here.

"I still love to write," she says. "If I tried half as hard on my writings as I do on these military papers, I might get some place."

She loves the ocean too, and plans to spend time at Bethany Beach, Del. Colonel Riley has taken an apartment here at the Dorchester House, where she lives by herself.

"There is a wonderful opportunity for girls in the Air Force," Colonel Riley exclaims enthusiastically.

Seven Billion Dollars a Year in Buying Power

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include an article by Sylvia Porter in the Chicago Daily News of July 15, 1957. This article stresses the importance to our entire national economy of the annual contribution of over $7 billion to the buying power of our country that comes from social-security payments.

This furnishes justification of the argument made in the pioneering days of Dr. Townsend. His original plan was for $200 a month, all to be spent in the month of its receipt, thus not only providing for the aged but supplying a buying power to sustain industry on a scale sufficient to give employment to those in their working years. At the time the Nation was in a depression, there was precious little buying power and unemployment was at an all-time low. The Townsend plan, while attacked by some as visionary and unsound, swept the country like a forest fire. I was happy to be one of the early champions of a plan that gave the only hope in an era of dispair and hopelessness. If industry was to pick up so that the unemployed could find jobs there had to be buying power, and it should be a buying power of continuing volume sufficient to sustain employment at the required level. It seemed to me just commonsense that payments made to those who had passed the working years, not for saving but for spending, would do the double trick of taking care of the aged and providing jobs for the younger.

It is a source of satisfaction to know that social security, as Miss Potter points out, is doing just that. I would be happier, however, if the payments to the aged were geared closer to the $200 a month of Dr. Townsend's original suggestion in the dark years of the depression.

The article from the Chicago Daily News follows:

GREASING THE WHEELS—SOCIAL SECURITY MUSHROOMS IN UNITED STATES ECONOMY—SMALL PAYMENTS TO MILLIONS CREATE "FIRSTS" IN OUR HISTORY

(By Sylvia Porter)

A 63-year-old woman in New York opens an official envelope, draws out a Government check for $68.10. She cashes the check at once and starts spending the money on goods and services she needs.

A 66-year-old farmer in Iowa opens an identical envelope the same day, also draws out a modest Government check. He, too, cashes the check immediately, begins to buy things he needs and wants.

"Small" people they are, getting and spending relatively small amounts of money.

Yet, these little people and their little checks multiplied by millions of similarly little people in their senior years and their little checks are key forces behind these vitally important developments:

For the first time since the social-security system was created in the late thirties, the Government fund is today pouring out more money in benefits than it is collecting in social-security taxes.

For the first time in American history, incomes being paid by the Government to older citizens are climbing at a faster pace than the take-home pay going to all wage and salary workers in the land.

For the first time ever in America, the spending by our older citizens of incomes belonging directly to them is a powerful stimulant to our prosperity, accounting for much of the bounce in consumer spending.

TEN MILLION BENEFICIARIES NOW

In the couple of decades that our Social Security System has been in existence, it has grown to proportions that defy comprehension. Just glance at these few figures.

Early this month, Mrs. Jean Gavin, 36, a widow and mother of 2 young children, became the 10 millionth beneficiary under the system. She's to get the maximum family benefit of $200 a month.

Today, 73 million workers are covered under the program. That means 9 out of 10 of us are either covered or eligible for coverage.

This year over $7.3 billion will be paid out by the fund in social-security benefits. To grasp that figure, ponder the fact that in 1941, the first year benefits were paid, the total was $64 million.

In 1957 the fund will collect about $7 billion in social-security taxes. In 1941 our contributions came to $688 million.

(Despite the gap this year between tax collections and benefits, don't fret about the fund running out of money. It has income from investments which will more than cover the gap this year and next. It may sink into the red temporarily in 1959, but social-security taxes are slated to go up under the law in 1960 and it will jump right back into the black.)

PAYMENTS AHEAD OF ESTIMATES

Regardless of the details the significant point is that social-security benefits are becoming of tremendous meaning to the entire economy.

The reason the fund is paying out so much more this year than originally estimated is that almost 700,000 women have taken advantage of the change in the law in 1956 to allow women to begin drawing benefits at 62, and almost 400,000 self-employed farmers are now qualifying for benefits.

And in August, when the fund starts paying benefits to the permanently and totally disabled who have reached the age of 50, another 275,000 or so will go on the benefit rolls.

And as these and the other millions who are drawing monthly checks from the social-security pool spend their incomes, they'll keep the wheels of the economy turning.

Negroes Still Want Effective Civil-Rights Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. MARTIN. Mr. Speaker, since Senate passage of the civil-rights bill, there has been considerable propaganda to the effect that some organizations which have favored the legislation are willing to settle for a weak, watered-down version of the bill.

My mail indicates that the overwhelming numbers of our Negro citizens, who are most directly concerned with civil-rights legislation, do not want just a mere bill and will feel that this fight has been in vain if we pass anything less than an effective measure to protect the voting rights of the Negro people.

I have received hundreds of letters and telegrams from leaders of organizations, leaders of Negro opinion, and individual citizens protesting against the enactment of any bill which will not enforce the voting rights of a large body of American citizens who have been waiting since reconstruction days for an effective instrument.

Under leave to extend my remarks, I insert a cross section of the messages that have come to me from representative Negroes asking for a real bill:

Congressman JOSEPH MARTIN,
House of Representatives:

The National Fraternal Council of Churches, 14 denominations, over 10 million members, at their annual session endorsed the administration civil-rights bill as passed by the House. That's the bill that over 75 percent of the Negroes of America want personally. I would rather have no bill passed at this session of Congress than to accept the bill passed by the Senate.

W. H. JERNAGIN,
Chairman of the Executive Board.

Hon. JOE MARTIN,
Washington, D. C.:

As president of National Business League my contacts clearly indicate that Negroes generally regard civil-rights bill with jury-trial amendment completely unacceptable. It will not protect voting rights of Negro citizens in most southern States where intimidation, punitive action, and willful evasion can be supported by prejudiced juries. Elimination of jury-trial provision necessary for absolute protection of voting rights.

FREDERICK D. PATTERSON.

Hon. JOSEPH MARTIN,
Washington, D. C.:

As Grand Exalted Ruler of the Improved Benevolent Protective Order of Elks of the World, I wish to inform you that the order of Elks is against the Senate civil-rights bill in its present form. Please establish for your records our position, that the bill should be vetoed in its present form. Our survey shows that a majority of the newspapers and organizations actively working in the interest of minorities are against the Senate jury-trial amendment, and are willing to continue to work for a civil-rights measure which will be of real benefit to all Americans. I shall appreciate your continued support to our advancement, and feel that it will be mutually beneficial for all concerned to veto the present bill.

ROBERT H. JOHNSON,
Grand Exalted Ruler, IBPOEW, Philadelphia, Pa.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

As publisher oldest Negro newspaper in two Carolinas believe I voice sentiment Negroes both States when I say they are bitterly opposed to civil-rights bill with jury-trial amendent. Urge a strong civil-right bill or no bill.

L. E. AUSTIN,
Publisher, Carolina Times.

Hon. JOSEPH MARTIN,
Washington, D. C.:

Comments from readers of the Pittsburgh Courier throughout Nation indicate complete confidience in your position relative to emasculated civil-rights measure. The Courier strongly urges that you continue to insist on strong civil-rights bill or ask President to call special session to enact measure as recommended in platform of both parties.

Mrs. ROBERT L. VANN,
President-Treasurer, the Pittsburgh Courier.

Hon. JOSEPH W. MARTIN, Jr.,
Washington, D. C.

DEAR SIR: I agree with you fully that the present civil-rights bill passed by the Senate is inadequate. Unless the jury-trial amendment is changed and there is a House-Senate meeting to make other needed changes it is preferable to wait until the next session of Congress to consider this legislation.

Sincerely yours,

Dr. EVERETT B. SIMMONS,
President, NAACP Branch of the Oranges and Maplewood, Orange, N. J.

BOARD OF MISSIONS, THE EVANGELICAL UNITED BRETHREN CHURCH,
Dayton, Ohio, August 14, 1957.

The Honorable JOSEPH MARTIN,
House of Representatives,
Washington, D. C.

DEAR MR. MARTIN: I have followed with deep interest and grave concern the debate on the civil-rights bill in the Senate. The bill as approved by your body, the House, has been so emasculated by the Senate that I respectfully urge you to vote against the Senate proposal for the following reasons:

1. Because it does not protect every citizen in exercising the franchise which is his inalienable right.

2. If passed in its present form, the public will be falsely led to believe the right to vote has been protected whereas it will result in the contrary and it may be a generation before the injustice can be removed.

3. The Senate bill in its present form handicaps the Federal judge and weakens the power of the Federal courts by imposing a jury trial between the judges decree and the carrying out of the court order.

In presenting this request may I assure you I shall continue to put forth every effort to create attitudes and encourage practices in my own community which will make it possible for every citizen, irrespective of race, color, or national origion, to enjoy and exercise his civil rights.

Sincerely yours,

S. G. ZIEGLER,
Recording Secretary.

RICHMOND, VA., *August 13, 1957.*

Hon. JOSEPH MARTIN,
Majority Leader, House of Representatives, United States Senate Office Building, Washington, D. C.

DEAR SIR: Many of us think that Mr. Roy Wilkins, of the NAACP, did not express the

opinion of the overwhelming majority of Negroes in urging that the emasculated civil-rights measure passed by the Senate be adopted by the joint committee. Negroes want a changed status in the South. For too long we have been treated like quasi-slaves.

The 15th amendment to the Constitution of the United States grants Negroes the same right expressed in other language in the Senate version of the civil-rights measure, but Congress has never seen fit to enforce that amendment. Consequently, Negroes have been largely disfranchised by devious devices and intimidation. If the Senate measure is adopted the Negro's voting status will remain substantially the same as it has been for the past 90 years.

Race prejudice is so strong in the South that public sentiment of the majority of white people is positively in opposition to the idea of convicting whites in civil-rights cases involving Negroes. Hence, jury trials would be a farce. I have been urged to bring this to your attention.

Negroes in the South do not want a half a loaf.

Yours respectfully,

DAVID E. LONGLEY,
Treasurer, State Conference of NAACP in Virginia.

BLADENBORO, N. C., *August 5, 1957.*

Hon. JOSEPH W. MARTIN, Jr.,
House of Representatives,
Washington, D. C.

DEAR SIR: I have watched the House and Senate actions on the civil-rights bill with keen interest. I want to express my appreciation to you for not accepting the meaningless bill passed by the Senate.

By not accepting this bill passed by the Senate, you have not only strengthened the Republican Party, you have also rendered a service to this Nation before God and men of Christian morals all over the world.

We are not an immatured people, as the United States Senate seems to think we are when it comes to dealing with human rights. We will use whatever voting rights we have now at present until God helps us to elect men with courage enough to stand firm and fearless of any immorality when it comes to dealing with human rights. Only then will our country be respected as a leader of freedom loving people.

God created men to love and to seek freedom. The leaders of your party realized this truth under Lincoln, and I'm happy to see you and others of the GOP still have courage enough to stand on these principles today.

You have nothing to fear from your stand by not accepting this meaningless bill passed by the Senate. I can cite cases where a jury would not convict admitted criminals. To name a few: Emmett Till, Willie Earl, the case in South Carolina where a music teacher was beaten by men of the Ku Klux Klan, and many others including my own county, Bladen.

I would be glad if I could be of some service of maintaining the principles of men such as you and those with courage to stand up and be counted for human rights.

You have my permission to use this letter in any way to help the cause of freedom.

Sincerely yours,

Rev. JAMES C. BELLAMY,
President, Bladen County Branch of NAACP.

DANVILLE, VA.

Hon. JOSEPH W. MARTIN, Jr.,
Washington, D. C.:

Rights of unborn generations of American Negroes depend on your unqualified support of an effective civil-rights bill. We want an effective bill or no bill.

Attorney RUTH L. HARVEY,
President, Danville Council, National Council of Negro Women.

DANVILLE, VA.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

We favor the civil-rights bill as passed by the House and we urge you to push for passage of the House version.

J. L. WILLIAMS,
President, Danville Chapter of Dominion Bar Association.

BIRMINGHAM, ALA.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

Please hold out for a meaningful civil-rights bill; the version passed by the Senate is too weak.

L. J. WILLIE.

DURHAM, N. C.

Hon. JOSEPH W. MARTIN,
Washington, D. C.

DEAR MR. MARTIN: The civil-rights bill in its present form, as I see it, is not acceptable with the jury-trial amendment. I hope that you will use your influence to either defeat or amend the bill in its present form.

LOCAL UNION 204, TWSU,
A. J. STANLEY, Sr., *President.*

ATLANTA, GA.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

It is vitally necessary for the protection of the right to vote of thousands of disfranchised citizens of Georgia and other Southern States that the United States Congress pass the strongest civil-rights bill possible. The majority of these citizens feel and know that the Senate version of this bill is inadequate to provide this protection.

W. J. SHAW.

CHICAGO, ILL.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

The officers and members of Quinn Chapel, the oldest church established by Negro Americans in Chicago, urge you to insist upon a strong civil-rights bill as proposed by President Eisenhower and not accept the weakened version fashioned in the Senate by the opponents of fair play.

ARCHIBALD J. CASEY, Jr., *Minister.*

ATLANTA, GA.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

A stronger version of the Senate's rights bill is the only thing that will guarantee our full freedom. Don't fail us.

WILLIAM FOWLKES,
Managing Editor of the Atlanta Daily World.

DURHAM, N. C.

Hon. JOSEPH MARTIN,
Washington, D. C.:

I am gravely concerned and hoping that you will put forth every effort to secure the passage of an effective civil-rights bill.

Rev. R. L. SPEAKS,
Pastor St. Marke AME Zion Church.

BIRMINGHAM, ALA.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

We, the Eisenhower Colored Republican Club, are very grateful to you Republicans for your fight for full freedom for everybody everywhere. We urge that you hold out for an all-but-nothing civil-rights bill.

Dr. G. P. PARHAM.

FORT WORTH, TEX.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

We wholeheartedly concur in the stand you are taking in carrying this fight for civil rights where there will be justice and liberty for all citizens of America.

H. H. MONROE,
President.
J. DORSEY ADAMS,
Chairman of the Board, City Wide Voters League.

DURHAM, N. C.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:

Most Negroes in America are bitterly opposed to a civil-rights bill with a jury-trial amendment. It is our hope that this bill will be passed without such amendment.

WILLIAM A. CLEMENT.

BALTIMORE, MD.

Representative JOSEPH MARTIN,
Washington, D. C.:

Afro-American newspapers urge you to stand firmly for House civil-rights bill without the crippling Senate amendments.

CARL MURPHY,
President.

FORT WORTH, TEX.

Hon. JOSEPH W. MARTIN,
House Republican Leader,
Washington, D. C.:

We appreciate so very much the firm stand you are taking as relates to the civil-rights bill. It is because of your kind of leadership thinking that we as Negroes can feel that you are making a genuine contribution toward the elimination of race discrimination and to the development of democracy and the democratic processes. We hope for a civil-rights bill that assures every citizen equal opportunity and equal justice under the law. We are depending on you to continue contending for the faith that was delivered to the saints.

Dr. GEORGE D. FLEMMINGS,
National President, Phi Delta Sigma Fraternity, Inc.

DANVILLE, VA.

Hon. JOSEPH W. MARTIN, Jr.,
Washington, D. C.:

The rights of the American Negro will not be protected by the Senate version of the civil-rights bill.

The opinion of a representative group of Negroes with whom I am associated indicates a desire for a strong civil-rights bill or no bill at all. We humbly urge you to zealously support a strong and effective civil-rights bill.

Attorney HARRY I. WOOD,
President of the General Alumnae Association of Howard University.

WASHINGTON, D. C.

Hon. JOSEPH W. MARTIN,
The Capitol:

Every one of more than 50 responsible Negroes with whom I have talked within the last 3 days and most of whom are NAACP members oppose civil-rights bill with jury-trial amendment.

A. T. 3PAULDING.

DURHAM, N. C.

RICHMOND, VA.

Hon. JOSEPH MARTIN,
Washington, D. C.:

A civil rights bill without teeth will not help the Negro. Use all of your influence to get a good bill.

RICHMOND BRANCH NAACP.

BIRMINGHAM, ALA.

Hon. JOSEPH W. MARTIN, Jr.
Washington, D. C.:

No civil-rights bill at all is preferable to the Senate's watered down jury trial one.

Rev. J. C. PERRY.

HOUSTON, TEX.

Hon. JOSEPH MARTIN,
Washington, D. C.:
The civil-rights bill in its present for is not acceptable to my race. Am urging the elimination of the jury-trial amendment in order that the voting rights of Negro citizens may be secured.

HOBART TAYLOR.

BIRMINGHAM, ALA.

Hon. JOSEPH W. MARTIN, Jr.,
Washington, D. C.:
Sir: We had rather have no bill at all if there is a jury trial.
Respectfully.

W. M. PARKER.

DANVILLE, VA.

Hon. JOSEPH W. MARTIN, Jr.,
Washington, D. C.:
Give us strong civil-rights bill or no bill at all.

Dr. C. C. HARVEY,
Member, Trustee Board, Virginia Theological Seminary and College; Pastor of Whiteoak Grove Baptist Church; Cross Roads Baptist Church; Jeters Chapel Baptist Church; Owens Grove Baptist Church; Sunflower Baptist Church.

ATLANTA, GA.

Hon. JOSEPH W. MARTIN,
Washington, D. C.:
Senate version civil rights unsatisfactory. Urge passage strongest possible measure.

J. H. CALHOUN,
President, Atlanta Branch, NAACP.

BIRMINGHAM, ALA.

Hon. JOSEPH W. MARTIN, Jr.,
Washington, D. C.:
Our experience here in the South tells us that the Senate jury trials amendment would not guarantee voting rights. The jury trial amendment gives us the same results as no bill at all.

FRANK HUNTER,
Public Relations Director, Abraham Lincoln Republican Club,

Hon. JOSEPH W. MARTIN,
Washington, D. C.:
As members of the George H. White Bar Association, composed of Negro attorneys, we are strongly opposed to a civil-rights bill with the jury-trial amendment. We solicit your strong support to the bill proposed by the President.

M. HUGH THOMPSON,
President, George H. White Bar Association.

BRIGHT HOPE BAPTIST CHURCH,
Philadelphia, Pa., August 14, 1957.

Hon. JOSEPH MARTIN,
House of Representatives, United States Congress, Washington, D. C.

DEAR CONGRESSMAN MARTIN: Permit me to assure you that Negro Americans are mindful of the interest you have shown in trying to obtain congressional action on an effective civil-rights bill. It is therefore regrettable that the bill which is now pending has been so altered as to render it relatively inconsequential in solving the real problem of guaranteeing voting rights to southern Negroes.

It is an obvious fact that in many southern communities, Negroes have not obtained justice in the trial courts before local juries on simple and clear-cut issues of law; and it is therefore unrealistic to believe that the bill as it now stands will correct the existing customs which have led to the disfranchisement of thousands of Negro citizens.

For this reason we urge you to insist upon the elimination of the jury-trial amendment inclusive of voting rights, or forgo at this time, passage of any civil-rights bill in the hope and prayers that a climate of open-mindedness and fair play will come into existence to enable passage of a useful and effective bill in some future congressional session.

Respectfully yours,

WILLIAM H. GRAY, Jr.

A Sad View of the World

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "A Sad View of the World," which appeared in the August 16, 1957, issue of the Wall Street Journal of New York, N. Y.

The editorial is as follows:

A SAD VIEW OF THE WORLD

One does not ordinarily expect Presidents to talk of extraordinary sessions of Congress except to meet grave situations. And what is it that has provoked President Eisenhower into hinting at a special session this fall?

The provocation is Congress' action on the mutual security program. The President asked for an authorization to spend another $3.9 billion for aid to other countries. The Congress authorized $3.4 billion and it may appropriate less. This difference caused the President to call an impromptu press conference and warn that he may have to call Congress back.

Mr. Eisenhower offered the really prayerful hope that $3.4 billion would be enough, but there is no disguising the fact that the effects of the $500 million cut will be serious. Reductions in foreign aid, he said, may put the interests of the United States in real jeopardy. Then he would have no recourse but a special session.

Now this is grave talk indeed. It is the kind of talk that would certainly be appropriate if an irresponsible Congress had left the Government without funds for our Armed Forces; in view of the President's opinion about foreign aid, it might have been expected from him if Congress had suddenly abolished the whole program.

But this is not what happened. Three billion dollars, and more, is not small sum. And Mr. Eisenhower is not merely arguing that more would be better. He is saying that even a few millions less can be a life-and-death matter for our national interests, a question of such great urgency that it may not wait between August and January.

It is almost impossible to find this credible.

But if the President is right, if somehow that is actually the case, then it seems to us he has raised far graver questions than whether foreign aid should be $3.4 billion or $3.9 billion or some other sum.

Consider: In World War II the United States had to support its allies to the extent of something like $50 billion, over and above the billions spent on our own forces. Since World War II we have levied upon ourselves to the extent of some $60 billion—the exact figure is lost in a welter of budget categories—to give aid to other non-Communist nations.

This post-war money has gone not only to help these countries repair war-torn areas and to give them guns against a next war. It has gone also to bolster their currencies, irrigate their farms, develop their resources, and thus make them economically strong so they can be dependable members of the alliance against communism.

Yet the inescapable implication in the President's grave view of the situation is that in all of this we have not improved our position a whit. What he now says about the urgency for foreign aid is hardly altered from what President Truman said when pleading for a temporary foreign-aid program in 1947, a full 10 years ago.

This is indeed a sad view of the world. For the inescapable conclusion must be that all our treasure has bought practically nothing of value. If after all those billions our friends and allies are still so weak, or so undetermined, that they will collapse for want of some $500 million then the platform we have built is too flimsy to stand on at all. If the President is right, then the thing to question is not the $500 million but the whole thing.

Fortunately for our own peace of mind, we do not really believe all that is so dire; the tail-end of congressional sessions is the season for political arguments to become ultimatums. But if the world is in so sad a shape as Mr. Eisenhower says, then a few hundred millions more of foreign aid offer no remedy.

Academy Graduates Should Serve Longer

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. GROSS. Mr. Speaker, it has long been my contention that after the Government invests a considerable amount in the education of a young man in one of the Military Academies the individual should be required to serve a longer period on active than is now the case.

I am having legislation drafted which would require that graduates of the Military, Naval, and Air Force Academies must serve a minimum of 10 years on active duty, and I plan to introduce such a bill at an early date. It seems to me that this is a reasonable requirement, and I hope the legislation will be given favorable consideration during the 2d session of the 85th Congress next year.

A 10-year active-duty requirement is suggested in an editorial which appeared in a recent edition of the Waterloo, Iowa, Daily Courier, and I am pleased to include the editorial as part of my remarks:

It costs the taxpayers $37,756 to put a single cadet through the 4 years of training at the West Point Military Academy. This specialized education, while naturally slanted toward military applications of knowledge, is the equivalent of a good college education and West Point graduates can usually find excellent jobs after their term of service is ended.

This term of military service after graduation from West Point is only 3 years. Forty-eight of the 446 men who graduated in 1954 have already resigned. Some 20 percent of the class of 1952 has resigned.

Higher education for all students is subsidized to some extent—through State support or endowments. Millions of veterans

have received help through the GI Bill of Rights.

But surely the graduates of the three service academies are receiving the highest per capita subsidy and should, in return, be required to remain in the service longer than 3 or 4 years. The Government is not justified in investing large sums in the education of young men in these service academies unless it gets some guaranty of longer service on active duty. Surely a minimum requirement of at least 10 years should be imposed.

The 18th and 19th of a Series of Editorials by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. MICHEL. Mr. Speaker, following are the 18th and 19th of a series of editorial letters by Mr. F. F. McNaughton, commenting on his recent trip to Russia, which are appearing in the Pekin Daily Times, Pekin, Ill.:

[From the Pekin (Ill.) Daily Times of of August 10, 1957]

THE EDITOR'S LETTER

(By F. F. McNaughton)

Do we teach Russian?

No.

But they teach English.

They have 41,000 teachers in Russia who teach English.

My guess is that they are exclusively English teachers.

Also, the children are required to learn English.

For a while, children had to study English from their first day at school. (They start school at 7).

But now they have changed it and do not start teaching English to the children until they are 10.

Of course more adult students may (perhaps many must) study other languages, too.

Why?

Because Russia wants her people equipped to make friends with and deal with the world.

Russia invites and entertains many guests. All important Indians, Burmese, Celonese; and many important Chinese and Arabs speak English.

Besides, important technical books are nearly all translated (from whatever tongue written) into English. The Russians don't aim to miss any technical information from how to control potato bugs to how to buy a hydrogen bomb.

But when I see Russians by the millions studying different languages from their own, I think most of the one billion people on this earth who have not yet joined either the Russian side or our side.

They aim to get them.

Then us.

[From the Pekin (Ill.) Daily Times of August 12, 1957]

THE EDITOR'S LETTER

(By F. F. McNaughton)

"Who gets this apartment?"

The Russians were showing us through a new apartment building near the University. We came to an apartment that would have a kitchen and bathroom of its own.

(Nearly all families live in a room or two and share a kitchen and bathroom and toilet with other families.)

"Who gets this?" I asked.

The answer was: "The state decides."

That is typical of the situation which the average man of the free world, whether he be French, Dane, Arab, Scot, Indians, German, or American, finds hard to take.

It's the same with jobs.

There is only one boss.

It is the state.

Imagine living where you could not get mad at your landlord and move because there is only one landlord.

And if you get in a huff at your boss, well—there's only one boss.

And that same landlord and boss tells you what you should read and keeps from you what they forbid you to know.

And that same landlord and boss aims to control your thinking!

Of course the Russians might reply:

(1) Having only one landlord isn't so bad if he charges you only $2 a month rent.

(2) Having only one boss isn't so bad, if you know he will always have a job for you.

But how can the Russians justify trying to compel one to think in only one way?

Reclamation and Water Conservation as National Policy Boosted by President Eisenhower in Signing San Angelo, Tex., Reclamation Bill

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. FISHER. Mr. Speaker, by signing the San Angelo, Tex., reclamation project bill on last Friday, President Eisenhower further confirmed his support of reclamation and water conservation as a national policy. The action of the Congress in passing this bill and the action of the President in approving it will be acclaimed by all true friends of reclamation, particularly in the west and southwest where the value of water and its conservation is so universally recognized and appreciated.

This project, highly recommended and justified by the Bureau of Reclamation and the Secretary of the Interior, is one of the sounder reclamation projects that has been considered by the Congress in recent years. Its benefit-cost ratio is more than 2 to 1. The proportion of cost chargeable to municipal and industrial uses is only 20 percent—every penny of which is reimbursable to the Government, with interest. There have been very few reclamation projects before the Congress in recent years where such a small proportion of the cost was attributable to municipal uses. This proportion in most of the reclamation projects runs up as high as 40 to 75 percent.

One of the pressing domestic demands in this country today is a more widely recognized need for water conservation, which goes hand-in-hand with soil conservation. To meet the minimum requirements for normal progress we must store and conserve floodwaters and convert such water to the use of man. That sort of planning is needed everywhere, on every stream and river in America where storage dams are economically feasible. To ignore that need and its importance is to gamble with our future and to stymie progress on the homefront, and to practice false economy.

So long as the Congress supports projects of this nature that are engineeringly sound and economically feasible, reclamation as a national policy will continue to command and deserve public support. The Congress in approving the San Angelo project has given support to that principle. The President in signing the bill has demonstrated his friendship for sound and feasible water conservation policies. The passage and approval of this bill is deeply appreciated by the people in the immediate area of the project, as well as by the people of Texas and of the great Southwest.

Some Things You Cannot Buy Even in a Big City

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Carlton Morris:

SOME THINGS YOU CANNOT BUY EVEN IN A BIG CITY

(By Carlton Morris)

GATESVILLE.—People in the cities have a lot of trouble understanding why other people live in small towns and rural communities. Perhaps we who live quietly beside the road could tell them our reasons.

Perhaps we would say that we love peace and quiet and country things best of all and of course we would be right as to our reasons. But I think that we live in small towns and communities because we can know our neighbors by first name and feel free to drop around to pass the time of day when we please.

We like to know all about our neighbors in small communities. We know when the baby is sick and when he is well. We know who is getting married and who should get married. We know whose husband is running around and we know whose wife he is running around with, for all things are revealed in small communities.

We don't particularly like our neighbors in these small communities unless their views, religion, and politics are the same as our own. We don't especially like to see them get ahead and very seldom do they act with knowledge and forethought and very seldom do they consult us about their problems, even when we are better equipped to handle their problems than they are to handle anything.

We don't like the way they build their homes. If they decide to repair, we almost invariably feel that they would have done better to build anew. And when they build, we often feel that they are going too deep in debt and should have made out with the old home.

We don't care for a man or woman who drinks too much and we can't abide the prude who refuses to touch the stuff.

On any issue, no matter how simple, we

find it necessary to take side one way or the other.

We have a deep and abiding interest in our schools in small communities. Or at least we say we do, but strangely enough we can never find the time to help out with them in any form or fashion. But we know all about them and how they should be operated, even better than the teachers. We do not hesitate to tell one and all about our knowledge in this matter.

In our churches we condemn sin in any form except the private little pet sins that we like of our own. These are not so bad to begin with and actually harm no one. But we do condemn it among the neighbors for we want our little communities to be good places to live.

We are not particularly interested in the rest of the world in our little communities for if we succeed in keeping our own little world on the straight and narrow, we will have done enough.

Viewed from the outside, it would seem that we are maybe a little narrow in our viewpoint and that we tend to grow inward rather than expanding outward, and as everyone knows, this is not good.

Comes a time though when a small community is the best place on God's green earth. Just let one of the neighbors really need help. Financial aid or a loss by fire or a death in the family or bad sickness or any one of a dozen things. Then friend and foe turn out and help him in every way possible. At a time like that friend and foe alike stop by to place a hand on his shoulder to let him know they are with him all the way. And that is the way of small communities.

And you can't even buy such in a city.

German Assets

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter to the editor of the New York Herald Tribune, which appeared in that paper on August 18, 1957:

GERMAN ASSETS—READER QUERIES REVERSAL OF UNITED STATES POLICY

To the NEW YORK HERALD TRIBUNE:

Unless prompt action is taken, pro-German lobbyists in Washington will be celebrating a resounding victory. After World War I Germany promised to pay the war claims of American citizens, and the United States returned confiscated enemy property, Germany defaulted.

After World War II, America, Great Britain, and 16 other Allied nation signed the Paris Reparation Agreement (1946). They agreed to retain sequestered enemy assets in lieu of reparations, and specifically undertook not to return them to German ownership or control. In 1948 Congress gave added recognition to this agreement in the War Claims Act, declaring that German and Japanese assets would not be returned, nor former owners compensated. In 1952, Federal Germany agreed in the Bonn convention that the sequestered assets should be retained by the victors as their only reparation.

Yet now, while hundreds and thousands of those who suffered under Nazi persecution still await their promised compensation, Washington proposes measures for an equitable monetary return of confiscated German assets. This would be very gratifying to some of the German vested interests who strongly supported the Nazi regime—until it fell; and realizing the inherent dangers, the peoples of America and her allies have every right to know just what is behind so extraordinary a reversal of policy.

L. M. HOPKINS.

DEVIZES, ENGLAND, August 15, 1957.

Plan Expands Use of Panama Canal

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. THOMPSON of Texas. Mr. Speaker, the attached article from the New York Times of August 4 reflects a recognition, at least in part, of the growing need for improvement of the Panama Canal. Without in any way detracting from the wisdom of judgment exercised in proposing these improvements, it is noted that they are merely symptomatic treatment of a basic ill.

The Congress should not be lulled into complacency by anything less than a comprehensive study of the various recommendations which are now before it. These include proposals for long-range structural changes, alteration of alinement, serious diplomatic considerations and various others. For a long time I have advocated the appointment of a nonpartisan, entirely unbiased, and completely competent commission to weigh the data at hand and to recommend to the Congress the long-range program. This move has been opposed by various executive departments for reasons which they consider to be sufficient. In any event, they have forestalled the passage of the enabling legislation.

I now note with great interest and satisfaction that the chairman of the Merchant Marine Committee, the Honorable HERBERT C. BONNER, of North Carolina, proposes to appoint a commission of a similar nature but with fewer members to study the situation and to report its findings to the committee. Knowing Mr. BONNER as I do and have through many years I am confident that his choice of members of the commission will be wise and that the resulting report will in all probability lead the way to an early solution of the Panama Canal problems.

[The New York Times, Sunday, August 4, 1957]

PLAN EXPANDS USE OF PANAMA CANAL—WIDENINGS AND ADDITIONAL LIGHTING WOULD PUT SAFE TRANSIT ON 24-HOUR BASIS

BALBOA, C. Z., August 3.—A short-range plan for improvements to increase the dependable transit capacity of the Panama Canal by about 25 percent has been approved by the Board of Directors of the Panama Canal Company.

The plan, which is designed to meet world shipping requirements for the next 10 to 20 years, will be submitted to the Bureau of the Budget and to the appropriate congressional committees. Its estimated cost is $18,956,000.

Five major improvements are proposed but the cost of one of these is already budgeted. This phase of the program is the purchase of five additional towing locomotives.

One of the four phases of the program for which approval is sought is the lighting of Gaillard Cut and improved lighting of locks for safer night operation.

Another phase of the plan contemplates mooring facilities for two large ships just north of the Pedro Miguel locks. The aim is to facilitate the dispatching of ships through these locks and the narrow reaches of Gaillard Cut.

PROJECTED WIDENINGS

A further phase of the plan is the widening of the Paraiso and Cucaracha reaches of the Gaillard Cut to 500 feet, plus the deepening of the widened reaches by 5 feet.

The other phase is the widening of Bend 1,660.

The sections of the channel marked for widening have had many ship accidents. The Paraiso and Cucaracha reaches are considered particularly hazardous because of their narrow rocky banks and because surges of water from the Pedro Miguel lockages make ships sheer unexpectedly.

The widening of Bend 1,660 is deemed urgent. The Bend 1,660 record for bank-strikings and collisions is the worst of any part of the canal. The channel changes direction by over 37° at this point, making heavy bulk carriers difficult to maneuver.

ADVANTAGES OUTLINED

The widenings and added lighting, it is said, would reduce the number of ships requiring daylight transit and the number of those needing "clearout," which means one-way traffic with no passing permitted.

The plan is designed to permit round-the-clock operations under safe conditions. The waterway is now on a basis of about 16 hours.

Canal transits during the overhaul period would drop to an estimated minimum of 28 from the present normal of 35 in 24 hours. The increase under the plan would be to about 45 normal.

The improvements would result in an average saving of about 3 hours for ships in waiting and transit time.

The savings for shipping companies would aggregate about $2 million yearly.

The Small Farm

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Small Farm," which appeared in the August 16, 1957, issue of the Herald-News, of Irvington, Ky.

The editorial is as follows:

THE SMALL FARM

An official of the Department of Agriculture recently stated that, in his opinion, there were too many farms in the United States. While the official may be right, we dislike accepting such a statement.

We like to believe that in this country there is always room for the free farmer, who wants to till his land and make his life by working the soil. We hesitate to accept the conclusion that farming is only for the big operator, the mass-farmer, so to speak.

We think that America will be a stronger Nation, and a greater one, as long as the individual and his family can farm a small area, living with the soil, keeping in touch with the earth in this fashion. We think that no occupation is nobler than that of farming.

We suspect the trouble with the farmer today and the farm situation in the United States is that the farmer does not get an adequate share of the income and profits from his products. We think the Agriculture Department would do well to concentrate its efforts in this direction, rather than in the negative field, by concluding that we have too many farms.

Actually, the one-family farm can operate relatively cheaply today—with a few mechanized vehicles—because much of the labor is performed by the family itself, in the tradition of the farm, and therefore labor costs are kept down to a minimum.

If the farmer were getting his fair share of the income and profits derived from farm products, there would always be room in this country for the one-family farm. We hope there always will be.

The American Red Cross and Hurricane Audrey

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. THOMPSON of Louisiana. Mr. Speaker, I want to read into the records of the Congress of the United States an expression of praise and respect for the wonderful and outstanding work of the American Red Cross during Hurricane Audrey as well as for the thorough understanding and tireless manner in which their personnel are accomplishing the monumental task of rehabilitating the entire Parish of Cameron in addition to other areas in Jefferson Davis, St. Landry, Vermilion, a total of 21 parishes and 4 counties in Texas.

During and immediately after the hurricane struck and in the early emergency stages of the disaster, the local Calcasieu-Cameron Chapter of the American Red Cross, guided and assisted by National Red Cross personnel, opened some 18 shelters in Lake Charles and Sulphur and others throughout southwest Louisiana to care for the 26,000 or more people who left their homes seeking safety or whose homes were destroyed by the winds and tides of the hurricane. This emergency period of some 3 or 4 days duration cost the Red Cross some $374,481.

The emergency is by no means over in Cameron Parish to this day for despite the 1,108 grants made from among the requests for assistance filed in Cameron alone, there is still no store open in Cameron Parish, no restaurant or cafe, no place where a person may purchase food or clothing. Much used clothing is available through Red Cross and Salvation Army. Electric power is not yet restored although crews are working long hours erecting poles and stringing power lines. Without electric power, there are no lights, refrigeration, no way of lifting water or power to operate workmen's tools.

You may wonder why after 7 weeks this condition exists. To truly know the answer, you would have to visit Cameron Parish and see the total devastation of an entire Parish, an area some 50 miles long by 30 miles wide. The only place where a worker can get a hot meal in the entire parish is at 1 of the 3 Red Cross kitchens. These kitchens are staffed by military personnel of the Army and Air Force and are housed in tents supplied by the military and who have performed a great job in support of the Red Cross during the rehabilitation phase of this operation. Mass care of returning residents, working to clean up and rebuild their property, workers clearing roads, workers rebuilding houses and other personnel in the area has already amounted to $85,059 in costs to the American Red Cross and the job is far from over—already over 100,000 meals have been served.

Outright gifts in the amount of $1,036,105 have been made to some 3,137 families who suffered losses as a result of the hurricane. There were many, many more families affected by the hurricane, but who however, due to their financial position or resources made no request to the Red Cross for assistance. The Red Cross, serving as the Nation's official disaster relief agency under its Congressional charter, in carrying out its traditional but less publicized rehabilitation assistance phase of Red Cross disaster operations which it gets underway as soon as possible after the emergency period of a disaster, plans with the individual family for the family's recovery, when the family asks Red Cross for such assistance. The Red Cross does not replace loss, but does provide the funds necessary to meet a family's disaster-caused need which the family is unable to meet through its own resources without undue hardship. The Red Cross gives this assistance as an outright gift in behalf of the American people who provide the funds which are channeled through the Red Cross to do this wonderful job. I strongly recommend that each of you become more familiar with the work of our American Red Cross in disasters. I think that all of you would have a new conception, a real understanding of what the phrase "neighbor helping neighbor" means and why it is so symbolic of our Red Cross.

To date, the American Red Cross has spent or awarded in gifts, a total of practically $1½ million in the wake of Audrey and the entire operation will probably run an additional million dollars.

I would be remiss if I did not praise the unusual and outstanding work of the Red Cross personnel. Unusual because, in a great number of cases, these families spoke French rather than the English language. Outstanding because of the understanding way in which the Red Cross workers helped families establish the required facts; their former assets, their present resources, and their basic needs. Using these developed facts, trained Red Cross technicians made recommendations to the advisory committee, composed of local business and civic leaders of the affected areas. These advisory committees, using their personal knowledge of the families and situation combined with Red Cross recommendation settled the case. Needless to say, due to the thoroughness of the Red Cross workers' development of the case and trained ability to arrive at an equitable and fair amount as an award, their suggested award was followed in 99 percent of the cases presented, and while Red Cross personnel will be still engaged in planning with the disaster stricken families in Louisiana for their rehabilitation, in the manner I have spoken of, for possibly weeks after this body adjourns, it has been my earnest desire to recognize and commend to you for the current record the work of the Red Cross to date and for what it will continue to do until every disaster sufferer who has requested Red Cross assistance has his claim carefully considered. The people of my State can never forget what it has meant to have the help of the rest of the Nation channeled to the individual families through our American Red Cross.

Amendment Misused

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. WATTS. Mr. Speaker, I wish to call attention of the membership to a most timely and pertinent observation concerning the use and misuse of the privileges granted under the fifth amendment which appeared as an editorial in the Kentucky Advocate, Danville, Ky.

It behooves me to suggest to the membership that it is truly food for thought for all of us.

AMENDMENT MISUSED

We know that our forefathers, in framing the Constitution of the United States and the Bill of Rights, did not intend that the fifth amendment be used as an escape hatch for racketeers. It never entered their minds that Senate probe committees would be faced with the dilemma of having a witness go as far as to invoke the amendment as an excuse not to answer such simple questions as "What is your name?" and "Do you know your father's name?" Our racketeers are a smart bunch of cookies with all their thoughts and energies directed toward graft, violence, embezzlement, and other tactics that produce money and power for them in an illegal manner. We would be the last to advocate the depriving of a man of his rights as a citizen, but by the same token all citizens deserve protection and it is hard for us to see where a majority of our citizens are getting full protection from gutter rats when such characters are allowed to invoke the fifth amendment in a farcical manner. Take a look at the sneer on the face of racketeer Johnny Dio in the papers and really get sick with frustration.

Dedicated Women

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story and an editorial from the Wilkes-Barre Times Leader of August 15, 1957, as well as an editorial from the Wilkes-Barre Record of August 16, 1957, on the changes which took place last week at College Misericordia, located at Dallas, Pa.:

[From the Wilkes-Barre Times Leader of August 15, 1957]

SISTER CELESTINE NEW MISERICORDIA HEAD—THREE KEY EDUCATIONAL POSTS ARE FILLED BY SISTERS OF MERCY

The board of trustees of College Misericordia, Dallas, announced today the appointment of Sister Mary Celestine McHale, R. S. M., as president of College Misericordia, and Sister Marianna Gildea, R. S. M., as dean. At the same time, Sister Mary Annunciata Merrick, R. S. M., former dean, was appointed by Mother Mary de Lourdes, Mother Provincial, as community supervisor of schools conducted by the Sisters of Mercy in the Diocese of Scranton. The three sisters are prominently known as leading educators throughout the State.

Sister Mary Celestine assumes the important duties of the administration of College Misericordia just 1 month after completing a 6-year period as Mother Provincial of the Sisters of Mercy of the Province of Scranton. She brings to her new office educational and administrative qualities, as well as wide experience as teacher, principal, and supervisor in all fields of education.

TAUGHT IN PUBLIC SCHOOLS

A native of Wilkes-Barre, Sister Mary Celestine taught in the public schools before entering religion. She received the bachelor of arts degree from College Misericordia, the master of arts degree from Villanova, and the doctor of philosophy degree from Fordham University. She was professor in the department of education at College Misericordia, and had been principal at St. John's, Holy Savior, and St. Mary's, Wilkes-Barre, and St. Vincent's, Plymouth. Sister Celestine also served as community supervisor of schools. As mother provincial she directed the educational activities of the Sisters of Mercy in the Scranton Province, an area encompassing Pennsylvania, Long Island, N. Y., and British Guiana, South America.

The office of president of College Misericordia has previously been ex officio. In making the new appointment, the board of trustees spoke of the need of an active administrator, due to the increased pressure of duties caused by the continual expansion of the college in enrollment, facilities, and curriculums.

STUDIED IN EUROPE

Sister Marianna, newly appointed dean of College Misericordia, returned August 12 from a year of study in Europe, where she attended Regina Mundi, the theological institute for religion in Rome. After completing the course of studies there, she enrolled in the Institute Catholique in Paris, for further study. A native of Luzerne, Sister Marianna has been associated with College Misericordia since its doors opened. She was a member of the second graduation class in 1928, and then returned as a faculty member in 1934, in the departments of Romance languages and education. She was away from the campus for a brief period of teaching at Sacred Heart School, Plains, and for the years of study necessary for higher degrees. Sister Marianna received the master of arts degree and the doctor of philosophy degree from the Catholic University of America, where she majored in the Romance languages. As a member of the faculty of College Misericordia for 20 years, Sister Marianna is also the author of the book, "Living the Little Office."

HELPED DEVELOP COLLEGE

As community supervisor of schools, Sister Mary Annunciata will represent the Mother Provincial in the elementary and secondary schools conducted by the Sisters of Mercy in the diocese of Scranton. As dean of College Misericordia for 12 years, Sister Annunciata did much to bring about growth of the institution. The elementary and nursing education departments were State-accredited, other departments were expanded and enlarged, and four new buildings were added to the campus facilities.

Sister Annunciata was secondary school principal over a period of 12 years in the commercial department, and in the high school of St. Mary's, Wilkes-Barre. While at St. Mary's she taught in the College Misericordia extension division. In 1936 she was professor of political science and sociology, teaching fulltime on the campus and in the extension division. She was appointed dean in 1945. Sister received the bachelor of arts degree from the Catholic University of America, the master of arts degree and the doctor of philosophy degree from Notre Dame University. A native of Avoca, she is a niece of the late Msgr. Rev. John J. Curran.

The office of community supervisor is at St. Mary's Convent, Wilkes-Barre, where Sister Annunciata will reside. She is succeeding Sister Mary Colette Rafter, a member of the Provincial Council, who has been appointed superior of College Misericordia.

[From the Wilkes-Barre Times Leader of August 15, 1957]

MISERICORDIA CHANGES

Appointment of Sister Mary Celestine McHale, R. S. M., as president of College Misericordia, Sister Marianna Gildea, R. S. M., as dean and Sister Mary Annunciata Merrick, R. S. M., as community supervisor of schools in the diocese of Scranton is stimulating news not only for the religious order with which they are identified, but for the community as a whole. In their new roles, they will continue to serve the public in key educational and administrative posts.

Sister Mary Celetsine, a native of Wilkes-Barre and a doctor of philosophy, recently completed a tour of duty as provincial. A public-school teacher in this city at the time she entered the novitiate of the Sisters of Mercy, she subsequently served as a teacher, principal, supervisor, and provincial councilor. She brings to the presidency of Misericordia a broad experience as an educator and executive, eminently qualifying her to carry on the program of expansion, now in progress.

Sister Marianna Gildea, the new dean at the college, is a native of Luzerne and also a doctor of philosophy. She recently returned from a year of advanced study and post-doctoral research in Rome and Paris. A Misericordia graduate and faculty member for 2 decades, she will be at home in the new capacity in which she has been called to serve. By coincidence, she, too, was a public-school teacher before entering the novitiate. She is regarded as an outstanding scholar as well as an author of distinction. Her appointment is not at all surprising to those who are familiar with her attainments and career.

Sister Mary Annunciata, the retiring dean of College Misericordia, who comes to Wilkes-Barre as community supervisor of schools, hails from Avoca. She is a niece of the late Msgr. J. J. Curran and also holds a doctorate in philosophy. She has carried on the family tradition of intense interest in political and social needs of the community. As dean, she displayed immense energy, tireless devotion to duty, a brilliant mind, and administrative ability. Having dealt with the educational problems of so many teachers in training, she is well aware of the challenges facing the elementary and secondary teachers today and fitted to cope with them.

[From the Wilkes-Barre (Pa.) Record of August 16, 1957]

DEDICATED WOMEN

Carrying on its policy of providing the community with the most experienced personnel, the Religious Sisters of Mercy announced the appointment yesterday of three of its outstanding sisters to key positions in the educational circles of this community.

Sister M. Annunciata, R. S. M., former dean of College Misericordia, will assume her new duties as community supervisor of schools conducted by the Sisters of Mercy in the diocese of Scranton. Sister's vast experience as a teacher and administrator provides her with a wealth of background for her new role.

During her 12-year tenure as dean of College Misericordia, vast changes appeared both physically and academically on the Dallas campus. New buildings—four in number—have been added in the past decade to the beautiful campus. New courses such as nursing and elementary education found their way in the curriculum under her guidance. The number of students has almost doubled during her service.

Now, once again she will serve in the vital role of administrating and guiding education of the young—in the very important and formative stage. Sister M. Annunciati, like her beloved uncle, the late Msgr. John J. Curran, has given her life to the welfare and education of the young of this community and her influence finds its way into the four corners of the universe. She will serve in her important new role with the same dignity and unselfish interest that is part of the dedication of the Sisters of Mercy.

Assuming her new role as dean of College Misericordia, Sister Marianna, R. S. M., is beautifully prepared. Her formal education plus the addition of advanced training provides her with the qualities that personify the dedication of the Sisters of Mercy. An alumnus of College Misericordia, a faculty member for 22 years and a student and scholar, Sister Marianna will carry on in the true tradition of those unselfish women whose life is one of study, good works, understanding, and leadership.

The third appointment, Sister M. Celestine, R. S. M., former provincial of the Sisters of Mercy, to the important role of president of College Misericordia, once again signifies that the gallant women who have built a college for women in little more than a quarter of a century, will continue to expand and improve with every year that follows.

Mutual Security

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. LECOMPTE. Mr. Speaker, Members of Congress will, I am sure, be interested in having the observations of

one of my constituents who has recently returned from Europe, and who strongly advocates support of the mutual security program as proposed by the President. Under leave to extend my remarks in the RECORD, I include a telegram I have from Howard Frank of Oskaloosa, Iowa:

OSKALOOSA, IOWA, *August 16, 1957.*

KARL M. LECOMPTE,
Representative, House Office Building, Washington, D. C.:

Urge your wholehearted support of Eisenhower foreign-aid program. Six weeks in Europe this summer made me realize we either compete against Russia or pullout. The Germans greatly fear we may back out and turn it over to Russia. I do not like the taxes, but it is a far better deal than loss of position.

HOWARD FRANK.

United States International Air Transport Policy

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. BOW. Mr. Speaker, I have on several occasions in the past joined with other of my colleagues in calling upon the Department of State to take a firm stand in the protection and promotion of American interest in international aviation.

One of the items which we have discussed has been the failure to secure the extension of the route of an American carrier from Frankfurt to Zurich. This flight is but 178 miles. However, it is a very important link in a route that makes economically feasible an international flight. I have had further correspondence with the Department of State on this matter and I, therefore, include in these remarks a letter which I received from the Department of State, dated July 18, 1957, from John S. Hoghland II, Acting Assistant Secretary for Congressional Relations, together with my reply to Secretary Hoghland on August 9, 1957:

DEPARTMENT OF STATE,
Washington, D. C., July 18, 1957.

The Honorable FRANK T. BOW,
House of Representatives,
Washington, D. C.

DEAR MR. BOW: Reference is made to your letter of June 14, 1957, in which you expressed interest in the extension to Zurich and beyond of Trans World Airlines' present route to Frankfurt via London. Your speech and extension of remarks on this matter, and on United States international air transport policy in general, have received thorough consideration. Your courtesy in forwarding the texts of your remarks on these subjects is appreciated. In view of your expressed interest, the following detailed comments have been prepared for your further consideration of the issues in question.

Your views as to the importance of TWA's Frankfurt-Zurich extension are fully shared by the Department. Since the carrier's amended certificate was approved by the President in 1952, the acquisition of additional traffic rights from foreign governments, where required, has been a primary objective of United States foreign relations in the air transport field. In some countries the additional traffic rights in question could be obtained only by the grant of additional traffic rights in the United States. For example, the fact, mentioned in your speech, that the German Government does not object to the service, is due to the fact that the traffic rights desired by the United States have been obtained from the German Government in exchange for the grant of traffic rights of equal value for the German airline. Incidentally, the grant to Germany of traffic rights necessary for this purpose was strenuously opposed by certain United States airlines which either had no interest in the extension of TWA's route beyond Frankfurt or which activity opposed such extension for competitive reasons.

It is true that the British Government thus far has refused to grant additional traffic rights in the United Kingdom for TWA operations over the proposed route beyond Frankfurt. Within the last 16 months, this Government has pressed its request during each of 3 formal meetings with representatives of the British Government and has actively pursued the matter through diplomatic channels. It should be emphasized that TWA already is exercising unrestricted rights to carry traffic between New York and London and between London and Frankfurt. These rights would not be affected by the extension of the airline's route beyond Frankfurt. Moreover, the British are interposing no objections to the extension as such. They have not agreed however, to permit TWA to carry traffic between London and points in countries beyond Frankfurt. The British Government takes the position that airlines of Great Britain and the foreign countries involved have primary claim to traffic between their countries; that competitive United States-flag carrier services between such points would have a serious adverse effect on British carriers; and that Great Britain has at present no reciprocal route desires of the United States which would equal in value the additional rights desired by this Government for TWA. The Department remains determined to pursue this matter to a satisfactory conclusion. However, in view of the adamant position of the British Government and the opposition of most United States airlines to the grant of additional traffic rights to British airlines, it is not possible to estimate when this issue may be resolved. In the meantime, of course, the decision to delay the establishment of service beyond Frankfurt in the exercise of the traffic rights already negotiated by this Government rests solely with TWA.

With respect to the portion of your speech which expressed concern lest the Government was abandoning the basic principles upon which its international air transport policy has been based since 1946, the Department takes this opportunity to assure you without qualification that the Government's actions have been guided by the desire and the determination to give effect to those principles and to encourage adherence to them on the part of foreign governments. All of the bilateral air transport agreements which this Government has concluded since 1946, with the possible exception of that with India, reflect these principles. The bilateral agreement with India differs in some respects from the other air transport agreements which the United States has negotiated since 1946. This was necessitated by the differing philosophy between the two governments as to the methods through which the orderly development of air transportation might best be achieved and by the unique nature of air transport between the two countries.

With regard to the application of United States international air transport policy to specific route exchanges, the agreement with the Netherlands, which was mentioned in your letter, is one of the most controversial. The Department's position in this matter, and the practical problems which it must face in discharging its responsibilities in the interest of the Nation as a whole, were explained by Mr. Thorsten V. Kalijarvi, Assistant Secretary of State for Economic Affairs, in a recent address before the International Management Association. A copy of Mr. Kalijarvi's remarks is enclosed.

The Department appreciates your interest in these matters, and hopes that you will find the foregoing comments and the enclosure useful in your continued consideration of the important issues relating to United States international air transport policy.

Sincerely yours,

JOHN S. HOAGHLAND II,
Acting Assistant Secretary for Congressional Relations.

WASHINGTON, D. C., *August 9, 1957.*

Mr. JOHN S. HOGHLAND *II,*
Acting Secretary for Congressional Relations, Department of State,
Washington, D. C.

DEAR MR. HOGHLAND: Thank you for your letter of July 18, 1957, commenting on the Department's inability to secure operating rights for Trans World Airlines' route beyond London via Frankfurt.

Your position seems to be that international routes result from trades between governments and that the United States has nothing to offer the British in return for TWA's Frankfurt-Zurich rights. The idea seems to be that we have nothing to trade because we have already given them everything they want.

I understand, moreover, that the United States recently accepted without protest a notice under the United Kingdom bilateral that had the effect of giving the British traffic rights between Tokyo and the United States and that we received nothing in return for this grant. I do not understand why the same procedure cannot be used with respect to TWA's Frankfurt-Zurich rights.

I also understand that there is now in effect an extremely generous interpretation of British rights under the bilateral agreement that extends BOAC's transatlantic route from New York to California. Under that interpretation, BOAC is carrying between California and New York traffic destined for London that is to be carried beyond New York on the lines of another carrier, as well as traffic originating at New York that is destined for points in the Orient on the routes of Qantas. I also understand that BOAC intends to carry across the United States traffic originated in Canada and destined to Honolulu. These appear to be valuable rights arrived at by interpretation in return for which our American carriers again received nothing.

I have been told that BOAC does approximately $25 million worth of business a year on its transatlantic route to and from the United States, and that just the annual rate of increase in this business for the last 6 years far exceeds the revenues that TWA could expect to receive as a result of extending its operations beyond Frankfurt.

The true interest of our Government must be in the practical effect of the route situation on our carriers and on foreign carriers, and I for one am not impressed by the argument that the British are not asking for anything just now.

Second, your letter explains that TWA could start operating the Frankfurt-Zurich traffic today if it did not carry traffic between London and points east of Frankfurt. Surely you must agree that the right to operate in an uneconomic manner and one not contemplated by the CAB award, cannot be regarded as any right at all.

I would appreciate it if you could from time to time keep me advised of progress made by the Department on this route.

Yours sincerely,

FRANK T. BOW,
Member of Congress.

Mr. Reuther's Smokescreen

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. VURSELL. Mr. Speaker, since I recently introduced a resolution asking the Congress to join with the President in urging the labor leaders and the business leaders of the Nation to voluntarily cooperate in holding down further wage increases, and further rises in prices in the hope of stopping the present inflation and turning the cost of living index downward, I should like to comment on a statement by Walter Reuther carried in the press yesterday.

It appears that the statement given out by Reuther, asking the automobile industry to reduce the price of their new 1958 line by $100, and giving the impression, in his nebulous statement, that they would give consideration to such reduction when they ask for a new wage contract in 1958, is a rather neat trick to gain the jump on the automobile industry in the hope of gaining public sentiment favorable to him and his union leadership.

Mr. Speaker, the suggestion he makes has the appearances of propaganda—hoping to gain the favor of public sentiment. He will have to be more specific.

Mr. Speaker, if Mr. Reuther is sincere, why did he not make the suggestion 2 or 3 months ago—before the automobile industry got out its new, and doubtless improved, line of cars for 1958? Better than that, why does he not now say to the automobile industry that if you reduce the price of your cars an average of $100 each to the dealers, we will forego wage increase demands, and preserve the status quo of the contracts now in existence, so the public may share in the lower prices for automobiles—thus contributing their part to the reduction of the cost of living.

Mr. Speaker, in this connection, I contacted General Motors Corp. this morning, and find that on $10,910 million annual gross business they averaged about 7¾ percent profits, of which 5¼ percent was paid to over 1 million stockholders in dividends, whose finances make the operation of this gigantic business possible, with jobs for over 1 million people.

Mr. Speaker, the following table will show percentagewise how this gross amount was distributed:

For material and services, 49 percent plus.

For wages, 29 percent.

For all taxes, 10½ percent.

For depreciation and obsolescence, 3¼ percent.

For stockholders, 5¼ percent.

Retained for facilities and working capital only, 2½ percent.

From the above, you will note that out of 7¾ percent net profit, 5¼ percent went for dividends to the stockholders, upon which these stockholders still must pay Federal income taxes, and that the corporation retained for upkeep of facilities, new facilities and working capital only 2½ percent.

Mr. Speaker, we are glad to note that in Mr. Reuther's statement he admits that the constant increase in wages is inflationary; that his organization and the automobile industry should cooperate to hold down manufacturing and retail prices in an effort to stop inflation, and reduce the cost of living.

We hope he will now make a further understandable, factual statement as to just how he will make his contribution to the reduction of the cost of automobiles by foregoing further wage demands and benefits, and preserving the status quo.

Mr. Speaker, the Congress and the public will appreciate the combined efforts of both the automobile industry and labor in making an effort, just and fair to both parties concerned, to stop inflation and lower the cost of motor vehicles.

[From the Journal of Commerce of August 19, 1957]

MR. REUTHER'S SMOKESCREEN

Walter Reuther's invitation to the automotive industry's Big Three to join the United Auto Workers Union in a dramatic antiinflation program shows up the UAW chief at his best and at his worst.

Mr. Reuther's proposal looks quite simple: The automobile makers are to reduce prices on their 1958 models by an average of $100 per car. Against that, the union pledges to "give full consideration to the effect of such reductions on the financial situation of the auto companies" in the drafting of the 1958 union demands and in the collective-bargaining negotiations next year.

The answer to Mr. Reuther's proposal is quite obvious.

Any move honestly designed to alleviate inflationary pressures in the economy is a fine thing and should be encouraged. There is serious doubt in our mind, however, that this plan of Mr. Reuther's was made in good faith. It looks to us like a move designed to build up public sympathy for the UAW rather than an honest attempt to stop the wage-price spiral in the automobile industry.

Mr. Reuther's letter makes a persuasive case against inflation. He admits quite significantly that the members of the UAW—though protected by cost-of-living escalation in their wage contracts—actually have much to lose by inflation because it erodes the purchasing power of their savings, life-insurance payments, and pensions just as other important sectors of the public are victimized by it.

With the flair of a master politician, he berates both management and labor that "self-discipline is the price of freedom and that free management and free labor cannot for long remain free if they abuse their power." Moreover, their responsibility to the public, as he sees it, goes beyond "mere resistance to further price increases in the auto industry."

He wants the automobile industry to take the leadership in a drive toward reversing the inflationary price trend.

The hitch in this plan lies in the fact that he wants a definite commitment from the industry to cut prices when the new models are announced within a matter of weeks, while he fails to match this with any specific concession with respect to wages.

Nobody could expect him to come out with a proposal to cut wage rates, of course. However, he did not even suggest that the union might offer the industry maintenance of the status quo in wages and fringe benefits as reward for the suggested price cuts.

His letter contains a lot of window dressing about setting up a review board in case the 1958 union demands, in the opinion of the industry, would necessitate withdrawal of the suggested price cuts, in full or in part. Actually, Mr. Reuther did not even hint or imply that he might be willing to drop his campaign for a shorter work week for the life of the next contract.

The real tipoff to Mr. Reuther's latest maneuver lies in the way he is trying to mastermind the impact of such price cuts on the industry's sales and profits.

Using what must be a new model crystal ball, he stated categorically that average price cuts of $100 per car charged to dealers will result in a gain of 1 million cars in 1958 auto sales and thereby pull industry earnings to even higher levels although unit profits would be lower.

This prediction has a very definite purpose, of course. It is meant to prepare the public for the shock that the union will enter next year's collective bargaining period with a long list of additional demands which, in its opinion, should be granted in order to bring about a "fairer distribution of the fruits of a growing economy."

Here again, the master politician is showing his hand. What he really wants at this time is to embarrass the auto makers and to put them on the defensive.

Having failed in his prior attempt to soften rising public resentment against the endless chain of wage boosts by blaming the current phase of inflation on the bugaboo of administered prices (he was personally responsible for sicking the Kefauver subcommittee on that subject), he is now launching another public-relations program.

The public is not likely to be fooled any more than it was the last time. The fact of the matter is that Mr. Reuther really could have contributed something to the fight against inflation, if he had been willing to offer the industry a status quo. This would have put the industry on the spot. However, this chance he passed up, for obvious reasons.

Eisenhower May Not Mention the Name of Harry Truman but History Will Record Truman as One of Our Truly Great Presidents

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an excerpt of Post Scripts which appeared in the August 19, 1957, issue of the Washington Post and Times Herald:

President Eisenhower is so vexed with his predecessor, Harry S. Truman, that he even tries to steer clear of using his name.

In a flash press conference held in his office last week, the President was appealing through the press to Congress to appropriate sufficient money for mutual security. Telling the history of the program, he said:

"It started in 1947, and since that time there have been many points in the free world that have been transformed from positions of weakness and threat into positions of real strength for the free world. Greece and Turkey started it."

He made no mention of Mr. Truman's part in all this or of the now historic Truman Doctrine.

On June 5, President Eisenhower wrote and made public a glowing letter to Gen. George C. Marshall on the 10th anniversary of the Marshall plan. He credited the plan with saving Europe when it was on "the brink of economic collapse and political chaos." But he made no mention of Mr. Truman, without whose backing and whose fight on Capitol Hill, of course, there would have been no Marshall plan.

Federal Aid to School Construction and TVA as Seen by a Pennsylvanian

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a feature article which appeared in the Evening Chronicle, of Allentown, Pa., on August 9, 1957, which discussed both Federal aid to school construction and TVA as seen by a Pennsylvanian:

(By W. D. Reimert)

The Federal Aid to Education bill, which was defeated only recently by the devious means of introducing a segregation amendment, was nevertheless one of the biggest flim-flams ever perpetrated upon a large segment of America.

Utilizing the successful slogan that no expense is too great to provide our children with good educations, proponents of the bill had painted a lurid picture of the collapse of public education in this country, if it did not pass. A great many well-intentioned persons fell for this line and warmly advocated the measure.

But plenty of good evidence was introduced to show how fallacious the glowing statistics of school need were and to prove that, despite all the cry for Federal aid, the States themselves were building more schoolrooms than the bill's sponsors said will be needed.

Actually, what the bill would have done was to saddle on 18 States a large portion of the costs of building schools in States which refused to recognize their own responsibility in the matter.

Thus Pennsylvania would have paid out several millions more than it would have received, while States like North Carolina and other southern States which have been stealing industries from the North right and left largely because of low tax inducements, would have collected millions more than they paid in.

The arithmetic of the whole proposal, plus the fact that the biggest recipients were not doing their own job adequately, should have been enough to defeat Federal Aid to Education on the face of it, not to mention the threat of Federal domination over all public education. So it was unfortunate the bill was not laid to rest on the basis of these good arguments, but because of racial prejudices.

All this is now history and most of it has been said before, but it serves a good purpose to recall some of these things at this time because of two other bills now rolling around in Washington's legislative hoppers. They are known as House bill 4266 and Senate bill 1869.

Both are designed to vastly expand the Tennessee Valley Authority with especial reference to its electric power producing facilities. Both practically remove the last vestige of control by Congress over TVA. Both would saddle States without even a remote indirect interest in TVA power with paying tremendous portions of the cost, while the States who benefit most will use cheap power produced at taxpayer expense to lure industries into the Southland, which has had its hand out for Government handouts ever since the Roosevelt depression days.

Among other things House bill 4266 does are these:

1. Terminates the TVA obligation to replay a billion and a half dollars already invested by the taxpayers of the Nation. Under the Government Appropriations Act of 1948, TVA is required to repay all funds appropriated for power purposes over a period of 40 years. H. R. 4266 could repeal this requirement.

What does this mean? Simply that TVA will wipe the books clean of a billion and a half dollars in appropriations over the past years. Of this amount, according to Senator EDWARD MARTIN, Pennsylvania, has contributed $147.3 million and gotten nothing in return, while Tennessee, the principal beneficiary of these appropriations has paid only $25 million as its share. North Carolina, now included in the expanded TVA area under Senate bill 1869, and which has been advertising for industry in the North by holding out its low tax rate as bait, has paid only $29 million. Thus, Pennsylvania taxpayers have been paying from 5 to 6 times what either Tennessee or North Carolina have.

2. Gives TVA unlimited right to issue bonds for expansion without authorization or approval or check by Congress or any other governmental agency.

This is the first time in American history that a government agency has been authorized to sell bonds to support a business activity.

3. Gives TVA the power to set rates without Federal Power Commission approval. Thus, it is conceivable that under some starry-eyed management the people of the South could get electricity for nothing or next to nothing at the expense of the rest of the country.

4. Makes the taxpayers' interest secondary to that of the bondholders, thus wiping out, to all intents and purposes, past obligations of a billion and a half.

5. Makes these bonds Federal obligations, and excludes them from budget control. In other words, receipts and expenditures from bonds need not be accounted for when TVA submits its budget to Congress.

All this, despite the fact that TVA by its own statement already has about $100 million a year available for expansion purposes.

6. Removes any requirement that TVA get approval before expanding. All that is necessary is for its officials to notify Congress of its plans.

7. Establishes a responsibility on the part of TVA to furnish power for a variety of purposes the same as the law does for private utilities. But under the broad powers of H. R. 4266, this has the effect of enabling TVA to spread from an area of 80,000 square miles to 1 of 200,000 square miles by merely declaring its own feeling of responsibility to do so. This additional area is as big as the six New England States and New York combined.

This is perhaps the most dangerous portion of the entire bill, because it removes any limit to TVA expansion. There is no stopping these things. Originally, TVA was set up to control the waters of the Tennessee River. That was done long since. Power was to be a byproduct. Now it has launched into producing power with steam. What it will do next is limited only by the few controls Congress chooses to exercise.

The socialistic expansion of governmental activities in the power field, knows no bounds. According to S. C. Hollister, dean of the College of Engineering at Cornell, in 1933 the Government owned one-half of 1 percent of the total electric generating capacity of the country. By 1953, this had jumped to 10 percent. Including projects now authorized, the Federal Government will soon own nearly one-third of the total installed generating capacity of the country.

"How," Dr. Hollister asks, "would you like to receive your electric bill with a notation that 35 percent was being deducted because the utility furnishing your electricity could now do so without having to pay the usual taxes and the full cost of capital? This is what the biggest power producer in the business can do for its customers. Who is this producer? Your Federal Government. How does it do this? It taxes you to make up the deficit.

"How would you like to receive a note on your light bill saying that a sum has been added so that someone you never heard of could get his light bill reduced 35 percent? This is what is happening to most of you, but it isn't being so marked on the bill. About 80 percent of the people are paying a quarter or a third of the light bill for the other 20 percent."

It is as simple as that.

House bill 4266 and Senate bill 1869 would simply extend the money grab deeper into the taxpayers' pocket, your pocket that is, if you live in Pennsylvania or New York or in any of the other States beyond the pale of this generosity to the few at the expense of the many.

They should be killed promptly and in their place Congress should follow the recommendations of the Hoover Commission and "empower and direct the Federal Power Commission to fix the rates on Government power sales at such a level as will (a) eliminate the inequities now imposed upon the great majority of the people; (b) amortize and pay interest on the Federal investment in power, plus an amount which will equal Federal exemption based upon the Federal taxes paid by the private utilities; and (c) provide payments in lieu of full taxes to the State and local government equivalent to those the private utilities would pay."

Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. SMITH of Kansas. Mr. Speaker, last week in the other body a memorial service was held for deceased Members. A great many Senators spoke of Senator McCarthy and what he meant to many Americans. It is readily apparent that some Members in the other body have changed their appraisal of Senator McCarthy. They should be commended for their new evaluation of Senator McCarthy.

I append hereto a most worthwhile comment of Nagene Campbell Bethune—a great American patriot who has long made her views felt in the realm of basic, American doctrines:

DEAR GUARDIANS: Although there are many happenings recorded in the news today

which challenge our attention, the Guardian has chosen to pay its tribute to the inexpressibly sad news of the death of the greatest champion the cause of patriotism our country has ever had. Loyal to the core, he represented the best there is in American life, the most valient fighter, he must be credited with great vision, understanding, and to rarest courage—that courage he exhibited to preserve and safeguard America in the fight to cleanse our country of saboteurs in our Government. I refer, with saddened heart, to Senator Joseph R. McCarthy.

"Men may come and men may go" many leaving no trace in the sands of time except that of evil—but not so with Senator McCarthy's passing. There was no evil in him, and the old Chinese proverb still rings true: "Just as tall trees are known by their shadows, so are good men known by their enemies."

With the fearless independence of a rugged character, boldly defending whatever he believed would promote the welfare of our common humanity and the redemption of America as we once knew it, Senator McCarthy will go down in history as the man upon whose investigation the country learned of the frightful corruption in Government where scandals were shrugged off as a part of politics and the presence of traitors there had all but destroyed our Constitution. He believed the Bill of Rights must not be used for the protection of traitors and that as long as our Government protects the man who engages in conspiracy to destroy the very institutions which give him freedom, we cannot deal adequately with the fifth-column columnists (a word coined by him). Witness after witness appeared before him from the highest echelon who had their orders and their stories well prepared—down to the petty racketeer and his shady operations. His investigation brought howls of rage from his opponents. The violence and methods used by them, even to attacks upon his personal character and honesty did not intimidate him although Machiavelli himself could have hardly devised a more cruel, cold-blooded, and amoral plan than the schemes to discredit him, by the pinks, the reds, the leftist commentators of radio, TV, and the controlled press.

They said he was "rough" but one does not handle treason with slogans. Some characterized "rough" as lacking in the veneer that is so quickly attained by those who come to this cocktail, party-loving, social Washington who are so accustomed to having public men say quite a lot less than they really mean that it startles them when anybody ges up on a platform and talks as if he were sitting in a room with close friends, but Senator McCarthy's sincerity, simplicity, and earnestness soon won them to his cause. He had many precedents who lacked the social graces. Is it not recorded that Abraham Lincoln was on the lowest of the low social scale? Did not the gentlemen regardless of the ideals of the Declaration of Independence and the resultant war, object to the backwoodsman, Patrick Henry, as captain of the militia?

Senator McCarthy had a remarkable capacity for instilling faith and loyalty in the hearts of those who shared his beliefs. Out of the byways and hedges, in the humble places of the Nation, in the hearts of men whose words are perhaps illiterate and tones halting, there lies latent virtues that have been bred in the century or more of our free national life that have come through tradition—mostly accepted on trust—the laws and opinions laid down by our progenitors. Such men do not need a glossary to understand Joe McCarthy for he spoke their language—a language they understood—and they looked upon him as a spearhead to restore this country as the Founding Fathers envisioned it.

Senator McCarthy believed that the Declaration of Independence, the Bill of Rights, and the Constitution were divinely inspired and that if our Republic is to remain free, the people, not the Pentagon, the State Department (giving us such information as we need to know), or foreigners—must decide the issues before us.

I am proud to have known Joe McCarthy. The Nation owes him a debt of gratitude in alerting the Nation not only to the danger of communism in our Government, if for no other reason, they, as Communists, are obliged to destroy it, but in calling attention to those internationalists who are of a mind to compromise with the spirit of the Constitution. Inoculated with the materialistic virus, with little or no religious faith, indeed, so lacking in religious faith that it is almost a violation of etiquette to take the name of God into an international assembly of lawmakers or politicians, although we, as a Christian nation, Atlas-like, are carrying on our backs most of the nations they represent. They take no account whatever of America and its interests. We are second. They are first. Always first. They consider us unable to decide what is best for our own country; they would run it for us. And again and again they have brazenly broadcast to the world that we are gullible and inferior in matters of statesmanship.

Senator McCarthy had the courage of a man who knew he was in the right. He typified the spirit and was, in a sense, a prototype of the Father of Our Country, with the same moral armament as George Washington, who led his ill-fed, ragged, half-frozen Colonial Army through the Revolution. He lost most of the battles; but when all seemed hopeless, Washington is pictured at Valley Forge, as seen and described by Isaac Potts, by the following: "General Washington's horse was tied to a sapling in a thicket. The general was on his knees praying most fervently." On that memorable night Washington stood firmly and won the last battle that changed the course of history.

Joe McCarthy was deeply religious. He, too, in moments of great despair, sought guidance from his Maker in the sanctuary of his church.

Senator McCarthy devoted himself to the service of his country with a zeal as great as it was unselfish, and it can be truly said that he gave his life, every drop of it, his last breath, to his beloved country. We who heard him that last afternoon little dreamed it would be his last address. We were uneasy, for he had shown signs of emotional strain and nervous exhaustion, but, as courage was one of his gifts, with characteristic tenacity he fought on. The physical body can stand only so much. If it is true, as many contend today, that "emotions kill"—and no one knows this better than the sordid sinners who heaped vilification and venomous animosity upon him—then Joe McCarthy was killed just as surely as were his buddies in the war in Korea. Is there any difference between physical and moral murder?

Time works strange magic on events and human beings and very often brings a different perspective and belated honor to the daring souls pilloried during their lifetime and often makes martyrs of men. It was only yesterday that condemned Billy Mitchell and Dr. Wirt, that stalwart western schoolmaster who was the first to bring forth evidence regarding the Brain Trust only a year after the New Deal came into power.

Joe McCarthy is gone, and with him went something of the heart and soul of every patriotic American. To them the name shall remain a cherished memory; but he leaves more than a memory, for he left behind him his spirit; and though he is no longer here, his cause lives on, for he has inspired milions of his countrymen with a new patriotism.

NAGENE CAMPBELL BETHUNE.

Hawaii Opinion on Okinawa

EXTENSION OF REMARKS
OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. BURNS of Hawaii. A problem of particular significance to the position and influence of the United States of America in the Far East is that of Okinawa and the Ryukyus.

In connection with Hawaiian Statehood, I have pointed out on innumerable occasions that I am for statehood for Hawaii primarily because I am an American. Statehood for Hawaii is in the interest of the United States because thereby the great potential of Hawaii's Americans of many diverse ancestries will be accorded full recognition and maximum growth, affording a bridge of understanding so vitally needed in solving the problems in the Pacific and Far East.

The editorial I include herewith reflects Hawaii's awareness of and closeness to problems of the Orient that involve social, as well as military, economic, and political situations, the importance of which continues to mount.

I am sure that the editorial touches a problem which should concern us all.

[From the Honolulu Star-Bulletin of August 16, 1957]

TWELVE YEARS AFTER THE SURRENDER

Japan is marking, this week, the 12th anniversary of its unconditional surrender as the loser of its greatest gamble.

That was the launching of World War II in Asia and the Pacific.

An Associated Press report from Tokyo said that Japan today has a sober realization that it is on the road back to the ranks of major nations.

Japan is, in fact, one of the major nations today.

Its shipbuilding industry is one of the largest in the world. It is turning out steamers, ships, and boats of all sizes at a record rate.

Its steel and paper mills and other factories are roaring and humming.

Tokyo is today the world's largest city. It has caught up with and surpassed New York and London.

Japan has formidable problems yet to solve. On 4 main islands are more than 85 million people. Its agricultural resources are limited. Its battle-won overseas empire that once stretched from Manchuria to Indonesia, Malaya, and the Solomon Islands, has been lost. To survive now, it must be a great exporting nation, but its overseas markets are limited.

In its serious problems Japan has now—as it has had ever since that day of surrender in Tokyo Bay, September 2, 1945—the cordial help of the United States, and considerable assistance from other members of the United Nations.

Japan will continue to have this help—which includes billions in grants and other aid—so long as Japan does not display a resurgent militarism aimed at new aggressions and new conquests.

The move made by Premier Nobusuke Kishi a few weeks ago to get Okinawa and the Ryukyu Islands returned to Japan's administrative control has already roused strong protest. Particularly Ryukyuans, both in their island homes and elsewhere in the world, are alarmed and indignant.

That move, made first openly in Washington during Kishi's visit, appears, unfortu-

nately, to have gotten some encouragement from the United States State Department and perhaps from the White House.

United States military commanders are much concerned. They are not in position to speak publicly on such a matter of United States national policy. Privately, they are both amazed and disturbed that the United States should give any recognition to Japan's specious claims to residual rights to Okinawa and the Ryukyus.

Okinawa today is our major northern anchor for that vital line of defense for the free Americas that stretches down the west Pacific to Australia and New Zealand.

Any further moves by Japan, any further signs of concession by our national administration on this issue of Okinawa will be watched with special concern by all who know today's military-economic-political situation in the Pacific.

Dr. Robert G. Neumann Analyzes France and the Algerian Crisis

EXTENSION OF REMARKS
OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. HILLINGS. Mr. Speaker, Dr. Robert G. Neumann, professor of political science at the University of California at Los Angeles, has written a series of excellent articles on France and the Algerian crisis. Professor Neumann's articles appeared in recent issues of the Los Angeles Times. His excellent background and on-the-spot study of this important question makes him eminently qualified to analyze this vital problem.

I urge all of my colleagues to obtain the benefit of Dr. Neumann's views in this regard. Following is the first of three articles written by Dr. Neumann:

FRANCE AND THE ALGERIAN CRISIS—I

(By Robert G. Neumann)

PARIS.—The Algerian crisis works like a slow but sure poison. It is not and cannot be absent from any political discussion in France. It has made for a bitter division among frequently equally honest and sincere men. It hangs a cloud of uncertainty over France's future, it isolates it and endangers its relations with its friends and allies; and it has raised some of the most poignant and serious doubts about the viability of France's republican institutions.

The much-tried American citizen knows by now that we are getting involved in this one too, as usual. Happily not as knee-deep as in the Middle East where we have assumed direct responsibilities and have undertaken direct action; there is no likelihood of such a thing happening to us over Algeria. But France's difficulties weaken the western alliance system and there is every indication that the forthcoming debate before the United Nations General Assembly will be a difficult one for France. Eventually America will have to take a stand there and vote for or against a resolution condemning France. Our attitude will have an important bearing on our future relations with France, the Arab countries and the Afro-Asian bloc.

Moreover, if I judge correctly from afar, America seems to become interested in this knotty problem. Senator KENNEDY, *smoothly* seconded by Senator MANSFIELD and HUMPHREY (all Democrats), has taken a strong stand and put the blame for the existing situation solely on France. The Eisenhower administration and especially Secretary of State Dulles has taken the opposite view and Mr. Adlai Stevenson has supported the administration view, more or less, rather than that of KENNEDY, MANSFIELD, and HUMPHREY.

If we want to gain some understanding of the Algerian question we must, first of all, free ourselves rigorously of a number of outmoded and utterly incorrect notions. Americans are prone to view a struggle of this kind as a colonial fight in which the suppressed natives rebel against their foreign rulers. Our sympathy is usually with the underdog; moreover we have a solid (and in contrast to my French friends I think very healthy) tradition of anticolonialism. Hence, the average American reaction is likely to be something like this: "Why don't the French give up Algeria and go home."

This reaction is of course understandable, but it misses Algerian realities completely. When France occupied Algeria 130 years ago it was a large, empty territory without any government and with few inhabitants. This was the land of the barbary pirate where America had intervened before and where Stephen Decatur undertook his daring action which every American child knows.

The French brought to Algeria modern economic and administrative measures. As a result Algeria began to attract many immigrants, both European and African, and well over 90 percent of the non-European population of Algeiria is therefore of no more ancient origin in that country than are the Europeans, most of whom have settled there for several generations. Both Europeans and non-Europeans have therefore an equally strong claim to calling Algeria "theirs." Of the European population only one-third came from France; the rest are of Spanish and Italian origin. Hence, Algeria, not France, is their country and it makes little sense to tell them to go home. They are at home. It is a tragic factor in this worsening situation that both the Algerian nationalists and the Europeans there have the passionate certainty of fighting for a man's most sacred possession: his home.

As I have stated in a previous article, the social structure of Algeria is not that of a colonial country. The Europeans do not form a thin, governing class of administrators and planters. They live largely as they do in France, as workers, farmers, farm laborers, artisans, businessmen, civil servants, etc. They are not rich. Their average income is lower than that of the French population in France proper. And in fact the backbone of the European resistance to concessions in Algeria the rabid European nationalists of Algeria, known as the "ultras," are the poorer Europeans: the rich ones could, if need be, move somewhere else and live comfortably there: the poor ones, however, have their backs against the wall; they stand to lose everything. This is a far cry from the legend of the moneybags and the colonial administrators who do not want to give up their privileges and rackets. If it were merely a matter of the rich and powerful the Algerian problem could be easily solved by buying the rich off and sending the administrators elsewhere.

And yet, the Europeans are, in a sense, a privileged group in comparison to the Moslems. (I am using the term Moslem as the most convenient one. We can't call them "natives" because the Europeans are just as "native" and we can't call them Arabs because many of them are Berbers and do not speak Arabic.) The European position of economic superiority is not the result of discrimination, either legal or otherwise. But in the process of settlement the superior European training, working habits and financial backing naturally brought the better land into European hands and established the Europeans more solidly in business. But there are rich Moslem businessmen and there are wealthy Moslem farmers whose economic status is superior to that of many Europeans. The Europeans therefore do not feel that their position is any more unfair than is that of a businessman in comparison to a less successful competitor. I do not think this point of view is realistic but it is easy to see why it is sincerely held.

In the field of political administration, however, there can be no question that the Moslems have been discriminated against; and yet, the French people who hotly disagree with me on this point are quite sincere. How is this possible?

French administration is ruled by the strictest centralism. Local government, in the American sense, does not exist. Mayors and city councils have next to no power and the councils of the departments (something like counties) have even less. Each department of France is in effect governed by a prefect who is a civil servant and is under the strict orders of the Minister of the Interior in Paris. Now this system may be good or bad, but in France proper the fact of being governed directly by Paris raises no significant political issues. But for the Moslem Algerians direct rule by Paris means foreign rule and hence does have an aspect of colonialism.

The French have been very slow to recognize this fact. They are people who like precise, legal formulas and who accept them as fact. The legal doctrine was (and actually still is) that Algeria is an integral part of France and is governed like other departments of France. If the Christian French citizens of Brittany or Normandy do not object to this system, why should the Moslem French citizens of Algeria? But this kind of thinking was based on a fallacy: the French citizens of Brittany and Normandy are, first of all, Frenchmen. But if the Moslem Algerians were to feel, first of all, like Frenchmen, they would have to become fully assimilated into the French culture, the French way of life.

It was therefore quite logical that assimilation should, for many years be the official policy of France. Unfortunately, it was a complete failure. Whether it could possibly have succeeded must remain a mute question because it was never applied down to its last consequences. The policy of assimilation was based on the contention that the French have no racial prejudices (which was once more nearly true than it is now) and that anyone who becomes wholly French in language, culture, and custom is accepted without prejudice. A few people, primarily Negroes, have benefited by this policy, have become completely Frenchified and have risen to the highest offices of the state, like the present President of the Council of the Republic and a Cabinet Minister in the present Government. But to the great masses of Africans this road remained closed because they did not receive even the rudimentary beginning of an education. Even today, the great majority of Moslems in Algeria are illiterate, while every European child had an opportunity for full education. In view of these circumstances one must question whether the French were ever serious about the policy of assimilation.

Whether assimilation would have succeeded if really applied must remain a mute question. Certainly conservative Moslem forces, as well as the rising spirit of nationalism did not look kindly upon those who accepted the European way of life. But, at any rate, the failure of the assimilation policy left the great masses of the Moslem Algerians without a meaningful status. Differences of language, culture, custom as well as social and economic conditions prevented them from feeling wholly French. Yet, the system of centralization and the doctrine of the one and indivisable Republic of which

Algeria was merely an integral part left no other alternative. A former governor-general of Algeria, Maurice Violette, predicted the present development with tragically prophetic clarity when he said to the French in 1935: "Beware, lest the indigenous population of Algeria be left without a homeland by your fault. They are seeking one. They want from you the homeland of France. Give it to them quickly, or, failing that, they will create another one for themselves."

Postal Wage Increase

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. ULLMAN. Mr. Speaker, the overwhelming vote of the House of Representatives in support of a pay increase for postal employees indicated, I believe, the widespread conviction that these dedicated public servants merit salaries more in keeping with the current cost of living. I am pleased to see that newspapers in my home State of Oregon have also reflected this conviction. Both the Portland Oregonian and the Oregon Journal recently carried editorials calling upon Congress to speedily enact legislation which would raise the salaries of postal employees.

Mr. Speaker, I think these two editorials will be of interest to other Members of Congress and under unanimous consent I ask that they be printed in the Appendix.

The editorials follow:

[From the Portland Oregonian of August 6, 1957]

POSTAL WAGES TOO LOW

Postal clerks, carriers, and other employees got about a 10-percent wage increase in 1951. They got an 8-percent increase in 1955. Since postal wages have slipped behind those in many other Federal agenices, and far behind wages in industry, the post office is having a rough time keeping younger employees. The turnover is too great for efficiency. Some older workers are leaving for greener pastures. The post office is not so attractive as a career service as it once was.

The House of Representatives has adopted H. R. 2474 providing a $546 annual across-the-board cost-of-living increase for postal employees. This amounts to about 12 percent, but is by no means too generous. There is talk that the Senate committee, which has been considering a separate bill, may go along with the House to expedite the legislation.

The possibility of a Presidential veto has been raised. Although post-office employees consider themselves on the tail rather than the head of inflation, and we think they are right, Postmaster General Summerfield has said the increase would be inflationary. But why single out postal employees to hold the line, when wage adjustments are being made in other departments and the price of steel has boomed $6 a ton?

The view that post-office wages should not be increased unless there is a comparable boost in mail rates and charges is untenable. Congress sanctions a $600,500,000 annual deficit in the post office because it is politically afraid to increase rates. But employees cannot in justice be made the scapegoat for political timidity, or for any more tenable reason for subsidization of the Federal mails. The House postal pay bill should be adopted in the Senate, and it should not be vetoed by President Eisenhower.

[From the Oregon Daily Journal of August 10, 1957]

WAGE INCREASE JUSTIFIED

Congress and the administration will be doing an injustice to a large group of Government employees if a pay adjustment for postal workers is not provided at the current session.

The House passed a pay-increase measure by a vote of 379 to 38 and the measure now rests in a Senate committee. This bill provides a $546 across-the-board increase. With this increase a Portland clerk or carrier who has put in 7 years and worked himself to the top civil-service grade for his position still would be making less than $5,000 a year gross income.

The postal service is a big operation. In all, some 518,000 workers across the country would be affected by this bill and the total annual cost would be in the neighborhood of $318 million.

The administration has opposed these measures on two grounds—first, that such an outlay would be inflationary and, second, that Congress should consider legislation to provide prevailing pay scales for Government workers in different localities or that an allowance system, such as the one used in the Army and diplomatic service, be provided.

The first argument is valid only in the sense that any new expenditure is inflationary. But from an overall standpoint, postal workers have been the victims, not the cause of inflation.

Their last wage increase was in 1951. The inflation which has occurred in the interim cannot be blamed on them. In his budget message President Eisenhower said that any wage increases—private or Government—must be reasonably related to improvements in productivity.

On the basis of pieces of mail handled, postal clerks show a 43.6 percent increase in productivity between 1945 and 1957. The second reason is valid only if some reasonable effort is made to implement one or the other of the suggestions.

To date no such effort has been made and postal workers should not be asked to continue at substandard wages while Congress decides whether some alternative might work.

Considerable has been said about wages in relation to the post office deficit. It is true that postal rates should more nearly meet costs, but again this problem is not directly related to wages.

The workers are entitled to a living wage and it is up to Congress to decide whether these services should be paid for by the taxpayer or by the user of postal services.

Uneasy Plight of Small-Business Man

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Uneasy Plight of Small-Business Man," which appeared in the August 10, 1957, issue of the Madisonville Messenger, of Madisonville, Ky.

The editorial is as follows:

UNEASY PLIGHT OF SMALL-BUSINESS MAN

Among other things which have turned up in Washington in recent days is a discovery that every bill introduced to help small business is being left to die in the 85th Congress.

Dr. John W. Dargavel, who is secretary of the National Association of Retail Druggists, made the announcement and warned of the consequences of treating small-business men as though they were expendable.

Dr. Dargavel points out that in the national election campaigns of 1956 both parties took note of the squeeze being applied to small businesses these days, and both made rosy promises to leave nothing undone to help insure the survival of independent enterprise in America.

Then, to quote the critic of this charged congressional neglect:

"After the political oratory ceased and the votes were counted, the majority of the victorious candidates seemed to make haste to forget the pledges they made to strive in behalf of independent enterprise.

"One of the examples in sharp focus is the evasive tactics used to dodge action on relief from the overload of taxes levied on small business firms."

For our part, we have long maintained that the small-business man is a vital factor in the American way of life, and we dread to think of the consequences should it become impossible, one of these days, for the small-business man to survive.

The small-business man not only is a key figure in our economy; the fact is that our country's 4 million small-business concerns add up to 95 percent of all the businesses operating in our Nation today.

The small-business man, nevertheless, is facing a growing crisis, and there are those who view the situation with alarm and claim, with considerable evidence to back their claim, that America's small-business man may become the little man who isn't there.

The figures show, so advocates of small business tell us, that the small-business man with his independent stores, factories, and enterprises of all sorts provides the livelihood for 1 out of every 3 people in America.

Which demonstrates, of course, that this amazing country of ours needs the little-business man and the medium-sized business man as well as the giant-business man.

As for the warning itself: To date in 1957 there have been more failures among small-business men this year than in any year since 1939. Cautious estimates by Dun & Bradstreet indicate that in 1957 over 13,000 small businesses will be wiped out—unless the trend reverses itself.

Alaska-Hawaii Statehood

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. BURNS of Hawaii. Mr. Speaker, under leave to revise and extend my remarks and include extraneous matter, I include for printing in the RECORD for the information of the Members an article written by the Honorable Victor S. K. Houston, Delegate to Congress from Hawaii in the 1920's.

My predecessor, Mr. Houston, is a man of outstanding dedication and devotion and an honor and credit to the Americans of Polynesian ancestry. I have the

greatest respect for him as a man of the highest character and integrity.

His article should be compared with an article which appeared on June 19, 1957, page A4875 of the RECORD. More than meets the eye is found therein.

[From the Honolulu Advertiser of August 15, 1957]

IMPLIED STATEHOOD PROMISE GIVEN

(By Victor S. K. Houston)

The CONGRESSIONAL RECORD for June 19, 1957, contains an extension by the Honorable JOHN R. PILLION, of New York, of an article by Kathleen Mellen that first appeared in the Honolulu Advertiser.

The article is titled "Hawaii's Statehood Pledge Challenged"; this, in the extension, was changed to "Hawaii Pledges Not To Seek Statehood." The article deserves an answer.

It is quite true, as Mrs. Mellen says, that in 1893, annexation of these islands to the "United States was desired by a mere handful of Hawaii's total population."

Those who sought annexation then, were racially non-Hawaiians; and described themselves as "one-fourth of the voters and owners of nine-tenths of the private property of the kingdom." (Proclamation of the Committee of Safety of January 17, 1893.)

It is also true that the Treaty of Annexation was consented to by a Hawaiian senate that contined but two native Hawaiian members, and was approved by the President of the Republic and his council, in which there was but one native Hawaiian member. The franchise at that time being restricted, and limited by a loyalty oath.

To say, however, that "annexation was approved on the mainland by an even smaller proportion of American citizens" is to disregard the status of the American Congress, which through its elected representatives, passed the Newlands Resolution in both Houses (Public Res. No. 51, 55th Cong., 2d sess.). This was certified to by the Speaker pro tempore Sereno E. Payne and the Vice President Garret A. Hobart, and signed by President William McKinley on July 7, 1898.

The statement that "proponents of annexation did not want statehood" is in the article supported by selected quotations out of context, to suit the writer's purpose. It is quite as easy to quote the opposite as follows: In a discussion with Secretary of State Foster, the Hawaiian commissioners expressed a desire "to have Hawaii annexed as a State" (Memoirs of the Hawaiian Revolution by L. A. Thurston, p. 283). It is true that subsequently the Hawaiian commissioners did play down statehood, but this was due to Secretary Foster's argument that the main problem was to get annexation, and that the question as to whether it should be a State or a Territory was a secondary matter.

Much water has since gone over the dam, and the native Hawaiian citizens are thoroughly reconciled to the situation, largely as a result of the passage of the organic act by the Federal Congress and the granting of universal male suffrage. The commissioners representing Hawaii had tried to limit the franchise by property and financial qualifications. (See draft of organic act as submitted in Ex. Doc. No. 16, 55th Cong., 3d sess., pp. 28, 29.)

Hawaii is now an organized, and incorporated Territory of the United States, an integral part of the Union.

Speaking of the Louisiana Purchase, Justice White said in part ,"The inhabitants of the ceded Territory shall be incorporated into the Union of the United States * * *." (*Downs* v. *Bidwell*, 182 U. S., p. 325). Of this Frederic R. Coudert, a member of the bar, said in his address of June 18, 1926—"The evolution of the doctrine of territorial incorporation." This it seems clear enough to me was a promise of ultimate statehood, at page 24.

An earlier quotation that supports the thought of an implied promise of statehood, is found in the report of the Hawaiian Commission, supra, Executive Document No. 16, page 16, whence the quotation: "The bill provides that the Constitution and laws of the United States locally applicable shall have the same force and effect in the Territory of Hawaii as elsewhere in the United States. This is the usual provision found in acts of Congress providing for the establishment of Territorial governments in the United States heretofore." All such previous Territorial governments have since been elected into States.

The commission further states: "The people of Hawaii are capable of self-government, and have proven this by the establishment of the Republic of Hawaii and the adoption of a constitution and code of laws which compare favorably with that of any other government." (Executive Document, supra, p. 17.)

It is quite clear from a study of the whole record, what there is good ground for holding that an implied promise of statehood is contained therein.

The record is definite also that the present electorate is asking for statehood. We don't like taxation without representation, especially when it extends into the second half of a century, a matter of two generations.

Promoting Sales of Meat

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. GROSS. Mr. Speaker, if farmers desire to contribute any part of the proceeds of the sale of their livestock for the promotion of the sale of meat, I certainly have no quarrel with them for doing so, but I am opposed to compulsory deductions for this purpose.

The following editorial from the Des Moines (Iowa) Daily Register approving the recent House action in decisively defeating legislation to provide for compulsory deductions is timely and is inserted herewith:

The House of Representatives rejected the meat promotion fund bill last week. This bill would have permitted buyers of livestock to deduct up to 10 cents a head from prices paid for cattle and calves, and up to 5 cents on sheep, lambs and pigs. The money would have been turned over to producer organizations to finance market research and sales promotion.

We believe the House acted wisely in rejecting this plan.

In the first place, a considerable amount of sales promotion and advertising of meat already is being carried on by the American Meat Institute and individual meatpacking companies. Advertising and sales promotion are normal functions of the meatpacking industry, meat wholesalers and meat retailers—not of producers of the raw materials.

Second, it is doubtful that further sales promotion and advertising would increase the returns to livestock producers. For farmers to gain, it would be necessary to induce the American public to spend more money on meat and less on nonfood products and services. Economists who have studied the demand for meat and patterns of consumer spending consider the chances for accomplishing this not very good. Nearly every American who can afford it is buying all the meat he wants to eat now.

The best possibility for increasing the demand for meat in the United States is higher incomes for the people who cannot afford as much meat as they would like. Additional sales promotion would not help increase sales very much among the few Americans who cannot afford an adequate meat diet.

Third, if more advertising and sales promotion are deemed advisable, we question whether the check-off system of raising funds is the best way to go about it. Why does the Government need to be involved? If farm groups think more promotion is needed, they should try to persuade the packers to kick in more money to the American Meat Institute for its promotional programs.

The Enlisted Men—He Knows What They Think

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Our Navy for September 1, 1957:

"WE TRUST YOU"—THE ENLISTED MEN—HE KNOWS WHAT THEY THINK

(By William J. Miller, chief journalist, U. S. Navy)

Take away the names of the Navy giants—such names as Halsey, Nimitz, and Spruance. Take away the names of those top admirals whose stars now shine the brightest—such names as Radford, Burke, Wright, Felt, Holloway, Stump, Brown, Beakley. * * * Take away those names and it may be said that of living Navy men, no name is better known either throughout the Navy or in the Nation's Capital than that of Charles E. Lofgren.

An outstanding naval career that spanned 20 years' active duty—a period of storybook adventure in the late 1920's and early 1930's—a total of 24 years' service as head of a unique organization: Those are the main headings of Lofgren's lifetime chronicle.

It is in the last of those three, as national secretary of the Fleet Reserve Association, that he has made his greatest mark. The sole national association of enlisted men in the Armed Forces, the FRA has seen him in the forefront of those looking after the interests of the career enlisted regulars of the Navy and Marine Corps. It is on the occasion of his stepping down from office this coming October, 1 month after his 64th birthday, that his life story is here being told.

Lofgren's interests in matters naval first began in the last century. The year was 1897 and his uncle, emigrating from Stockholm, gave him a cap of the type worn by Swedish Navy bluejackets. "H. M. S. *Thule*," it read on the cap ribbon. Neighbors in his native town of Malden, Mass., were soon treated to the sight of the young Lofgren strutting around, proud in his new sailor cap. He was 4 years old.

Though Scandinavians, none, of his ancestors had followed the sea. Instead, they were farmers. Lofgren's interest in the Navy

was given a strong boost during the formative years of his early teens, when in 1907–09 the "Great White Fleet" made its round-the-world cruise. The demonstrated qualities of silent might and preparedness made a lasting impression on him.

On July 11, 1911, the 17-year-old Lofgren checked into the recruiting station at Boston. Only 3 weeks before this he had graduated from Boston's Everett High School. The recruiter noted his business course background—bookkeeping, typing, and shorthand—and signed him on as a "landsman for yeoman, second class."

After 2 months of boot training at the Newport (R. I.) Naval Training Station, he was transferred to the Navy's yeoman school. It was a 6-month course and upon graduation, Lofgren—(who stood No. 1 in his class—was rated yeoman, third class. Following a stenographic exam and a brief tour of court-recorder duties at Newport, he was advanced to yeoman, second class. His next important event takes place at the Philadelphia Navy Yard. Here he is one of the crew that, on September 17, 1912, put the U. S. S. *Arkansas* into commission.

Cage masted, coal burning, and torpedo mounting, the battleship *"Arky"* was one of the world's most powerful war vessels at that time. (During World War II she was our oldest active battleship; and in 1946 she went down in 20 minutes at Bikina, broken by the A-bomb.)

His first duties as a seagoing sailor were as gunnery yeoman. And 19 months later the *Arkansas'* main battery 12-inchers were to play something of a role in hemispheric politics. For during the 1914 difficulties at Veracruz, Mexico, with the Government of "that unspeakable Huerta," the *Arkansas* was the backbone of the offshore force that helped enforce Woodrow Wilson's decisions in the matter.

After 15 months as gunnery yeoman Lofgren became captain's writer and served as such with three successive skippers. In 1914 he was advanced to chief yeoman. His age at the time was 20, which gave him the distinction of being the youngest CPO then in the Navy.

An *Arkansas* shipmate who later won admiral's stripes was Ensign Louis E. Denfeld, Chief of Naval Operations from 1947 to 1949. Proof that admirals, like chief petty officers, have long memories is brought out by the fact that 37 years after their shipmate days, Admiral Denfeld mentioned those early days. The occasion was the FRA's 22d national convention at Annapolis. Said the admiral to the 500 careermen assembled there:

"I was really brought up by one of the people that built up the Fleet Reserve Association. When I first went to sea in 1912, Charley Lofgren was a second-class petty officer on the *Arkansas*. We were fresh and green, as all ensigns are, you know. Charley took us under his wing. He guided us. He helped us and, for your private information, he has done that for me ever since. Whenever I want to know what the enlisted men think, what is best for the enlisted man, I ask Charley Lofgren.

U. S. S. *Arkansas'* duties for Lofgren ended in March 1917. He left her at Guantanamo Bay, Cuba, and a week later was in Norfolk, Va. There he received orders directing him to report for duty in the Recruiting Division of the Navy's Personnel Bureau.

The years 1917–18 were significant ones for Lofgren. They marked his appearance on the Washington scene—a scene in which he was to be an active participant for 40 years. They marked his first entry into commissioned ranks—as an ensign on July 3, 1918.

By the end of World War I, he was a lieutenant (jg) and an assistant to the Director of Navy Recruiting. In 1920 he reverted to his old rate of chief yeoman. The end of 1920 saw him reenlisting and being assigned to the Bureau's Enlisted Personnel Division. He was soon placed in the Division Director's Office and then began one of the most unusual duty station assignments that an enlisted man of the Navy had ever known. The first Division Director with whom he served—knowing of Lofgren's mastery of the work—extended the length of Lofgren's normal tour to enable his successor to utilize Lofgren's knowledge. The successor, in turn, kept Lofgren on for his own tour of duty and then turned Lofgren over to his relief. This pattern kept on until January 1927, the month of Lofgren's retirement from active duty and entry into that retired-but-ready-for-service category known as fleet reserve status.

A week later the 33-year-old Lofgren started to work as a full-time national officer of the FRA, beginning what would prove to be a full second career and the chief work of his life. Enter here the Fleet Reserve Association of that time—a nonofficial organization formed mostly of Navy retired Regulars in the above-mentioned fleet reserve status—

He, together with George Carlin, who had founded the FRA, occupied a single office of the Earle Theater Building in downtown Washington. Carlin, credited by Lofgren as being his teacher in the science of organization, was the national secretary, while Lofgren was director of organization. He had been voted into this position 2 months earlier while still on active duty by delegates to the FRA's second national convention.

The outfit he was tying up with calls for a closer look at this point. It had existed in one form or another since the fall of 1922. For its first 3 years, it was centered in Philadelphia. During its first few years, it was quite shaky—and not just financially or in numbers. Some Navy officials termed it "the enlisted man's union" and wondered just what "that gang up in Philadelphia" was up to.

One account of its early days puts it this way: "They (the early FRA officials) had to overcome in the minds of member-eligibles the belief that such an organization would be frowned upon by the Navy Department; that they would get into difficulties if they dared to appeal directly to Congress in seeking enactment of laws not approved by the Navy Department; that there would be a constant round of 'tarpaulin musters' to meet demands of civilian contacts. * * * It was obvious to all eligibles that benefits and privileges gained by or for the member must also be shared by the nonmember with similar service. * * *"

Its 1927 membership was 2,334; it was operating on an annual budget of $12,000 and had assets of about $2,845. One highlight of Lofgren's first year was a trip through the Middle West that resulted in the chartering of a number of new branches. Another was the granting of authority by the United States Veterans' Bureau to the FRA to represent principals in cases of veterans and dependents.

After 18 months on duty at the FRA's 1-room headquarters, Lofgren heard the same call he had heard while a boy in Malden. He had been pretty much deskbound for several years and travel and adventure were beckoning in the form of Cmdr. Richard E. Byrd's upcoming First Antarctic Expedition. In a letter to Byrd, Lofgren set forth his qualifications and was selected as the expedition's assistant business manager. Unlike present Arctic expeditions, this one was not governmentally sponsored. So a lot of private money had to be raised.

Six months were spent in fitting out the expedition in New York City. In October of 1928, the expedition set out in the barque *City of New York*, and was not to return for 22 months. Some 14 of those months were spent at the Little America base. After the expedition set sail for the Antarctic, Lofgren's duties took on more of a military nature and he was designated as Byrd's personnel officer and paymaster. "All hands turn to" was the scheme of things in that expedition, which, by today's standards, would be considered primitive. And even the paymaster-personnel officer took his turn as seaman, coal passer, dog driver, mess cook.

The Antarctic phase completed, the expedition set sail for Duneden, New Zealand. It was at Duneden that in answer to press queries Byrd singled out Lofgren as "the most even-tempered man on the expedition and an anchor to windward." Those qualities must have endeared Lofgren to the heroic Byrd, for upon his return stateside, he selected Lofgren to accompany him on his American lecture tour. Byrd then turned over his reels of film to him and gave him permission to strike out on his own.

Accompanied by his older brother, Arthur, who served as projectionist, and by Tom Prat, a Labrador husky born at Little America, Lofgren set forth on a series of illustrated talks sponsored by educational groups. From January 1931 to December 1934, he covered the greater part of the United States, and brought the Little America story before more than 2,400 groups, most of them student bodies. Lofgren wore his chief petty officer's uniform while lecturing and in one way or another always got in a boost for the Navy.

All during this Byrd expedition phase, Lofgren's interest in the FRA continued to be strong. In the fall of 1934, he timed the tour to be in Boston where the 10th national convention was being held. There he was elected national secretary, an action that would be repeated every 2 years until 1955.

When, in January 1935, Lofgren once again started work as a full-time official of the FRA, he had a picture before him that was anything but prosperous. Financially, and in numbers the association was, in fact, worse off than in 1927. Members, less than 2,000; finances, $5,000 in the red.

In other matters, however, the FRA's position was fairly favorable. Most important, it had been recognized officially by the Navy Department and each year a departmental representative had been on hand to greet the FRA members at their convention. Perhaps the most significant action along these lines was the appearance of three admirals at the 1929 convention. One of them was Rear Adm. Richard H. Leigh, then head of the Navy's personnel bureau. His words cleared up any doubts in the minds of eligibles: "* * * The Navy Department is not opposed to organizations such as this. We are glad to see it. We want you men to inform yourselves; to organize, because we know that you back the Navy. You have the interest of the Navy at heart. We trust you; we have tried you * * * and you stand ready, I feel confident, to carry out the policy of the Navy Department."

Through their actions, the FRA set forth the case of the careermen. "Reasonableness" was the watchword and "a fair shake and decent consideration" was all they asked for. The work of these men was, in part, responsible for such actions as these: Payment of 6 months' death gratuity to beneficiaries of active-duty fleet reservists; free hospitalization and medical treatment for fleet reservists not on active duty; counting for retirement purposes of commissioned service for those World War I-era enlisted Navy men. They also helped shoot down such depression-spawned threats as: A proposal to pay a cash bounty of $5,000 in lieu of transfer to fleet reserve status; a proposal to prohibit those men in fleet reserve or retired status who were in civil service from drawing pay for both.

It might be said that Lofgren's second appearance on the FRA's full-time scene came at a time when the tide had reached its greatest ebb—but that the potentiality of such an organization had been shown. He moved swiftly. At the end of his first 6

months he was credited by the FRA's national president with giving the association a new lease on life. Creditors had been paid off, and there was a cash balance of $3,272. There were 3,866 members.

Signs pointed to the fact that for the FRA the ship was finally making knots and that an alert helmsman was at the wheel. Looking back to that era now, there are also signs that for the first time someone was taking a long and searching look at the outfit. Fortunately, this same person possessed administrative and organizational abilities that even then were highly developed.

A brief look at the present organization will help explain Lofgren's work from 1935 on. For the present organization is something on the order of what he had in mind at that time and is what he was working for.

First off, here is what the FRA is not. It is not a union, a veterans' group, a lobby, a guild, a fraternal organization. It does have some of the elements of each of these, though. And of them all, its nature probably favors that of the fraternal organization.

The FRA is one of a handful of associations formed of military personnel—such outfits as the Retired Officers Association, the Marine Corps League, the National Guard Association, the Reserve Officers Association * * * But even with the category narrowed down this fine, the FRA stands unique in these respects. Its membership is formed solely of Navy and Marine Corps regulars—no reservists. At least 6 years' active service is another requirement. Its membership is basically an enlisted one—even its warrant officer and commissioned officer members are ex-enlisted men. A majority of its members are on active duty.

Active duty is the keyword to an area that has been strongly influenced by Lofgren's leadership. It might be said that prior to 1935, the emphasis of the FRA was almost entirely on the man who had retired after 16 or 20 or more years' active service. From 1935 on, however, more and more emphasis has been placed on the active-duty Navy or Marine Corps enlisted men. At present, the membership is roughly 60 percent active, 40 percent retired.

With the creation of the Department of Defense some 10 years ago, it was only natural that DOD officials would sooner or later take notice—one way or another—of the FRA. How notice was taken may be shown by the following episode. The time was the fall of 1955, about 2 weeks after Lofgren had completed his testimony on the Career Incentive Act of 1955. The place was Lofgren's office. Visiting him were an Army colonel and an Air Force colonel. Purpose of their visit: to get an idea of how the FRA functioned.

Lofgren's testimony during the hearings had been so impressive that there was some feeling in the Department of Defense that the Army and Air Force might do well to sponsor similar enlisted outfits.

How much the two colonels learned from Lofgren during their 4-hour visit is, of course difficult to say. But if they had spent a few weeks with him they would have begun to get an idea of how Lofgren goes about his multiple, complex duties. To put it another way, they would have learned what he does to earn his annual salary—which, by the way, amounts not to $25,000-$40,000, the going rate for Washington heads of similar-sized organizations—but to $8,000.

Lofgren's work lies in three main areas. The first of these is, naturally enough, as executive head of the association itself. The second and third areas are in connection with the Federal Government's executive and legislative branches.

In the FRA's national executive offices, he heads up a small group of full-time salaried officials and the supporting clerical force. His task is considerably eased by the FRA's well-designed internal structure: 210 worldwide branches in 9 regional districts. Then, too, the participation of nonsalaried elective FRA officials is much greater than in comparable associations. Despite this fine aid from the field, Lofgren's out-of-town travel schedule is a heavy one.

His correspondence schedule is even heavier. Each of the nearly 50,000 members has a direct tie-line to Washington—through a letter to FRA headquarters. The problems are numerous and deal with such varied matters as: active-duty dates, enlisted promotions, classification of fleet reserve and retired lists, suggestions for morale improvement in the Navy and the Marine Corps, questions about duty station assignments, assistance in military pay matters. Others are: Service housing difficulties, hospitalization and commissary privileges, civil-service rights, veterans' benefits, widows' and orphans' protection.

The above muster leads to the second of Lofgren's work area—that of dealing with the executive branch of the Government. Answers to many of the members' letters can be obtained through a phone call or letter request for information. In some cases a personal visit is needed; in other cases, it is a matter of pleading a case before a special board. The Navy Department, Marine Corps headquarters, Veterans' Administration, Civil Service Commission, Workmen's Compensation Section of the Labor Department Passport Division of the State Department—these are the main locations on Lofgren's usual around town schedule.

The third area of Lofgren's work deals chiefly with congressional committees. He estimates that he has spent more than 500 hours in committee rooms. He has testified about 55 times as a committee witness for the FRA. Most of his testimony has been before the Senate and House Armed Services Committees and—prior to 1947—the old Naval Affairs Committees of both the House and Senate. Other committees before which he has testified are Civil Service, Judiciary, and Veterans' Affairs. He states that one of the finest things about the American system of government is that it has a way of placing some of the Nation's very best men in public office. Among those he singles out in this respect are Congressman Carl Vinson of Georgia, Congressman Paul J. Kilday of Texas, and the late Senator David I. Walsh of Massachusetts.

Typical career-beneficial items for which Lofgren has testified over the years include these: (a) reenlistment bonus; (b) retention of commissary stores, Navy exchanges, and post exchanges; (c) free rations in Government hospitals for retired Navy men and Marines; (d) free transportation of household effects; (e) reimbursement for enlisted men's dependents upon change of duty station; (f) clothing allowances for enlisted men promoted to officer status; (g) physical disability retirement for enlisted men.

His testimony was heard by committees considering these dollars-and-cents acts: Career Incentive Act of 1955; 4-percent pay increase of 1952; Career Compensation Act of 1949; Pay Readjustment Act of 1942. Also: Naval Reserve Act of 1938; and the 1956 Servicemen's and Veterans' Survivor Benefits and Dependents' Medical Care Acts.

During the period May 1942–March 1946, congressional committee rooms were not once graced by the presence of Lofgren. It not that he was unwelcome or that he was too far away. In fact he was less than 3 miles from "the hill." It was just that he had been ordered into uniform and was assigned to the Navy's personnel bureau in Arlington. One result of this was that he had to step aside from his position as active head of the FRA.

Once again in Navy blue, he served for 3 weeks in his old rate of chief yeoman. Then he was promoted to lieutenant. And when paid off in April 1947, he was a commander—one of the eight who had risen from enlisted grade to three-striper during that time.

Upon reporting to the bureau, he went to work on a redtape-cutting job. He reviewed all the Navy standard personnel reports then called for. Then he recommended that several hundred of them be abolished, and it was so done. Next he assisted in revising the bureau's basic manual. Then he was placed in the enlisted personnel division with the title of Policy and Policy Enforcement Officer. Here he served as the "sounding board for morale effect on enlisted men of new policies and procedures."

In the main, though, his role was anything but a passive one. He came up with many ideas of his own—ideas born, for the most part, during his FRA work. One was a new reporting-in-station procedure. It did away with the situation in which a man would be detached from a cruiser at, say, San Diego, go home on leave to New York City, then report back to San Diego only to learn that he had been assigned to Norfolk or Boston. The change sounds simple and logical, but the older procedure had been going on for years.

He also developed a standard transfer order form and the related procedures. Earlier, transfers had been made on an individual-letter basis—which for a Navy of 3 million men really ate up the man hours.

There is evidence that Lofgren's lifetime credo of "service to others" permeated the ranks of those Navy men in the clerical ratings. This is a very general thing, but the general attitude in these ratings is now a very decent one: "We're here to help you." The pre-World War II attitude was more on the order of: "I'll do this because it's my job * * * but just the same consider it a favor."

Not a man given to boasting, Lofgren likes to point out, however, that he has personally known each of the 17 chiefs of the Navy's personnel bureau since 1917. Two in particular he singles out. Vice Admiral James L. Holloway, Jr., the present Chief of BuPers—"from whom I learned the most in the fine science of administration." And Adm. Louis E. Denfeld who, as Lofgren points out, "took the rap for the Navy when he was fired as Chief of Naval Operations in an interservice fight; but who was later vindicated by the turn of world events, which placed the Navy in its proper place on the national-defense team."

Released from active duty June 30, 1947, Lofgren once again began full-time work with the FRA. The stature of the outfit was vastly better than at his two other "startin' anew" periods of 1926 and 1935. There were 29,255 members and $63,700 in assets. He was just getting the feel of the helm when, in October, he was again ordered to active duty and became a member of a board convened by SecNav to try to up-date the badly outdated Naval Reserve Act of 1938. One part of this act dealt with fleet reserve status provisions—a subject of high complexity and the very subject in which Lofgren is a recognized expert. So complicated is the subject, indeed, that a two-man subcommittee was set up to deal with it. Its members: the Deputy Chief of Naval Personnel and Lofgren.

The board assignment lasted for 2 months, and then he began his fourth and final and longest tour of full-time duty with the FRA. Looking back now, Lofgren views the era from 1948 to the present and sees it in various lights.

He sees it as one of rapid growth and prestige for the group he has headed for so long. The year 1957 is an especially significant one, with the 50,000 member mark in sight and the acquisition of a headquarters building of its own, a $112,000 3-story office building in the DuPont Circle section of Washington.

He sees it as an era unique in that the standing forces have been the largest, by far,

in the Nation's peacetime history—but also an era of high national prosperity. To Lofgren—as head of the only career enlisted men's association for any branch of the Armed Forces—this combination meant a continuing vigilance. Particularly in the matter of assisting in the sponsorship of legislation on such matters as pay and allowances, military housing, dependents' and survivors' protection, medical care, commissary and exchange privileges. Legislation, in short, designed to keep the standard of living of Navy and Marine Corps enlisted career men (and their families) at least apace of their civilian contemporaries.

And what perhaps is the most important of all, he sees it as an era in which a key precept of the FRA was first threatened and then vindicated. "Support of a strong Navy," the precept states. In 1948, though, there were many thinking persons who could not seriously see a future need for the Navy. Whereas in 1957, America's three-pronged—underseas Navy, surface Navy, air Navy—trident of seapower is increasingly being recognized as the scepter of the world.

The center prong of that trident recalls to Lofgren the days of the great white fleet and its display to the world of the Navy's silent might and preparedness. Those qualities made a strong impression on the youthful Lofgren and resulted in his donning the Navy blue. It is possible that at one time he had doubts about the validity of those qualities. But his record during 46 years of service to the Navy itself and to the men of the Navy shows that those doubts were removed long, long ago.

Public Power Socialists Block Progress

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. CEDERBERG. Mr. Speaker, I believe it is generally recognized that union leaders do not thrive as well and their members do not fare as well with government ownership of plants in dictator countries as they do under the free enterprise system. They take what the political bosses want to give them and in most instances cannot strike against the government which owns the plants.

Therefore it is a little difficult to understand why some of this country's union leaders plug for socialistic government ownership of some segments of our industrial economy.

Efforts of CIO's Walter Reuther to block plans for a privately sponsored power reactor development plant in Michigan would seem a little strange were it not for the fact that Mr. Reuther's socialistic tendencies are pretty widely known.

The Bay City Times, in an editorial published August 14, places Reuther in the ranks of public power socialists and accuses him of using a phony safety issue to thwart this progress by private industry.

The editorial follows:

REUTHER WOULD STOP THIS PROGRESS

Every time the Power Reactor Development Co's. plant at Monroe comes around again in the whirl of the day's news, the motives and ideologies of Walter Reuther become more transparent than before if that is possible.

Ever since the plan to build the reactor with private funds was announced, Reuther has been crying that it is "unsafe."

He has been answered, again and again, by the country's leading atomic scientists. A study by University of Michigan scientists—who are close enough to Monroe to be concerned personally with the safety aspects of the plan—again has reaffirmed the company's contention that the plant is harmless.

Despite that, Reuther is asking Congress to reject an allotment of $4,200,000 in research funds for the plant. Those who let Reuther think for them join in the appeals to Washington.

The House, in effect, has rejected the appeal by voting to restore the funds cut out of an appropriation bill by the Democratic-controlled Senate-House atomic energy committee, but the CIO leader will keep right on trying.

Reuther, who, on the basis of his past performances, deserves a high rank among the public power socialists, wants to kill a $4,200,000 research allotment so that Uncle Sam can spend many times that amount building the reactor powerplant with Government money.

The only danger in the Monroe project is to the socialists who can't stand the thought of their pet theories being damaged by a successful private venture into a new field of power production.

They see the development of atomic power as a golden opportunity to establish the Government as the sole proprietor of the power generating industry in America.

They see every plant built with private funds as a defeat in the development of their grand strategy. They will use every trick in the book, including a phony safety issue, in an effort to win this crucial battle.

A Tumbling House

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. JONES of Missouri. Mr. Speaker, I have requested permission to have included the following editorial from the Daily Dunklin Democrat, of Kennett, Mo., under date of Friday, August 16, 1957, because I believe it does set forth some of the fears which are being expressed in connection with a recent request from the Secretary of Agriculture.

Mr. Jack Stapleton, Jr., publisher of this newspaper, has set forth quite clearly why the farmers of America and others who recognize agriculture as the basis of any sound economy feel that Secretary Benson's record does not justify either their confidence or the authority which he seeks.

I am sure that many, in fact most of the Members of Congress will agree that no action of the Secretary of Agriculture would warrant the authority which he seeks and which unquestionably could be used to do even greater injury to millions of farm families:

A TUMBLING HOUSE

The Secretary of Agriculture wants authority from Congress to peg farm support prices at anywhere from 90 percent of parity down to zero percent.

He has specifically requested Congress for this authority.

And there are undoubtedly some in both the Senate and the House who would give him this right.

But we hope, for the sake of American agriculture, that no secretary—and particularly Mr. Benson—ever gains this much control over the economic life of such a large segment of the American population.

Mr. Benson, individually, does not deserve the authority, based on his past record.

For it was Benson who suggested to candidate Eisenhower back in 1952 that the farmer should receive 100 percent of parity. But it was Benson who later termed this rate dangerous and unnecessary.

And it was Benson who suggested that the American farmer should be free of governmental controls and operate under a free system of production. But it has been Benson who has constantly tightened and restricted the number of acres the American farmer can use for major crops.

And it was Benson who called for greater marketing facilities for the American farmer. But it took an act of Congress to force Benson to begin an export program for such major crops as cotton.

And it was Benson who has constantly criticized his predecessors for their official acts while in his office. But under Benson, farm income has declined from $14 billion in 1952 to $11 billion in 1956.

And it was Benson who stated that the farmer must make sufficient profit from his operations to meet capital costs. But under Benson, the national farm debt has increased by exactly 50 percent.

And it was Benson who said the Commodity Credit Corporation must be made to show a profit. But under Benson, the CCC has lost three times the amount of money it did in the previous 20 years, while CCC stocks have increased from $2 billion in 1953 to more than $8 billion as of January 1, 1957.

The House of Agriculture, under Benson, has been a house divided against itself. Cotton legislators in Congress now find that representatives from other areas are no longer sympathetic to our problems. Much of this can be attributed to the energetic work of Mr. Secretary Benson.

The House of Agriculture needs restoration, but it will not be rebuilt by Benson or his general friend who lives at 1600 Pennsylvania Avenue.

It will only be restored by a comprehensive farm plan from Congress. To date the Congress has lacked the fortitude to take up the tools and start to work.

But it must now allow Benson to take the hammer he seeks or the House of Agriculture will come tumbling down.

Deductions Must Be Voluntary

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. GROSS. Mr. Speaker, when the bill was before the House recently to provide for a checkoff in the sale of livestock I voted against it for the reason that it was not voluntary.

The bill provided for a compulsory deduction when a farmer sold his livestock and was voluntary only in the sense that he could apply for a refund of the deduction within 30 days after the sale. To how many groups a farmer

would have to apply to obtain his refunds was completely unclear in the proposed legislation. There is little doubt that the House Agriculture Committee could have obtained passage of this legislation had it provided that written consent of farmers be obtained for the deductions before they were made. With that proviso, the voluntary deduction would have been fact and not fiction.

The following editorial from the Waterloo (Iowa) Daily Courier sums up quite well the reasons why this proposed legislation met decisive defeat in the House, and the basis on which it would have a chance for enactment:

The House recently refused, by a 216 to 175 vote, to debate a bill which would have authorized deductions, for promotional purposes, of up to 10 cents a head for cattle and calves when marketed and up to 5 cents a head for sheep, lambs and swine.

The vote was a victory for the American Farm Bureau Federation and other general farm organizations which had opposed the bill and a defeat for the meat producers' associations which had favored it. Geographically, the bill was favored by heavy majorities in the West and South but opposed by heavy majorities in the Middle West and East.

The idea of a checkoff for promotion of agricultural products is not new. Dairymen pioneered the idea and the deductions from milk checks are used for local dairy promotions and the national advertising campaigns of the American Dairy Association. A similar deduction is made on livestock marketings (augmented by packer donations) to finance the activities of the National Livestock and Meat Board. A deduction is made from the Government subsidies paid wool producers to finance promotion of that fiber. Many cooperative marketing organizations, as exemplified by citrus-fruit growers, engage in extensive promotional efforts.

Why, then, did the House refuse to debate the bill? One reason was no doubt the fear of influential general farm organizations that independent associations of farm producers would obtain large sums in this way and thus counteract the influence of the general organizations. If meat producers obtained these deductions, why should not producers of major crops form associations to promote those crops? The American Soybean Association is seeking a similar checkoff to promote soybeans.

But opponents of the proposal also stimulated fears that the checkoff system would add to food costs, that the checkoff was something less than voluntary and that there was no clear indication in the law as to which producers' groups were to get the funds. Under the proposal, the deductions would be made automatically at livestock markets and producers would have been required to request refunds within 30 days if they did not desire to participate in the program. That is the system currently used by the dairy associations.

A promotional deduction on livestock would be under a legal cloud only at the posted markets. There is nothing to prevent producers now from making a voluntary donation for promotional purposes if meat packers agree to serve as the collection agency.

The Courier believes, however, that Congress should eliminate all legal obstacles to voluntary contributions by farmers who wish to participate in these promotional efforts. But such legalizing acts should clearly establish that the "checkoff" is a voluntary contribution and not a tax. The ethics of the transaction would be more firmly established if producers of either livestock or dairy products signed authorizations for the checkoff in advance of the sale and designated the agency or association which was to receive the money.

While that complicates the routine of collections, it puts the program on a much more sound basis. Since the support of the overwhelming majority of producers would, in any case, be needed, it should be possible to obtain this advance approval of the deduction. And such a system would leave opponents of the plan without any effective argument.

America, the Beautiful Illustrated in Methodist National Publication

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. REUSS. Mr. Speaker, America, the Beautiful, which is known as America's second national anthem, will be illustrated in an 8 page color spread of the August issue of Together. Announcement of this has been made by Lawrence Giese, Milwaukee, chairman of the board of world peace of the Wisconsin conference of the Methodist Church which has been active in promoting this hymn as an anthem portraying the peaceful aspects of our Nation.

The illustrations of America, the Beautiful, are the results of a nationwide contest which started last fall for colored pictures which would best illustrate the hymn. Over 7,000 persons submitted 13,000 transparencies in the biggest contest ever held in securing illustrations for a hymn. It is estimated that the entrants culled about a million transparencies to secure the choicest representations. One individual went through over 2,000 slides to select several that he would submit.

Printing of these color illustrations is creating a great deal of attention in both Methodist and non-Methodist groups. Together, the official Methodist publication, is a monthly 80-page magazine, having over 850,000 subscribers, nearly 40,000 from Wisconsin.

America, the Beautiful was written as the result of an inspiration received by Miss Katharine Lee Bates as she made a journey up Pike's Peak by prairie wagon in 1893. The indelible impressions of a 3-week stay in Colorado Springs are embodied in the four stanzas of the hymn which were written before she left. The hymn was first published on July 4, 1895 with slight revisions during the next decade. When set to music to the tune of Materna, it became intensely popular at that time and the popularity continues to increase. It is sung at rallies, patriotic gatherings, and conventions. It is a favorite hymn of our service men and women all over the world—it is sung by people of all faiths.

It reflects the beauty and bountifulness of our Nation, it embraces the best of the major religions, each stanza ends with a prayer for a better nation. It is dedicated to the past, it concerns itself with the present, it is hopeful for that which the future holds. It is no wonder then that the lead paragraph in Together states that—

You can't see America without thanking God for the bountiess and beauties of our land—her fields in harvest, her deserts in bloom, teeming commerce, skyscraper cities, and above all, free men with the spirit and the strength to match our mountains.

Miss Bates in her private autobiography wrote:

That the hymn has gained such a hold as it has upon our people, is clearly due to the fact that Americans are at heart idealists with a fundamental faith in human brotherhood.

Methodist congregations in the Wisconsin conference will be singing the hymn on Sunday, August 25. Many will be singing from Together with the 13 colored illustrations as a background for the words.

I hope all my fellow Members of Congress will have an opportunity to see this wonderful pictorial presentation.

Factors in Future of Far East

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. BRAY. Mr. Speaker, many things are taking place in the Far East which will shape the course of Asia and the world in the years to come. The enclosed story, taken from the Washington Evening Star of July 23, 1957, points out some of the issues of great significance. Because Dr. You Chan Yang is intimately acquainted with these problems and is also a very good friend of the United States, these charges are deserving of study and consideration:

REDS PLAN SUB BUILDUP IN VLADIVOSTOK, UNITED STATES TOLD

(By Earl H. Voss)

Closing the port of Vladivostok portends a buildup of secret submarine activity and a stepped-up flow of munitions to Communist North Korea, Ambassador You Chan Yang, of the Republic of Koren, warned today.

He said he is passing this information, drawn from Korean intelligence sources, to the United States Government.

The Soviet Union's Council of Ministers announced the closing of Vladivostok to foreign ships and planes last Saturday.

Red submarines already are concentrating at Vladivostok, according to Ambassador Yang's information.

HUNGNAM BASE SEEN

He believes the Soviet Union plans to base a submarine fleet not only at Vladivostok but also at Hungnam, in North Korea, the port from which American troops were evacuated after being cut off by the Chinese Communist forces.

From these bases Ambassador Yang expects Soviet submarines to fan out over the whole Pacific. In case of war, he believes they would be able to close all of eastern Asia.

Dr. Yang also warned that the closing of Vladivostok—"a naked power move"—will

influence negatively Japan's "tenuous relationship with the free world."

He fears that the new Soviet power in the North Pacific will enable the Kremlin to bring new pressure on the Japanese Government which, in his view, is already "doing everything to please the Communists."

Ambassador Yang also criticized American policy on Okinawa and the Ryukyus Islands.

Secretary of State Dulles repeated recently that the United States will maintain military forces and administrative control in Okinawa as long as defense requirements dictate it, but that Japan has residual sovereignty there.

Ambassador Yang claims that the Ryukyuans are not Japanese either historically or ethnologically and should be made an independent island state.

"We believe the United States, in the position it is now taking on the Ryukyus," the Ambassador stated, "is making a grievous mistake and, like the great and magnanimous Nation we know it to be,should clearly affirm anew to the world that it stands for freedom and independence of all nations, large and small, and for justice and human dignity for all peoples."

WARNS OF JAPAN

In warning of a resurgent Japan, Ambassador Yang said:

"We pray the United States will realize, before it is too late, that the stronger Japan becomes, the more brazenly it speeds down its present course of playing both sides against the middle and, above all, for the renewal of Japanese hegemony in Asia.

"The return of the Ryukyus to Japan's dominating control would be a major first step toward realization of its aggressively resurgent dream of expansionism."

Internal Revenue Service Proposes Further Invasion of Rights of Citizens

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. BURDICK. Mr. Speaker, I have here a letter from two of my constituents which I wish to commend to the attention and earnest consideration of my colleagues. The Internal Revenue Service is proposing new regulations in regard to the ownership of firearms and ammunition by our citizens which are direct violations of the second and fourth amendments to the Constitution, which provide respectively: "the right of the people to keep and bear arms shall not be infringed," and "to be secure in their persons, houses, papers, and effects against unreasonable searchers and seizures."

The letter follows:

HANSBORO, N. DAK., *August 7, 1957.*

Hon. USHER L. BURDICK,
Representative in Congress, House Office Building, Washington, D. C.

DEAR MR. BURDICK: I am writing you for the purpose of making a most emphatic and indignant protest against adoption of the proposed new regulations of the Alcohol and Tobacco Tax Unit of the Internal Revenue Service, which are to implement the Federal Firearms Act. These proposed new regulations, and particularly sections 177.50, 177.51, 177.52, 177.54 and 177.55, go far beyond the original intent of the law as written by the Congress, and amount to a rewriting of the law by the enforcement agency concerned. The impact of the new regulations, particularly on small business, gunsmiths and ordinary hardware and sporting goods dealers will be so sharp it will lead to many of them going out of business, and will also lead to widespread violation and evasion. I suggest the Congress should sharply scrutinize these new regulations as to the intent and purpose of this agency.

Section 177.50 provides for stamping of much more information on all firearms than is now the case, making a great deal more expense for the manufacturer, both in the stamping and the attendant record keeping. No good purpose is served by this additional marking, which goes way beyond even that required by the United States Customs on imported firearms. There is no present problem which would be solved, or to which a solution would be approached, by this marking, unless the creation of myriads of records is considered a desirable purpose. No regard or consideration is given to the difficulty of marking, on imported weapons, for instance, of heat treated steel parts such as the receivers, which after manufacture is completed are extremely difficult to even drill for the mounting of sights. The question also occurs to this writer, "do these people intend an attempt at making all firearms manufactured prior to promulgation of these rules, to be contraband, because not properly marked?"

Section 177.51 provides for the keeping of records, voluminous records to be kept in perpetuity. This appears to be an attempt to obtain by subterfuge a record of all the firearms in the country, together with the names and addresses of the owners (registration of firearms). I see no reason why the man that buys a firearm for his own use, a rifle or shotgun to be kept on the farm, should have a record made permanently of such transaction. What conceivable useful purpose can it serve? It is an unwarranted invasion of privacy, and, of course, these records will be just ducky for a Commie or other fifth column to use. It could work out the same as in France in 1940 after the German breakthrough and the breaking down of the French armies, when the Gestapo used the French firearms registration lists in disarming the people, which was the direct cause of the French maquis being so slow to getting started with the resistance—no arms.

Section 177.52 is probably the prize foolishness of the lot—ammunition records. Each dealer must maintain on the licensed premises complete records of the receipt and sale of all pistol and revolver ammunition, the identity of the purchaser and also of the wholesaler to be shown, with disposition of each box recorded, with address of purchaser. If this section is aimed at criminals, how asinine to think they would identify themselves in buying ammunition, to say nothing of the fact that the criminal uses very little ammo, and steals most of that. If the section is not aimed at criminals, what is the purpose of the recording of this information?

Section 177.54 provides that in over-the-counter sales of firearms, the buyer must acknowledge receipt of the weapon in his own handwriting. This, being that it applies to all firearms, rifles, shotguns, and handguns, seems to have no useful or legitimate purpose under the act and will just build up a feeling on the part of the prospective buyer, "I don't want to buy a gun if I'm going to be treated like a criminal." And, as there appears to be no provision in the regulation for the buyer furnishing documentary identification, the wrongdoer, if he does buy a gun, will either give a false name and address or use fraudulent identification.

Section 177.55 provides, in effect, for "exploratory searches," without search warrants, and exploratory searches, even with a warrant, are illegal and always are frowned upon in law. What the ATTU agent would be searching for, or what he would do if he found something he thought was a violation, is hard to determine. This section provides ostensibly for examination of records, and then, for searches of the premises.

This rewriting of the regulations under the Federal Firearms Act, to build a lot more powers for the enforcement agency than, I think were ever intended by Congress, goes a lot more deeply into the rights of things than appears at first glance. It is an infringement of the rights of Americans to possess, and use, under proper regulations as to game seasons, etc., personal firearms without a lot of arbitrary and unnecessary governmental controls. Also at issue is the matter of whether by a mere rewriting of regulations our rights to possess such arms, as is stated in article 2 of the Bill of Rights, can be slowly strangled without legislative action by our appointed representatives.

Departmental action such as this I am petitioning you about, plays right into the hands of the Communists, and probably of other dissident factions, for one of the basic tenets of the Communist Party is the disarming of the party of the citizenry who would support the Government against their attempts to take over by force. And the terrific load of recordkeeping, with little or no usefulness, added to the already great load of social-security records, income-tax deductions, etc., leaves too little time for keeping up a small business. There is another thing to be considered, I think, and that is the expense to the Government of administration of the rewritten records. If the ATTU has now enough of a staff to handle all this additional work, they have been overstaffed a long time. And, if they do not, consider the increase of the number of agents, travel funds, and additional motor vehicles to be required.

I would suggest that this Federal Firearms Act be repealed, as having outlived its usefulness, or if retained, be transferred to the Federal Bureau of Investigation for enforcement. The actual revenue derived from the act does not justify the expense of administration at present, to say nothing of the prospective increase in such expense.

Sincerely yours,

LEROY H. ANDERSON.
GRANVILLE WARD.

Sound Farm Economics

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. PELLY. Mr. Speaker, as one who has been an outspoken critic of production-adjustment laws and the principle of the Federal agricultural price-support program, I was pleased to read an article entitled "Faith in Farmers" which under unanimous consent I will include following these brief remarks. This article was in the August 19, 1957, Farm Bureau News.

I hope in particular that this article will be read by my distinguished friends who are members of the committees of the House of Representatives having to do with agriculture and farm policy. It has seemed to me, Mr. Speaker, that there has been some encouraging evidence and signs of hope in this first ses-

sion of the 85th Congress; namely, that the membership of the Committee on Agriculture is at odds and, as a result of their division of opinion or partisan politics, much farm legislation has not been reported; either that or bills have been openly scuttled on the floor. This is a situation which in time might help both the farmers and the housewives of America.

As the editor of the Iowa Farm Bureau Spokesman says, the farmers are capable of controlling their own production without, I would add, pricing their products out of the markets such as Uncle Sam has done with peanuts—to name only one commodity.

The following illustration is a reminder that it is time to return to a policy of sound farm economics:

FAITH IN FARMERS

(By Dan B. Murphy)

Like most of you, I thoroughly dislike having someone say "I told you so."

Therefore, I've been hesitant about doing a column on the hog situation. However, I'd still like to review a bit on this matter—not to rub in any previous claim or statement—but in the hope that we all may have learned something.

As you recall, hogs 18 months or so back dropped way below production costs. You were losing not only your work, but a good part of your actual feed. Naturally, you were worried. So were we.

In the strain of that situation, a widespread effort was made to convince farmers that the only solution was to set supports under hogs at 15–16 cents—and ask Government to control our pork output.

Farm Bureau members had been asked for their ideas on livestock supports several times. They had studied the matter that fall. Their decision, as noted in some 40,000 written answers, had been strongly against imposing supports and controls on livestock. The several producer groups had arrived independently at the same policy.

We therefore opposed such supports and controls.

By holding to the position of our members, we became target No. 1. I had scores of letters saying we were selling farmers down the river. Most of these letters insisted that farmers could not reduce hog numbers without Government regulation. We heard, over and over, the statement that farmers had no choice but to raise more and more hogs—in a desperate effort to survive.

Farm Bureau lost members over this matter, even though we explained what we thought were the key factors repeatedly. Experience had shown that controls usually don't work well, and that price supports almost automatically become price ceilings. We contended that the free market rewards farmers when they exercise the necessary self-control, just as it was then penalizing us for plunging too heavily.

We had faith in farmers' ability to limit output. The other forces insisted farmers could not get the job done—and they urged Iowans to settle for $15 or $16 hogs, even though this was likely to become a ceiling.

Perhaps now we can be more objective. We can examine the two kinds of thinking in terms of fact. Farmers did reduce output without Federal orders. Markets did respond as they they always have and prices have run well above the proposed support for more than a year.

When you see headlines about $22–$23 hogs, please remember that had you taken bad advice in a panicky time, the cost to you would be running at $8 per hundred on your hogs. Strangely enough, you'll be hearing the same bad advice, based on the same unsound premises, the next time hog prices drop. So think now, and decide now—on which side was right.

The Cameron Disaster

EXTENSION OF REMARKS

OF

HON. T. A. THOMPSON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. THOMPSON of Louisiana. Mr. Speaker, it befell the lot of the people of my district to suffer the devastation of the first killer hurricane of the 1957 hurricane season. Hurricane Audrey which came into the Louisiana coast at Cameron on June 26 and carried with it a wall of water from the Gulf of Mexico varying in height along this coast from 8 to 13 feet above normal tides. Even at this date, Mr. Speaker, an evaluation of losses, both in lives and properties, cannot be accurately determined. I do know that upwards of 600 of our people are known to be killed or are still missing—most of those missing presumed to be dead—and untold millions of dollars in property have been lost by the force of water and gales.

My frequent absence from Washington since the hurricane, I hope, will be understood by this membership. I felt it my duty to be with my people in the time of their great anguish to assist in any way that I could in coordinating the efforts of our various governmental agencies who are charged with the responsibility of rendering assistance in such disasters.

I am extremely proud, Mr. Speaker, of the marvelous efforts put forth by Senators ELLENDER and LONG and Congressman WILLIS, of the Third District, and all of our Federal officials who observed their responsibilities and reacted to them in a most expeditious manner. From the time the President declared the disaster as one qualifying for emergency assistance, the Federal Civil Defense Administration assumed the helm of operations and nothing was left undone in the matter of rescue and rehabilitation.

That organization, which represents the generosity and understanding of all the American people, namely the Red Cross, again has proved that it reflects the great humanitarian instincts of the American people. The work that was done by the Red Cross from the time the hurricane struck our areas and the work that I know is planned to be done in rehabilitation can well be an inspiration to all of us. Mr. Donald Stout, who is in charge from the national level of the Red Cross, and his associates are people of great understanding and long experience in the matter of disaster relief. The local Red Cross chapters have worked tirelessly and have no doubt been directly responsible for the saving of many lives and will be on the scene until these unfortunate people can again resume a semblance of normalcy in their lives. The American people can well be proud of these accomplishments by the Red Cross and her sister agency, the Salvation Army.

Having gone into the area immediately after hurricane Audrey had struck, I was able to see the activities of our local agencies in the matter of rescue and assistance to the suffering. Sheriff O. B. Carter and all of the officials of Cameron Parish, many of whom had themselves lost some of their dear ones and most of their properties, worked tirelessly and with inspiration. And the people of the Parish of Calcasieu, who themselves sustained many losses, reacted generously and with a show of true American neighborliness. The local civil-defense officials and other local government officials set up emergency procedures and at great risk to themselves were able to rescue literally hundreds of people who otherwise would have been lost.

Sheriff Henry A. Reid and Mayor Sidney Gray, of Calcasieu Parish, and the city of Lake Charles and other city officials did a banner job in setting up rescue stations, refugee camps, and feeding stations in coordination with Federal agencies and the Red Cross.

Sheriff Reid especially displayed great courage and effectiveness that only a staff as well trained as his could have accomplished. Throughout the day of the hurricane and the trying days following, Sheriff Reid and his deputies plied the streams of the area under almost impossible circumstances to evacuate those who were marooned on housetops and in trees, most of whom could not have survived too many hours otherwise.

The entire fraternity of the medical profession, including the nurses of the area and sepecially Dr. C. W. Clark, who himself lost half of his family, and Drs. G. W. Dix and S. E. Carter, should be commended by the American people for their heroic efforts. Certainly, it would be proper to consider that special Federal commendation be afforded these men and others who accomplished seemingly impossible tasks which exemplify the highest traditions of American heroism.

Mr. Speaker, there have been many questions asked as to whether sufficient warning was given to the people of my areas in regard to this impending disaster. Unfortunately, there have been some charges made as to incompetence or laxity in the operation of some of our services. It would not be my purpose to criticize or condemn, but certainly, there is a lesson to be learned from this horrible catastrophe and it shall be my purpose to seek better methods and adequate equipment, which I am sure will be available to us through the ingenuity of our scientists and men of training in the matter of protection of lives and property, not only of the people of my areas, but wherever an even remote possibility of visitation by such a storm exists. Four years ago, Mr. Speaker, I initiated legislation to authorize that weather ships be placed in the Gulf of Mexico, where nearly all of the tropical hurricanes are born, which perhaps, if implemented, would have supplied the necessary information

to many who were otherwise uninformed as to the danger. I am even now not certain, however, that this would be the answer. Suggestions have been made of providing hurricane-tracking airplanes. Perhaps a more tightly knit ring of radar installations around the perimeter of the gulf would be the answer. I feel that I am not qualified to judge these things which are of the most technical nature, but I do insist that our qualified Government scientists be given whatever authorization is necessary for them to proceed with studies with the assurance that our Government will accomplish their recommendations, not in the nebulous future, but as a matter of utmost urgency.

Last week at my suggestion, hearings were held in the area by Gen. Holmes E. Dager and Mr. Welcome Wilson, of the Natural Disaster Division of the Federal Civil Defense Administration, and other qualified persons in order to build up a file of information which will later reveal the weaknesses in our present system of weather forecasts and rescue operations. These hearings I attended and I am confident that in a short time, the answer to these all-important problems will be found and it is my hope that this body will take whatever action is necessary to insure our people of this Nation that adequate protection and forewarning will be provided.

Mr. Speaker, I know that this entire membership joins me in extending heartfelt sympathy to those who lost their dear ones to hurricane Audrey and it is my hope that we can join our efforts towards the ends that the loss of these lives may well serve the purpose of providing means for others to survive.

Seventh District Tour Schedule, 1957

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 15, 1957

Mr. BRAY. Mr. Speaker, to discuss the problems, interests, and wishes of the people of the Seventh Congressional District, I will meet people at the various post offices in accordance with the following schedules:

WEDNESDAY, OCTOBER 30

8:30: Trafalgar.
9:30: Nineveh.
10:30: Edinburg.
11:30: Franklin.
1:45: Needham.
2:30: Whiteland.
3:30: Greenwood.
4:30: Bargersville.

THURSDAY, OCTOBER 31

9:30: Indian Springs.
10:30: Shoals.
11:30: Loogootee.
1:30: Alfordsville.
2:30: Burns City.
3:30: Crane.

MONDAY, NOVEMBER 4

9:00: Oakland City.
10:15: Somerville.
11:00: Mackey.
12:00: Ft. Branch.
1:30: Owensville.
2:45: Haubstadt.
3:45: Buckskin.
5:00: Princeton.

TUESDAY, NOVEMBER 5

8:00: Francisco.
9:00: Patoka.
10:00: Hazleton.
10:30: Decker.
11:30: Vincinnes.
2:00: Monroe City.
3:00: Wheatland.
4:00: Bruceville.

WEDNESDAY, NOVEMBER 6

8:30: Emison.
9:30: Oaktown.
10:30: Freelandville.
11:30: Ragsdale.
12:15: Bicknell.
2:00: Edwardsport.
2:45: Westphalia.
3:30: Sandborn.

FRIDAY, NOVEMBER 8

9:00: Odon.
10:00: Elnora.
11:00: Plainville.
12:00: Washington.
2:00: Montgomery.
3:00: Cannelburg.

TUESDAY, NOVEMBER 12

9:00: Solsberry.
10:00: Owensburg.
11:00: Koleen.
12:00: Bloomfield.
1:30: Doans.
2:15: Scotland.
3:15: Newberry.
4:00: Switz City.

WEDNESDAY, NOVEMBER 13

8:30: Worthington.
9:30: Jasonville.
10:30: Coalmont.
11:30: Midland.
12:30: Linton.
2:00: Marco.
3:00: Lyons.

THURSDAY, NOVEMBER 14

9:00: Farmersburg.
10:00: Shelburn.
11:00: Hymera.
12:00: Sullivan.
2:00: Fairbanks.
3:00: Graysville.

FRIDAY, NOVEMBER 15

9:30: Merom.
10:00: New Lebanon.
11:00: Paxton.
12:00: Carlisle.
2:00: Pleasantville.
3:00: Dugger.

MONDAY, NOVEMBER 18

The Construction of a Sister Ship to Steamship "United States" Highly Important at This Time

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. WOLVERTON. Mr. Speaker, two similar bills, H. R. 4342, by Mr. BONNER of North Carolina, and H. R. 9351, by Mr. TOLLEFSON, of Washington, were introduced today which, I believe, merit the immediate attention of every Member. The purpose of the bills is to authorize commencement of construction during the present fiscal year of a sister ship to the *United States* as a replacement for the steamship *America*. The effect of favorable action on the bills would be to guarantee the continued development of a maritime fleet capable of protecting the national interest in peace or in war.

Mr. Speaker, a matter of such great importance deserves an objective and dispassionate examination by the House. My appeal is to reason—to the dedicated concern of my colleagues—for the well-being of the land we serve. The facts which I shall present at this time will establish beyond any doubt the justification and the urgent need for the measure which has been offered.

In evaluating this appeal, I trust that Members will bear in mind several fundamental factors which attest to the national significance and the emergency nature of the problem.

The principles of this proposed legislation are supported by the entire maritime industry. In 2 years of active discussion of the issue, every interested and qualified individual—in Government and

out—has indorsed the idea of replacing the *America* with a superliner of the *United States* class. There is universal agreement that failure to do so would be tantamount to scuttling our future as a first-line maritime power. Even more important, it would all but demolish the capacity of our merchant fleet to do its assigned job in the event of another national emergency.

Mr. Speaker, that is too big a price to pay—too grievous a risk to run—for the sake of achieving a relatively small dollar saving.

The course provided for in these bills involves no radical departure from precedent. As a matter of fact, from our recent experience in connection with the building of the *United States*, it serves to diminish the problems and uncertainties which normally would attend an undertaking of this size. Of course, Members will recall that the construction of the *United States* involved substantial misunderstandings and controversy. There were questionable procedures and even litigation before delivery.

But I submit, Mr. Speaker, that it would be illogical and foolish for anyone to permit these circumstances to weight his judgment against the building of a second superliner at this time. On the contrary, the very fact that there were difficulties and the fact that a most searching investigation was made provides assurance that the difficulties will not be repeated.

We Americans traditionally place great stock in performance. The record, we hold, is a fair judge.

Today, after 5 years of service, the *United States* is the unchallenged queen of the seas. On her maiden voyage she established a speed record for the North Atlantic crossing which no other vessel has approached. She has operated at 95 percent capacity, well above the rated level for her class. Her fuel consumption has been less than was anticipated, attesting to the soundness of her design. To millions of our friends abroad who have seen her come and go in the ports of Northern Europe, she is a majestic reminder of the power and prestige of the Nation whose name and flag she bears.

Mr. Speaker, on the basis of the record, I suggest that every Member of this House today can derive real satisfaction from the construction and performance of this splendid ship. Certainly those Members who have made a crossing on the *United States* will agree with me. Let me point out, however, that one vessel—even one of this caliber—does not make a fleet. Our ocean-going passenger fleet, at the present time, is woefully inadequate. We simply are not competing with foreign-flag ships either on the seas or in the shipyards.

The reason for this is well known to Members who have followed the fortunes of our maritime industry in recent years. Our merchant marine was a casualty of World War II, and it has continued in casualty status as a result of post-war policies which have in effect aided its foreign competition.

In September of 1939 we had in commercial operation a total of 123 passenger ships with a capacity of 38,000 passengers. Today we have 39 ships with a capacity of 11,170 passengers. Of these 39 ships only 4 can sustain a speed of over 20 knots, and more than half operate under 18 knots.

This fleet, as a unit, is old and slow. Many of the ships have passed the age of economic operation. According to our naval leaders, their transport utility in wartime would be extremely limited and would entail severe risk.

The ship construction program now underway will bring America's passenger fleet up to approximately one-half its pre-war tonnage. From the standpoint of our maritime progress, the prospect is at best disappointing. From the competitive standpoint, it is dismal.

For other maritime powers also are building ships, and most of them are building at a far greater rate. The ship construction program now underway in the United Kingdom, for example, will restore that fleet to 81 percent of its prewar size. The Netherlands will have 81 percent of its prewar tonnage, France 71 percent, and Greece, Norway, and Sweden 100 percent.

In each of these countries the government is contributing substantially to passengership construction. In some, the government is doing the whole job. And in every instance this building program has been made possible and accelerated by American economic aid.

Mr. Speaker, I do not quarrel with the principle of foreign aid. I invite every Member to ponder and decide, however, whether it is consistent and wise, while carrying on such a program, to withhold continuing support of our own maritime fleet.

The procedure contemplated in these two bills which have been introduced would permit commencement of work this year on a sister ship of the *United States*. It is a procedure that has been proved sound over a period of many years of cooperation between the Government and the maritime industry. Favorable consideration, in my opinion, would assure that the Congress is fulfilling at least its minimum obligation—as set forth in the Merchant Marine Act of 1936 to "foster the development and encourage the maintenance of a strong merchant marine."

Mr. Speaker, action by this Congress at this session to authorize the replacement of the *America* with a vessel of the *United States* type is clearly in the national interest. Let me cite some of the specific and practical advantages from which the entire country would benefit.

First, construction should have been started this fall in order to have the new vessel ready for service at the time the *America* is due for retirement in 1960. Unless we act now, the *America* in all probability will be removed from service at that time, leaving just one American-flag vessel on the North Atlantic passenger run. This is so because the terms of the contract between the Government and the United States Lines provide that the *America's* operating subsidy will be withdrawn in 1960 unless a replacement contract is in effect.

Second, construction of the ship would strengthen our overall defense posture. The Navy Department wants the vessel built. Its spokesmen, both civilian and uniformed, have repeatedly supported the project as being essential to the national defense. Testifying before a House Committee more than a year ago, a naval official stated—I quote:

> The construction of this ship will (1) help to relieve the block obsolescence in transport vessels. There are some 24 Victory-type transport vessels in the national defense reserve fleet whose deficiencies in speed and safety cannot be overcome economically; (2) give the United States a capability of delivering 308,000 troops to Europe in a year as compared to the capability of the Steamship *America* to deliver 124,000 troops per year in convoy; and (3) provide a greater measure of safety to the troops carried against submarine and air attack because of its very high speed and the inherent flexibility in its use.

Third, savings in time and money can be realized by making use of the basic design and engineering features incorporated in the steamship *United States*. We have the word of the Navy and the Maritime Administration that a sister ship, built at this time, would require only minor modifications of the *United States* plans.

Finally—again in the important area of economy—it is reasonably certain that costs of material and labor will be 5 percent higher a year from now than they are today. Where is the economy in postponing this matter? I have sufficient faith in the wisdom of the Congress and the Administration to assume that sooner or later a ship of this type will be built. Certainly, there is no economy in a further delay which can only jack up the final cost.

The legislation which has been presented was not drawn in haste. Neither is it offered in criticism of our established procedures. I commend it to your consideration at this time as a means of correcting what I believe to have been a simple oversight occasioned by perhaps an overly emotional—and in this case a misdirected—concern for economy.

Mr. Speaker, in fiscal year 1957 the Congress appropriated the sum of $100,700,000 for the purpose of ship construction. The budget estimate for fiscal 1958, as it came to us from the Administration, was $94,500,000—and the estimate included provision for the building of a sister ship to the *United States*. However, the Appropriations Committee recommended, and the House approved, a cut from $94,500,000 to $3 million, a gigantic reduction of more than 96 percent. Among the items eliminated was the one providing for the *America's* replacement.

The committee, acting in good faith, stated that its action was based upon the fact that considerable funds would carry over from the 1957 appropriation and upon the belief that this unspent reserve would support an effective maritime program for another year. Mr. Speaker, the facts do not sustain that belief. For the reasons which I have summarized, the people who are closest to our maritime needs are in agreement that an effective ship construction pro-

gram for 1958 must include a start on replacement of the *America*.

I am convinced that, in acting on the appropriation bill, the House did not have the opportunity to fully understand the effect of this wholesale reduction. The Maritime Administration, itself was not in a position to aggressively support its case. And those who might have pressed the matter apparently attached higher priorities to other items in the budget.

Be that as it may, Mr. Speaker, the issue is not one of placing blame. My appeal now is for action by the House in the national interest. We have the time and, in my judgment, we have the responsibility to avoid an error whose consequences might well be disastrous.

I count extravagance and inefficiency in Government among the mortal enemies of our Republic. My record as a Member of this body will, I believe, verify that fact. But, Mr. Speaker, there is sometimes a thin line, particularly in the field of defense, between extravagance and sensible precaution.

Should an emergency develop and leave us no choice but to commit our boys' lives to transport that is too little and too late, it will be no help to them that we thought we were practicing economy.

During the present session we have approved a Federal budget of $78.2 billion. Many of us would prefer to have the Government run for less, but none of us seriously doubts the capacity of our economy to survive. The bill for which I ask my colleagues' support would entail a cost during the new fiscal year of $75 million. The price, I submit, is small in terms of what it will buy for America. It is a part—and a fractional part—of the price which we can and must afford for military and economic preparedness.

Mr. Speaker, the Members of this House bear an awesome responsibility with respect to the future security of our country. We best discharge that responsibility when we act not from fear but from reason, not for the moment but for the future, not in deference to possible criticism but in in furtherance of the Nation's strength. Let us heed the counsel of reason and vision and statesmenship, and act favorably on this bill.

Creation of a Commission To Study the Utilization of Those Areas of the Radiofrequency Spectrum

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. BRAY. Mr. Speaker, on June 20 of this year I introduced House Joint Resolution 381 proposing the creation of a Commission To Study the Utilization of Those Areas of the Radiofrequency Spectrum which are assigned to the Federal Government. An identical proposal had been introduced previously by Senator POTTER.

The three Commission members would be experts in the communications field, but they would not be officers or employees of the Federal Government. The obvious purpose of this study would be to allow persons outside of the Federal Government, but competent in the field, to see how well the frequencies reserved for Government use are being utilized. It is not uncommon in matter of great public interest to establish a study group composed of private individuals; our Government has not been and should not become a closed-door operation.

The Commission, in addition, would make some assessments about the future requirements for Government use of radio frequencies. The rapid changes in armament have brought about startling innovations in the fields of communications and electronics. New uses for the airwaves have been found, and many of these uses are important to our defense establishment. We have heard of the ever-increasing crowding of the airlanes, but the increasing demands of airwaves are perhaps even more of a problem. It is not a matter to be considered lightly, and this resolution was put forth with very serious purposes.

The resolution was referred to the Commitee on Interstate and Foreign Commerce which requested reports from several agencies of the executive branch. The Bureau of the Budget, in replying to this request for comment, reported adversely on the bill and endorsed the views set forth in a letter from the Office of Defense Mobilization to the chairman of the Senate Committee on Interstate and Foreign Commerce on Senate Joint Resolution 106, Senator POTTER'S resolution.

The Director of Defense Mobilization states that such an undertaking would require the work of many experts over an extended period of time, pointing out that a recent study of only a portion of the spectrum required the efforts of more than 50 experts for an estimated equivalent of 2½ man-years. He did not say that because this report was classified the public was merely informed that the Government could not release any of the spectrum space it is currently in possession of. Furthermore, the Commission would be expected to make use of the results of any such investigations completed by Government agencies. The resolution states specifically that—

> The Commission is authorized to secure from any department, agency, or independent instrumentality of the Federal Government any information (including information which has been classified for security purposes) it deems necessary or desirable to enable it to carry out its functions.

It would use such information as base for its further investigations.

The Director of the Office of Defense Mobilization, in the letter referred to above, states—

> The classified report which resulted from the study pointed out that in addition to national security requirements, the programs for guided missiles, radar networks, earth satellites, and other defense necessities will continue to cause an ever-increasing demand for radio frequencies.

It is in this field that we are trying to provide some light.

I became interested in this inquiry partly because of recurring reports that the Military Establishment is going to request the use of frequencies in the area between 50 and 90 megacycles. Such use might infringe on the frequencies of five VHF television channels. Channel 2 is 54 to 60 megacycles; channel 3 is 60 to 66 megacycles; channel 4 is 66 to 72 megacycles; channel 5 is 76 to 82 megacycles; channel 6 is 82 to 88 megacycles. It is apparently the contention of at least some military engineers that defense requirements may bump television out of these frequencies.

This is a matter of great public concern. Should the hundreds of stations on these channels be forced to move, where would they go? If space were found for them in the UHF frequencies, it would greatly alter and impair their service, and cause further bumping and jostling of other stations. What about the millions of Americans who have television sets designed to receive these frequencies, and in some cases receive service only on these frequencies? Television is here to stay as much as the cold war; adequate service is a public demand which must be considered and met.

In addition to the VHF television frequencies, the public has a great interest in many of the uses of other radio frequencies, and the future problems and use of them are of significant and national interest. I do not suggest that the Government officials charged with responsibilities in this field are unaware or unmindful of this national interest. I do suggest that an independent study of the field is called for, whether it be by the Commission I have proposed or by some other means.

If the Congress passes this resolution, it would not of course be with any intention of hindering defense efforts or hampering nondefense communications use of radio frequencies. The members of the Commission, appointed by the President, could surely be expected to be men dedicated to our national interest. The purpose of the study would be merely to let someone from the outside peer in, for it is easy to become so engrossed in our own labors that we lose perspective and fail to comprehend the broader view.

The Federal Communications Commission is empowered to assign radio frequencies to non-Government users, and the President is empowered to assign frequencies to Federal Government users. There is no designated arbiter. Should the President decide that the national interest required him to appropriate other portions of the radio frequency spectrum for the use of the Government, public acceptance would surely be gained more quickly if a study of all available material by competent private persons had been made.

The need for some independent study is apparent to me, and if the Congress decides against the Commission proposed, then some other body or a special committee of the Congress itself should be given the responsibility for it.

Sobering Views on Foreign-Aid Question

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mrs. DWYER. Mr. Speaker, the New York Times, in its editions this past Sunday, carried an editorial in which it observed that the House slash in President Eisenhower's mutual-security appropriations requests is a warning to our allies that the American public is beginning to weary of carrying so large a share of the free world defense burden and now expects them to assume a bigger share of it.

There is unquestioned truth in that statement, but, to me, the following sentence in the editorial is even more significant as we in this Congress continue to face the vital question of foreign aid.

The sentence stated:

But it is also a warning to all free nations, including ourselves, that if we all weary of the burden or seek to shift it to shoulders unable to bear it we stand in danger of facilitating a Soviet victory in the cold war and unleashing a new Soviet aggressiveness which could burst into the flames of a hot war.

Certainly, these are words to which we all should give grave consideration. Certainly, in the face of the President's repeated warnings, we should ask ourselves: Are we gambling with our Nation's security when we wield a heavy and indiscriminate ax on mutual security funds?

I do not believe that any of us would dispute the need for economy; the need for a determined seeking of means by which the tax burden our people are carrying can be eased. But I do not believe that any of us—or the people we represent—would want such economies to be made at the tragic price of weakening our Nation's strength in a sorely troubled world.

The bitter harvest we might reap from such a shortsighted policy would be not only far vaster expenditures than we now are considering, but the blood of our men and the hopes of our future, as well.

In recent days, there have been a number of penetrating editorials written on the mutual-security question. Today, I would like to submit for study by Members of this House, two of these editorials—one from the New York Herald Tribune of August 17 and the other from the Newark Evening News, Newark, N. J., of August 16.

The Herald Tribune editorial follows:

FALSE ECONOMY

The House, in one of those aberrations that seem to seize legislative bodies when adjournment draws near, has slashed the mutual-security program of the United States to ribbons. After authorizing a program totaling $3,367,083,000 on Wednesday, on Thursday it refused to appropriate more than $2,524,760,000 in new money and confined the whole program to $3,191,800,000, including unspent funds.

The authorization measure, a compromise between House and Senate versions of the bill, was already half a billion dollars short of what President Eisenhower had requested. Signing it, the President took the unusual step of calling a special press conference to underline his fear that this cut would have serious effects and his prayerful hope that the act would enable his Government to sustain the essential interests of the United States in the free world. That the House could, the very next day, make a bad matter much worse, shows a lack of responsibility on the part of that body.

There is no use, at this time, in assessing all the elements that went into the debacle. The administration undoubtedly contributed to it, in part through open dissensions among Cabinet members over the size of the budget, in part through the failure of the President, in person or by deputy, to fight for the mutual-security program early enough, in part through the changes of front on military spending in the Defense Department budget. But this does not relieve the House of the onus of slashing the mutual-security funds in the teeth of warnings from almost everyone who knows what these funds mean to the United States and the free world.

There are two ways in which the program can be salvaged. One is by firm Senate action, concurred in by the House. The other is by a special session. The President has said quite plainly that he will watch the overseas situation carefully and whenever for lack of money the United States interests become placed in real jeopardy, at that moment I would have no recourse except to call a special session.

The House made its cuts in the name of economy. It is attempting to practice false economy, since for every dollar saved in this manner, much blood and treasure might have to be spent. As the President said: "Here is the cheapest money we can spend, as long as we are talking about getting security for the United States." The House majority—the Republicans put up a good fight for the President's plan—may prefer to get security the hard way, in isolation, but that is not what the American people have voted for in any election since World War II. The mutual-security program must go forward, with all the money needed to do the job.

The Newark Evening News editorial follows:

PRESIDENTIAL WARNING

A lagging Congress with one eager eye on adjournment and a less eager one on the unfinished part of the President's legislative program has had a jolt. Mr. Eisenhower has raised the possibility of a special session if he doesn't get the full amount of money authorized for foreign aid.

Congressional Democrats protested. Some spoke of the President's warning as a threat, a term which he rejected.

Yet it was only a short time ago that the Chief Executive was roundly criticized from the same sources for failing to speak out at the last minute for his school-aid bill. He was accused of responsibility for the death of that measure, which he had made an essential part of his program.

Now, when he intervenes to prevent further whittling of mutual security funds, Senator JOHNSON, majority leader, responded that Congress, in its collective judgment, would determine what was adequate for foreign aid.

That imperative presidential action was required was made evident shortly afterward when a House appropriations subcommittee defiantly voted to cut $842 million from the authorized funds. This would be in addition to a half-billion cut already made by the authorization bill. The House itself followed the committee's lead and approved the new reduction, 252 to 130.

Mr. Eisenhower had told a special press conference he hoped the Government would be able to get by with the amount covered in the authorization bill. But he said if funds made available proved inadequate to maintain American interests, he would have no recourse but to recall Congress.

He called this the cheapest money we spend. In effect, he warned those who are trying to pare it down that the country will not permit the security program to be damaged by misguided legislators who imagine this a safe place to strike an economy pose because the issue has no local political impact.

One-Hundred-Billion-Dollar Road to Graft

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present an editorial which appeared in the Shreveport Times, Shreveport, La., on Wednesday, August 7, 1957, entitled "One Hundred Billion Dollar Road to Graft." The highway program is important to all of us and I feel this editorial offers interesting reading. It is as follows:

ONE-HUNDRED-BILLION-DOLLAR ROAD TO GRAFT

The huge Federal road building program, under which approximately $100 billion will be spent by the Federal Government and the States in a network of highways totaling 41,000 miles and linking practically all cities of more than 50,000 population in the United States, is a step toward both prosperity and corruption.

This is the most colossal project of road building since the Roman Empire built 50,000 miles of what we would today call dirt trails—a job that took 500 years, where the present program is supposed to be completed in 15 years.

When $100 billion of public tax money is to be spent a lot of people are certain to have sticky fingers. Those sticky fingers already have appeared. The question now is how much of this spending is going to be along the lines of graft and corruption and how much is going to be along the lines of honesty.

One hundred billion dollars is something to attract the attention of big league crooks, particularly those in the field of politics who think they can get by with moral crookedness and bypassing of laws, as well as those who are tempted simply to break laws. Life magazine points out examples of plain, unadulterated, statutory crookedness that already has been exposed in certain States and raises the question of whether this is going to spread to other States. It says, editorially, in part:

"At least two States have proved that their highway appointees were ill-prepared to handle the coming Federal shower of gold without scandal. A Pennsylvania jury last week convicted five men, including a former turnpike commission chairman, of trying to defraud the commission of no less than $19,500,000. The case involved a contract to drill and fill some abandoned coal mines that underlay a turnpike extension, but the work done was largely a gigantic boondoggle, and the contract was clearly drawn either by grafters or incompetents.

"In Indiana three former highway officials, including a commission chairman, have been indicted for misusing their jobs. The chairman is charged with purveying inside dope on prospective land acquisition so

that friends could buy lots and then sell them to the State at excessive prices. This same chairman has also shown up in nearby Iowa, charged by a legislative committee with trying to rig specifications for highway equipmen there. But Iowa is in good shape compared to Indiana, where a lot of other people apparently got into the land acquisition act, including Maurice Hutcheson, president of the Brotherhood of Carpenters, 1 of the 4 unions which will have most to do with the whole road-building program.

"The Indiana mess came to light through the enterprise of the Indianapolis newspapers, the kind of enterprise which every State needs to keep its highway skirts clean. But the subsequent cleanup has certainly been hastened by the fact that Bertram Tallamy, Chief of the Federal Bureau of Public Roads, immediately announced that he was withholding Federal funds from Indiana. According to the grand jury, a chief source of the corruption was the sloppy housekeeping of the highway department under former Governor Craig. The department had neither the trained personnel nor the clear regulations it needed. The new Governor, Harold Handley, has installed a new hard as nails policy which has recently removed the stopper from the Federal faucet.

"The Indiana experience shows where most trouble is to be expected in the new program, namely land acquisition. The appraisal of land values is an inexact science at best, but it is complicated by two factors, one old and one new. The new one is the limited access highway, which may divide a man's farm in two and force him to drive 30 miles to get across it; this can destroy as much value as the old-fashioned highway used to create. The older factor is the larcenous impulse that wells up in every landowner whenever he smells taxpayers' dough. When the State's offer to buy is backed by the threat of condemnation, this larcenous impulse becomes self-righteous, and judges and juries often share it. Since close to a million parcels will be changing hands before we get these highways built, this attitude may add enormously to their cost.

"One way to combat it has already been learned by the best highway departments. Former Chairman Robert Beck of the Iowa highway commission says they 'have long since abandoned the horse-trade theory * * * The State does not want to pay less than it is worth, or it would be cheating its own citizens; nor does it want to pay more.' The method of publicity for intended routes, independent prenegotiation appraisal, and condemnation if necessary should gradually tame our natural larceny and minimize the margin for graft.

"The Bureau of Public Roads has set and can enforce minimum national standards, but there remains a wide spread between the best and worst of the 48 independent highway departments. Nearly half of these are not yet immunized from politics (though some of those which remain political, notably Texas and Virginia, have very good highway departments indeed). Every department will need to do more than it has to attract and hold good engineers. When the Maryland department launched a college recruitment program lately, it was able to find only 1 of 80 needed engineers and in the meantime lost 70 more. The engineer shortage may prove to be the most vulnerable part of the whole program unless every department improves its pay and professional status.

"Thus further scandals are to be expected; but it would be a sad mistake to take them for granted. Not only good newspapers but public attitudes can make an enormous difference, as is evidenced by the best highway department of them all, California's.

"It has its own sources of income and methods of expenditure, prescribed by the constitution and statutes, virtually beyond any legislative meddling. Its highly professional staff is protected by civil service and its unpaid commissioners are picked by the Governor 'with just as much care,' says the director of the northern California AAA, 'as a regent of the university. He can't afford to mix politics with highways because every motorist in California watches him like a hawk.' The land acquisition program, wholly separate from maintenance and construction, is run according to a long-range plan which the legislature adopted in 1953 after 8 years of study and hearings. Contractors are kept up to taw by their own organizations, by State records of past performance called 'the integrity file,' by the AAA and by other private groups. Behind all this is a public attitude that stems from the fact that California grew to political maturity in the automobile era. Everybody depends on the highways, from farmers to weekend skiers, and everybody is his own watchdog. Says one State senator, 'It would be easier and safer to tamper with the water supply than the highway program. This is a highway State.'

"The other 47 are, or soon will be, 'highway States' too. The vast new road program will be cleaner, cheaper, and better if all of us copy our best models."

Equal Rights for Men and Women

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. MOSS. Mr. Speaker, throuhout the United States today, many thousands of women are engaged in what most of us consider to be a highly meritorious effort to gain support for House Resolution No. 127, proposing an amendment to the Constitution relative to equal rights for men and women.

Some weeks ago it was my pleasure to be one of the 239 Members of the House who lent their names as sponsors to this resolution. I have continued to be greatly interested in the progress of this rapidly growing campaign to breakdown the remaining barriers standing in the way of equal rights.

It is a long and arduous job that these women have taken upon themselves, since as we all know, passage of a constitutional amendment requires approval not only of two-thirds of the House and two-thirds of the Senate, but approval of the legislatures of 36 of the States.

If she were alive today, Susan B. Anthony would be proud of these thousands of members of her sex who continue the heroic fight which she so bravely initiated. I am sure that the great mass of Americans—men and women alike—stand shoulder to shoulder with those who lead in these final skirmishes for equality and justice.

Naturally enough, among our vast population of 170 million people, there are bound to be some who oppose the equal-rights amendment. Among women, of course, the opposition constitutes but a handful and this is daily growing smaller.

However, I am informed that there are sinister influences at work to make it seem that the number of people against the amendment is much greater than it really is.

The most vocal opponents of equal rights are found among the members of the Communist Party, who, through their newspaper, the Daily Worker, and by other insidious means are seeking to block this legislation.

I am informed that a woman lawyer from Burma, who is also a distinguished educator, recently declared thousands of leaflets are being distributed to women in Communist-dominated nations of the Far East which distort beyond all recognition the actual legal discriminations that exist against women in the United States.

These leaflets use the standard Communist technique of combining halflies and half-truths to influence Asiatic women against American institutions and women.

Mr. Speaker, passage of the equal-rights amendment would put an end to this vicious Communist propaganda by eliminating the few remaining outmoded State laws that make it possible to malign our democratic principles. In this connection, I urge approval by the House of the equal-rights amendment at the earliest possible date.

The Northwest Timber Industry Looks Toward the Future

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. MACK of Washington. Mr. Speaker, the Northwest States of Washington and Oregon contain 30 percent of the timber supply of the United States and supply the Nation with 25 percent of their annual timber needs. Such a national resource is vital to our future and its management must provide for its permanence.

In this area are some 2,500 wood-producing and wood-using plants employing 140,000 workers and producing wood products annually valued at nearly $2 billion. Their annual payroll exceeds $700 million. A resource industry of such magnitude is of vital concern to all of us and must be operated in such a way as to assure a permanent supply of wood products both for the present and for future generations.

So that Members of Congress will have information on how this resource is being developed and managed I present part of a paper recently read before the American Society of Mechanical Engineers by Mr. W. D. Hagenstein of Portland, Oreg. Mr. Hagenstein is vice president of the Industrial Forestry Association and an outstanding authority on tree farming and forest management. The article follows:

Wood is a replaceable resource. To meet the needs of America's growing population for homes, food packaging, books, writing

paper, newspapers, rayon, furniture, and a thousand other everyday uses, the wood processing industry is harvesting, manufacturing, and growing trees. In few places has forest management been more dynamic than in the Douglas fir region, where the forest industry began its march toward permanence by founding the tree-farm program in 1941.

The Douglas fir region, a highly productive forest, extends from British Columbia to the Oregon-California boundary and from the Cascades west to the Pacific Ocean. This relatively small region, named after its principal tree species, contains only 5.3 percent of the total commercial forest land in the United States. It has 30 percent of the Nation's timber supply. It serves the American people with one-quarter of their annual timber needs.

The Douglas fir region has gone through a revolution in wood use in the last 15 years. Nowhere in the world in so short a time has a giant industry so integrated its operations to get the most from each log by processing it or portions of it in the plant which can get the most out of it.

The region's diversified wood use is best demonstrated by pertinent statistics. In 1955 it produced 9.6 billion feet of lumber, 4.4 billion square feet of plywood, 2.7 million squares of shingles, 3 million doors, 3.4 million tons of wood pulp, 1.9 million tons of paper and paperboard, and 435 million square feet of hard, soft, particle, and chip board.

These products were manufactured by a great number of wood-using plants including 843 sawmills, 29 pulp mills, 30 paper mills, 93 plywood plants, 63 veneer plants, 149 shingle mills, 17 board plants, and 17 door factories. In addition, there were 1,100 miscellaneous wood-using industries which produce molding, boxes and containers, treated products, furniture, wood flour, woodenware, cooperage, boat stock, cross arms, etc.

The value of forest products manufactured in 1955 was $1,845,000,000 or $570 for each of the region's 3¼ million people.

The forest industries employ directly more than 140,000 persons. Their wages in 1955 were nearly $700 million. In addition, another 90,000 people manufacture, distribute, and service equipment and furnish supplies for the wood processing industry and move its products to market. Six out of every ten railroad cars which leave the region carry forest products. Eighty percent of the waterborne tonnage is forest products. While no accurate data are at hand, trucking of forest products is significant.

Before a forest can be managed for the maintenance of a permanent wood processing industry, one must know its species, extent, growth habits, protection problems, and engineering problems of road construction and timber harvesting. Public forest policies because of the preponderance of Government ownership, forest taxation, and landownership pattern which affects access, protection against fire and insects and management planning, are also important considerations.

The Douglas-fir region has a relatively small number of commercial tree species. Five species comprise 90 percent of the total timber inventory. These, in order of importance, are Douglas-fir, western hemlock, true firs (actually five species), western redcedar and Sitka spruce.

Douglas-fir is the prime lumber species of the world because there is more of it, it is available in large sizes and long lengths, and has excellent structural properties. It is the principal softwood plywood species and makes excellent kraft pulp.

Western hemlock is the principal pulp species and is used particularly for sulfite pulp for tissues, rayon, cellophane, photographic film, explosives, and newsprint.

The true firs are principally pulp species, although they are used increasingly for lumber, particularly Shasta and Noble fir. Western red cedar is used primarily for shingles and lumber. Sitka spruce is used for lumber, sounding boards for musical instruments, woodenware, newsprint and sulphite pulp.

The total area of commercial forests in the Douglas fir region is 25.5 million acres. Of this, 52.4 percent is privately owned, 28 percent is in national forests 8.9 percent is managed by the Bureau of Land Management, other Federal holdings comprise 1.2 percent and local government owns 9.5 percent.

Merchantable timber inventory of the region is nearly 600 billion board feet. Private owners hold 45.6 percent, the Federal Government 48.5 percent (mostly in national forests) and local governments nearly 6 percent. It is clear that constructive management of public forests, as well as private, is essential for continuation of the region's wood processing industry.

Forestry begins with the axe in the Douglas fir region. Old-growth forests steadily decline in volume of usable wood. Their annual growth is more than offset by annual mortality. Therefore, changing the untamed, old-growth forest to a managed one must be accomplished by orderly conversion into a series of age classes from zero to rotation age for continuous production.

The region's coniferous forests grow best in even-aged stands. This dictates that to reproduce them, they must be harvested by clearcutting. Foresters have long recognized that provision of a seed supply and protection againt fire are the two main considerations in timber growing. Seed-bearing timber is reserved adjacent to harvest areas to regenerate them and adequate fire prevention practiced. Where these measures fail, artificial reforestation is used to keep the land productive.

A harvesting rate, termed "allowable cut," at which the oldgrowth forest is converted to the age classes necessary for continuous forestry must be determined. As advancing improvements in wood utilization make timber inventories obsolete every 5 years, an allowable cut, figured at any given time, must be recalculated periodically to reflect current economics and technology. This is one of the region's serious forestry problems at present.

Data for the past decade show that the principal government ownership, the national forests, has contributed only 12.3 percent of the region's log harvest, although its timber inventory was 37.3 percent. Private owners, on the other hand, holding only 45.6 percent of the timber supply, contributed 79.8 percent of the region's log harvest.

From these data it is clear that the national forests have been undercutting and private forests overcutting on the basis of any realistic allowable cut. This has made it difficult for adjusting timber harvest rates, irrespective of ownership, in some localities.

The current trend of the Federal Government to inventory its forests as rapidly as possible, some of them for the first time on any intensive basis, will help solve this problem by getting allowable cuts revised. An example of what this means in a specific situation is a national forest in western Oregon which has recently been reinventoried. In 1936 it was estimated to contain 13 billion board-feet of timber. Now it is found to have 31½ billion feet. Its previous allowable annual cut was calculated at 189 million board-feet. On the basis of the up-to-date inventory, which reflects today's economy and technology, a recalculated allowable cut will exceed 400 million board-feet per annum. If the Federal Government offers this allowable cut for sale each year, it will help local private owners, now overcutting, adjust their cut downward within the framework of a realistic allowable cut. This will permit them, too, to manage their forests permanently for the benefit of their communities.

To focus attention upon the necessity for forest management, the Douglas-fir industry started its tree-farm program in 1941. Its prime purpose was to mold public opinion for effective protection against forest fires. A second objective was to stabilize private landownership. Third, it was hoped that it would become a vital force in education of all private landowners to their forestry opportunities.

By 1957 there were 432 tree farms comprising nearly 5 million acres in the region. Ninety-eight percent of their area is owned by wood-using organizations.

At the time the tree-farm movement started forest products prices, from trees on the stump through the finished product, were relatively low. So were conversion costs. A rising demand for forest products and a change in timber supply and demand have resulted in driving timber prices up sharply in the last 12 years. With this has come a continuing and increasing interest in tree farming. Annual progress data for the region's industrial tree farms for the last 7 years illustrate this conclusively.

Many kinds of wood processing companies own and operate tree farms in the Douglas-fir region. In 1949, for example, 28 companies managed 51 tree farms. Fourteen properties were managed by five integrated companies which used their logs for more than one product; e. g., plywood and lumber, lumber and pulp, etc. In 1957 with 53 companies managing 108 tree farms, it is significant that 13 are integrated companies which manage 51 tree farms. This demonstrates the advancing trend of the Douglas-fir industry toward integration of wood use. Integration is one logical solution to the problems of high stumpage, logging, manufacturing, and shipping costs. Integration is occurring not only within single companies, but there are a dozen integrated wood-processing centers in the region in which there has been developed between a number of companies an outlet for every kind, size, shape, and quality of wood.

Another interesting trend has been the proportionate use of the log harvest for the principal forest products. In 1925 89.3 percent of logs were converted to lumber, 0.7 percent to plywood, 3 percent for pulp, and 7 percent for shingles. In 1955 the comparable percentages were lumber, 61.6 percent; plywood, 13.8 percent; pulp, 22.2 percent; shingles, 1.9 percent.

This appears that other uses are making inroads on log use at the expense of lumber, but the total footage converted to lumber in 1955 was almost the same as 30 years earlier. Also, more than two-fifths of wood used for pulp and board products is from leftovers rather than logs.

Currently the industry is experiencing a soft market. With many companies depending on public stumpage in whole or part, they are squeezed by a combination of high stumpage, logging and manufacturing costs, and high freight rates to the centers of consumption. When the market softens, something has to give. It will probably be timber prices and current appraisals for public timber are beginning to reflect this.

One of the greatest contributions made to the economy by tree farms has been the additional opportunities for wood use unearthed by their timber inventories. The writer previously reported what these meant in 1949. They are more important today. Had anyone predicted in 1941 that by the end of the decade relogging would occur annually on tens of thousands of acres previously logged for all their merchantable values, he would have been referred to a psychiatrist. But this is exactly what has happened and hun-

dreds of truckloads of small, broken, and defective logs are encountered daily on every public road in this region. This, coupled with the use of new timber volume tables which reflect current wood use and more accurate forest area data from aerial photographs, has increased the timber volume of the Douglas-fir region by 100 billion board-feet in the last decade. This additional timber inventory was always in the woods, but at the time of previous surveys wasn't usable or located. It is useful now for every major forest product. This means an additional 10 years' cut in old-growth forests with the accompanying benefit of aiding in the toughest problem of all in converting an unmanaged to a managed forest—building up the age classes necessary for continuous production.

Inside the Chapel

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. SIEMINSKI. Mr. Speaker, the other day, the House voted $3 million to build a chapel on the grounds of the Air Academy in Colorado.

Much of the debate questioned the outside appearance of the proposed $3 million chapel with its 19 aluminum spires. From the air, the spires would appear to blend into a vaulted structure with the look of a cathedral.

A small part of the debate touched on the 2 floors and the 3 chambers within the Air Force chapel to accommodate those of the Jewish, the Catholic and the Protestant faiths.

During the debate, models and drawings of the proposed inside and outside of the chapel were on display in the Speaker's lobby.

The concept of the proposed Air Force chapel was so bold, daring, and new that one had hardly time in debate to question the impression it would leave on those who entered its doors to worship.

And even if one did have the time and the presence of mind to question the impression given by the chapel, would such questioning be fitting and proper by the membership in the House Chamber?

The House voted the $3 million and left it for others to work out the nicities.

A chapel, by definition, is a private place of worship or oratory. It is not connected with a church. It is a subordinate place of worship, a sanctuary other than a parish or cathedral church.

To what extent will the Air Force chapel give one the impression of the love of God and of man? To what extent will it give one that impression of love on which all law hangs and in defense of which lives have been given?

It seems to me, Mr. Speaker, that the inside of the Air Force chapel could do much to answer that question.

It could do much to keep our boys, though separate in faith, equal in their love of God and man, of country and countrymen, in defense of whose flag they pledge their lives.

As of possible assistance to those to whom Congress entrusted the refinements of the Air Force chapel, I should like to offer, if I may, for their consideration, a few observations on the inside of one of America's great and unique university chapels.

The stained glass is the chief glory of the Princeton chapel. It tells the story of the life and teaching of Jesus. It shows our Lord in the red robe of the martyr, in the blue robe of the philosopher and teacher, and in the white robe to judge the world at the second advent.

Great figures of the old testament are shown, as are great teachers of the gentiles in philosophy, theology, poetry, literature, law, and science.

Shown too are the great books thought to be the foundation of a university education.

As one enters the Princeton chapel, one is impressed by the love of God and of man, the love on which hangs all the law.

I trust it will be of help, Mr. Speaker, to all who are interested in the refinements of the Air Force chapel, to cite here a description of the Princeton chapel as it is found on page 12 of a booklet entitled, "A Guide to the Princeton Campus and Its Treasures," published in 1955 by the University League of Princeton, N. J.

The description follows:

THE PRINCETON CHAPEL

The university chapel, the fourth structure Princeton has built for her religious services in the course of 200 years, stands to the east of the library on the very summit of the ridge on which the university is situated. Visible for miles, the great church commands the flat Jersey plain to the south and to the east and, from a distance, impresses the visitor with its great length and height. But to one standing immediately in front of its elegant and intricately sculptured façade, the effect is one of intimacy rather than of grandeur. The chapel takes its proper place among the libraries and recitation halls and hardly seems any longer to be, as it is, second in size only to the Chapel of Kings, in Cambridge.

The façade with its pinnacled turrets resembles the transept of a cathedral. The great west window is recessed under a heavy moulding which terminates in clusters of pine cones to commemorate, in the form of a rebus, the Pyne family to whom the chapel is indebted for the beautiful west front. Above the outer arch of the entrance is carved the masterpiece of the sculptor John Angel, the two flying angles who display with sensitive hands the precious sudarium with its imprint of the Crown of Thorns to recall the Passion of the Lord Jesus Christ who himself sits in judgment—a majestic figure—in the tympanum over the main doors beneath. He is surrounded by the Four Beasts of the Apocalypse, symbolizing the Evangelists, and holds in his hands an open scroll on which is inscribed, in Greek, "Who is worthy to open the book."

The interior of the Princeton Chapel, to one who has passed through the low and oppressive narthex, comes as a revelation of space and dignity. The great width of the nave, wider than that of Westminster Abbey, the four great piers of the crossing opening into the transepts and choir, the distant east window with its myriad of little colored lights— all combine to produce what is the finest gothic interior in America. In spite of the great length (250 feet), the effect is one of harmonious unity and quiet caused by the emphasis on the enormous space of the crossing borne up by the many channelled piers and domed by the simple and beautiful vault culminating at its highest point (78 feet) in the central boss of the Holy Trinity.

The long choir to the east contains the elaborately carved and canopied stalls of the faculty of the university together with the throne of the president and the benches for the choir. Above, on either side, are the intricate organ cases with sculptures representing the eight Gregorian tones. All the woodwork in the choir is of English pollard oak from Sherwood Forest, finely grained and apt for the carving of the lace-like tracery and the many little statuettes of saints, scholars, and musicians who populate the stalls and standards of the choir. Included among them are St. Peter, Pope Gregory the Great, St. Augustine of Canterbury, St. Columba of Iona, Calvin, Jonathan Edwards, Ptolemy, St. Cecilia, Charlemagne, King Alfred, William of Wykeham, etc. At the end of the choir in front of the most elaborate stalls is the Communion table covered with a crimson pall and having upon it the brass flower vases and, as a focus for the whole chapel, the large gilded Celtic cross to recall Princeton's Scottish connections.

The shallow transepts are decorated with sedilia having cusped canopies. Above are sculptured the coats of arms of Nassau, the Isle of Jersey, George II, George Washington (north transept), of Princeton University, the University of Edinburgh, and Queen's College, Belfast (south transept). In the north transept also is placed, between the sedilia, the magnificent bronze high relief of President James McCosh by Augustus St. Gaudens, perhaps the greatest work of art in the chapel.

The chief glory of the Princeton chapel is the stained glass which fills most of the windows. The chapel contains the finest ensemble of this art to be found in the Western Hemisphere. Throughout the windows there runs a unified iconographic scheme or rather set of schemes. The subject of all is the life and teaching of Jesus Christ. This is made to culminate in the four great windows at the arms of the cruciform chapel. The central figure of each of these windows is Christ. In the north transept He is clad in the red robe of the martyr. Below is the inscription "He that shall endure unto the end, the same shall be saved." and around Him are the great martyrs of the church and of history. The east window in the choir has Christ between the Virgin, His mother, and St. John, His friend. The inscription reads: "Greater love hath no man than this, that a man lay down his life for his friends." Above in the rose is represented the Crucifixion against a red ground. Below is the Last Supper instituting the commemoration of the death of the Lord, and around are many little scenes from the life of Christ to illustrate the love on which hang all the law and the prophets. The south transept shows Christ in the blue robe of the philosopher or teacher. The inscription reads: "And ye shall know the truth, and the truth shall make you free." Surrounding Him are the apostles of the New Testament, the fathers, and great religious teachers. The great west window shows Christ in the white robe, seated in a mandoria of the Signs of the Zodiac, coming to judge the world at the second advent. The inscription reads: "I am come that they might have life, and that they might have it more abundantly." Around Christ are the four evangelists and the worthies of the Old and New Testaments and of history who have contributed to show the abundance of the Lord. Below is represented the Nativity, the First Advent, the coming of the Lord in the world. Immedi-

ately in the north aisle follow the windows of the Life of Christ culminating in the Passion represented in the many little scenes in the apsidal chapel of the north transept. In the south aisle windows are the Teachings and Parables of Christ beginning with the Sermon on the Mount and ending with the Parables of the Second Coming which then is represented in the Great West Window. In each of the two staircases leading to the gallery below this window are two lancets depicting the whole of the great parable of the Old Testament, the Book of Job, the righteous patriarch who contended with God. Above in the clerestory are, to the north, the great figures of the Old Testament and, to the south, the great teachers of the gentiles, in philosophy, theology, poetry, literature, law, and science.

The choir in its window of the love of God and man is the climax of the whole iconography, and this is expressed entirely from the four gospels. Supporting the gospels are four great Christian epics, each represented in one of the tall lateral windows of the choir. To the north are Dante's Divine Comedy and Malory's Morte d'Arthur. To the south are Milton's Paradise Lost and Bunyan's Pilgrim's Progress. Thus in the choir, in the myriad of scenes, are pictorially displayed for all to see the great books which are the foundation of a university education. All these splendid windows are the masterworks of the famous glassmaker, Charles J. Connick.

The Princeton Chapel was built by Ralph Adams Cram and was dedicated on Memorial Day, 1928.—A. M. FRIEND.

Manpower Utilization

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. LESINSKI. Mr. Speaker, as a member of the Subcommittee on Manpower Utilization, I read with interest the article from the Reader's Digest of May 1957, "Let's Stop This Shocking Waste of Scientific Manpower," which deals with the types of problems we encountered in our investigation of the utilization of engineers in the Federal service. Congressman DAVIS, chairman of the subcommittee, has done an excellent job in bringing out the details of that investigation. I believe action should be taken to prevent any contractor with the Federal Government from using Federal funds to advertise for engineers. Thereby the problem will be greatly alleviated and if the example set by Boeing in recruiting and training young men to fill semiskilled jobs in engineering departments is followed, not only the industry but the Nation as a whole will benefit.

The article follows:

LET'S STOP THIS SHOCKING WASTE OF SCIENTIFIC MANPOWER

(By Albert Q. Maisel)

A vast—and rapidly growing—shortage of scientists and engineers is forcing cutbacks in military and civilian research programs and causing critical delays in the completion of urgent defense contracts.

For lack of engineering manpower, such major manufacturers as Caterpillar Tractor and Sylvania Electric have had repeatedly to turn down invitations to bid on production of material for our Armed Forces. Raytheon, AiResearch Manufacturing and scores of other firms report intermittent slowdowns in new product development. The Radio Corporation of America is searching for at least 1,000 additional graduate engineers, General Electric for 2,300. In the Civil Aeronautics Administration 35 percent of the authorized science and engineering positions have been vacant. At Redstone Arsenal, the Army's principal missile research center, the shortage of civilian scientists has exceeded 40 percent.

Behind this mounting famine of scientific brainpower lies the fact that ever since 1950 our output of college-graduated engineers has been from 20 to 40 percent below the soaring needs of our expanding economy. This June our colleges and universities will graduate fewer than 40,000 young physicists, metallurgists, mathematicians, and engineers—10,000 below the number needed to make up for deaths, retirements, and the normal growth of industry and research.

Is there any way to ease this crucial shortage—right now? Indeed there is. Dr. Lee A. DuBridge, president of California Institute of Technology, pointed it out a year ago. "If we could improve by only 5 percent the efficiency of our utilization of the 600,000 engineers we already have," he declared, "we would add to the effective supply of engineering talent as much as all this year's new graduates."

But that is exactly what the Defense Department and many of our largest defense plants have not been doing. Instead, they have been squandering the time and talent of thousands of their most skilled research and development experts.

Worse yet: Thousands of key men have been diverted from top priority research work to the wasteful job of luring away the scientific staffs of other defense plants, of civilian industries, and college faculties, and even of the Defense Department's most important military research labs.

Most fantastic of all, the Pentagon has been fostering and financing this piratical raiding with millions of your tax dollars and mine. For the Army, Navy, and Air Force have been lavishly "reimbursing" their industrial contractors for the cost of thousands of pages of flamboyant want ads and hundreds of high-pressure recruiting teams.

Three times within the last year and a half this prodigal waste of money and manpower has been detailed and documented in testimony before the Joint Congressional Committee on Atomic Energy and the House Armed Services and Civil Service Committees. Members of these committees have repeatedly prodded the Defense Department to alter its talent-squandering policies. But the most wasteful practices continue unabated.

At Government expense, for example, west coast airplane and electronic plants have been flooding east coast newspapers with advertisements urging engineers to abandon their jobs in the land of slush and snow and head for sunny California. These ads promise full relocation expenses. Even dogs and cats have been crated and transported—with the taxpayer, of course, picking up the bill.

East coast defense contractors have not taken this lying down. One large electronics manufacturer, for instance, has been using big space in newspapers all over the West for ads reading: "Are you homesick for fresh green spring, sparkling autumn, snowy winter? You can enjoy four-season living again—swimming, fishing, hunting, skiing, and unique career opportunities too." In 1 year this tempting offer induced some 230 engineers, most of them originally migrants from the East, to pick up stakes for a second cross-country trek and a second round of Government-reimbursed relocation expenses.

To flush out additional prospects, military contractors have been sending swarms of recruiters to every scientific meeting. The 308 physicists who attended a recent meeting of the American Institute of Physics were besieged by more than 2,000 job offers. Out of 40,000 who went to a recent convention of electronic engineers, an estimated 15,000 changed their positions before the sessions ended. "I was happy in my old job," explained one engineer, "but I just couldn't go home and tell my wife that I'd turned down an offer of a $2,500 increase."

What has all this shuffling and reshuffling been costing the taxpayer? With some 10,000 primary and subcontractors in the plane and missile field alone, the Pentagon has thus far been unable to supply congressional investigators with even an estimate of the total cost. But the Navy, in a spot check of 37 companies selected at random from among those doing most of their business with the Government, found that even this small group was running up total recruitment charges at the rate of nearly $9 million a year.

One contractor was spending $500,000 annually just for help-wanted advertising. Another firm's travel and moving expenses, which were charged back to the Pentagon, came to $540,000. A third firm spent $907,560 to recruit and relocate 193 engineers, but in the same period lost 134 engineers to other companies—thus scoring a net gain of only 59 men. For each engineer actually added to this plant's staff the Treasury had to pay out $15,380.

Yet such fantastic hiring costs are only a fraction of the staggering waste. For these raids and counterraids have been drastically reducing the productivity of our existing scientific work force. Before 1950, only 3 to 4 percent of all scientists and engineers switched from one plant or laboratory to another in any given year. But last year the engineering turnover was more than 12 percent, while in airplane manufacturing the turnover rate soared to 17 percent. Throughout industry the time wasted between jobs and in becoming familiar with new assignments is now estimated to equal the full year's productivity of nearly 19,000 engineers and scientists.

To tap the only source of new scientific talent, defense contractors and other industrial firms have sent their headhunters stalking over every college campus. This spring 500 such squads descended upon Massachusetts Institute of Technology, to solicit the services of 1,200 prospective graduates. Columbia, Rensselaer, Cal Tech, Georgia Tech, and Carnegie Tech have been similarly overrun. Outstanding students often have 50 job offers to choose from, at $450 a month and up, plus fringe benefits. The result, unfortunately for the future of research, is that hundreds of the best brains abandon their plans for further study which would lead to advanced degrees. Thus, the country has been losing its future Einsteins, Fermis, and Tellers.

Nearly every Government engineering and research laboratory has had its work disrupted and delayed by the raiding. Last year alone, offers of jobs at salary increases of $1,500 to $15,000 induced over 9,300 engineers and scientists to resign from Federal positions. The quit rate in Government labs today is 50 percent higher than that of private industry and is rocketing rapidly upward. The new hire rate, on the other hand, is plummeting downward.

Ironically, it is in the laboratories of the Defense Department itself that Pentagon-subsidized personnel pirates have been wreaking their greatest havoc. The Army Engineering Corps has lost 2,000 of its civilian engineers and scientists in less than 2 years. At its Fort Belvoir Research and Development Laboratories, one out of every

five of its budgeted scientific jobs is now vacant.

All three services have been desperately trying to compete with the free-spending recruiters from the defense plants. The Army Engineers, for instance, made 1,164 offers of employment to civilian engineers during a recent 3-month period. They managed to hire only 52. Recruiting squads from the White Sands Proving Ground visited 74 colleges, but could induce only 47 young men to accept jobs.

While paying its contractors to wreck its own research staffs, and everyone else's as well, the Defense Department has also been wasting the working time of thousands of engineers and scientists still under its control. About 5,000 draftees who are scientists and engineerss, for example, are currently serving in the Army as privates and corporals, classified under a special Scientific and Professional Personnel Program. Theoretically, they are being utilized to relieve the pressing shortage of civilian scientists in our understaffed military research laboratories. In practice, however, the Army has not seen fit to release these men from routine chores, and half their time is wasted upon KP and other fatigue details, on compulsory attendance at training movies and marching in parades. At Fort Belvoir, Congressman CARL HINSHAW found an entire company of masters and doctors of science being removed from lab duty 2 days a week to swab pots, pick up cigarette butts, and stand guard.

At Fort Monmouth, 50 draftee engineers made a 9-month study of the Army's utilization of their time. Keeping meticulous records, they found that details having nothing to do with their specialized skills had consumed the amazing total of 31,872 hours. Less than 60 percent of their time on duty was left—in short and unpredictable snatches—for their professional assignments.

At Rossford Ordnance Depot, two half-idle engineer draftees applied for transfers. Their request was rejected "due to the critical shortage." A few days later, these same men were given the vitally important task of copying long lists of serial numbers from file cards onto sheets of paper.

What about the civilian engineers and physical scientists who still work for the services? In a recent survey Army investigators interviewed 4,000 engineers and scientists in 14 principal Army research centers. They discovered that nearly one-third of the working time of these experts was being consumed by duties that could be performed by office managers, draftsmen, laboratory assistants, bottle washers, stock clerks, or messengers. The shocked investigators found that saving even half of this time—780 man-years—would make up for all the vacancies currently plaguing these Army labs.

Many large defense plants are as profligate as the Government in the misuse of scientists and engineers. A study by Booz, Allen, & Hamilton, management consultants, revealed that 41 percent of the scientists employed in 25 major companies were heavily burdened with such tasks as lettering on blueprints, compiling bibliographies and reports in longhand, and performing repetitive calculations which could have been done by assistants.

The stock excuse for these practices is the claim that technical help is even harder to find than graduate engineers. But that alibi was punctured back in 1951 when an ad appeared in Seattle newspapers, reading: "Boeing will teach you drafting and pay while you learn. Must be able to do simple arithmetic." In the first 2 days, 243 persons applied for the 6-week course, which has run to capacity ever since. Thanks to the graduates of this in-the-plant school, Boeing has trebled the proportion of semiskilled helpers in its engineering departments and eased its shortage of engineers by at least 1,000.

By a similar plan, International Business Machines has so increased its use of technical helpers that their number now equals the combined total of its scientists and engineers. The result? The quit rate in its laboratories has fallen to less than one-sixth of the national average.

Some firms use machines to replace or aid men. Sperry Gyroscope Co., for instances, has 11 sets of electronic computers which work out in minutes the solutions to mathematical problems that formerly took scores of engineers weeks.

At Hughes Aircraft, an intensive program to improve working conditions has produced phenomenal increases in productivity. Instead of huge bullpens, there are semiprivate offices, each shared by two or three men doing related work. Instead of having to line up to obtain supplies, scientists are trusted to browse through selfservice, supermarket stockrooms. For every three engineers, there are four supporting technicians, clerks and other aides. As a result, Hughes' quit rate has fallen below the west-coast average, while engineering output has skyrocketed.

Unfortunately, instances like these are the exceptions. Far more typical are conditions reported at another plane plant where more than 1,100 engineers are crowded into a loft originally designed for 750. Another group works immediately above a wind tunnel, the noise level being 80 decibels and the summer temperature sometimes topping 100°. Two hundred additional engineers work on an open mezzanine, overlooking a metalworking shop where the noise tops that of a boiler factory. More than a third of this plant's engineering staff quit their jobs in 1956, the highest turnover in the entire airframe industry.

What can be done to eliminate this waste of talent? Must we resort to wartime controls: job freezes and wage freezes? Not at all. Our shortage of engineers and scientists could be immeasurably and immediately eased by a few simple changes in Defense Department policies.

A logical first step would be to release from military service the 5,000 draftee scientists and at least an equal number of ROTC engineers and scientists whose specialized skills are currently going almost unused. They could serve far better in defense production.

A second would be to eliminate the Defense Department's misuse of its civilian engineering force.

Third, the armed services could curb the destructive practice of personnel pirating, and save many millions of dollars besides, by stopping their lush subsidies for recruiting teams and switch-your-job ads. Compelled to pay their own hiring expenses, most defense contractors would find it far cheaper to train technical aides and to improve working conditions in order to hold on to the engineers and scientists they already have.

Finally, military procurement officials could provide an incentive, a reward, for efficient use of engineers by defense firms, just as they reward efficient manufacturing production with share-the-savings contracts.

None of these steps are the panaceas of visionaries unfamiliar with the scientific manpower problem. They have been repeatedly recommended by outstanding educators and industrialists, by professional societies of scientists and engineers, and by three successive congressional investigations. Only the public, which pays for the waste, has not been heard from. If its powerful voice rang out—in letters to the Secretary of Defense and the Members of Congress—our shocking waste of engineers and scientists would soon come to a halt.

Justice, Jencks, and Junk

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Post of August 12, 1957:

JUSTICE, JENCKS, AND JUNK

It has long been a fact of United States life that most newspapers, like most politicians, are unwilling to differ with FBI Director J. Edgar Hoover in a public place.

But there is something especially degrading about the way in which most metropolitan dailies are serving as propaganda organs for the FBI in its campaign to overthrow the Supreme Court decision in the Jencks case.

That decision affirmed nothing more than the sound American principle that a defendant shall have access to any information material to his defense—even if it be contained in that sacrosanct vault known as the FBI files.

It did not require the FBI to divulge any secrets or unveil any underground agents. It simply obliged the Government to decide whether the protection of such hidden bodies was more or less vital to the national security than an individual prosecution.

These distinctions are being hopelessly obscured in the drive to stampede Congress into enactment of legislation repealing the spirit and substance of the Jencks decision. The drive has reached new depths of fraud and fury in the aftermath of the indictment of accused Soviet intelligence agent Rudolf Abel.

The news columns of the august Herald Tribune are competing feverishly with those of the know-nothing gazettes in spreading the word that the FBI's war against communism in general and its prosecution of Abel in particular will be fatally crippled unless Congress acts at once to scrap the Jencks decision.

Legislation sponsored by Representative KEATING, Republican, New York, and noisily seconded by Representatives MARTIN, Republican, Massachusetts, and WALTER, Democrat, Pennsylvania, would in effect restore to the FBI—in cooperation with friendly and timid judges—the right to withhold relevant data where J. Edgar Hoover deemed such suppression expedient.

The growing tumult is clearly designed to smother free debate and to force frenzied legislative action in an area that deserves calm, thoughtful appraisal. Now, as so often before, it is being suggested that anyone who quesions the FBI formula must be a hireling or dupe of the Kremlin, and not even Chief Justice Warren has been spared such attack.

The timing of the tempest is parenthetically puzzling in view of the known facts in the Abel case. The chief witness against Abel, as the Times noted yesterday, will be Abel's former top aid, whose defection is no longer a secret. It is hard to believe under these circumstances that the success or failure of the prosecution truly hinges on the restoration of secrecy to the FBI files.

But in any event the crucial matter is the principle of disclosure; it is bigger than Abel or any other single case. Obviously Abel himself ceased to constitute a threat from the moment when the FBI caught up with his operations; in the past Mr. Hoover himself has noted that there are times when the FBI prefers to keep foreign agents under

surveillance rather than initiate prosecutions. If the Jencks decision actually threatens an effective trial, why was the indictment brought at this juncture?

Police agencies naturally prefer rules of operation which afford them maximum convenience and minimum complexity. They prefer to reveal as little as possible about their methods and to intimate that their work would be crippled if it became exposed to serious scrutiny. The FBI lives by that code. Yet that code for many years offered protection to such dubious FBI informants as Harvey Matusow, and subjected many Americans to unjust harassment at the hands of untrustworthy witnesses who flourished behind closed doors.

The Jencks decision was a dramatic reassertion of what used to be basic American doctrine: that business of our courts is to secure justice, not insure convictions, and that the rights of defendants shall not be subordinated to the comforts of the police. Surely this is the point at which our law clashes most fundamentally with the gospel of Communist and Fascist states. But that issue is being disguised and distorted by the panic of the patrioteers, and by the craven performances of most of the press.

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

COME TO THE COURTHOUSE—MEET YOUR CONGRESSMAN—HOME AFTER CONGRESS ADJOURNS—RENDER ACCOUNT OF STEWARDSHIP—HOLD GOVERNMENT CLINICS—NOT POLITICAL MEETINGS—SCHEDULE MEETINGS

Mr. MILLER of Nebraska. Mr. Speaker, during my 15 years in Congress I go home immediately after adjournment to render an account of my stewardship. This year I will again hold my government clinics in all of the 38 county-seat towns. The first hour in each clinic is devoted to high school students. The second hour to adults. The question and answer session is mutually beneficial, informative, and stimulating. It takes up all phases of government.

MEETINGS AT COURTHOUSE

September 16, Sidney, 2 p. m.
September 17, Chappell, 2 p. m.
September 17, Kimball, 8 p. m.
September 18, Bridgeport, 2 p. m.
September 18, Alliance, 8 p. m.
September 19, Harrison, 2 p. m.
September 19, Chadron, 8 p. m.
September 20, Rushville, 2 p. m.
September 20, Valentine, 8 p. m.
September 21, Springview, 10 a. m.
September 21, Bassett, 2 p. m.
September 21, Ainsworth, 8 p. m.
September 23, Butte, 10 a. m.
September 23, O'Neill, 2 p. m.
September 23, Ord, 8 p. m.
September 24, Bartlett, 10 a. m.
September 24, Taylor, 2 p. m.
September 24, Burwell, 8 p. m.
September 25, Greeley, 10 a. m.
September 25, Loup City, 2 p. m.
September 25, St. Paul, 8 p. m.
September 26, Grand Island, 2 p. m.
September 26, Kearney, 8 p. m.

Small Farms

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. PATMAN. Mr. Speaker, the farm program over the years has consistently eliminated the small farmer and made more secure and powerful the big, factory-type farm.

When the program first started over 20 years ago, I insisted that the family-size farm should be given first consideration; that any allotments or quotas that were made should first guarantee to the family-size farmer a sufficient allotment to enable the farm family to earn enough for the family to enjoy a good standard of living. In other words, a cotton farmer should be allowed to market each year a sufficient number of bales of cotton at a fair price to give that farmer enough income for a good living and something for the future.

Although I testified before congressional committees and did everything possible to urge the adoption of such a proposal, it was not possible to get it accepted. The whole trend seemed to be during all these years to base the allocation on land or property without consideration of human rights or families. We are now suffering from that fallacious policy.

The time is likely to come when there will be a serious demand to divide up the large land holdings among farm families, who desire to work on the farm for a living. This has happened in other countries. I hope it is never forced in this country. We believe in the private enterprise system, but in the case of the small farmers, it has not worked satisfactorily because the small farmers have not had the right kind of opportunity. Therefore, if this trend and development go too far, there will be demands for changes that are not compatible to our private enterprise system. The way to forestall them is to make changes now before it is too late. There is little encouragement from the Secretary of Agriculture, Mr. Benson, who advises small farmers to seek other employment.

Last week, there appeared in the De Kalb News, De Kalb, Tex., an interesting article on "The Small Farm," which I am inserting herewith. It is as follows:

THE SMALL FARM

An official of the Department of Agriculture recently stated that, in his opinion, there were too many farms in the United States. While the official may be right, we dislike accepting such a statement.

We like to believe that in this country there is always room for the free farmer, who wants to till his land and make his life by working the soil. We hesitate to accept the conclusion that farming is only for the big operator, the mass farmer, so to speak.

We think that America will be a stronger Nation, and a greater one, as long as the individual and his family can farm a small area, living with the soil and keeping in touch with the earth in this fashion. We think that no occupation is nobler than that of farming.

We suspect the trouble with the farmer today and the farm situation in the United States is that the farmer does not get an adequate share of the income and profits from his products. We think the Agriculture Department would do well to concentrate its efforts in his direction, rather than in the negative field, by concluding that we have too many farms.

Actually, the one-family farm can operate relatively cheaply today—with a few mechanized vehicles—because much of the labor is performed by the family itself, in the tradition of the farm, and therefore labor costs are kept down to a minimum.

If the farmer were getting his fair share of the income and profits derived from farm products there would always be room in this country for the one-family farm. We hope there will always be.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Senator Knowland's Interview on the Meet the Press Program

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 20, 1957

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the program Meet the Press on which I appeared last Sunday evening.

There being no objection, the text of the program was ordered to be printed in the RECORD, as follows:

MEET THE PRESS

(Produced by Lawrence E. Spivak, Sunday, August 18, 1957; moderator, Ned Brooks; guest, Senator William F. Knowland, Republican, of California; panel, May Craig (Portland (Maine) Press Herald), Lyle Wilson (United Press), Bill Thies (International News Service), and Lawrence E. Spivak)

The ANNOUNCER. Our guest, ladies and gentlemen, is Senator WILLIAM F. KNOWLAND, Republican, from California, whose announcement early in January that he would not run again for the Senate has kept interest high in his future political plans.

Now, Meet the Press, the prizewinning program produced by Lawrence E. Spivak.

Ready for this spontaneous, unrehearsed conference are four of America's top reporters. Their questions, please remember, do not necessarily reflect their point of view. It is their way of getting a story for you.

Here is the moderator of Meet the Press, Mr. Ned Brooks.

Mr. BROOKS. And welcome once again to Meet the Press.

Our guest is the Republican leader of the Senate, Senator WILLIAM KNOWLAND, of California. As Congress comes closer to adjournment, important decisions are still to be made. One major issue is the administration's foreign program. The House of Representatives has reduced the appropriation asked by President Eisenhower by more than $800 million. Senator KNOWLAND was called to the White House on Friday to discuss the restoration of at least a substantial part of that reduction. He also was in the forefront of the battle to reach a compromise on the administration's civil-rights bill.

On the political front, Senator KNOWLAND's plans for the future have been the subject of much speculation. Early this year he announced he will not be a candidate for reelection in 1958. Since then he has been talked of prominently as a candidate for Governor of California next year and for President in 1960. When Congress adjourns he plans to make an extensive speaking tour of his home State.

Senator KNOWLAND has been the Republican leader of the Senate since 1953. He is a member of three important committees, Foreign Relations, Appropriations, and Atomic Energy.

And now seated around the press table ready to interview Senator KNOWLAND are Lyle Wilson of the United Press, May Craig of the Portland (Maine) Press Herald, William Thies of International News Service, and Lawrence E. Spivak, our regular member of the Meet the Press panel.

Now, Senator KNOWLAND, if you are ready, we will start the questions with Mr. Spivak.

Mr. SPIVAK. Senator, you were one of the first to call for a cut in the foreign-aid program. Do you approve of the cuts made by the House or do you think, as the President does, that they have gone too far for our security?

Senator KNOWLAND. I think the House cuts go far too deeply for our national defense interests and our foreign policy. I believe that the Senate amount will be less than the authorization bill, but more than the House appropriation.

Actually, even with the authorization bill, if you will total the amount, will be over $1 billion less than the President first recommended in January.

Mr. SPIVAK. Senator, after your talks with the President, what do you consider the minimum foreign-aid money that we need?

Senator KNOWLAND. I think something in the neighborhood of $3 billion can be justified in the assistance to those Nations where we have a deep obligation, with mutual defense pacts, for instance Korea. We are supporting some 20 divisions—helping to support some 20 divisions there. I think it would be generally looked upon as a catastrophe if the Communists should be able to destroy seven divisions. Yet a 30-percent cut in the defense support and the military support for Korea would be indicated by the action taken by the House and I think that is far too deep a cut in our own national interests or the interests of the free world.

Mr. SPIVAK. Senator, there is one question I would like to ask you about the House of Representatives' most recent cut: Do you think that our House of Representatives is conducting itself as a responsible body when it votes a bill authorizing a foreign aid expenditure of $3.3 billion and then cuts that authorization when it comes to appropriating the money, to $2.5 billion, in round figures?

Senator KNOWLAND. Yes, I think the House is conducting itself—I certainly wouldn't be critical of the House action. That is part of our constitutional system. We have to get an adjustment between the House and the Senate point of view and I think there is room for an honest difference of opinion. They happen to have one viewpoint, the Senate may have another.

Mr. SPIVAK. Now, that is not what I am getting at, Senator. The House itself passed a bill for $3.1 billion and then in conference agreed to a bill roughly of $3.3 billion but now when it comes to appropriating the money for the bill that it itself accepted, it cuts it to $2.5 billion. Now, is that responsible government?

Senator KNOWLAND. Yes; I think it is responsible government, Mr. Spivak. It happens to be the viewpoint of a majority of the Members of the House. That is representative government. We don't have to agree with that action and term it irresponsible. I don't believe that is the proper term to use.

Mr. SPIVAK. No; but why did they pass a bill for $3.3 billion?

Senator KNOWLAND. That is not unusual for an authorization bill to be higher than an appropriation bill. I think that the House perhaps in the back of its mind may have thought that the Senate was going to adjust the amount upward. That has been done before. In the final analysis, however, I think that the House cut is too deep in our own national interest because it will most heavily fall upon the Republic of Korea where they are facing some very heavy Communist forcoes north of the 38th parallel; it would drastically cut the defense forces in the Republic of China, on Formosa; it would cut them in southeast Asia, in Pakistan and in Turkey and all of these countries have been very stout allies of ours.

Mr. THIES. Well, Senator, as the Republican leader of the Senate, do you fight for restoration of the full $800 million eliminated by the House or will you tend to compromise the $3 billion figure?

Senator KNOWLAND. No; I do not believe that it is feasible to restore the entire amount of the authorization bill, but I do believe that the House reduction is deeper than it should have been and I shall certainly do what I can to have the Senate adjust those figures in the neighborhood of $3 billion.

That, as I pointed out before, will be a reduction of about $1,400,000,000 under the January recommendations of the President.

Mr. THIES. This week the President warned pretty bluntly that if he didn't get adequate foreign aid appropriations he would call Congress back into a special session. Now, what is your understanding of what he means by adequate?

Senator KNOWLAND. I didn't quite interpret his press conference statement in the way that you did. I think what he said was that if there were not adequate appropriations and if the world conditions warranted, where he felt that the national interests of our country were adversely affected, he would then consider calling Congress into special session and I think that would be the obligation of any President, Democrat or Republican, if he felt our vital national interests were adversely affected or if world conditions should indicate a further Communist encroachment.

Mr. THIES. In other words, if there is no worsening of the international situation he would not go that far?

Senator KNOWLAND. I am inclined to believe that would be the case because we will be back here in January. I think the second part of his alternative is the one that would be controlling if the international situation should warrant.

Mr. THIES. Did he have Syria in mind this week when he spoke of possible changes in the international situation?

Senator KNOWLAND. Syria is one of the critical problems in a very difficult area of the world and we never know when there may be some outbreak in the Middle East, in the Far East, or in Europe that would completely change the international situation. The developments in Syria certainly indicate that the situation in the Middle East is still tense.

Mrs. CRAIG. Senator, it is definite you will not run for the Senate in 1958?

Senator KNOWLAND. Yes; I made that position clear on January 7 and I have not changed it. I am not going to be a candidate for reelection to the Senate.

Mrs. CRAIG. Will you retain the Senate leadership while you are in the Senate?

Senator KNOWLAND. I have no present intentions of resigning from the Senate leadership.

Mrs. CRAIG. Will you tell us whether or not you are going to run for Governor of California?

Senator KNOWLAND. No; not at this time. When I make that decision I expect to inform the people of California, in the State of California.

Mrs. CRAIG. If you remain as leader, how would you get time to campaign for governor?

Senator KNOWLAND. We will cross that bridge when we come to it, Mrs. Craig.

Mrs. CRAIG. Did you read the story in the Washington Star, the interview with Mrs. Knowland, in which she said that she believed you would run, but you were not committed?

Senator KNOWLAND. I read the interview and that was her opinion.

Mrs. CRAIG. Do you agree with her?

Senator KNOWLAND. I would say I have never attempted to censor my wife's views or her letters.

Mrs. CRAIG. Well, Senator, you are scheduled for something like 45 speeches in September in California. Now, if you are not going to run for reelection, what are you going to make speeches about?

Senator KNOWLAND. Oh, Mrs. Craig, for 12 years I have gone back to California and made reports to the people of my State and I am doing that this year. I may discuss some other problems with them as well, but I am still reporting on conditions in Washington and elsewhere in the world.

Mrs. CRAIG. Do you have any agreement, tacit or otherwise, with Vice President NIXON that he will support you for governor if you decide to run for governor?

Senator KNOWLAND. No; I have no agreement with the Vice President whatsoever.

Mr. WILSON. Senator, may I take you to perhaps an easier area, back to foreign relations? When President Eisenhower proposed aerial inspection at the summit conference, it is my recollection that you were something less than enthusiastic. Now the aerial inspection idea seems to be basic in the present disarmament discussion. Do you think now that that proposal or the policy is useful, desirable, or mistaken?

Senator KNOWLAND. When the original proposal was made, Mr. Wilson, it is true that I was less than enthusiastic until we had some of the details develop. For instance, on the first announcement I could personally not picture a situation where Soviet planes would be allowed to fly over the United States and maybe fly over six times and on the seventh time come over containing atomic or other weapons and I wanted to be sure how we were to be safeguarded in that regard. I think that has been satisfactorily explained that either the planes, if they were Soviet planes, would have to land at an American airport, we will say in Alaska or elsewhere, be searched, take on an American observer before they could proceed, or American planes would be furnished to Soviet observers and they would make the trip in that way, so we would be safeguarded against maybe on the sixth or seventh trip, having a sting in the tail of the plane, so to speak.

The next thing was, personally I could not accept the idea that we would merely inspect the frozen wastes of Siberia while they were inspecting all of the United States including my own State of California, and the United States west of the Mississippi River. I thought this was trading 1 horse for 1 rabbit and that did not appeal to me. But that is not the proposal. If they are only willing to allow arctic areas to be inspected, I now understand our position that we will only allow arctic areas in Alaska and northern Canada to be inspected.

If they will allow all of their country to be inspected, we would then consider allowing all of our country to be inspected but I think it is a more equitable arrangement than some of the Soviet proposals that have heretofore been made.

Mr. WILSON. Would you be prepared to defend it in the Senate?

Senator KNOWLAND. I would be prepared, with the necessary safeguards.

Mr. WILSON. May I take you to another area now: Assuming that you are familiar with the McClellan hearing, the Senate hearing on rackets and labor, organized labor has accumulated a great deal of money and a great deal of political power. Do you think that the political and money power of organized labor should be held as strictly accountable before the law as are the powers exercised or that could be exercised by corporations, with their vast supplies of money?

Senator KNOWLAND. I certainly do. I believe that always in a business, in labor or in Government, with power must go responsibility. I believe that it is very dangerous to have power without having the equal responsibility to go with it and I think that the leaders of organized labor have the same responsibility to their membership and to the public to adequately and honestly account for their funds and to safeguard them as our great insurance companies or business organizations have. And I think that a great many of the leaders of the organization, including Mr. Meany, feel that way about it.

Mr. WILSON. Corporate money and political power is strictly accountable to law passed by the Congress.

Now, if you feel that way about labor money and political power, do you plan any legislation to bring it about?

Senator KNOWLAND. I am not sure that that is necessarily the field of Federal legislation. I think that the States have a great responsibility to be sure that trust funds are adequately safeguarded and I don't think that the States should fall down on their responsibility in giving this protection to the general public and to the union membership and pass the buck entirely to the Federal Government.

Now, it may be in those organizations which are interstate in character and where one State could not get to the problem, that the Federal Government would be amply justified in passing some legislation.

Mr. WILSON. Do you think the big unions are interstate?

Senator KNOWLAND. Yes.

Mr. WILSON. Would you propose legislation in California if you were governor?

Senator KNOWLAND. Wherever legislation would be necessary to protect the rank and file of the union membership and the general public, I would believe that a governor would have a responsibility to recommend legislation.

Mr. SPIVAK. Senator, where you you stand on the controversial right-to-work laws? I believe they have been under consideration in California. Do you believe that the State has a responsibility to pass such laws?

Senator KNOWLAND. I think that that is primarily a State problem. I think undoubtedly that the right to work is a civil right of the highest character and that the person's ability to earn a livelihood is one of the highest civil rights next to voting that a person could have and I think he ought to be assured that he has a right to earn a living.

Mr. SPIVAK. You are satisfied then with section 14 (b) of the Taft-Hartley Act which now gives the States the right to pass such laws. You wouldn't want an amendment for a national act of that kind?

Senator KNOWLAND. No; I would oppose any attempt on the part of Federal legislation to take away from the States the right to enact such legislation if in their judgment they felt it was wise to do so.

Mr. SPIVAK. As I understand it you are for State legislation. Are you for a State law of that kind, though?

Senator KNOWLAND. On that Mr. Spivak, I don't know. It would depend on what the type of the State law might be. I personally believe that, as I say, the right to work is one of the greatest rights next to the right to vote and worship your God according to your conscience, that an American citizen can have and I don't think it should be infringed upon by any group or organization.

Mr. SPIVAK. Senator, most of us have found it rather difficult to make head or tail of the disarmament discussions that are going on in London between Governor Stassen for the West, and the Soviet. Do you think that Governor Stassen has made any progress of importance in these discussions?

Senator KNOWLAND. I am not certain at this time whether we have made any real progress in this regard. I think we may have made some negative progress in the sense that we have found that the Soviet Union is just as determined to have their way, or have no agreement and to that extent I suppose you can say there is some progress in knowing that the Soviet Union hasn't changed its position. But I see up to this point no indication that a satisfactory and sound agreement will be entered into.

Mr. SPIVAK. Do you see any point in the continuing of these discussions?

Senator KNOWLAND. I think that we should always search for ways of finding methods of limiting armaments and preserving international law and order and there may come a time—maybe not with this crowd that is controlling the Kremlin, but at some future time—when we can reach such an agreement and I don't think we should ever abandon the possibility that some such agreement may be arrived at.

Mr. THIES. Senator, conceding your natural reluctance to make what you may think is a premature announcement about the governorship of California, many Republicans, including Gov. Goodwin Knight, have said that a fight between you and the Governor for that seat in the primary would split the party wide open in California and possibly throw the election to the Democrats. What is your view on that?

Senator KNOWLAND. I don't agree with that point of view. I happen to believe in the direct primary system. I think the people of my State who have for now, for some 50 years almost, had the direct primary—40 years—feel that they are entitled to have a voice in the selection of their candidates for State office and for the legislature.

Mr. THIES. Senator, I remember a conference that you had with Vice President NIXON aboard his airplane in 1953 in which you and he got together and issued a joint statement endorsing then Lieutenant Governor Knight for the governorship. I assume at that time it was to avoid a fight. Was that correct, and how does that compare with this situation?

Senator KNOWLAND. Not necessarily, because I don't think you can always draw a parallel between conditions one year and in a subsequent year. I think conditions change and if the people of California have a choice of candidates I certainly think they are competent to make a choice.

Mrs. CRAIG. Senator, going back to foreign aid, you said in a speech last May "I do not favor taxing the American people to support Communist economic or political systems abroad."

Senator KNOWLAND. I don't favor it now.

Mrs. CRAIG. Yes.

Well, now, in this bill which will come up to you soon for money, are you for money for Yugoslavia and Tito?

Senator KNOWLAND. Personally I am not.

Mrs. CRAIG. How are you going to get it out? Will you get it out? Will you try?

Senator KNOWLAND. I don't know whether we can get it out, but I have made representations to the administration then and I expect to make them in the future. I certainly think that it is unsound to give military aid to Tito. I did then; I do now.

Mrs. CRAIG. Well, how do you feel then perhaps about selling food to Poland and the other satellites? You did say, I believe, that you thought anything that would make people happy in a Communist country only strengthened the Communist system.

Senator KNOWLAND. I have always drawn a line, I believe, Mrs. Craig, if you will examine the text of speeches and statements I have made, between feeding hungry people and supporting the general economic system of Communist powers.

Now under the leadership of Mr. Hoover after World War I in the twenties when there was a great famine in the Soviet Union itself, the American people showed their desire as humanitarians to prevent innocent people from starving to death due to the incompetence of their Government. And I would believe that we could help hungry people in the world without strengthening their economic system.

I do not favor a building up of Communist nations by the support of their economic systems.

Mrs. CRAIG. Do you think that there should be a special session and do you think the President's eventual suggestion of such a thing was resented at the Capitol?

Senator KNOWLAND. Personally, I do not see the necessity of a special session, at this time. If world conditions warranted it, I would think any President of the United States would call Congress into special session.

Mrs. CRAIG. But not for more foreign aid?

Senator KNOWLAND. Not necessarily unless that, in turn, had a direct implication with the international situation, which then might be confronting the Nation.

Mr. BROOKS. Senator, before we close, I think we ought to have a word about the civil-rights bill and the conference between the House and the Senate. How do you account for the fact that so many Republicans voted to weaken the civil-rights bill?

Senator KNOWLAND. Not so many of them did vote to weaken it. As a matter of fact, the predominant vote of the Senate Republicans was against weakening the bill. But some did and those together with the large majority of the Democrats who voted to weaken it, was a sufficient majority to enable them to make the change.

Mr. BROOKS. Mr. Wilson——

Mr WILSON. I wanted to go back to that matter of economic aid. You would oppose economic aid to a Communist state. Would you oppose it to a Socialist state?

Senator KNOWLAND. No; I think that there is a difference between those countries which are under Soviet occupation and a neutral state which is not under Soviet occupation. Personally, however, I think that insofar as we can, we should gradually get out of the business of government to government, even loans, to say nothing of grants, and encourage private enterprise making investment in foreign countries. And, of course, they are not apt to make investments in countries which are threatening to socialize the economy.

Mr. WILSON. The reason I inquire is that the movement toward socialism in Europe, for example, has been precipitous since the war and it is perfectly likely that in the course of time, the United States will be a little island of private enterprise in a Socialist world. It would make it very difficult for the United States to trade and engage in foreign trade under those circumstances.

Senator KNOWLAND. Of course, one of the great differences, however, has been that Germany which has had the greatest advance in all of Western Europe, has turned directly to private enterprise and away from socialism and I think that is what has given them their economic superiority.

Mr. SPIVAK. Senator, are you willing to settle for the Senate bill on civil rights?

Senator KNOWLAND. No; I am not willing to settle for the Senate bill as finally passed. I believe it will be amended. I hope that it will be sufficiently amended to make it fully effective.

Mr. SPIVAK. You are going to fight for a better bill then; are you?

Senator KNOWLAND. Yes; I would expect that we will get a better bill than the one finally passed in the Senate.

Mr. THIES. Do you think this will end the long battle for civil-rights legislation for the foreseeable future, Senator?

Senator KNOWLAND. No; I think not, but I think we will get some experience under this and the Commission will be able to make a study of just how much progress we can make under this bill.

Mrs. CRAIG. How are you going to get out of the civil-rights bill that section which would fine or put in jail a reporter who revealed anything in a secret session of that Commission?

Senator KNOWLAND. That could be done by a separate bill or they can concur and amend in the House and I think they can get it out.

Mr. BROOKS. I am sorry, I am going to have to interrupt. Our time is up.

Thank you, Senator KNOWLAND, for being with us.

Wiley Salutes Aviation Industry—Urges Approval of More Funds for Research

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. WILEY. Mr. President, as we know, yesterday was National Aviation Day. All of us, of course, are deeply aware that our country is safer, stronger, and greatly advanced because of the great contributions of the aeronautical industry to our development and progress.

In its brief lifetime, aviation has changed the complexion of communication, commerce, warfare, and generally, world affairs.

Behind this conquest of the air, of course, are the brains, brawn, foresight, imagination, and sweat of millions of men. Lest we forget, there are also the graves of those who risked their necks in experimenting and testing.

During the years, aviation has been confronted with a multitude of challenges—from the problem of just getting off the ground to development of supersonic jets, launching of space satellites, and other advancements that, only yesterday, were the subject of science fiction.

Now our task is to increase our efforts for ever greater air progress, including resolving its problems and supporting programs to meet our air needs of the future.

BUDGET CUTBACKS "TRIM THE WINGS" OF AVIATION

Regrettably, some budget cutbacks are, in effect, "trimming the wings" of the aviation industry.

The Air Force is stretching out or canceling a great many contracts.

Civil aviation, too, feels that its expansion programs as well as its ability to provide adequate services to our people, is being too greatly restricted.

Frankly, I do not believe we can afford to jeopardize air progress by wielding the economy knife recklessly.

As we know, progress in any field is based on a sound research program.

Today on the Senate Calendar is a bill, H. R. 3377, which would authorize the acquisition of new land and the construction of additional facilities for aeronautical research. It would include testing and experimentations of nuclear propulsion, rocket research, pilotless aircraft, and other phases of aeronautical progress. The authorized cost is not to exceed $45 million for these purposes.

I should like to point out that none of the projects in this particular bill are in my State. However, I am happy to note that the University of Wisconsin in 1956 participated in other research projects sponsored by the National Advisory Committee for Aeronautics.

I believe that this modest step—the passage of H. R. 3377—in advancing aeronautical research, is definitely necessary.

Consequently, I urge that the bill be favorably considered when it is reached on the calendar today.

In addition, I request unanimous consent to have printed in the Appendix of the RECORD a brief statement saluting Aviation Day, and briefly pointing up the challenges facing our aeronautical industry.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

Now that yesterday's dreams of air travel have become today's realities, we must dedicate ourselves to ever-increased progress in this industry which has contributed so much to our growth and progress as a Nation. In this young industry of aviation the question of "Can man fly?" has been displaced by the queries: "How fast can he fly?" and "How safely can he fly?"

Too, we are faced with fulfilling the needs and requirements of the dual role aviation plays in our country: that of maintaining strong, effective air power to protect us; and, that of further developing aviation for commerce, travel, and other peaceful pursuits.

As we know, the Air Force celebrates its 50th anniversary this year. Again and again, this flying fighting arm of our service has spearheaded progress in aviation.

Our civilian industry, too, has been a fine record of notable breakthroughs toward ever-greater progress in harnessing the airways for the benefit of our people.

WISCONSIN'S FINE RECORD OF AIR DEVELOPMENT

As we look forward to additional achievements in aviation, we must also prepare to resolve its problems.

These problems exist in varying degrees, across the Nation.

In Wisconsin, our officials and citizens are making valiant efforts to fully bring the benefits of this air age to our people. They are grappling with the jobs of expanding facilities, improving navigation aids for local and interstate commerce, establishing new routes linking us with the South, Southwest, and Far West, and others.

I am proud to point out that this work is going forward at a good pace. For example, the following facts illustrate the scope of our program as regards airports, aircraft, pilots, and airways:

Airports: As of January 1, 1957, there were a total of 182 civil airports in the State of Wisconsin. Of this number, 80 were public-use airports and 102 were classified as limited.

Aircraft: As of January 1, 1957, there were a total of 1,338 civil aircraft registered in the State of Wisconsin. These include: general aviation multiengine, 85; postwar, 5; and 5-place single engine, 418; all other, 835.

Pilots: As of January 1, 1956 (latest available figure) there were 14,409 pilots registered in the State of Wisconsin. Of this number there were: Student, 1,575; private, 8,615; commercial, 4,103; air transport rating, 108; and others, 8.

Airways: As of May 30, 1957, there were a total of 2,392 miles of airways in the State of Wisconsin. Of this total, 568 miles were on low-frequency airways, 1,129 miles were very high frequency airways, and 695 miles were very high frequency alternate airways.

I am proud to point out also that in Wisconsin there have been many outstanding men who have contributed to the advancement of aviation.

To name a few, I include Gen. Billy Mitchell, Gen. Nathan Twining, Gen. Hoyt Vandenberg, Adm. Mark Mischer, Maj. Richard I. Bong, Gen. Lester Maitland, and others.

To this notable group, I am now happy to add the name of Jim Durfee, present Chairman of the Civil Aeronautics Board, who is making a fine contribution in this field.

PROBLEMS CONFRONTING THIS VITAL INDUSTRY

On the national scope, we need a stepped-up program for the future if we are to get maximum benefit from the potential of our air age—the jet age. The requirements of such a program include expanded air facilities; improved navigational aids; greater air safety; a fair competitive climate for economically healthy airlines; a sound rate system to enable them to meet their financial burdens; strong United States-flag carriers servicing routes to the four corners of the world; a wider program for cross-continent travel; trunklines to provide service to fast-developing areas of the Nation; and adequate local service; expanded use of aeronautical advancements for such important segments as agriculture, commerce, industry, etc.; an appropriate assumption of responsibilities for aeronautical development at Federal, State, and local levels; highway improvement to and from airports, so as to relieve congestion.

These are only a few of the challenges confronting us.

I could mention the military and dozens of other problems. The problems of jet noise, of airways used exclusively by the military.

I am happy that our people are displaying foresight, ingenuity, and commonsense in tackling these and other problems.

I should like also to pay tribute to Wisconsin's Aeronautics Commission, and to its counterparts across the Nation, as well as other officials who are making an outstanding contribution in this field.

Their unrelenting efforts to meet and resolve our problems are, indeed, an example of the best way we can commemorate Aviation Day.

Resolution Opposing Proposals To Increase REA Interest Rates

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. JOHNSON of Texas. Mr. President, those of us who have supported the program of the Rural Electrification Administration view with concern efforts to increase REA interest rates.

For many years REA loan funds bore interest rates greater than the rate which the Government paid on its borrowings. This resulted in a net margin to the Government of more than $47 million from lending operations.

Recently the board of directors of the National Telephone Cooperative Association, meeting in Washington, adopted a resolution stating the official position of the association regarding proposals that REA interest rates be raised. I ask unanimous consent that the text of this resolution be printed in the Appendix of the RECORD.

There being no objection, the text of the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE BOARD OF DIRECTORS OF THE NATIONAL TELEPHONE COOPERATIVE ASSOCIATION

Whereas Congressmen HIESTAND, of California, and BECKER, of New York, have introduced bills which would substantially raise the REA interest rates; and

Whereas the administration through the Bureau of the Budget has sent a proposal to the Congress which would do the same thing; and

Whereas the rural telephone cooperatives are serving in sparsely settled areas and cannot afford an increase in interest rates: Now, therefore, be it

Resolved, That the National Telephone Cooperative Association oppose the Hiestand and Becker bills and the proposal of the administration; and be it further

Resolved, That the NTCA continue to oppose these bills and recommend to the Rural Electrification Administration and the Congress that the current structure of interest rates charged to REA borrowers be maintained.

Negotiations With Foreign Countries Regarding International Air Service

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. BRICKER. Mr. President, on July 2 of this year I introduced Senate bill 2459, to amend section 402 of the Civil Aeronautics Act of 1948. In connection with that I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Air Transport Association of America on June 24, 1957.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION PASSED BY THE BOARD OF DIRECTORS, WASHINGTON, D. C., JUNE 24, 1957

Whereas the Department of State in recent negotiations of international air-service agreements with the Governments of the Netherlands and of Australia, has pursued a giveaway philosophy under which valuable additional air transport rights have been taken from United States airlines and surrendered to foreign airlines, and that Department has announced its intention of following the same course of action with others; and

Whereas this giveaway philosophy menaces the very structure of the United States civil air transport system, both international and domestic, and threatens to impose upon the American taxpayer the burden of financial support of that system; and

Whereas the United States civil air transport system is vital to the welfare and security of the United States; and

Whereas the present philosophy of the Department of State is in defiance of the long-established, bipartisan, air transport policy of the executive branch and the Congress: Now, therefore, be it

Resolved, That the Air Transport Association of America:

1. Condemns the grants of additional routes to the Governments of the Netherlands and Australia, and the announced intention of the Department of State to make similar grants to other nations, as destructive of a sound United States air transport system, and as unjustifiable under long-established bipartisan United States air transport policy; and

2. Urges that grants to foreign airlines which jeopardize the development of a sound United States air transport system and violate long-established United States policy, should be halted immediately; and

3. Directs the president of the association to bring this resolution to the attention of the public, the appropriate committees of the Congress, the Civil Aeronautics Board, and the Department of State.

Foreign-Aid Appropriations

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. FULBRIGHT. Mr. President, again Mr. Walter Lippmann, with his usual sharp and penetrating wisdom, has analyzed the causes and effects of the present deplorable conditions in our foreign relations.

In the Herald Tribune of today his column appears under the headline "The Rebellion in Congress," and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE REBELLION IN CONGRESS

(By Walter Lippmann)

The cuts made by the House in the appropriations for foreign aid are big. But their true significance cannot be measured in terms of money. For what the House has done is not merely to insist on spending less money. It has rejected the fundamental conception of the function of foreign aid in our current foreign policy, and it has voted its lack of confidence in the President's judgment of what is necessary for national security. Unless the action of the House is clearly reversed, the world will be on notice that the policy of maintaining our alliances by subsidizing them no longer has reliable public support.

The debates in Congress show that there is a preponderant opinion which wants, not merely to reduce foreign aid but, to bring it to an end. Last week, for example, Representative NEAL put it this way: "I would support any program that would assure gradual withdrawal of expenditure for foreign aid, but I am unwilling to approve plans to perpetuate the present program."

Mr. NEAL, who reflected the majority opinion, had seen, quite correctly, that this year's proposals were designed to establish foreign aid as a continuing activity of the Government. Military aid was to be put under the Department of Defense. Economic aid was to take the form of a banking operation which, it was hoped, would not need to be examined and voted upon by Congress each year.

The House would have none of this, at bottom because, as Mr. NEAL said, it wants to wind up and not to perpetuate the basic policy.

As a rough measure of the size of the cut by the House, we can say that it is about equal to last year's total military and economic aid to South Korea and Formosa combined. That does not mean, of course, that there will now be no money for South Korea and Formosa. But it does mean that in order to subsidize them at something like the level to which their civil and military officials have become accustomed, money will have to be squeezed out of our contributions to the NATO alliance, to Iran, Pakistan, and South Vietnam, and to others among the fifty-odd nations.

This will, asserts the President, seriously delay the modernization of their military forces. It will compel them to reduce the size and effectiveness of their forces. It will make impossible important capital assistance through loans for development. In substance what the House has said to this argument is that it is probably not a vital interest of the United States that our military allies should have modernized forces that are larger than they themselves can afford to pay for—and that even if it is a vital interest of the United States, they are not willing to accept the President's judgment of how much money is needed.

After all, how modern would be a modernized force in South Korea or in Iran? What is the size of the forces that would be effective in each of the free nations bordering on the Communist powers? Nobody can answer these questions with any assurance, certainly not the President himself who has made two sharply different estimates of the money needed.

In view of the state of mind in Congress and in the country, the President would be very badly advised if, in the casual manner of last week's impromptu press conference, he called a special session of Congress. The chances are now very great that he would be inviting an even more resounding defeat than he has already suffered. For a special session, called without his having first recovered his leadership of the Nation, would be asking for a showdown on whether his foreign policy is still the national policy. If he were rebuffed by Congress, the policy of our alliances would be gravely injured.

No doubt it is our duty to hope for the best, in this case to hope that the President will learn from his bitter experiences during this session of Congress. But he will have to do more than read speeches and statements that are written for him, and to plead at the last moment with the leaders of Congress.

He must learn to believe in his own recommendations to Congress—which means, to recommend to Congress only what he himself understands and believes in. The collapse of his leadership in this Congress stems from his failure to take sufficient trouble to understand and then to defend his own great measures: The budget, civil rights, and foreign aid.

No doubt the country is big and strong, and we shall somehow muddle through. But there is no use trying to pretend that the indecision and the vacillation, the ambiguities and the moral generalities, are an inspiring spectacle for the world to watch.

Texan Protests Proposed Revisions in Regulations for Control of Interstate Traffic in Firearms and Ammunition

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 20, 1957

Mr. JOHNSON of Texas. Mr. President, a number of Texans have protested to me against regulations recently proposed by the Alcohol and Tobacco Tax Division of the Internal Revenue Service, which would amend the Federal Firearms Act of 1938 by Executive decree.

John H. Wootters, Jr., has sent me copies of several statements of protest he has filed with the Division, to be entered in the record of a public hearing for August 27.

I ask unanimous consent that the text of Mr. Wooters' statements be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF JOHN H. WOOTTERS, JR., PURSUANT TO PARAGRAPH 177.50, PROPOSED REGULATIONS FOR CONTROL OF INTERSTATE TRAFFIC IN FIREARMS AND AMMUNITION UNDER THE FEDERAL FIREARMS ACT OF 1938 (AS PUBLISHED IN VOL. 22, NO. 86, THE FEDERAL REGISTER)

I protest adoption of paragraph 177.50 on the grounds that this regulation will reduce or destroy the value of thousands of obsolete firearms with the status of collector's items by requiring an identifying stamp which will obviously alter the original condition of the piece. This argument will also be valid in the cases of many firearms which are lawfully imported into the United States for sale to collectors, and of thousands of domestically manufactured rifles and shotguns of an earlier (but not antique) date now in dealers' stocks or the hands of private citizens. In many cases, a serious question will arise as to the status of these last-mentioned weapons, and a resolution of the question may be to the injury of the owners who acted in good faith when purchasing the guns.

This paragraph will also work a hardship and additional expense on the manufacturers of firearms, which cost must be passed on to the consumer.

Such a regulation is unnecessary and unduly restrictive upon law-abiding citizens while it will seldom, if ever serve a useful purpose in the prevention of crime.

STATEMENT OF JOHN H. WOOTTERS, JR,. PURSUANT TO PARAGRAPH 177.51, PROPOSED REGULATIONS FOR CONTROL OF INTERSTATE TRAFFIC IN FIREARMS AND AMMUNITION UNDER THE FEDERAL FIREARMS ACT OF 1938 (AS PUBLISHED IN VOL. 22, NO. 86, THE FEDERAL REGISTER)

I protest the adoption of paragraph 177.51 on the grounds that it imposes an unhecessary and unreasonable burden of records keeping and storage upon duly licensed dealers in firearms and ammunition. The smaller dealer, or the merchant to whom a stock of guns and ammunition is a sideline, maintained for the convenience of his customers, will be forced to the choice between complying with a regulation which will increase his costs unfairly and simply abandoning the firearms dealership entirely.

This regulation unduly restricts the lawful activities of citizens while serving no purpose in the prevention of crime.

STATEMENT OF JOHN H. WOOTTERS, JR,. PURSUANT TO PARAGRAPH 177.52, PROPOSED REGULATIONS FOR CONTROL OF INTERSTATE TRAFFIC IN FIREARMS AND AMMUNITION UNDER THE FEDERAL FIREARMS ACT OF 1938 (AS PUBLISHED IN VOL. 22, NO. 86, THE FEDERAL REGISTER)

I protest the adoption of paragraph 177.52 on the grounds that it is totally unreasonable and that it can serve no useful purpose in preventing crime. The concept of persons of criminal intent complying with a regulation so easily circumvented is absurd, so that its sole effect will be to discourage dealers in ammunition from commerce in that item. The only hardship worked will therefore be upon the law-abiding dealer and his law-abiding customers. It would be much more reasonable to require that the sale of every bottle of alcoholic beverage sold in the United States must be recorded and described as to distiller, proof, type, quantity, and the identity of the person from whom received and to whom sold. Such a regulation would be by no means so nonsensical as the proposal in paragraph 177.52, here in question.

The adoption of this paragraph will impose an intolerable burden upon dealers in ammunition, with no benefits accruing to the public therefrom in anyway whatsoever.

STATEMENT OF JOHN H. WOOTTERS, JR., PURSUANT TO PARAGRAPH 177.54, PROPOSED REGULATIONS FOR CONTROL OF INTERSTATE TRAFFIC IN FIREARMS AND AMMUNITION UNDER THE FEDERAL FIREARMS ACT OF 1938 (AS PUBLISHED IN VOL. 22, NO. 86, THE FEDERAL REGISTER)

I protest the adoption of paragraph 177.54 on the grounds that it attempts unlawfully to regulate the activities of a private citizen transacting business in good faith and entirely within the borders of his own State of residence. The purpose of the Federal Firearms Act of 1938 is the regulation of interstate commerce, and the intent of paragraph 177.54 goes beyond that purpose, since the act of purchasing a gun or ammunition by a private individual is quite patently not in any way, shape, or form interstate commerce.

Adoption of this paragraph would amend the Federal Firearms Act without the consent of the Congress, thus depriving all private citizens of their right to representation by elected officials, and would constitute "legislation by decree." If this paragraph is

adopted, I have no doubt that the Supreme Court of the United States will have the opportunity to pass on its legality in the near future.

STATEMENT OF JOHN H. WOOTTERS, JR., PURSUANT TO PARAGRAPH 177.55, PROPOSED REGULATIONS FOR CONTROL OF INTERSTATE TRAFFIC IN FIREARMS AND AMMUNITION UNDER THE FEDERAL FIREARMS ACT OF 1938 [AS PUBLISHED IN VOL. 22, NO 86, THE FEDERAL REGISTER]

I protest the adoption of paragraph 177.55 on the grounds that it will deny to manufacturers and dealers of firearms and ammunition their constitutional protection from unwarranted search of their places of business, and that it would do so by administrative decree. This paragraph is unreasonable and unnecessary since other regulations require these businessmen to maintain records of importation, shipment, and disposal only of items of stock.

The adoption of this paragraph will create unfair harassment of those lawfully engaged in commerce in sporting arms and ammunition, with no public benefit accruing therefrom.

Appointment of Arnold R. Jones To Be a Director of the Tennessee Valley Authority

---

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. KEFAUVER. Mr. President, the great newspapers of the Tennessee Valley area, representing the sentiments of the people of that area, are practically unanimous in their criticism of the appointment of Arnold R. Jones to be a member of the Board of Directors of the Tennessee Valley Authority, and in their expression of hope that his nomination will not be confirmed by the Senate. I think this is indicative of the general feeling on the part of the people of that section who are affected by the operations of the Tennessee Valley Authority.

I ask unanimous consent to have printed in the Appendix of the RECORD editorials from the Louisville Courier-Journal, the Sacramento, Fresno, and Modesto Bees regarding the nomination of Arnold Jones to be a Director of the Tennessee Valley Authority. These editorials followed a series of articles by Nat Caldwell, of the Nashville Tennessean, which were published in that newspaper and many others in which were revealed Mr. Jones' hostility toward the agency. To quote the Louisville Courier-Journal editorial: "Mr. Jones won't do."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Nashville Tennessean of August 2, 1957]

VISITOR'S CORNER—REPORTER CALDWELL HAS DONE NATION A SERVICE—LOUISVILLE NEWSPAPER CITES SERIES ON JONES, CONCLUDES PRESIDENT HAS MADE A SORRY CHOICE

(Editorial comment from a wide range of newspapers has followed publication of a series of articles on Arnold Jones by this newspaper. The following excerpts are the second of two such reprints in this space.)

[From the Louisville Courier-Journal]

Reporter Nat Caldwell of the Nashville Tennessean has done the Nation a service with his series of articles on Arnold Jones, the man President Eisenhower has nominated for appointment to the Board of the Tennessee Valley Authority. Mr. Caldwell's articles show beyond the possibility of sensible dispute that Mr. Jones is not suitable for the job.

Mr. Caldwell has done an especially useful job in his story of Mr. Jones because, outside his native Kansas, practically nothing was known of Mr. Jones at the time his name was picked out of obscurity by the President. Interested Senators became suspicious upon learning that Jones was employed in the Bureau of the Budget, an agency that has seemed hell-bent on destroying TVA as an efficient service agency of the Government. Their suspicions were increased when it was discovered that Jones was author of a letter to Congress recommending measures that would have restricted TVA to a point where operation would have been difficult, if not impossible.

Friends of TVA began to fear that this was another appointment like that of Herbert Vogel, the former Army officer who, as an Eisenhower appointee to the Board, has ably served the interests of the enemies of TVA while seeking to cripple the very agency he heads. The Caldwell series gives sound basis to their fears. Indeed, it makes it apparent that Arnold Jones cannot in good conscience accept the job of TVA Director.

According to Federal law, a TVA Director must believe in the spirit of the TVA Enabling Act and the agency it created. He must, in other words, believe in the original purpose of TVA, a public power and area-improvement agency of the United States Government. There is nothing in Mr. Jones' background to indicate that he can honestly say that he so believes.

A Board member of TVA should be an an efficient administrator as well as a man who can inspire loyalty from subordinates. Said a former associate of Jones, when he was on the faculty of Kansas State College: "If they want a man on the TVA Board who will magnify redtape until the people under him will hate the agency and quit in disgust, Jones is the perfect man for the job."

A TVA Director should not only understand the scope of the agency's operations, but should approve of them. There is absolutely nothing in Mr. Jones' background to indicate that he does. On the other hand, it is significant that he has been for the past 20 years identified with political and private-power groups that have sought to undermine and cripple TVA, and that his only written record on the subject was directed at hampering TVA financing efforts.

This is the type of man President Eisenhower now describes as "the best and most disinterested man" he could find for the job of TVA Director. It has become customary in Washington to excuse the President's actions in such cases on the curious grounds that he doesn't know what he is doing. This is no excuse for his nomination of Arnold Jones. If the President does not know, he is not fulfilling his duties. If he does know, the appointment is unforgiveable. Mr. Jones won't do.

[From the McClatchy newspapers—Sacramento, Fresno, and Modesto Bees]

The United States Senate would be more than justified in taking a close look at the record of Arnold Jones in view of facts which have come to light since his appointment by President Dwight D. Eisenhower to the Tennessee Valley Authority Board of Directors.

Jones' record as a State corporation commissioner in his home State of Kansas has been interpreted as being friendly to the private utilities and damaging to the rural-electrification cooperatives, which could suggest what his performance might be were he confirmed for the TVA Board.

In addition, the Nashville Tennessean points out:

"Before his appointment to TVA's Board, this capable and disinterested man, this noncontroversial figure, wrote a letter from the Budget Bureau to a Senate committee in which he urged more stringent legislation for TVA and in which he proposed a bond limitation even below that recommended by his agency."

The authority to float bonds is vital to TVA's continued growth. The Budget Bureau, where the Dixon-Yates contract was spawned, has sought to beat the bonding capacity down to the point where it would not help TVA to meet its power requirements. And when Jones even goes beyond that point, it would be straining to say he is one who is in sympathy with the principles and objectives of TVA, as the law requires of a Director.

[From the St. Louis Post-Dispatch]

As Arnold Jones' record begins emerging from national obscurity, the early doubts that were felt about his nomination to the TVA directorate are becoming more than justified. On the heels of the rejection of Mr. Jones by the Tennessee Valley Public Power Association comes the disclosure of his hostility to the Rural Electrification Administration in Kansas.

As a member of the Kansas Corporation Commission—the equivalent of the utilities commission in most States—Mr. Jones was a party to a program of gradually starving out the REA co-ops.

The attrition of the co-op's lifeblood was started in the pre-Jones era on the corporation commission and has continued after it, but Mr. Jones is credited with carrying it forward. The process has gone so far that co-ops must either destroy the starvation policy or be destroyed by it, according to their statewide association, Kansas Electric Cooperatives.

In the light of all this: Does President Eisenhower still regard Arnold Jones as the most capable disinterested man that I could find?

Enough has become known to warrant and even demand the more detailed examination which the Senate confirmation hearings can provide through subpenaing of records and questioning of witnesses. Though Kansas law does not forbid conflicts of interest between public service and private profit, the law of the United States makes it a criminal offense, and it is to the service of the United States Government as a Director of the Tennessee Valley Authority that Mr. Jones has been nominated by President Eisenhower.

If Mr. Jones sees nothing wrong in conflicts of interest, if he is potentially an Adolphe H. Wenzell or another of the steady stream of officeholders before him who have vexed the Eisenhower administration by confusing their public and private responsibilities, now is the best time to find out about it.

[From the Memphis Press-Scimitar of August 7, 1957]

JONES SHOULD NOT BE A TVA DIRECTOR

The Senate Public Works Committee is about to consider President Eisenhower's nomination of Arnold R. Jones to the three-man Board of Directors of the Tennessee Valley Authority.

The committee should not confirm the President's choice.

Mr. Jones is a 53-year-old Kansas Republican who attained his greatest distinction just a little more than a year ago when he

was appointed Deputy Director of the Bureau of the Budget.

Jones has stated his views on TVA. Either he must reverse himself or he cannot even qualify under the law as a TVA director: The TVA Act requires that persons believing in the aims of the act shall be appointed its directors.

Jones would limit TVA's borrowing power to $200 million. This is $550 million less than President Eisenhower himself has said he favors as a ceiling. What $200 million is in flood control or power development can be seen by these comparisons: The Memphis steam plant is costing $117,500,000 and will generate 750,000 kilowatts by nameplate rating. Kentucky dam, last of the great multiple-use dams built on the Tennessee River, was completed at a cost of $114 million—and that was almost 10 years ago.

Jones would have TVA pay interest on the total United States investment in TVA, an after-the-fact suggestion which is a little like suggesting a higher rate of interest to a borrower after the loan has been made on his house. TVA has been repaying the United States investment in the power operations, has been doing so since 1948.

Jones is unknown to the Senators representing the Tennessee Valley States. Senator GORE has said he does not know him. Senator COOPER of Kentucky was surprised by the nomination. Senator KEFAUVER believes Jones "doesn't have anything good in mind for TVA."

Tennessee's Senators should have the support of their colleagues, regardless of party and geography, in opposition to Mr. Jones.

When President Eisenhower nominated Mr. Jones, it was an action which will not, in our opinion, effectively carry out the promise he made to the people of the TVA region, in a telegram to the editor of this newspaper on November 1, 1952:

"If I am elected President, TVA will be operated and maintained at maximum efficiency."

[From the Chattanooga Times of July 23, 1957]

CONSIDER THE 6 MILLION

The Tennessee Valley Public Power Association speaks for some 6 million consumers of TVA electricity in this valley. The association has now announced its opposition to the nomination of Arnold R. Jones to be a member of the Board of Directors of TVA.

It has not been explained why Mr. Jones, Deputy Director of the Budget Bureau, was nominated by President Eisenhower for this vital post. Whoever becomes the third member of the TVA Board could decide the fate of the great valley development for the future, depending upon whether he sided with Chairman Vogel or with Dr. Paty.

Six million people are quite a respectable percentage of the population of this country. The TVA law does not require that they be consulted before a new Director is named, but at least they should not be treated with indifference.

It has been revealed by a Nashville Tennessean correspondent who went to Kansas to investigate, that Mr. Jones, while a member of the Kansas Corporation Commission, helped make Kansas the only State where private power companies at will can take customers from rural electrical systems. It is charged that while a member of the commission he also helped make it possible for private power to offer cooperatives cheap wholesale rates with assurance that the commission would reject them. The result is that private power has a stranglehold on rural electric development and is able to maintain its high-rate structure.

The Budget Bureau has been hostile to TVA and many in this valley were shocked when the President or Sherman Adams chose the Deputy Director of that Bureau to have decisive power in leadership of the TVA.

There is yet time for this nomination to be withdrawn. In addition, it appears probable that the Senate will not begin its investigation of Mr. Jones' fitness until after a TVA financing bill has been passed.

In that event, the Senate might not act on the nomination at this session. The President would be able to give Mr. Jones a recess appointment, but he would have to be confirmed by the Senate early next year.

The protest by the Tennessee Public Power Association representing 6 million Americans is only one of the roadblocks being thrown up against confirmation of Mr. Jones. At this time it appears that he would be taking a chance of being out of a job if he accepted a recess appointment.

[From the St. Louis Post-Dispatch of July 26, 1957]

BLANKS IN THE JONES RECORD

The developing record of Arnold Jones leaves it still unclear whether he turned his position on the Kansas Corporation Commission to the profit of his auditing firm.

The exact dates of his partnership in the firm of Breisford, Gifford & Jones are unknown. The exact date or even the exact year when GOP leader Walter Fees transferred the account of his multi-million-dollar oil and gas business—regulated by the corporation commission—to the accounting firm, is unknown.

Records of payments to the accountants are also missing, and Mr. Fees explains that a fire in 1949 destroyed all his business records. Six oil and gas companies—also regulated by the corporation commission—are said by several persons to have retained the Jones accounting firm, but their names are not on the firm's microfilm records, according to W. F. Hardesty, a member of the firm.

It is not even known whether Mr. Jones took any profit out of the accounting firm while he was a corporation commissioner, or, if so, how much, though Mr. Hardesty says he assumes Mr. Jones took 10 percent of the profits as he himself did.

Further light might be thrown on these and other pertinent matters by fine-toothcomb examination of the corporation commission's records and the accounting firm's microfilms.

Enough has become known to warrant and even demand the more detailed examination which the Senate confirmation hearings can provide through subpenaing of records and questioning of witnesses. Though Kansas law does not forbid conflicts of interest between public service and private profit, the law of the United States makes it a criminal offense, and it is to the service of the United States Government as a director of the Tennessee Valley Authority that Mr. Jones has been nominated by President Eisenhower.

If Mr. Jones sees nothing wrong in conflicts of interest, if he is potentially an Adolphe H. Wenzell or another of the steady stream of officeholders before him who have vexed the Eisenhower administration by confusing their public and private responsibilities, now is the best time to find out about it.

[From the St. Louis Post-Dispatch of July 23, 1957]

ARNOLD JONES' RECORD

As Arnold Jones' record begins emerging from national obscurity, the early doubts that were felt about his nomination to the TVA directorate are becoming more than justified. On the heels of the rejection of Mr. Jones by the Tennessee Valley Public Power Association comes the disclosure of his hostility to the Rural Electrification Administration in Kansas.

As a member of the Kansas Corporation Commission—the equivalent of the utilities commission in most States—Mr. Jones was a party to a program of gradually starving out the REA co-ops.

This program consisted of giving the six big Kansas power companies progressively more and more of the cream of the market, and restricting the REA co-ops more and more to the skim milk.

Since REA came into existence in the first place to supply a market for electricity which most privately owned power companies scorned as too poor to notice, this was a particularly lethal approach. It was gone about from two directions: First, the co-ops' territories were pinched in geographically. Second, the co-ops were forbidden to serve the profitable industrial and commercial market, including the rich oilfields. Both these ideas for persecuting rural co-ops were peculiar to Kansas.

The attrition of the co-ops' lifeblood was started in the pre-Jones era on the corporation commission and has continued after it, but Mr. Jones is credited with carrying it forward. The process has gone so far that co-ops must either destroy the starvation policy or be destroyed by it, according to their statewide association, Kansas Electric Cooperatives.

In the light of all this: Does President Eisenhower will regard Arnold Jones as "the most capable disinterested man that I could find"?

[From the St. Louis Post-Dispatch of July 22, 1957]

PLAIN TALK TO THE PRESIDENT

The kind of voice President Eisenhower has often said he wants to hear has spoken to him from the Tennessee Valley.

It is the voice of people making decisions about their future in their own local communities and taking the initiative to bring that future about.

Some of the electric systems in the Tennessee Valley belong to municipalities. Some of them belong to cooperatives owned by farmers and other non-profit-making groups of citizens. All distribute TVA electricity.

The municipal systems came about because the people in their own local communities decided to own their own systems and issue the bonds to finance them. They made these decisions in free and democratic elections.

The co-op systems came about because these other American citizens made the same decision and borrowed the money to carry it out.

Now these municipal and co-op systems serve some 6 million customers. They are banded together in the Tennessee Valley Public Power Association. And the association, speaking with the voice of local decision and local self-help, tells President Eisenhower it does not like his choice of Arnold R. Jones for the second vacancy on the TVA Board.

The association points out that it is in partnership with TVA and that its member systems have half a billion dollars invested in it.

It does not, therefore, want to see anything go wrong with its source of supply. And it is concerned lest Mr. Jones might be something wrong.

It feels that a TVA Board member should be better qualified; that the people should know more about him. Moreover, Mr. Jones "knows little or nothing about the TVA itself." The Valley association is fearful Mr. Jones may be hostile to TVA, since he is Deputy Director of the hostile Budget Bureau and is the handpicked choice of Presidential Assistant Adams, No. 1 foe of public power.

The President must know how important it will be to his new TVA Director to have the confidence and support of the people he must work among. And, as we said before, he has spoken repeatedly and with evident feeling of his deference to "the people, locally," making their own decisions in their own communities.

His handling of the Jones appointment will show how these principles are put into practice.

[From the Nashville Tennessean of August 11, 1957]

VISITOR'S CORNER—IT ONLY TAKES TWO FOR A TVA WRECKING CREW—COLORADO NEWSPAPER URGES SENATE TO PROBE QUESTIONABLE BACKGROUND OF ARNOLD JONES

(Many newspapers have taken an editorial second look at the noncontroversial Mr. Arnold Jones, appointed to serve on the TVA Board, since this newspaper published a series of articles on his background. The following is from the editorial page of the Denver Post. Excerpts of other editorials will follow in this space tomorrow.)

According to the act creating the Tennessee Valley Authority, the three members of the Board of Directors of TVA shall be persons who profess a belief in the feasibility and wisdom of this act.

In 1954 when President Eisenhower named Gen. Herbert D. Vogel to be Chairman of the TVA Board there was considerable question as to whether he could truthfully profess a belief in the wisdom of the TVA Act. Subsequently, when General Vogel supported the notorious Dixon-Yates scheme to turn over to private companies part of the electric power market which TVA had built up, it began to appear the general's profession of belief must have been made with tongue in cheek.

Belief in the wisdom of TVA is now becoming an important issue again in connection with President Eisenhower's nomination of Arnold Jones, Deputy Director of the United States Bureau of the Budget, to succeed Dr. Harry A. Curtis as a member of the TVA Board.

Jones was a rather obscure figure in Washington when he was nominated. The President called him the most capable and disinterested man I could find for the job. Why disinterested should be considered an important qualification the President did not say.

If Jones was noncontroversial before his nomination, he is rapidly becoming highly controversial now that some of the friends of TVA have had time to check into his record.

TVA's rehabilitation of the Tennessee Valley in parts of six States has been so successful that TVA now needs more power to serve the farms, industries, and cities it has helped develop.

TVA is asking Congress for authority to issue $750 million worth of revenue bonds to finance a healthy power expansion. These bonds would not cost taxpayers a cent.

Jones, it develops, has written a letter to the Senate Public Works Committee proposing that TVA should be limited to issue $200 million worth of bonds and that other restrictions be added which might force TVA to increase its power rates or circumscribe its power operations.

The private power industry for years has been waging a bitter—and often untruthful—campaign against TVA, aimed principally at increasing its rates and limiting its service. It looks very much as though Jones had lined up on the side of the foes of TVA before he was picked to serve on the TVA Board.

The Nashville Tennessean, a strong supporter of TVA, has been doing some checking on Jones' record back in his home State of Kansas. It claims to have discovered that when Jones was a member of the Kansas Corporation Commission he pursued policies which favored private electric companies to the detriment of rural electric associations.

The Tennessean charges that Jones, instead of being capable, was such a petty tyrant of redtape at Kansas State College, when he was a dean there, that he was quietly demoted. It also claims that while Jones was on the corporation commission an auditing firm with which he was connected had as its clients several firms which were under regulation by the commission, thereby creating a questionable conflict of interest as far as Jones was concerned.

These are matters which the Senate should investigate thoroughly before any action is taken on Jones' nomination to the TVA Board. The vast TVA program to control floods, provide navigation, improve agriculture, and sponsor new industries was set up by act of Congress. It should not be crippled or liquidated except by act of Congress.

TVA's Board of Directors now has a Chairman whose devotion to the purposes of TVA is suspect. If he should be joined on the Board by another member who harbors hostility to TVA, the two of them would comprise a majority which could wreck an important experiment in basinwide development beyond the ability of Congress to repair.

Changing Nature of American Agriculture

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, August 20, 1957

Mr. JOHNSON of Texas. Mr. President, those of us who come from agricultural States are well aware that farmers and ranchers are not getting their share of the national income.

This fact was pointed out recently by Dr. Tyrus R. Timm, head of the department of agricultural economics and sociology of Texas A. and M. College. Dr. Timm's address on the Changing Nature of American Agriculture was reported fully by the Texas Ranchman, an outstanding livestock business weekly published at Strawn, Tex.

I ask unanimous consent that the Texas Ranchman's report be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. TIMM OUTLINES CHANGING NATURE OF UNITED STATES AGRICULTURE

COLLEGE STATION, TEX.—Agriculture isn't sharing in the Nation's current record prosperity, Dr. Tyrus R. Timm, head of the department of agricultural economics and sociology, Texas A. and M. College, declared during a brief address delivered here Saturday night.

And, peering into the future, the A. and M. agricultural economist didn't paint a particularly rosy industry picture for the years to come—but neither was he pessimistic. Work, deliberation, and understanding will be required to meet and solve the challenges of tomorrow, he said.

Dr. Timm spoke on "The Changing Nature of American Agriculture" following an informal dinner in the memorial student center on the A. and M. campus which concluded the first annual college-sponsored conference for livestock auction operators of Texas.

The economist told his audience that while the national income has increased 25 percent, the income of farmers and ranchers has decreased about that same proportion.

However, he did inject this heartening note:

Prospects for Texas' agricultural and livestock industries have been greatly improved as a result of abundant rains which have broken a long 7-year drought.

Current plentiful supplies of feed, he said, are now a favorable factor.

Also, present reduced numbers of beef cattle—which could continue through a possible cycle of 7 to 8 years—may assure generally favorable market prices for producers.

Dr. Timm said that expenditures for food now take around 25 percent of the consumer's dollar. But, he emphasized, only about 5 cents or less goes to the basic producers of the Nation's meat and food products.

Processing, packing, transportation, merchandising, and ever-increasing new techniques and services and their added costs are constantly widening the gap between the basic price paid the grower and the eventual inflated retail price paid by the food-consuming public at markets and food stores.

The A. and M. economist also pointed out that price produces little change in production and consumption. For instance, he explained a 5-percent reduction in price usually results in only a 1-percent gain in consumption.

Dr. Timm foresees no radical deviation from the present trend in the years ahead and reminded his audience "that Government has now been participating in agriculture for about 30 years."

"Nothing," he quipped, "is more permanent than a temporary Government agency for agriculture."

The future? "We're going to continue to have Government programs," he predicted, "and to have them regardless of the party in power, Republican or Democrat, because economic and financial conditions, not party, are the basic factors.

"Government will play an important, significant, and major role in agriculture's future," he said. "The extent and the eventual benefit and progress derived as a result of Government in agriculture will be determined through sifting the good from the bad, and will take time.

"Government's future role in agriculture, however," Dr. Timm asserted, "probably will be more evolutionary than revolutionary in nature."

Other important remarks in Dr. Timm's address pertained to the Nation's farm population and "its changing nature."

He notes the ever-increasing number of "part-time" farmers and ranchers. This new trend, he explained, is the result of agriculture's economic problems.

Although farm population has generally been reported on the wane in many States, Dr. Timm revealed there are more farmers and ranchers in Texas, year by year. The increase in numbers of these agriculturists, however, appears insignificant in relation to the vast increase of the general population of the Lone Star State.

This year, he said, there are 15,000 more farmers and ranchers in Texas, and there were about the same number of new farm and ranch operators in 1956 compared to the year previous.

Illustrating how statistics can sometimes be misleading, the A. and M. economist pointed out that despite the fact that only about 7 percent of the Nation's population is directly engaged in the basic production of agricultural products and livestock, 25 to 40 percent of all business today is directly related to agriculture.

And increased use of agricultural products in the industrial field and expansion of overseas markets, he declared, are developments which should brighten the future economic picture for American agriculture.

"There'll be more part-time farmers and ranchers in the years ahead," he told the livestock auction men. "In fact, in the future the livestock auctions of Texas may be doing more business with part-time producers than with full-time farmers and ranchmen."

Dr. Timm complimented the Texas operators for their interest and participation in the special conference and urged them to work for "better livestock auctions, more efficient livestock auctions, for the betterment of the country and to aid in building confidence in the future."

FBI Files

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. COTTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "FBI Files," from the August 17 issue of the Concord Daily Monitor, one of New Hampshire's leading newspapers. I am in complete accord with the writer of this editorial as to the imperative need for immediate congressional action to define and clarify the ruling of the Supreme Court in the Jencks case. A bill to accomplish this purpose is now on the Senate Calendar. I urge that it be scheduled for consideration without further delay.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Concord (N. H.) Daily Monitor of August 17, 1957]

FBI FILES

The bill to protect FBI files from court exposure has become emergency legislation. The fact is brought to public attention by the arrest of Rudolf Ivanovich Abel, master spy and colonel in the Soviet intelligence.

Thanks to the Supreme Court decision in the Jencks case, the FBI now faces a choice of possibly dropping prosecution of Abel or having its own intelligence secrets bared in the courtroom at the insistence of Abel's lawyers.

It is conceivable that any information made public about the FBI's methods of counterespionage might be more useful to the Russians and their international conspiracy than that which Abel managed to gather through his own efforts and transmit to Moscow inside hollowed pencils.

This dilemma puts the issue squarely before Congress. It has the power to change those statutes which the Supreme Court interpreted to give defendants' lawyers access to FBI files whenever information of any kind from those files was used in prosecuting Communists or others.

A bill to amend the law so as to protect the security of the FBI files is before Congress. Already a number of Federal prosecutions have been dropped rather than reveal FBI information. Others have been dismissed by courts when FBI records have been withheld. One FBI agent is under a $1,000 contempt of court fine for refusal to yield such records.

Up to now most of the cases in which prosecution has been dropped rather than reveal FBI files have not involved espionage. The Abel case, however, involves national security and puts the whole issue squarely before Congress and the public. If the FBI can be compelled to reveal to Soviet agents and their lawyers names of counterspies and the details of their methods the Kremlin will have gained through our courts vital secrets it could not have hoped to obtain through its spy network.

The FBI bill is on Eisenhower's program. Leaders concede that Congress favors passage. While there may be no opposition, the fact will matter little unless the measure is speeded to the House and Senate floors and voted upon before Congress adjourns.

Houston Regains Second Place in Nation's Ports

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. YARBOROUGH. Mr. President, the port of Houston, one of the young seaports of the Nation, has climbed back into second place among the ports in the total tonnage handled.

This is indeed a remarkable achievement. The port of Houston is only a few years old. In the development and promotion of this port, Houston has had to compete with other fine ports of the Nation, some of which have been in operation for centuries.

The port of Houston's recapture of the second ranking spot in the Nation is a great tribute to civic leaders of Houston. Howard Tellepsen, the head of the port commission, and all the other civic-minded businessmen on the Houston Port Commission are to be commended for this achievement.

The Houston Post, one of the great newspapers of the South, hails the port of Houston's feat in an editorial.

Mr. President, I ask unanimous consent to have this Houston Post editorial of August 16, printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PORT OF HOUSTON REGAINS TOP PLACE ON GULF—SECOND IN THE NATION

Maybe it was a blessing in disguise that the port of New Orleans topped Houston in 1955, in tonnage handled. Houston's port people have been working strenuously to regain our lost position, but were unable to learn from New Orleans what the Crescent City's 1956 port tonnage totaled. Figures released Wednesday by Army engineers showed clearly that Houston was ahead of all other gulf ports, with 52,293,262 tons moving to, from, or through the ship channel. That puts the port of Houston back again in second place nationally, unless you lump the tonnage of the half dozen or more ports in the 3-State area on the Delaware River with that of Philadelphia into 1 total. Philadelphia itself is behind Houston.

It is really remarkable, when you stop to think about it, that a comparatively new port on a bayou that ends in Houston should outstrip the 200-year-old State-subsidized port near the mouth of the mighty Mississippi. Of course, petroleum accounts for much of Houston's tonnage. However, while Louisiana has only 2 other minor ports, Houston shares the maritime commerce of this section with nearly a dozen Texas ports, 3 of which have a larger combined tonnage than Houston's.

In the race for continued port leadership, Houston has the advantage of a faster population growth and industrial growth, in the city, the State, and the inland trade territory. But those New Orleans boosters are on their toes. They have been intensively wooing the Latin American trade, as well as the shipping of the United States hinterland. New Orleans has the advantage of being better known as a port in the southern parts of the hemisphere, the greatest potential source of shipping yet to be developed. New Orleans is aggressively pressing its advantage there.

Houston will have to get its share of that business to keep ahead. It is essential to the future of our port. The port of Houston is not State-supported, as is that of New Orleans. It must look to the city and county, and to its own revenues, for physical development. It needs the moral backing of the business interests and the citizens generally of the community. We need to be port-conscious, enthusiastic boosters—like the New Orleaneans—for our own economic good.

The Houston Port Commission and all the portworkers are to be congratulated on the 1956 tonnage record.

Sensing the News

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. Thurman Sensing in Sensing the News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENSING THE NEWS

(By Thurman Sensing, executive vice president, Southern States Industrial Council)

The coming of the Pilgrims to the New England coast in 1620 forms a glamorous chapter in American history. Now, 337 years later, we have been hearing and reading much about a rather thrilling and adventuresome duplication of the trip in a replica of the original *Mayflower* in which the first trip was made. It would therefore seem to be an appropriate time to review a little known fact about the system of government or control the people on the original *Mayflower* set up for themselves.

The fact that is generally ignored, overlooked and unknown about this landing at Massachusetts Bay 337 years ago is that it marked the first Communist settlement in America. The main lesson about this settlement that is generally ignored, overlooked and unknown is that this experiment in communism failed within 3 years' time, and—for their very survival—the Pilgrims had to turn to what we know as the free enterprise system.

Through the years, it would have been—and it still would be—a valuable lesson to the pupils in the classrooms studying American history if this lesson in the failure of communism—some people call it socialism; there is no real difference—were emphasized.

Before landing, the Pilgrims entered into what is known as the Mayflower compact. Under this compact, Plymouth was set up as a share-the-wealth community. Nobody owned anything. Whatever was produced belonged to the community as a whole. They called this system "the comone course and

condition." They lived under this system from the desperate, disease-ridden first winter of 1620–21 until the hungry spring of 1623. Then they changed to private enterprise. Why?

We find the answer in a book written by William Bradford, one of the leading original Pilgrims and second Governor of Plymouth Colony, entitled "Of Plimoth Plantation." This book had an interesting history itself. It was written by Bradford in 1647, was available to historians until 1767, and then it completely disappeared from this country for almost a hundred years. It was finally located in the library of the bishop of London in 1855. After long negotiations and finally upon formal request from "The President and Citizens of the United States," Queen Victoria had it sent back and it now reposes in the Statehouse at Boston, Mass. Printed copies are available in most major libraries.

The Pilgrims weren't long under this "comone course and condition," writes Bradford, until it "was found to breed much confusion & discontent, & ritard imployment that would have been to their benefite and comforte. For the young men that were most able and fitte for labor and service did repine that they should spend their time & strength to worke for other mens wives and children, without any recompense. The strong * * * had no more in devission of victails & cloaths then he that was weake. * * *

"Upon the poynte all being to have alike, and all to doe alike, they thought themselves in the like condition, and one as good as another. And so, if it did not cut off those relations that God hath set amongst men, yet it did at least much diminish and take of the mutuall respects that should be preserved amongst them."

Instead of a Thanksgiving feast in the fall of 1622, there was literal starvation and hopelessly low morale. "So they begane to thinke how they might raise as much corne as they could * * * that they might not still thus languish in misere. At last, after much debate of things, the governor" (Bradford himself) "gave way that they should set corne every man for his own perticuler. * * * And so assigned to every family a parcell of land. * * * This had very good success for it made all hands very industrious, so as much more corne was planted then other waise would have bene."

The Pilgrims offered thanks for deliverance from communism with a great Thanksgiving feast in the fall of 1623.

Then Bradford philosophizes somewhat: "The experience that was had in this comone course and condition, tried sundrie years, and that amongst Godly and sober men, may well evince the Vanitie of that conceite of Platos and other ancients, applauded by some of later times;—that the taking away of propertie, and bringing in communitie into a comone wealth would make them happy and flourishing; as if they were wiser than God!"

This is the story about the Pilgrims that should be taught in our schools—because "that conceite of Platos and other ancients" is still "applauded by some of later times." Men still have the idea "that the taking away of propertie, and bringing in communitie into a comone wealth would make them happy and flourishing." Socialism and communism were tried many times before Plymouth Colony; they have been tried many times since. "As if they were wiser than God!" They have always failed.

Why doesn't mankind learn the lesson? Is it because the lesson is left out of, or unemphasized in, our history books?

The Battle of Cowpens

EXTENSION OF REMARKS
OF

HON. ROBERT T. ASHMORE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. ASHMORE. Mr. Speaker, I commend to the attention of our colleagues the following article containing facts on the Battle of Cowpens:

FACTS ON THE BATTLE OF COWPENS

The Battle of Cowpens took place on January 17, 1781, between American and British forces. Lieutenant Colonel Tarleton commanded the British forces of approximately 1,150 officers and men, and Gen. Daniel Morgan of Virginia, commanded the American forces of approximately 850 officers and men.

Soldiers from the following States participated in the battle: Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia. The Americans had 12 killed and 60 wounded in battle; the British had 110 killed and 200 wounded with 531 prisoners taken, making a grand total of 841.

The name, Cowpens, S. C., originated in 1730. Sir Alexander Cumming made a treaty with Cherokee Indians and when the white men settled in this natural paradise, they were called cow drivers or cowpens men, and in 1780 a man by the name of Sanders lived at the battle site. He had plenty of grass for his cattle and many pens, hence the name Cowpens.

OFFICERS AND MEN THAT PARTICIPATED

Col. John Thomas, Jr., Spartanburg County (commanded the Spartan regiment).

Col. Thomas Brandon, Union County (commanded South Carolina men).

Col. Andrew Pickens, Pickens County (Major McArthur surrendered his sword to Colonel Pickens in person).

Colonel Glenn, Newberry County.

Colonel Hayes (commanded South Carolina men).

Lt. Col. John E. Howard, Baltimore, Md. (seven officers surrendered their swords to Howard).

Lt. Col. William Washington, Charleston County. Colonel Washington and Colonel Tarleton had a personal encounter as Tarleton's aide was about to strike him his bugler boy wounded him with a pistol and Washington wounded Tarleton in the hand.

Lt. Col. William Farr, Union County.

Lt. Col. Benjamin Roebuck, Spartanburg, County.

Major Cunningham, Georgia.

Major McDowell, North Carolina.

Major McCall, South Carolina.

Major Triplett, Virginia.

Maj. James Jackson, Georgia.

Maj. Joseph McJunkin, Union.

Maj. Thomas Young, Union County (wounded in action).

Maj. Samuel Hammond, Edgefield County.

Maj. Benjamin Jolley, Union County.

Captain Beatie, Virginia; Captain Buchanan, Virginia; Captain Tate, Virginia; Capt. James Caldwell, Newberry County (all wounded in action).

Lt. Joseph Hughes, Union County.

Dr. Francis Whelchel, of Union County cared for the wounded.

Sergeant Major Perry; Pvt. John Whelchel, Union County, wounded in action. After the war it was "Dr." John Whelchel.

John Savage, Union County, fired first shot.

William Sharp, Union County, listed as hero.

Pvt. Golden Tinsley, Newberry.

William Giles, Union, listed as hero.

Samuel Hodge, Union County.

William Caldwell, Newberry.

Samuel Clowney, Union County.

Adam Skain, Union County.

Peter Skain, Union County.

John Skain, Union County (killed in action, buried on battle site).

Deshazer and McJilton, Virginia.

OTHERS BELIEVED TO HAVE TAKEN PART IN BATTLE

Col. James Steen, South Carolina.

Maj. Henry White, Georgia.

Lieutenant Patterson, South Carolina.

James Park, South Carolina.

George Walton, Georgia.

Christopher Brandon, Union.

Samuel Smith, Union.

Francis Whelchel, Jr., Union.

William Whelchel, Union.

Davis Whelchel, Union.

Unfairness of Federal Freight Levy

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 20, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a cogent editorial entitled "Unjust Freight Tax," from the Oregonian, of Portland, Oreg., of August 14, 1957.

This editorial supports in principle an advocacy voiced by me in the August 1957 issue of the Railway Progress magazine, under the title of "The Tax That Chokes the West," when I wrote an article describing how the 3 percent Federal freight tax acts unfairly and discriminatorily to deny full opportunity to western industry and agriculture.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNJUST FREIGHT TAX

How Uncle Sam helps drive the West out of the national market through a 3 percent Federal freight tax is shown by Oregon's Senator RICHARD L. NEUBERGER in the current Railway Progress magazine.

Oregon canners, he points out, pay almost four times as much in transportation excise taxes as do midwestern shippers on a carload of canned goods to the Pittsburgh area. The tax on Oregon grain is more than 3½ times that on grain from the central States and on livestock nearly 4 times. The Oregon lumberman is taxed 40 percent more than the Georgia lumber shipper.

The Senator might have added that every time freight rates are raised, as they were a week ago for the second time since last December, the Federal penalty for living in the West increase proportionally.

Federal transportation taxes should be repealed outright, as Senator NEUBERGER has urged in the Senate. Shipping cannot, by any stretch of the imagination, be termed a luxury. Neither can traveling, which is taxed 10 percent.

Eggs and Commonsense

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD at this point an editorial from the Everett Daily Herald, an outstanding daily newspaper published in my hometown of Everett, Wash.

There has been considerable discussion in the pages of the RECORD lately, some of it bordering on the hysterical, on the necessity for the Government to rush out and enter the poultry market. Eggs are going through one of their periods of lowered price. Having talked with poultrymen in my congressional district I know that most of them believe they are better off taking care of their own business and would like the Government to stay out and not interfere with their operations with subsidies, production controls and the various other programs that have been applied to other farm products.

This editoral points up the solid constructive steps being undertaken by the Government and poultry groups to guard against the flash expansion that occurred in some other farm areas under the subsidy plan where today we are still paying for marginal lands under absentee ownership and wasteful cultivation.

I believe the Everett Daily Herald has delineated an important point concerning our poultry industry, and I believe my colleagues will find it of interest.

Text of the editorial is as follows:

PRUDENT GRANTING OF CREDIT WILL HELP STATE POULTRYMEN

The Tacoma News-Tribune has called attention to action by the poultrymen in our midst that it believes will prove a constructive step by easing expansion in an industry that it is asserted, should not be expanded. The Tacoma paper puts it this way:

"The men already fighting to keep their heads above water knew it was no service to induce more competitors to jump into the struggle at this time. So they laid their facts before the Department of Agriculture, which has now announced an agreement that should be of considerable assistance to the poultry industry in the end.

"The Farmers Home Administration, the Farm Credit Administration, the American Feed Manufacturers Association, and the American Bankers Association, have agreed to put the brakes on easy credit. Credit will, by no means, be cut off, but it will be advanced prudently to discourage demoralising over-expansion."

The poultrymen have faced the situation where the price of eggs and dressed chickens is barely above the cost of production. Again they have tried to solve an economic problem without resorting to Government price supports or other artificial devices. They have attempted to solve over-production. They believe they are on the right track.

Any industry which endeavors to solve its own problems in this manner, deserves commendation. As pointed out, the poultrymen could have stormed Congress to give them a ceiling on eggs and chickens. But this would only have created large backlogs of Government-owned stocks of both. Their action could result in a saving to the taxpayers and a result beneficial to themselves, to the State, and to the Nation. And it will discourage those who enter into a venture merely to try their luck—lacking funds and, so often, the know-how that is the foundation of success.

Minority Views of Mr. Holifield and Mr. Porter on the Amended Bill, S. 1411

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. HOLIFIELD. Mr. Speaker, the Post Office and Civil Service Committee of the House has reported out an amended form of S. 1411.

At the present time it is impossible to predict whether the bill will be considered in this session. But in the event that it is scheduled for consideration, I fear the opportunity to debate the bill will be limited.

I, therefore, under unanimous consent heretofore granted, will have printed the minority report for the benefit of advance information to the Members. The brief report is appended hereto.

MINORITY VIEWS ON S. 1411

INTRODUCTION

The Supreme Court in *Cole* v. *Young* (76 S. Ct. 861 (1956)) declared that the intent of Congress in passing Public Law 733 (64 Stat. 476), was to define national security, to emoprehend only those activities of the Government that are directly concerned with the protection of the Nation from internal subversion or foreign aggression, and not those which contribute to the strength of the Nation only through the impact on general welfare.

Accordingly, the Court held that President Eisenhower acted without statutory authority when he issued his Executive Order No. 10450 imposing the standard that a Federal employee's employment must be clearly consistent with the interest of national security to Federal employees occupying positions not affecting national security.

The committee's amendment to S. 1411 is designed to overrule the Cole case by defining national security to mean that all Government activities involve the national safety and security, including the protection of the United States from internal subversion or foreign aggression.

COMMITTEE REVISION OF SENATE BILL

As S. 1411 passed the Senate and came to the committee it was a noncontroversial measure to clarify suspension provisions in existing law. The majority in our committee has added to this simple proposal a highly controversial basic change in the substance of our laws governing personnel security. We suggest that S. 1411 should be shorn of these new and unrelated provisions; otherwise the Senate will reject the rewritten bill on which no hearings have been held in the Senate, and the salutary Senate bill will be lost.

Despite the clear implications in the arguments of those who would have the House adopt S. 1411 as reported by our committee, the present state of the law does not require the Government to retain in its employment or to hire disloyal persons. On the contrary, the Government not only has the authority to bar Communists and those who would overthrow our Government from its rolls, but is under the positive duty to do so. The Hatch Act of 1939 and the Internal Security Act of 1950 are a positive bar to the employment of such persons.

The provisions the committee has added to this bill are an attempt to legislate a national security interest into every Government position. This is an attempt to create a security interest where none exists. This is an attempt to reverse the Supreme Court without rhyme or reason; it is spite legislation.

The proposal was first presented to the committee as section 3 of Mr. WALTER'S bill, H. R. 981, and would have extended the Federal personnel security program to all positions affecting the national welfare as well as the national safety. The bill as reported drops the national welfare criterion. Which employees are meant to be included by the phrase national safety? Which employees are meant to be excluded by deletion of the phrase national welfare? How many years of senseless litigation will be required to answer these questions?

The proponents of S. 1411 suggest that all Government employees should be put back under the often-criticized, loose-security program, which fathered the disgraceful numbers game of a few years ago. Many sincere advocates of a strong security system have vigorously criticized the application of the security program to all positions in Government as the weakest link in our national security. In its monumental study, the Federal loyalty-security program, the association of the bar of the city of New York had this to say:

"In evaluating the personnel security system the committee has been guided by the need to protect national security and at the same time to adhere to the American tradition of individual liberty. Other security measures must also be taken into account, such as existing statutes which bar Communists from all Government positions. With these considerations in mind the committee has found weaknesses in four aspects of the program:

"1. There is a lack of coordination and supervision of the various personnel security programs.

"2. The scope of the personnel security programs is too broad in that positions are covered which have no substantial relationship to national security.

"3. The standards and criteria do not sufficiently recognize the variety of elements to be considered, including the positive contribution which an employee may make to national security, and they do not readily permit a commonsense judgment on the whole record.

"4. The security procedures fail in various ways to protect as they could the interests of the Government and of employees."

PROPOSAL WILL NOT AID NATIONAL SECURITY

As a result of the Supreme Court decision in the Cole case, the Federal personnel security program has been limited to security-sensitive positions. In this limited area improvements can be worked out to provide security for the Government and fair procedure for the Government employee. Improvement of the existing program rather than its extension should be of first concern to the Congress. To reextend the present inadequate and unfair program will make improvement all the more difficult.

The bill, far from strengthening our national security, will actually weaken it. If the intelligence agencies of our Government concentrate on sensitive positions, they can do their job well; if they have to investigate millions of persons in nonsecurity positions, they can only do their job superficially. As has been well said, "If we watch our toothbrushes and diamond rings with equal care, we will lose less toothbrushes but far more diamond rings."

In the summer of 1956 our committee and the Congress were told by the proponents of the pending measure that immediate legislation to overcome the Supreme Court's decision in *Cole* v. *Young* was essential if the Government were to protect itself from disloyal persons. The Congress in its wisdom did not succumb to these urgent appeals, and there has been no evidence presented that as a result of *Cole* v. *Young* one disloyal person has been kept on the Federal payroll. Here again, in the closing days of a session of Congress, we are urged that immediate action is necessary to protect the integrity of the Government. Such hasty action is no more necessary now than it was last summer.

NO CASE HAS BEEN MADE FOR S. 1411

No one has made a case for the reextension of the security program to all Federal jobs. In testimony before our committee the only witnesses who supported the pending legislation were a few members of the Wright Commission on Government Security. The Chairman of the Civil Service Commission was called, and stated that the Civil Service Commission has not taken a position on the pending legislation. Eight representatives of Government employees' unions, including a representative of the parent labor body, the AFL–CIO, appeared, and all eight of them opposed enactment of the pending legislation. These sincere and conscientious officials are concerned with the Nation's security. They know that Communist imperialism is a real threat to freedom. They have fought the Communists in the trade-union movement and know the tactics the Communists employ. And they urged the committee and the Congress not to weaken our security and undermine our civil service by adopting this proposal to extend the security program to non-security-sensitive Federal jobs.

We reject, categorically, the assertion made in the hearings by the principal proponent of the pending bill when he appeared as a witness, that "Now, this," [the decision in *Cole* v. *Young*] "of course, adds an additional burden and excepts from the operation of the law disloyal people unless they are in a sensitive position." We also reject the contention of this same witness that a janitor, who has access to the confidential files of the head of an agency or the stenographer that takes the notes of conferences involving national security have been excluded from the Federal personnel-security program by the decision in *Cole* v. *Young*. The decision does no more than prevent the Government from treating nonsensitive jobs as though they were security positions; any positions reasonably classified as sensitive positions, including this janitor and this stenographer, are within the security program under the Cole case.

We note that there has been no urgent appeal for the pending legislation from the administration. On the contrary, following the Supreme Court decision in *Cole* v. *Young*, Assistant Attorney General George C. Doub told the Criminal Law Section of the American Bar Association last August, in Dallas, that the administration was preparing a new Executive order limiting the Federal employee security program to sensitive positions.

THIS IS NOT STOPGAP LEGISLATION

The proponents of this bill demand its enactment as stopgap legislation. But it stops nothing, and fills no gaps. The Code decision is almost 15 months old; there has been no showing of any harmful effects to our national security during this 15-month period that should now be stopped. There is no gap in our national security to be filled; the bill provides for security screening in a nonsecurity area where it is unnecessary and unwarranted.

We urge that the pending proposal be rejected and that the committee face up to the task of making a thorough study of how the present restricted program can be improved. In the meantime, we suggest that there is no need for alarm for the Nation's security. As the Association of the Bar of the City of New York stated in the report referred to above:

"Restriction of the personnel security program would leave unaffected the laws which bar all Federal employment to Communists or persons who belong to an organization which advocates the overthrow of our constitutional Government by unlawful means. The Internal Security Act of 1950 bars from all Federal employment any present member of a Communist-action, Communist-front, or Communist-infiltrated organization. Members of Communist-action organizations are forbidden employment in any defense facility. The general suitability requirements of the Civil Service Commission would also continue to apply to the classified service in Federal employment."

CONCLUSION

The bill establishes each of the 65 agency heads as a court with power to fire and, be there no mistake, to brand permanently in the eyes of his community—any employee on unspecified and unproven charges of disloyalty. The appeal to the Civil Service Commission would be of small value because the records submitted would be prepared solely by the agency head who is both accuser and judge in the first instance.

Any agency head who wished to restaff his organization could unrestrainedly dismiss any and all his subordinates. While we do not expect such extreme action by an agency head, it is possible and we fear the granting of such power to any man.

The cost to the Government of extending FBI loyalty clearance to all of its employees regardless of job classification could be required by agency heads in the discharge of their new responsibility. If this occurs the cost could well run into millions as well as requiring FBI personnel to be assigned to routine and relatively unimportant new and extended responsibilities. Each FBI loyalty investigation costs on an average of over $500 each.

The undersigned yield to no one in their desire to protect the national safety and security. The closing days of the session of Congress do not permit adequate hearings and calm consideration of this most important problem. The Congress might be well advised to study carefully the report of President Eisenhower's Wright Commission, whose recommendations are being passed over without due evaluation by those who support this stopgap bill.

CHET HOLIFIELD.
CHARLES O. PORTER.

Education Funds From Ty Cobb

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a story from the Memphis Press Scimitar of July 30 reporting that Ty Cobb, one of our greatest baseball players, has given a million dollars for the education of needy youths in Georgia. This is a fine Christian gesture and Mr. Cobb is to be commended for a deed which will have far reaching results.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATION FUND FROM TY COBB—BASEBALL GREAT TO AID NEEDY YOUTHS

NEW YORK.—Ty Cobb, 71, one of baseball's alltime greats, has given more than $1 million in cash and securities to a foundation for the education of needy youth in his native State of Georgia, it was reported today.

The New York World-Telegram and Sun, a Scripps-Howard newspaper, quoted Cobb as saying the report was true but he didn't want it to get around.

"I'm giving away an extensive part of my wealth," the newspaper quoted Cobb. "I'm a believer in the Christian spirit and faith. When we die, we are all leveled off, no matter how many millions of dollars we've got."

"I've portioned out money to take care of the immediate family—my former wife and three older children. And I'll keep some to take care of Ty Cobb until he passes on. Just enough for that."

Cobb was making about $50,000 a year when he retired in 1928 and had many canny investments in Wall Street. He told the World-Telegram and Sun that he had made a killing over the years but always had in mind "getting money so I could help somebody else in later life."

Financial Crisis in France

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. BYRD. Mr. President, Reuters News Service brings us from Paris a remarkable story of how French officials are tackling their financial crisis. A virile call for austerity is made both by Felix Gaillard, Finance Minister, and the new Premier, M. Maurice Bourges-Maunoury—one by which the nation may pull itself up by its bootstraps. So unusual are the suggested actions, that I ask unanimous consent that the story be published as an historical document in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARIS, August 8.— Felix Gaillard, France's dynamic young Finance Minister, called on the nation tonight to tighten its belt in order to export more.

He also warned in a radio and television speech against a wave of new wage demands and unjustified price rises which, he said, would spell failure for his austerity campaign, aimed at restoring France's financial health.

Commenting on his successful budget battle, the 37-year-old Gaillard said: "Everyone must get it thoroughly into his mind that unless he stints himself a little to export more, the whole national economy will be threatened with asphyxia and unemployment will loom over our industries.

"If we cannot fill our ships, we will empty our shops."

Gaillard said new measures now under study would show the Government's determination to fight price increases and defend the workers living standards.

"But if the workers, by wage claims—and I understand their impatience—and industrial and agricultural producers and shopkeepers, by unjustified price rises, put our efforts in question they will take the responsibility for failure. And our failure will be theirs, too."

In another development, Premier Maurice Bourges-Maunoury today appealed to exservicemen to give up their pensions voluntarily to help get the country out of its financial difficulties.

Taxes, Trujillo, Jr., and Training for Tyranny

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. PORTER. Mr. Speaker, Members particularly concerned with the prudent spending of the taxpayers' money in the interest of national defense may be interested in the following correspondence between myself and the Defense Department:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 25, 1957.

Hon. WILBER M. BRUCKER,
Secretary of the Army,
Washington, D. C.

DEAR MR. SECRETARY: An item appearing in a New Orleans newspaper on July 19, 1957, reports that Rafael L. Trujillo, Jr., the son of the Dominican dictator, left New Orleans on that day to attend the Army's Command and General Staff School at Fort Leavenworth, Kans.

I should like to know if this information is true, and if it is, the explanation for General Trujillo's admission there.

Furthermore, I should greatly appreciate having a list of those individuals from Cuba, Nicaragua, Venezuela, and the Dominican Republic who are in the same class with General Trujillo, and a list of such nationals who have been in previous classes within the last 5 years.

I must say that I find it hard to rationalize making this wonderful training available to men who will use it to oppress their own peoples and who will never be able to contribute anything substantial to American defense. Your comments on this aspect are invited.

Sincerely yours,
CHARLES O. PORTER,
Member of Congress.

DEPARTMENT OF THE ARMY,
OFFICE OF THE SECRETARY OF THE ARMY,
Washington, D. C., August 13, 1957.

Hon. CHARLES O. PORTER,
House of Representatives.

DEAR MR. PORTER: This letter is in further reply to your inquiry concerning the attendance of Gen. Rafael L. Trujillo, Jr., and other foreign nationals at the Command and General Staff College, Fort Leavenworth, Kans.

General Trujillo, who assumed the rank of colonel while at school, and Lt. Col. Fernando A. Sanchez, members of the armed forces, Dominican Republic, are students at the Command and General Staff College. Enrolled in the same class are two students from Venezuela, Lt. Col. Benjamin Maldonado and Maj. Carlos Oscar Mendez Cardenas. Cuba and Nicaragua do not have students enrolled in the present class.

Under the Mutual Security Act of 1954, as amended, the Dominican Republic is eligible to receive military assistance. The Dominican Republic requested and was allocated two spaces at the Command and General Staff College.

The following students from Cuba, Dominican Republic, Nicaragua, and Venezuela have attended the Command and General Staff College during the past 5 years:

Cuba: Maj. Benjamin Camino y Gomendia, 1955.

Dominican Republic: No students have attended prior to fiscal year 1958.

Nicaragua: No students have attended to date.

Venezuela: Lt. Col. Jose V. Zambrano, 1952; Lt. Comdr. Carlos Bacalao-Lora, 1952; Maj. Raul Antonio Groce-Roa, 1955; Maj. Lulio Salgado Ayala, 1955.

The Department of the Army provides training at United States Army service schools only to those countries which have been declared eligible for such training under Presidential directives, the Mutual Security Act of 1954 as amended, and Department of Defense policy directives.

Your interest in this matter is appreciated.

Sincerely,
J. E. BASTION, JR.,
Brigadier General, GS., Deputy Chief of Legislative Liaison.

Willow Run Airport Finally Achieving Due Recognition

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from Ann Arbor (Mich.) News of August 14, 1957:

FROM OUR POINT OF VIEW: WILLOW RUN AIRPORT FINALLY ACHIEVING DUE RECOGNITION

Things are looking up for the University's Willow Run Airport, only recently the target of attacks by Wayne County interests which sought to move the airlines to Wayne-Major.

The Civil Aeronautics Administration gave the biggest boost to the airport last week by increasing its Federal grant for improvements in 1957–58 from $45,000 to $188,000. Pleased university and airport officials ascribe the boosted allotment to the fact that the Michigan Department of Aeronautics has finally recognized Willow Run as a permanent installation.

Another new phase in airport operations is marked by appointment of an advisory committee to coordinate its public affairs. The university plans a 10th anniversary observance at Willow Run on September 10, at which time improvements to the terminal will be completed. The ceiling is being lowered by installation of a modern and attractive new dome, and new dining facilities and other passenger accommodations are planned. Airport parking facilities also are being changed.

Willow Run—always one of the safest major air terminals—is fast becoming one of the busiest with 11 passenger lines operating from there and more than 460 flights daily scheduled, in addition to nearly 100 military and civilian aircraft operations.

The airport is one of the biggest operations of any kind in Washtenaw County, with about 2,500 nonflying employees and an annual payroll of more than $10 million.

A visit to the observation deck of the terminal provides the greatest 10 cents worth of entertainment available to residents of Washtenaw and Wayne Counties. With takeoffs and landings of the big planes averaging one every 3 minutes, the spectacle is one not soon to be forgotten, and the color and excitement continues for 24 hours of the day. Night operations are particularly interesting.

Willow Run has become one of the county's greatest assets, and Ann Arbor's much-traveled population can count itself fortunate at having an outstanding air terminal so convenient.

The 20th and 21st of a Series of Editorials by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. MICHEL. Mr. Speaker, I should like to insert the 20th and 21st in the series of editorial letters by Mr. F. F. McNaughton which are now being published in the Pekin Daily Times, Pekin, Ill.:

[From the Pekin (Ill.) Daily Times of August 13, 1957]

THE EDITOR'S LETTER

(By F. F. McNaughton)

Russians like to show off.

You all know that from watching their behavior in international affairs.

They act for effect.

They make gestures of peace and good will to gain ends.

Used to be that every visitor was practically required to look at their subway. While other cities have underground tubes built strictly to carry people, the Russians made their Metro a thing of art. It has art in tile, and frescoes, and it has beautiful chandeliers.

Returning from ballet at the Sport Palace, way out by the university, Ceil and I chose to ride back by Metro instead of by a Limousine (with Persian rug) which they insisted we accept free.

The dive down a hole into that subway was the longest, fastest, and steepest escalator ride we ever took. We must have dived 120 yards.

We sardined ourselves into the first subway train that came along.

Since the Russian alphabet is different from ours, I was worried as to whether we would know where to get off. But a well-dressed Russian man took us in tow. He was as well dressed and pleasant as any man in Pekin who might have gone out of his way to help strangers—such a fellow, say, as Bud More.

Couldn't speak English.

So we could not say a word; but he indicated for us to be at ease.

Presently he found Ceil a seat. Then when we came to the Moscow Hotel station, he indicated for us to follow him and he got off with us and led us to the escalator to take to get up to the street.

It warmed our hearts.

By the way, you can ride all over Moscow on the subway for 5 cents.

Surface fares cheap, too.

Another way in which the Russians are making an impression now is their new jet passenger planes. They've cut the former 8-hour time to Prague to 2 hours. But their big show is their flight to Peiping. (Wish it were Pekin, Ill.) They run a regular commercial passenger plane to the capital of China—make the 4,845-mile flight in 10 hours.

And butter!

Millions in Russia are bound to be short of butter, but I know of nowhere in Asia, Africa, Europe, or America where they pile butter on the table like they do for guests in Russia.

Show off? But isn't that just one more way in which the Russians are like Americans?

[From the Pekin (Ill.) Daily Times of August 14, 1957]

THE EDITOR'S LETTER

(By F. F. McNaughton)

Cell has noticed one thing that may be important or may not be.

We see no babies—that is, almost none. And no pregnant women.

Can it be that Russian women are acting so mannish or are so eager to work that they do not want to have babies?

One thing sure: They have no church to tell them it is wrong not to bear children.

When we asked our guide about this, she said the babies were in the country in the summer; and as to the pregnant women—well, they do not like to come into the center of the city.

But pregnant women appear freely in every other place we have been on earth; and if Russian women go about (as they do practically 100 percent) without corsets or girdles, and just let their stomachs stick out as they will, why would they hesitate at coming downtown pregnant?

We don't know.

And I think I failed to make one thing clear about free education.

It is free for the bright.

That is, at the top.

It just might be that America could make room in its universities and engineering, medical, art, etc., schools for all the brilliant youths and girls in America if all students who could not pass the stiff Russian entrance exams were eliminated from American universities.

And if the money spent on frats and sororities (which are quite undemocratic) were spent on dormitories, there would be places for these brilliant young Americans to live while they got free education.

A Better Atomic Plant Bill

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. MEADER. Mr. Speaker, I ask unanimous consent to have printed in the RECORD an editorial entitled "A Better Atomic Plant Bill," published in the Adrian Daily Telegram, Adrian, Mich., on August 13, 1957.

The editorial follows:

A BETTER ATOMIC PLANT BILL

Amendments approved on the floor of the House have made the atomic plant construction bill a much better measure. The $337 million measure was shorn of its order to the Atomic Energy Commission to build five reactors for cooperative and other public power companies. Likewise the bill veers away from the original directive to rush construction of a reactor similar to one Britain is hurrying toward completion.

The measure now provides for the orderly development of atomic plants in a working partnership with private industry. Democrats on the committee which prepared the bill had included various provisions designed to freeze private industry out of atomic development to a considerable extent. The House action again gives the green light to the fast reactor plant under construction at Monroe. It does this by retaining $4,200,000 of research funds. Committee Democrats had asked that any mention of the private group be kept out of the bill and that a million and a half dollars be authorized for fast breeder research in general.

In general the bill holds to the line of legislation adopted 3 years ago designed to interest the power industry in building pilot atomic plants under Atomic Energy Commisison authority. As offered in the House, the bill as first drafted would have made an abrupt change in this policy and substituted one of keeping such developments largely within Government corporations and agencies. All this was along the lines of socialism. The House refused to go along, and, by topheavy votes on various sections of the bill, showed it.

There Is No Substitute for Wood

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. PORTER. Mr. Speaker, lots of people in my district are concerned with what appears to be a tendency to overlook the wonderful building qualities of wood. Therefore, I should like to call to the attention of the Members of this House the following editorial which appeared in the August 8, 1957, issue of the Cottage Grove, Oreg., Sentinel, which is published and edited by W. C. Martin:

One of the basic troubles of the Northwest is due to the fact that wood is being excluded as a building material over the Nation and aside from the efforts of a few companies like Weyerhaeuser Timber Co., little is being done to combat the tendency to count wood out in the building plans. Our readers will recall a thought provoking article appearing on the editorial page of the Sentinel on July 25, under the heading of "Transfusion Needed," by H. V. Simpson, executive vice president of the West Coast Lumbermen's Association, in which Mr. Simpson pointed out that the people of the Northwest have not always been loyal to the No. 1 payroll of the region, lumber.

The present troubles of lumber are not all due to the fact that lumber has been replaced in some sections of the country to a large extent by substitute materials, but if wood could assume its rightful place in the building industry as the No. 1 material with which to build a dwelling, a large portion of the present difficulties might be lessened.

But the trouble is even in a section of the country where lots of lumber and wood should be used, most of us are willing to sit by and see brick, stone, and concrete replacing wood in many instances and we have done nothing about it.

We have called attention in previous articles about living in a transition period, where so far as the timber operator is concerned, he must utilize every bit of the tree he can to get even a margin of profit and an increasing number of the large operators have turned to finding ways of using the waste as a hard board, as container material and as pulp and paper. Even so there has never been a material on the market which would take the place of wood as a building material for a residence or dwelling as far as warmth, beauty, and charm goes. This is the theme of the Weyerhaeuser Timber Co. in its national advertising program and its efforts to create and maintain a market for wood for building homes.

In California and in other places where there has been a mass production of housing, even the window and door frames have been made of steel and practically no wood is used.

Adequate Financial Support for Our Ambassadors

EXTENSION OF REMARKS

OF

HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. COFFIN. Mr. Speaker, the problem of adequate financial support for our ambassadors is not new. Our interest has been quickened by the recent controversy surrounding the appointment of an ambassador to Ceylon, and the questions it has raised about the necessity for wealthy men in our diplomatic posts. But long before this the Congress was concerned with such matters as the 1878 proposal to increase the salaries of certain ministers. Representative James H. Blount of Georgia denounced the suggestion, voicing the hope that someday we would be able to dispose of the diplomatic service because of improved communications. This was apparently based on unlimited faith in diplomacy by telegraph.

Thomas Brackett Reed, one of our great speakers and a distinguished son of Maine, offered a response which stands the test of time very well.

I apprehend—

He said—

that while we are a great people, while we are a noble and magnificient people, yet there is some wisdom outside of the United States; and so long as we have a diplomatic corps * * * we ought to pay our ministers such salary * * * will enable them to maintain themselves properly in the places to which we send them.

A similar, and recent, plea has been made by a retired career officer of our Foreign Service. In a letter to the New York Times, published August 18, 1957, Mr. Edward P. Lawton struck a fresh note in the appeal for more adequate recognition and support of our career officers in the diplomatic corps:

To the EDITOR OF THE NEW YORK TIMES:

James Reston, in commenting on the recent nomination of Maxwell H. Gluck as Ambassador to Ceylon, suggested that with the facts now made public about the underpayment of our Ambassadors, something might conceivably be done to correct a bad situation. I should like to invite attention to certain aspects of the problems which do not seem to have been aired in the press.

A number of career officers without private means have served as Ambassadors at expensive posts. For example, the present Ambassador in Buenos Aires, long viewed as

on of the costly posts in the service, makes ut on his official income even though he as a large family. He previously served as mbassador at Havana, another expensive ost.

This Ambassador's predecessor at Buenos ires was likewise a career officer without rivate means.

Nearly all of the posts recently filled by olitical appointees have at times been occupied by career men with little or no private means.

POSTS UNDERPAID

Unquestionably our Ambassadors are rossly underpaid. Nevertheless, in all but or 3 posts—London, Paris and possibly ome—career men without money can get y. They may find it difficult, they may ip into their savings; but they can do it nd creditably. Were this not so, the State epartment would hardly go on making such ppointments.

Why then does the administration assert hat top ambassadorships must be filled by ich men? May it not be that this provides plausible reason for the noncareer appointments it wants to make anyway?

There is no evidence that any recent President desired a true career Foreign Service. There is no evidence that any substantial ortion of the Senate ever wanted such an nstitution as the British Foreign Service, ith the prestige and authority it has acuired through generations of application f the career principle up to the highest ppointments.

No President ever said to the Congress: ive me half a million (or a million) dollars dditional a year and I will nominate no ore political Ambassadors. A million, at he most, would be enough.

What is that in a budget such as ours, with 38 billion dedicated to defense? Or does the President truly believe that the major bastions of our first line of defense throughout he world should continue to be commanded y innocents like Mr. Gluck for the sake of minuscule saving?

SPIRIT OF OPTIMISM

When I entered the service in 1925 under alvin Coolidge, a spirit of optimism reigned. e younger men all looked forward to the ay when the career principle would be eslablished here as firmly as it is in Europe.

Twenty years later, when I resigned, the morale of the service had never been so low—nd this was long before the onslaughts of enator McCarthy. A majority of the men I new in the service looked forward only to ne thing, the earliest day they would qualify for retirement. Many of these men tepped happily out of the ranks at the early ge of 50, and with them the Nation lost ome of its best potential ambassadors.

A few others, with money or connections, left with the expectation of returning as olitical appointees to rank far higher than hey could have received through career advancement. The effect on the service of this omersaulting to top posts is easy to imagine.

What caused the decline in morale? There were many reasons, but inadequate pay was ot a principal one. In fact remuneration had risen, all the fringe allowances were better, there was promise of still more favorable treatment to come.

The chief reason was that the career men, who had entered the service after a stiff competitive examination and had risen in rank slowly over the years, found themselves suddenly joined in class standing by outsiders appointed—or so it was believed—largely through influence, and were blocked from the most desirable ambassadorships by the preference given political proteges.

ADDITIONAL EMBASSIES

It is a habit of the State Department to cite the number and percentage of career appointments that have been made, which usually show an increase. But it is never pointed out that this favorable showing is due only to the fact that a large number of new embassies have been created in recent years and that nearly all of them are in out-of-the-way posts where climate or living conditions are so difficult that no self-respecting politician would endure them.

With such posts filled by career men through default, and with Iron Curtain posts also filled by career men, it is a simple matter to assign the choice posts in Western Europe to the party national committee and still present a convincing record of fostering the career service.

One justification often made for the continuance of noncareer appointments is that the career service has insufficient men of top caliber. This may be true—though it is difficult for anyone intimately acquainted with the service to believe it. But if so, isn't there an obvious answer? Is such a condition not an effect of the system rather than a cause?

If good men can hope for no better than a third-rate ambassadorship in an unhealthy locality as the apex of their career will they enter the service in the first place, or, if already in, will they remain after reaching the earliest age of retirement?

EDWARD P. LAWTON.

CANNONDALE, CONN., *August 12, 1957.*

Mr. Speaker, we cannot afford less than the best in our diplomatic service. Is it too much to hope that, after over a century and a half, we shall at last recognize this fact?

General Lane Gives His Views on Soldiering

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the Revere Journal, Revere, Mass., on August 15, 1957, concerning former District Commissioner Thomas A. Lane, who is a native of Revere.

The article follows:

GENERAL LANE GIVES HIS VIEWS ON SOLDIERING

"The business of soldiering" came in for comments last week at Gen. Thomas A. Lane's first staff and commanders conference at Fort Leonard Wood, Mo. General Lane, a Revere native, was engineer commissioner of the District of Columbia before coming to Fort Leonard Wood on August 1.

Fort Wood's new commander pointed out to the assembled officers his views concerning soldiering, its obligations, and the honor and respect shared by every serviceman "from the lowest private up."

"We find a great deal of talk in our country today that men who have been drafted have been unfortunate and those who escaped the draft are lucky." the general said. "This is opposite of the truth. It is important that young men coming into the Army are made to understand the Army, to have pride in it and to realize that their Army service is one of the most fortunate things in their life."

General Lane went on to say that if Army officers do their job right "these young men will go back into civilian life and look back on this service as one of the finest things that ever happened to them."

Pointing out that difference in rank are minor, General Lane told the officers at his conference that all soldiers share equally the honor of being a soldier.

"We must honor and respect every soldier at all times," General Lane continued, going on to say that he wanted every soldier at Fort Wood to feel a pride in his position and his organization which can be brought about only by an understanding of his position and a feeling of confidence that he knows his duties.

When a soldier comes into the Army one of the first fundamentals he learns is how to salute and that, said General Lane, is an expression of pride. "When he stands up and gives a salute he should say to himself, 'I'm a soldier.' You will not have trouble getting compliance when a man understands his position and what is expected of him. We want Fort Leonard Wood to be what it is supposed to be, one of the finest training centers in the world.

"I have spoken of duty," General Lane continued, "but I am also deeply concerned about your happiness. One of the primary requirements for happiness is a feeling of doing something worthwhile, having a place in the community and filling it. A good soldier has this basic requirement for happiness. He has a feeling of team work, that we are all members of the team."

General Lane concluded his conference by reminding the senior officers of their responsibility for looking after the welfare of their subordinates.

"It is not their (senior officers) duty to pamper them but it is their duty to look after them and if they need help to see that they get it. I want to assure you that is my position—I will be doing everything I can to make Fort Leonard Wood a better and happier place for all of us."

Speech of Hon. Basil L. Whitener

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. COLMER. Mr. Speaker, on last evening our distinguished colleague, Congressman BASIL L. WHITENER, the Representative of the 11th North Carolina Congressional District, delivered a splendid address before the Shelby Junior Chamber of Commerce at Hotel Charles in Shelby, N. C.

In view of the sound and basic philosophy embodied in that speech and because of my very high regard for Congressman WHITENER, I desire to see it made a part of the permanent RECORD of this Congress. Mr. Speaker, I am firmly convinced that unless the trend toward centralism in this country is reversed, this splendid young Republic with its great institutions is bound to come to an end. If this tragedy to the world is to be prevented, our people must awaken to the dangers ahead and rededicate themselves to the Jeffersonian principles upon which the Democratic Party and the country were founded.

Congressman WHITENER's able address is as follows:

President Heath, members of the Shelby Junior Chamber of Commerce, and distinguished guests, I am most appreciative of the

very generous introduction by my long-time friend, Dave Gillespie. While Dave has only been in Shelby a short time, I am certain that you have already observed in him those traits of character and that sense of public service which resulted in his being selected by the Gastonia Junior Chamber of Commerce as Young Man of the Year a short time ago. His service as managing editor of your great daily newspaper, the Shelby Star, will, I am sure, be of great value to his paper and to the community which it serves.

It is always a privilege for me to speak to Jaycees. The most enjoyable period of my life was that period in which I was permitted to take a somewhat active role in the affairs of the local, State, and national organizations of which you are a part.

As a matter of fact, I have always had a deep sense of pride in the role that I was able to play in the formation of your organization here in Shelby. I remember so well our first meeting at the Cleveland Hotel and the enthusiasm for civic work which was evidenced by the young men of Shelby who at that time founded this organization which has meant so much to your city and county. Through the years that have followed this zeal for civic service has not lessened as is shown by the splendid record of service which you are continuing to build from day to day.

Your membership and activity in the various projects of this organization directly and indirectly touch every phase of community life. This broader value of your service is a noble thing. But there is another and more personal value resulting from your pursuit of the high ideals of the Junior Chamber of Commerce.

This other important value arises out of the personal development which the individual Jaycee experiences through his diligence in community service. No other organization in the Nation affords young men a greater opportunity of self-expression, equality of participation, and opportunity for accomplishment than does the Junior Chamber of Commerce.

We are told in the book of Joel that: "Your old men shall dream dreams, your young men shall see visions." These visions of the young men of hundreds of communities throughout the Nation are being given reality through the programs and projects which you and your colleagues conceive and promote. Tonight I would like to call to your attention another area of public service in which you as an individual and as a member of this great organization may find an opportunity for further service. This field of service is not limited by city, county, or State lines but embraces the entire area of the American continent. And, by reason of the influence which our great Nation has in the affairs of the world we might even say that this area of opportunity is as large as the world itself.

I speak of the opportunity to assist in the preservation of the fundamental principles upon which this Nation has built its foundation of greatness.

The psalmist has said: "The lines are fallen unto me in pleasant places; yea, I have a goodly heritage."

The heritage of all Americans is known and understood by even the casual student of history. I, therefore, shall not undertake to remind you of the many lines that have fallen about us in pleasant places. Rather, I prefer to discuss with you in a brief way some of the assaults which are being made upon this heritage of ours.

While my service in the Congress has been of short duration, it has been sufficient to convince me that in no similar period of our history has this country strayed further from the sound philosophy and principles of good government upon which this Republic was founded than it has during our lifetime. As a Member of Congress I have witnessed some further assaults which have been made on the very foundation stone of our society, the Bill of Rights.

It has been my constant aim when I was called upon to cast a vote to record myself as one who believes that the time has come when the chipping away at the bedrock of our society shall be stopped.

I am sure that you, as young civic leaders, are greatly alarmed over the ever-increasing tendency toward consolidation of power in the Federal Government at the expense of the States and freedom of our citizens. The great Thomas Jefferson issued a warning to the people of this country when he said: "It is not by the consolidation or concentration of powers that good government is effected. Were not this great country already divided into States, that division must be made, that each might do for itself what concerns itself directly, and what it can do much better than distant authority."

In order to prevent this consolidation of power our forebears adopted the 10th amendment of the Constitution which provides that: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

For more than a century that mandate was scrupulously honored. On those rare occasions, when the Congress in its zeal invaded the domain of the States, the Supreme Court firmly pulled it back. The Court at that time was a great bulwark in the preservation of constitutional Government.

How changed the situation today. Apparently the States no longer have any rights which the Federal Government is bound to respect. The Congress cannot evade its partial responsibility for this development. It has passed laws, expressed in vague general terms, empowering the Federal agencies to regulate vast areas of our economy. Immediately these agencies set up all the trappings of bureaucracy. They issue directives, regulations, and interpretations, which, as time goes on, bear less and less resemblance to the act passed by Congress.

But the evil presented by the executive and legislative branches has been minor in comparison with the destructive influence during the past two decades of the nine black-robed gentlemen who occupy the marble palace across the plaza from the Nation's Capitol.

You may search the Constitution, but you will find nothing about preemption in it.

The Supreme Court, however, with ever-increasing frequency is applying that doctrine to whittle down the jurisdiction of the State courts. In doing this the argument is advanced that the Court is carrying out the intent of Congress. Whatever its purpose, this assault upon time-honored constitutional principles has as its net effect the further centralization of power in the Federal Government.

Some of the outstanding examples of this are found in recent decisions which I will mention briefly.

(a) The Steve Nelson case in which the Court held that under this so-called doctrine of preemption the antisedition law of the State of Pennsylvania was void. This means that the antisedition laws of every State in the Union were stricken down with a stroke of the pen and that there is no authority except in the Federal Government to legislate against such sedition.

(b) The Slochower case in which the Court denied the right of the city of New York to terminate employment of a schoolteacher who had invoked the fifth amendment in a congressional committee investigation concerning his past membership in the Communist Party.

(c) The Girard College case in which the Court said that Steven Girard had no right to provide in his will, over a hundred years ago, that his money was to be used for the establishment of a college for the education of white orphan boys. The flimsy reason given was that the board which operate the college is an agency of the State of Pen sylvania.

(d) The Konigsberg case and its co panion case in which the Court held that State had no right to deprive an applica of his law license where it was shown th the applicant was a Communist. The rat er remarkable idea was expressed by the ni black robes that membership in the Co munist Party did not necessarily refle upon the moral character of the pers applying for admission to the bar.

These are just a few of the ill-advised d partures from the goodly heritage which o generation has received from those w went ahead of us. One great newspaper h commented that in its recent decisions t Supreme Court had continued its studi campaign to obliterate the States of t American Union. This is not a partis political matter. It is as fundamental the members of my party as it is to t members of the Republican Party. It pr sents a problem which is on the minds laymen and lawyers alike. Legislators a constantly wrestling with the problem determining what legislative steps, if an can be taken to curb the assault upon co stitutional principles now being carried by these men who have tenure in office f the duration of their natural lives.

I mention to you the fact that young me have visions. To be sure, young Thom Jefferson had more vision than many of h fellows when he wrote: "There is no dang I apprehend so much, as the consolidation our Government by the noiseless and, ther fore, alarming instrumentality of the S preme Court."

Jefferson's basic philosophy and vision w set out in the oft-quoted statement: "Th government is best that governs least."

In 1798 Jefferson was the author of t famous Kentucky Resolution, which spell out the kind of nation that he hoped to se when it said: "The several States compo ing the United States of America, are n united on the principle of unlimited sub mission to their general Governme but * * * by compact under the style a title of a Constitution for the United Stat and of amendments thereto, they const tuted a general Government for special pu poses, delegated to that Government certa definite powers, reserving each State to i self, the residuary mass of right to the own self-government."

Jefferson's principal antagonist, Alexa der Hamilton, ably presented his plea f complete sovereignty in the general Gover ment, but this principle was not engraft into the basic constitutional concepts of o Nation.

Can anyone fail to see that there is no a trend away from the Jeffersonian theo of government, and toward the Hamiltonia concept?

Those who profess to be great liberal seem to me to have turned their backs upo that great liberal, Thomas Jefferson, and have embraced the theories which in Jeffe son's day and time were known as conserv tism or federalism.

I believe that the people in the Sout have consistently clung to the Jeffersonia idea of liberalism. To me a liberal is on who believes that the individual should b as free as possible of restrictions upon th exercise of his daily pursuits, whether of social or business nature. How then ca one say that the further expansion of Fed eral domination over State, local, and coun government and the very lives of the ind vidual within the various local communiti constitutes liberalism?

As the young business and profession leaders of this Nation, the members of th Junior Chamber of Commerce have a gre opportunity and responsibility in this batt for survival of our established system o

vernment. You can do much to direct e people of your community and the tion from the present path now being trod d restoring to the people all of our cher- ed, God-given institutions of freedom and erty which were wrested from the tyran- s and oppressions of the past.

n the Acts of the Apostles the chief cap- n was quoted as saying to Paul: "With a at sum obtained I this freedom." And l said: "But I was freeborn."

Yes, my friends, you and I, as Paul, were eborn. But if we are to remain free it y be necessary that we pay a great sum maintain and preserve our freedom.

Bill Extending the Effective Date for Regulations Governing the Operation of Small Passenger Vessels

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. COFFIN. Mr. Speaker, yesterday e House did a very sensible thing in ssing H. R. 7494, which extends time r working out reasonable regulations r the passenger-boat owners of the tion. This is not a frivolous move, r is it a delaying tactic. This is an fort to arrive at a sensible and realistic of regulations for the field of small ssenger boat operation, covering mul- udes of small operators, working in ery conceivable set of climatic and ographic environments.

We do not want to delay, longer than cessary, the promulgation of these gulations. We do want to be abso- tely sure that the overwhelming ma- rity of conscientious passenger-boat ners will not be penalized and driven the wall by regulations which incur eat expense without necessarily adding preciably to the safety factor in the ssels which they operate.

There is, at the present time, a great vergence of opinion between the Coast ard and boatowners on the reason- bleness and practicability of the tenta- e regulations. The Coast Guard has ade two revisions in the proposed regu- tions, indicating the problems which e agency itself recognizes.

Patterns of regulation can more easily imposed on big units than on small es. The 5 biggest steel companies form unit easier to regulate than the 5,000 allest machine shops. The giant eamship lines are, for all their vast- ss, a more manageable subject matter r safety rules than the numberless flo- las of small passenger craft plying eir way along the coasts of this Nation.

Boatowners have indicated their will- gness to sit down with the Coast Guard d work out sound regulations which ill insure, as far as is possible, safe op- ation of small passenger vessels.

The 6-month delay proposed in this ll is not as much as we would have ed, but it does give us time to work it this problem in a sensible fashion. know some of the men who captain small passenger vessels along the Maine coast. They are expert sailors and they have great pride in the safety record they have compiled. They deserve the opportunity to work with the Coast Guard, contributing their invaluable experience to the drafting of the final version of these regulations.

I hope that the Coast Guard will use this added time in the spirit in which the House has granted it.

Letter to the President by the Chairman of the House Committee on Ways and Means

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks, I include the following letter addressed to the President by the chairman of the Committee on Ways and Means regarding pending proposals for the enactment of a sliding scale import excise tax on lead and zinc:

AUGUST 16, 1957.

The PRESIDENT,
The White House.

MY DEAR MR. PRESIDENT: I am writing to you in connection with the proposal of the Honorable Fred A. Seaton, Secretary of the Interior, on behalf of the administration, for the enactment of sliding-scale import excise taxes on lead and zinc.

Although the communication from Secretary Seaton on this subject was not received by the Committee on Ways and Means until June 19, 1957, at a time when the session was far advanced and the committee was diligently following an agenda previously determined by it, due to the importance of the subject and due to conditions in the lead and zinc industry as depicted by the communication of the Secretary, the committee broke into its agenda and conducted hearings on August 1 and 2, 1957.

I have now had time to carefully review and study the testimony which was presented to the committee at the public hearing on this important subject. It is my sincere conviction that you already have authority, previously delegated to you by the Congress in the trade agreements legislation, to afford relief to domestic industries from import competition in appropriate cases. The testimony of your representatives at the public hearings, in conjunction with the written recommendation of the Secretary of the Interior, indicates that the lead and zinc industries properly constitute such a case in the opinion of the administration. The testimony further shows that your present authority is adequate to afford the relief which you have recommended to the Congress.

As you will recall, one of the principal purposes of the so-called escape clause provision (section 7 of the Trade Agreements Extension Act of 1951) and the national security amendment (section 7 of the Trade Agreements Extension Act of 1955) was to afford you an avenue under which you can provide relief from import competition to domestic industries according to the procedures and standards set forth therein. As may further be recalled, the committees of the Congress and the Congress in past years have devoted much time, thought, and attention to providing you with these powers so that our domestic industries can be afforded protection in appropriate cases and so that the national interest can be served by presidential action without resort to further legislation.

It is clear that in this instance you have not made recourse to existing administrative procedures which are available to provide relief to these industries. In addition, you have not advised the Congress that your existing authority under the escape clause and the national security amendment is inadequate in these matters generally, although a subcommittee of the Committee on Ways and Means last fall specifically called upon the administration for any recommenations which it might have for modifying or strengthening these provisions of existing legislation.

The testimony presented to the Committee on Ways and Means during the course of the public hearings on August 1 and 2, 1957, indicated that the proposal for a sliding-scale import excise tax on lead and zinc is almost identical in major respects with the recommendations of the Tariff Commission made to you under the lead and zinc escape clause proceeding in 1954. You rejected this recommendation, stating among other things, that the proposed relief did not meet the needs of these industries. The testimony of your representatives further indicated that the situation today in the lead and zinc industries is substantially the same as it was at the time of the escape clause investigation by the Tariff Commission and your rejection of the unanimous finding of the Tariff Commission.

The testimony at the public hearings also clearly showed that the proposal which the Secretary of the Interior now recommends on behalf of the administration is almost identical in effect to a proposal that was before the Committee on Ways and Means in 1953 and on which a strongly adverse report was submitted by the State Department. The State Department set forth 10 reasons why this proposal was inadvisable and contrary to the national interest. This report was made a part of the recent public hearings.

The proposal which the administration has now recommended would not become effective, in event of its enactment, until January 1, 1958. Yet, under the national security amendment any relief found appropriate could be put into effect by you almost immediately. Also, under the escape clause I see no reason why you cannot direct the Tariff Commission to report to you within a stated time as to measures which it may deem appropriate for relief of these industries, and I see no reason why you could not have done so on June 19, the date of the proposal, or even earlier for that matter. It is clear from the testimony presented to our committee, aside from the merits of the proposal, that relief can be afforded by you much more speedily than would be the case even with enactment of the proposal.

As you of course know, I have been a strong and consistent supporter of the reciprocal trade agreements program since the inception of the program in 1934. I have consistently supported and worked for proposals which you have made to continue our foreign-trade policies, including, for example, your proposal during the last Congress and in this Congress for approval by the Congress for membership in OTC.

You have gone on record strongly supporting the reciprocal trade agreements program. At your request the Congress has provided three extensions of your authority during your administration. An important consideration of the Congress in providing these extensions was the fact that should trade agreements concessions result in such

import competition that domestic industries are injured or are threatened with injury you would have the authority where it is in the national interest to relieve domestic industries of such injury.

I cannot refrain from expressing to you my very great concern as to the impact of a proposal such as the one which your administration has made concerning lead and zinc on the whole structure of the trade-agreements program. In stating this, I do not intend to imply that the lead and zinc industries may not need relief. My concern is due to the fact that this proposal would completely bypass existing authority given you in present trade-agreements legislation. You are asking the Congress to do that which you already have ample authority to do. The authority which you have is not selective, but broad and general, and applies to any and all industries which are injured or threatened with injury as a result of trade-agreements concessions. I am sure you are aware of the fact that there are many other industries that are asking for relief from import competition. Among these are textiles, velveteen and ginghams, tuna fish, hardwood-plywood, stainless steel flatware, fluorspar, natural gas, petroleum, and many others. There are numerous bills now pending before the Committee on Ways and Means which would provide relief from import competition on the above specified items and many additional ones. I am confident that you would not want to see the Congress bypass and undermine your present authority under trade-agreements legislation by acting on individual items.

I sincerely urge you to personally review the situation in the lead and zinc industries and the proposal submitted to the Congress. Upon such a review, I am sure you will be convinced as I am that you do have ample authority to provide such relief as you deem necessary in the national interest to the lead and zinc industries. I am also confident that you will agree that to bypass the existing provisions of our trade-agreements law will undermine the trade agreements program.

I can only observe in closing that there is considerable sentiments that in the absence of your exercising such authority as you may have for an expansion of our foreign trade and the protection of domestic industries, the Congress will be forced to study again the delegation of authority made to you under the trade-agreements legislation. This is an eventuality which neither you nor I would contemplate with equanimity.

The other 14 Democratic members of the Committee on Ways and Means concur with me in this letter.

Very cordially yours,

JERE COOPER,
Chairman, Committee on Ways and Means

Tyrone, Pa., Celebrates the 100th Anniversary of Its Incorporation as a Borough

---

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. VAN ZANDT. Mr. Speaker, as a fitting climax to months of careful and patient planning, the Borough of Tyrone, Pa., in my congressional district, opened its centennial program, August 11, heralding the beginning of a fun-packed week of community celebration in commemorating the epochal event.

Situated in northern Blair County, for a century Tyrone has been known as the gateway to the picturesque Bald Eagle Valley regarded as one of the scenic splendors in the great Keystone State.

Tyrone which is a thriving community of patriotic and God-fearing people takes pardonable pride in its colorful history which was reenacted in a stirring pageant titled "Proud Heritage" which told the captivating story of the history of Tyrone with a cast of over 400 local residents performing on a 300-foot outdoor stage.

During the centennial celebration, it was my privilege to have the honor of crowning, as queen of the centennial, "Miss Tyrone" in the person of Miss Hope Snyder. In addition, I had the pleasure of bestowing the crown of "Little Queen" of the centennial on 5-year old Debbie Markel, daughter of Mr. and Mrs. William L. Markel.

One of the highlights of the centennial celebration was the participation by the famed Tyrone Gardner Guards in each performance of the pageant Proud Heritage. This famous drum and bugle corps has gained national recognition and since 1950 has won 145 first-place awards, including first prize in President Eisenhower's inaugural parade in Washington, D. C., last January. Recently the Gardner Guards appeared on Ed Sullivan's TV show, Toast of the Town, and has recently received an invitation to appear on Fred Waring's program. Incidentally, Fred Waring is a native son of Tyrone and all through the years of his successful ascent in the musical world has always found time to take an active interest in his old hometown, lending his support in a material manner in support of any programs designed to make Tyrone an ideal community in which to live.

The week-long centennial program opened in an appropriate manner in a spiritual vein on Sunday evening, August 11, with a community vesper service which included clergymen of all religious faiths.

During the period Monday, August 12, through Saturday, August 19, the weekly program consisted of Youth Day, Civic-Industrial Day, Rural-Suburban Day, Firemen's Day, and Veterans' Day. Each evening during the week there was a gigantic display of fireworks with the Saturday program consisting of an antique auto parade, a muzzle-loaders shooting match at Sportsmen's Lodge, and, as a finale, a musical festival featuring Lanny Ross, Elizabeth Doubleday, Buddy Williams and his Golden Echo Music, and the Winged Victory Chorus.

The various parades held during the centennial period elicited enthusiastic approval from the overflowing throngs that gathered along the route of march. With the Kiddies' Day parade on Monday and the martial atmosphere of the fine Veterans' Day and firemen's parades, coupled with the dazzling beauty of nearly twoscore of business and industrial floats in the civic and industrial parade, centennial visitors were treated to parades that were second to none for beauty and interest. The colorful and unique floats in the civic and indust parade portrayed in a novel and ef tive manner Tyrone's progress dur the past century. Almost every ph of American life was depicted due the ingenuity and artistic talents those who designed the many brilli floats.

During the entire week, general cha man of the centennial, Emmanuel Rodgers, who is also burgess of Tyro and his many associates on the vari committees were the recipients of wa praise for the well-planned and ent taining programs that daily delight the thousands of centennial visitors a residents of Tyrone.

One aspect of the Tyrone centenn that sounded a nostalgic note was outdoor horse show at Horseman's Fie For many years the famous Sherid troop of cavalry soldiers was known and wide in the military circles of State and Nation. The gleaming sp tacle of over 100 expertly groomed hor on exhibition was a vivid reminder the part horses played in the early h tory of Tyrone. Their important r is revealed by an article from the p of William Robert Fuoss, Tyrone, P which appeared in the August 9, 19 centennial edition of the Tyrone (P Daily Herald. Mr. Fuoss, who is kno throughout Pennsylvania as an ora and writer of no mean ability, is expert on horses having been interes in them since early boyhood.

In addition to Mr. Fuoss' article, whi I am inserting at the conclusion of remarks, there is also appended an a ticle from the August 9, 1957, cente nial edition of the Tyrone (Pa.) He ald which gives an interesting accou of the incorporation of Tyrone as a bo ough, July 27, 1857.

In concluding this salute to the bo ough of Tyrone, I wish to congratula the centennial committee for its unti ing efforts which culminated in a su cessful celebration of the 100th birthd of Tyrone borough.

At the same time I warmly comme the businessmen and industrial leade of Tyrone, and all the residents of th thriving community, for their civi minded and cooperative efforts in ma ing the centennial celebration an ou standing success.

It is my sincere wish that the progre enjoyed by the borough of Tyrone du ing the 100 years of its existence will continued in even greater measure. Th is certain to be experienced because t theme of the 1957 centennial pagean proud heritage, will provide a stimula ing influence and prove an incentive Tyrone residents to face the future wi unbounded faith in God in meeting t challenge of everyday living in th atomic age.

[From the Tyrone (Pa.) Daily Herald of August 9, 1957]

TYRONE INCORPORATED AS A BOROUGH JULY 27, 1857—SITE OF TYRONE LAID OUT 1850, THE SAME YEAR FIRST HOUSE BU

Tyrone City, so called in its earliest day its original proprietors, was one of the com paratively new towns in the central part the State.

It was originally laid out by Lyon, Scho & Co. an old and much-respected iron fir

hat carried on extensive iron works in different parts of the State.

John T. Mathias, a venerable and highly respected citizen of the town at that time, in 1850, assisted in planning the streets and laying out the lots. He was then the superintendent of what was known as the Tyrone forges.

Jacob Burley built the first house and moved into it in November 1850, and Rev. John D. Stewart and Mr. Burley started business together in the building first then completed, adjoining the city hotel.

In 1852, the Central Hotel was erected by Joshua Burley, and in 1853, Edwin L. Study, Silas Sneeringer and Samuel Berlin, on their way to the Far West from Adams County, were induced to interrupt their journey and look at the new town. They were so favorably impressed that they purchased lots and ever afterward identified themselves with the growth and prosperity of Tyrone.

Mr. Study died some years later, in 1879, after being widely and favorably known over the entire State as an active and honorable businessman. He was president of the Blair County Banking Co. at the time of his death.

Mr. Berlin commenced in the drug business, and Mr. Sneeringer started in general merchandising and retired in the late 1870's.

In 1852, the first schoolhouse and the Methodist Episcopal Church were added to the many new buildings previously erected, and in the following year the Presbyterian and United Brethren churches were built.

The railroad facilities of Tyrone were second to no town of like population in the State, and the early completion of the Tyrone & Lewisburg Railroad (soon to be affected) made Tyrone in reality a railroad center and a point which was sought after by persons whose inclinations and means would lead them into the manufacturing business.

In 1853, the Bellefonte plank road was completed, and in 1856 the Tyrone & Clearfield Railroad was commenced by David J. Pruner, but owing to some difficulties the road was in an incomplete condition until 1860, when the Pennsylvania Railroad took charge of it and soon laid the rails over what is said to be the steepest grade in the State, and Clearfield County poured its coal and lumber into the already flourishing borough.

In 1862, the Bald Eagle Valley Railroad superseded the old plank road, and a new division of the Pennsylvania Railroad was organized, with Samuel G. Black as superintendent and D. D. Wood, a well-known railroad man, as trainmaster. From this time the town grew rapidly.

The Pennsylvania Railroad, as early as 1863, established shops for repairs in Tyrone, which, for a number of years, were under the management of Andrew Vauclain, Sr., of Altoona. He was succeeded by William H. Jackson, Altoona. Mr. Jackson was succeeded by William H. Carothers, who had also held the office of chief director of the Good Will Fire Company of Altoona in its early history.

There were large boiler and machine shops in successful operation, under the management of W. H. Pawling; two large planing mills, owned by Samuel McCamannt & Co.; and Boyer, Guyer & Co.; a large steam tannery, owned and conducted by D. P. Ray; extensive limestone works and quarries of A. S. Morris, sawmill and shingle mill; large steam flouring mill in town and others close by; new process steel works in the vicinity, as well as the extensive Tyrone forges, conducted by S. C. Stewart, proprietor, who was long identified with the prosperity of Tyrone, doing all that could be done to further its interests and especially in urging the completion of the Tyrone & Lewisburg Railroad. The manufacture of illuminating gas, by the Tyrone Gas & Water Co., was considered as one of the growing industries of 1880.

A large paper mill was erected in the northern end of the town in 1880 by Morrison, Hare and Cass in which about 80 persons were employed. With a front of 120 feet on Main Street, the building extended back 190 feet. The rear wing on a parallel with the front, was 70 feet, making the walls on 3 sides 380 feet. Other buildings were also erected in the immediate vicinity of the plant. The interior of the main building was filled with improved and finely adjusted machinery.

About 1866, William M. Lloyd opened the first bank in the town, and was shortly after succeeded by the Tyrone bank, with Caleb Guyer as its cashier. For a long time previously, Mr. Guyer had acted as railroad agent, and in that capacity acquired an extensive acquaintance. Both banks did a large business. In 1876 the Blair County Banking Co. was organized, and it also became one of the fixed institutions of Tyrone. Edwin L. Study became its first president and Gen. Robert A. McCoy of the famed Pennsylvania Reserves and private secretary of Governor Curtin, was made cashier.

In 1835, 11 years before the establishment of Blair County, David Robinson; J. G. Fleck, of Sinking Valley; Allen McGlathery, E. B. Tipton, Robert Biddle, of Altoona; O. P. Haggerth, of Logan Township, and Thomas Skith, of Scotch Valley, were 7 of the 60 men who formed a military organization called the Union cavalry company.

The company was organized in Pleasant Valley and Martin Bell, of Elizabeth Furnace, uncle of Martin Bell, Hollidaysburg attorney, was made captain. James Hutchinson, of Altoona, was made first lieutenant and Joseph Irvin, of Hollidaysburg, second lieutenant.

Other members of the Union cavalry company included: B. F. Bell, James Hutchison, Oliver P. Haggerty, J. G. Fleck, John Hamilton, Smith Hamilton, Allen McGlathery, David Henshey, Samuel Noble, who was born in the old log house that formerly marked the site of Altoona; Thomas Smith, E. P. Tipton, Robert Biddle, Elias B. McClellan, Stephen Johnson, Thomas Trout, O. P. Trout, Joseph Irvin, Elias Moore, James Hopkins, A. K. Bell.

The Sheridan troop was organized July 15, 1871, with C. S. W. Jones, captain, and J. C. Akers, first lieutenant. Jones was elected captain in 1876.

Up to the 8th day of July 1880, Tyrone met with no serious reverses. About 3 o'clock on the morning of that day, a fire broke out in the livery stable attached to the City Hotel. The stable was burned to the ground. Its contents, including horses, a number of buggies, carriages, wagons, etc., were also destroyed. The third story of the Central Hotel, as well as a two-story frame dwelling, occupied by the Blair Banking Co., clothing firm of Meminger and Stewart and by Dr. J. M. Gemmil as an office, disappeared with the flames; also a frame two-story house with a one-story frame addition owned by James T. Owens, and occupied by W. B. Stewart as a shoe store and dwelling, and by Mrs. S. G. Black as a notions and stationery store.

The next victim of the fire was a two-story frame building owned by John A. Crawford and brother, of Sinking Valley, and occupied by John W. Thomas as a dwelling and by Smith & Gray groceries. From this point the flames leaped across an alley and attacked a large brick building owned by the heirs of Wesley Nowlin, and occupied by Templeton, Crawford & Co. as a dry-goods store, the roof and upper story of which were partially destroyed.

A large frame warehouse in the rear of the store and a frame dwelling house in the same locality also belonging to the Nowlin estate, met a similar fate. A frame dwelling house, owned by F. W. Fisk Conrad, was next consumed. A dwelling house adjoining, owned by Mrs. Rebecca Waler, was totally destroyed.

The Herald Building next to the City Hotel on Main Street, the first floor of which was occupied by D. B. Wilson, was a book and stationery store, the second floor of the Herald printing office, and the third floor by the Grand Army of the Republic, were partially destroyed, the first story remaining.

Next to the Herald Building, a two-story brick house, owned by Patrick Flynn, the first floor of which was occupied by the Tyrone Banking Co., and the second floor as offices of D. T. Caldwell and John A. Mathias, as well as a two-story frame hall adjoining the bank building, also owned by Mr. Flynn, yielded to the flames. The latter building was occupied on the first floor by the post office; P. Sneeringer & Sons, tobacco dealers, and George H. Garner, dealer in drugs; second floor, Democrat Printing Office.

Next destroyed was a frame building, owned and occupied by Van Valsah and Wilson as a dry goods and grocery store; also John Schullin's three-story brick building, occupied by him as a dwelling and merchant tailoring establishment; two-story frame building used by I. P. Walton as a dwelling and jewelry store.

An inconsiderable portion of personal property (goods, furniture, etc.) were saved, and in the absence of insurance the loss fell heavily upon many. The insurance, altogether amounted to about $100,000. The value of property destroyed was in the neighborhood of $150,000.

In response to a telegram transmitted by J. D. Hicks of Tyrone to Chief Engineer Rose of Altoona, about an hour after the fire broke out, the latter gentleman, with the Vigilant Steam Fire company, hastened to the scene of the conflagration.

Fires and floods, however, never dimmed the spirit of the businessmen and people of Tyrone. After every disaster the people worked together for reconstruction to make a bigger and better community.

There have been disasters which are not recorded in this account, but they are still within the memory of many persons residing in the community. Only the early vicissitudes of the community are recorded here.

Tyrone was incorporated as a borough on July 27, 1857, and on August 11, 1857, the community began to function as a borough and the first meeting of the Tyrone Borough Council was held. Jonathan H. Burley was the first burgess of Tyrone and through the succeeding years the borough has had men of competence and integrity as head of the municipal government.

Men with true community spirit directed the municipal affairs of the community. Those who have served as burgess are: Jonathan H. Burley, William Davidson, James Crowther, J. M. Harper, W. O. Myers, I. P. Walton, Samuel Berlin, James Bell, S. W. Barr, G. W. Ramsay, J. M. Calderwood, Thomas W. Graffius, Robert G. McLanahan, D. P. Ray, C. S. W. Jones, Rowan Clarke, James McCann, C. W. Bowles, J. W. Thomas, S. B. Templeton, Richard Beaston, J. K. Ray, J. W. Howe, James S. Gillam, Jacob A. Hoffman, E. J. Pruner, A. M. LaPorte, John H. Grazier, James I. Ginter, John S. Ginter, Raymond A. Hagerman, and Emanuel E. Rodgers, the present burgess.

Tyrone's first big step toward municipal ownership of public utilities came on February 5, 1932, when the water properties of the Tyrone Gas & Water Co. were purchased at a cost of $400,000. Since then great improvements have been made to the watersheds, reservoirs, and to Reservoir Park, which was first made available to the public by the late Adie A. Stevens, the park being known as Stevens Park until the name was changed, after being acquired by the borough.

The present municipal building at the corner of Logan Avenue and 11th Street houses all municipal offices, including the police department storage rooms, tax collector, borough auditor, water department offices, office

of the burgess, and the council room on the second floor.

At present extensive improvements and extensions are being made to the sewage system of the borough, first erecting a large sewage-disposal plant on the old Stine foundry property just east of the borough.

The present borough council and burgess are: Emanuel E. Rodgers, burgess; J. Lynne Ferner, council president; J. Scott Hommer, borough secretary and secretary for the water department; Miss Charlotte Faust, assistant secretary of the water department; Benjamin C. Jones, solicitor; Edgar A. Guyer, borough treasurer; Joseph A. Dickson, tax collector; James W. Hutchinson, chief of police; John W. Keefer, chief of the fire department and building inspector.

Members of the borough council are: First ward, James R. Black, John B. Jones; second ward, P. J. Meiklejohn and Bernard J. Oberly; third ward, Charles H. Cassady and Gilbert W. Kessler; fourth ward, John F. Dickson and Harry R. Gates; fifth ward, Edwin H. Woodring, Jr., and Sheldon Sellers; sixth ward, J. Lynne Ferner and Guy W. Hess; seventh ward, Robert H. Wilson and John T. Fitzpatrick.

[From the Tyrone (Pa.) Daily Herald of August 9, 1957]

HORSES HAD IMPORTANT ROLE IN BUILDING OF COMMUNITY

(By William Robert Fuoss)

Anybody who loves an outdoor horse show won't want to miss the big centennial celebration exhibition of Wednesday, August 14 at Horesman's field, Athletic park. This is the show extraordinary—the first and best of tis kind ever staged at the field. It begins at 1 p. m.

No prettier, more dramatic spectacle is imaginable than the sight of one hundred silken-coated, brilliant-eyed and splendidly groomed sale horses making the grand entry to spirited music, into an outdoor ring where, for 3 full hours, these horses and their riders will give a classical portrayal of Tyrone's century of progress.

Each set of ears will be at alert and velvety-soft necks will be arched as never before and long-flowing tails will be carried with a dash of extra pride for, consciously or otherwise, these beautiful creatures will know that they are putting on a show in Tyrone's honor. Even their glossy legs will glisten under the power of their great strength—these specially-trained animals that will come from far and near.

In ancient times these honors—such as Tyroners will see for nothing August 14—were reserved for the great of earth, kings and potentates, the rulers of empires. Only those of noble birth then dared own a horse. Many a crown fell from a kingly head for the want of a horse—the means of safety and security. No king or queen was crowned without the horse being at the coronation.

In this age of the mechanical, even the dawning of atomic power and wonders, few take time out to ponder what made this Nation great and strong and free. Three factors entered into the picture, the arduous labors of pioneering men, the advent of the steam engine and the domestication of the horse. It has been said "the railways brought civilization together and the horse kept it together." The horse tilled the soil, hauled the grains to the grist mills where they were translated into food for the table of men, even brought the timbers from stern mountains so they could be transformed into lumbers for man's home, his church, his school, his mill, plant and factory.

In a century of peace and prosperity—1857–1957—men do well to think of the part three factors played in our today's peace and progress. These things will be faithfully told, in simple and understandable language, at the big show of August 14. Long hours have gone into the drills, the preparation, and the planning. There will be a variety in this show—the kind you will like.

Life then was stern—100 years ago. The hours spent on farm and in factory were long, the pay miserably meager. Evolution, like education, is slow and gradual and so, too, is progress and prosperity. The early man, the steam locomotive and the faithful horse were the trail-blazers, forerunners of the glories of today. "Our Proud Heritage," factually speaking, dares not overlook these three factors—to do so amounts to a perversion of history. There will be a wholesome entertainment for all August 14. Plenty of food and plenty of souvenirs, too.

The Kuykendall and Paarlberg Nominations

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, August 20, 1957

Mr. BEALL. Mr. President, the degree of similarity or difference between this administration and its predecessor has been the subject of considerable discussion from time to time. Therefore, it was with considerable interest that I read an editorial entitled "There Is a Difference" in the August 18, 1957, issue of the Sunday Sun, of Baltimore. The editorial was quite thought-provoking and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THERE IS A DIFFERENCE

There has been a considerable argument to the effect that the Eisenhower administration is just New Dealism warmed over and that its strategy consists largely in stealing the old Roosevelt-Truman thunder away from the Democrats. This illusion could hardly survive three debates which have just occurred in the Senate.

First there were the long wrangles over the confirmation of Mr. Jerome K. Kuykendall for another term on the Federal Power Commission and of Dr. Don Paarlberg as Assistant Secretary of Agriculture. Then there was the very lively discussion on the AEC capital authorization bill.

The essential issue in the Kuykendall confirmation debate and in that over the AEC measure was the same. Mr. Kuykendall (who was finally confirmed) is anathema to men who want the Government to push forward in the development of power. The administration amendments to the AEC bill would have killed off plans for the AEC to build a $40 million nuclear powerplant at Arco, Idaho, and a $15 million plant at Hanford, Wash. Both amendments were defeated by substantial margins.

The debate over the Paarlberg nomination turned into an argument between critics and friends of the Benson farm policies. The gist of these is a return as near to the normal supply-and-demand market as possible and as soon as possible. Secretary Benson and Dr. Paarlberg, the latter a farm economist of high caliber, thus oppose Government supports and subsidies, the whole farm machinery which for 20 years has expanded Government control of agriculture. This debate the administration won when Dr. Paarlberg was confirmed.

But the issues here show clearly the difference between Eisenhower and his critics. He wants to widen as much as possible the area where private business and natural market interests prevail. They want to expand Government influence at strategic points. For the President, Government intervention should be marginal and exceptional. For his opponents it could be nearer the center of things and a good deal more frequent.

The President, of course, is not a laissez faire man in the sense that the Reverend Dr. Adam Smith was—that the Reverend Dr. Smith conceded freely that the Government must do some necessary things which private operators could not or would not do. His opponents are not Socialists. But there is a perfectly obvious ideological divergence between them and people who deny it would have to deny that the Paarlberg, Kuykendall and AEC debates took place.

School Construction in Federally Affected Areas

SPEECH
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. HOLT. Mr. Speaker, I yield myself 1 minute.

Mr. Speaker, I support the pending legislation as it is. It would not have been voted out of the committee unless an emergency had existed with respect to the military bases. There are over 150 bases that are affected by this CAPEHART housing matter and I feel many of them are more important than the Air Force Academy. That is why I support it.

It is true we intend to take up Public Law 874 when Congress convenes once again because we realize the school districts are having a tough time with their budgets and, speaking for the Republican side, we intend to take it up thoroughly next year and give all school districts plenty of time for their planning.

I supported the extension of Public Law 815 for an additional year beyond its present expiration date of June 30, 1958. This is necessary to finance the construction of schools for approximately 34,000 children that it is expected will be living in some 45,000 CAPEHART housing units located on military installations in 40 States and 3 Territories, which will be completed between the present termination date for Public Law 815, and June 30, 1959.

If this extension is not made at this time, none of the children may be counted for entitlement under the law as it is currently in effect; yet, it is this group of children which the law is intended to cover.

While much stress was laid upon the necessity for passing this legislation to accommodate the children of military personnel who would be housed at the Air Force Academy, I found, after making a personal investigation, that 150 bases covering all branches of the service would be affected by this Capehart housing and were in need for the extension of this legislation.

I certainly feel that authority should be given at this time so that the building of schools would be ready at the time the houses were completed and occupied. If this extension were not made, a year would elapse, during which time the children would have no school buildings as it requires on the average of 12 to 15 months to construct a school after Federal funds are made available.

There are some provisions of Public Law 815 which need amending. This is true also of Public Law 874, which provides Federal funds to local school districts for the maintenance and operation of their schools in impacted areas. It is my judgment, which has been concurred with by the subcommittee and full Committee on Education and Labor, that there is no need to extend Public Law 874 at this time, primarily because the subcommittee plans to begin hearings on this matter early in January. In fact, the subcommittee expects to have a thorough study to the recommendations of the Department of Health, Education and Welfare, and report out legislation early in the next session, which should be in ample time for the local school districts to calculate their budgeting for Public Law 874 and make any modifications necessary due to the changes made in Public Law 815.

St. Stephen's Day in Hungary

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. MULTER. Mr. Speaker, 950 years ago a king ascended the throne of Hungary; a king who by his Christian character and benign rule gained the title of "Apostolic King"; a king who was the founder of the Hungarian state as it has existed down through succeeding centuries. In commemoration of the saint who was the first King of Hungary, Hungarians will celebrate on August 20, as best they can, St. Stephen's Day.

To remember their national founder today must bring mixed feelings to the hearts of the Hungarian people. On the one hand, it must arouse a feeling of pride in the history of the Hungarian nation, a history brightly studded with achievements in the arts, in the sciences, and above all, in the struggle for human and national freedom. On the other hand, it must bring a feeling of tragedy and sorrow as they consider their nation, bound under the heel of the oppressor, betrayed and dishonored by the ruthless tyranny of Soviet communism.

Every American who cherishes deeply within him the belief in human rights and fundamental freedoms, the belief in the sovereign right of self-government, would have joined in some way, if he could have, in the recent gallant fight of the Hungarian people for the restoration of their freedom. The cruel exigencies of modern power politics and of modern warfare, made such a course impossible. A liberation which precipated a world war would be a liberation of desolation, a silent freedom of the grave. What can be done now, however, is to keep aroused the world public opinion which has so sternly condemned the Soviet Union in the United Nations. What can be done now is to keep open the doors of sympathy and relief and rehabilitation and resettlement of those valiant freedom fighters who would have given their all for the redemption of their homeland. What can be done now, is for individual Americans to help in what way they can, those warriors of the cause of Hungarian freedom who have had to seek refuge in our own land. What can be done now is to keep alive the hope that some day, in the not too far distant future, St. Stephen's Day will again be celebrated in freedom, in joy, and in thanksgiving.

The Fast Tax Writeoff Gimmick

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column by Richard L. Strout from the Christian Science Monitor of August 3, which is a very clear and detailed discussion of the fast tax writeoff arrangement popularized by this administration and substantially repealed by a recent act of Congress.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of August 3, 1957]

THE FAST TAX WRITEOFF GIMMICK—AN INTIMATE MESSAGE FROM WASHINGTON

(By Richard L. Strout)

WASHINGTON.—Suppose you owe the Treasury $500 in income tax. It's a lot of money and makes you feel uncomfortable. For the next 5 years you will probably have about the same annual tax. But suppose the Government allowed you to hold back $100 of this tax every year for 5 years. That would amount to $500. And then suppose the Government agreed to let you repay that debt through payments a little higher than the normal tax for the next 45 years, without interest.

Would that aid you? You would have to sit down and figure. In the long run, the Government would get back the same number of dollars as though you had paid the whole tax year by year. But you would have one advantage. You would have received what amounts to an interest-free loan of $100 that first year, another the second year—$500 in all. Would that help you?

Well, suppose you had invested that $500 "loan" at 4 percent compound interest. Over 50 years that mounts up. Even though you paid a little higher income tax over the remaining 45 years, the initial advantage would outdistance it. Actuaries say that at the end of 50 years you would be $1,819.17 to the good.

Put it the other way round. The Treasury would be the poorer by $1,819.17 at the end of 50 years, if it gave you this little favor reckoned on a 4-percent basis. (The Treasury now has to pay 4 percent when it issues bonds to fill in for such deferred taxes.)

If your neighbor did not have this tax advantage—which is called, in technical parlance, the fast tax writeoff—and learned about yours he would probably be sore. "Why not to everybody?" he would say.

The Federal Government has been granting fast tax writeoffs—but not to individuals, to corporations. They were meant to encourage companies to undertake important defense contracts in emergencies. The war emergency is over but this tax bonanza is still being handed out. It is going not merely to defense plants but to civilian companies, particularly private power groups, whose connection with defense is difficult for the layman to understand.

An article in the current Reader's Digest on Northwest power discusses the fast tax writeoff. Under the plan, it explains, the Idaho Power Co., for example, could have deducted from its taxable income, for 5 years, some two-thirds of the construction costs of 2 of the proposed Hells Canyon dams. But, continues the article, the company would thereafter have paid more than normal taxes. At the end of the lifetime of the two dams (50 years), it would have paid full Federal taxes on all of the income from the operation of the dams. This, the article explains, is merely a temporary advantage.

Under Senate criticism the Idaho Power Co. gave up the fast tax writeoff advantage which the administration had granted it. A Treasury official testified that the Treasury would have lost as much as $83,960,000 by this writeoff. This would have been spread over 50 years.

The fast tax writeoff gimmick is hardly a paltry matter. The Treasury estimated last month that it has already lost more than $4 billion since 1950 by it. Senator ESTES KEFAUVER, Democrat, of Tennessee, estimates that by 1958 private power utilities alone will have benefited by $6 billion.

Former Treasury Secretary George Humphrey called the fast tax writeoff an artificial stimulus of a dangerous type. Economy-minded HARRY BYRD, Senator from Virginia, bluntly calls the practice a subsidy. Mr. BYRD described the particular (and now voided) grant to the Idaho Power Co. utterly indefensible.

Anyone supporting free enterprise must think twice about a system of government interference in business which gives fat tax bonanzas to some companies and withholds them from others.

This Land of Ours

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden (S. C.) Chronicle, of August 14, 1957:

THIS LAND OF OURS

Ours is a wonderful country filled with a lot of wonderful people. Take, for instance, the case of Dorothy Brown, the discovery out of the two-room shack in the North Carolina mountains backcountry. Since a newspaperman tripped upon her several days ago, she has received nationwide publicity, and now everybody, from piemakers to shoe salesmen, are ready to dump a fortune into

this dark-haired beauty's lap. It could only happen in America.

Then take another example. "Tennessee Ernie" Ford. Raised on cornbread, blackeyed peas and sowbelly, proud of it, too. Tells the world about it. He could pick a guitar a little, had a pretty good voice. Now he counts his fortune in the millions. Again, it could only happen in America.

And, then too, there was the late Senator Walter George, of Georgia. The son of a poor Georgia sharecropper. Very few advantages, but he went far, a great leader of all the people of the Nation.

Capitalists, the Russians call us. The richer getting richer, the poorer getting poorer. The rich dominate the poor. No opportunity for the poor. Tommyrot.

America is a great country, great in size, great in opportunity. The sharecropper's son wanted it badly enough to toil for it. He got it. The opportunity he had we all have. It's the fight and drive which separates the men from the boys.

The Effects of the Decision in the Mallory Case

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. THURMOND. Mr. President, the far-reaching and adverse effects of the Supreme Court decision in the Mallory case were demonstrated again yesterday.

The United States Court of Appeals reversed a first-degree murder conviction of another confessed murderer because of the precedent established by the Mallory case decision.

Clarence E. Watson, Jr. has twice been convicted of first-degree murder for the slaying of Miss Alyce O. Taggart on July 5, 1953. But yesterday the United States Court of Appeals, relying on the Mallory case decision by the Supreme Court, held that Watson had been detained too long after his arrest before he was arraigned. In referring to the Mallory case, the Court of Appeals said that "the circumstances there narrated so closely parallel those in the instant case that we see no basis for distinction."

Mr. President, law enforcement officers all over the country have voiced their fears that the Mallory case decision will provide a basis for many serious crimes to go unpunished.

This latest case, the Watson case, is a clear demonstration that the fears voiced by law enforcement officers are valid fears. The man whose conviction was reversed yesterday is already serving a prison term of from 13 to 40 years on a conviction of rape. He committed murder when he was resisted in attempting to commit the same crime in another instance.

The lives of innocent citizens of this country are in increased danger from murderers and rapists so long as the Mallory case decision is permitted to stand unaltered.

Mr. President, I hope that before the Congress adjourns action will be taken on the bills now pending in the committees of both the Senate and the House of Representatives to enact a law to prevent the Supreme Court from giving continued protection to criminals at the expense of innocent citizens.

I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Washington Evening Star yesterday, August 19, entitled "Appeals Court Again Reverses Watson Verdict." This story points up the seriousness of the legal situation which has resulted from the Mallory case decision.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APPEALS COURT AGAIN REVERSES WATSON VERDICT—MALLORY PRECEDENT INVALIDATES DUCKPIN DEATH SENTENCE

(By William G. Pollard)

The United States Court of Appeals today for the second time reversed the first-degree murder conviction of Clarence E. Watson, Jr., 23-year-old former Pentagon shoeshine boy, relying on the Supreme Court decision in the Mallory case dealing with detention prior to arraignment.

Watson has twice been convicted of first-degree murder in the duckpin slaying of Miss Alyce O. Taggart, a 45-year-old Government secretary, on July 5, 1953. Miss Taggart was slain in her room in Scott's Hotel, 2100 block of O Street NW.

Watson's first conviction had been set aside on grounds that a written confession was illegally admitted as trial evidence. The court at that time ruled that an unreasonable length of time had elapsed between the time of arrest and arraignment.

NEW TRIAL EXCLUDED CONFESSION

Last December, Watson was again convicted at a trial where the written confession was excluded.

A jury at that time found him guilty of slaying Miss Taggart while attempting to rape her, a first-degree count. At the same time, the jury found him guilty on a lesser charge of second-degree murder on a count which had originally charged murder through premeditation. He was sentenced to death.

First Assistant United States Attorney Edward P. Troxell said the decision will be studied to determine what future action will be taken. United States Attorney Oliver Gasch is on vacation.

Court sources not wishing to be quoted expressed the view that it would be impossible to convict Watson upon retrial in light of the appellate ruling.

ATTORNEY TO ASK DISMISSAL

Attorney Albert J. Ahern, Jr., representing Watson, said he will seek dismissal of the murder indictment against his client in view of the appellate court decision.

In the unanimous opinion today, written by Judge John A. Danaher, the appellate court declared it was bound to apply the Mallory rule in the Watson case.

It was pointed out that Watson had been apprehended at 6:40 p. m. when he returned home from work.

"During the evening and part of the night he was questioned, denying guilt until about 3:15 a. m., when he made the first oral inculpatory disclosures. They were repeated to various officers next morning before 9 a. m. when the courts in the District were opened. Many judges were available, but Watson was not presented before any of them," continued the court of appeals decision.

"After 9 in the morning, still without arraignment and lacking judicial warning, the accused reenacted the crime and accompanied by the police, went to his apartment where the police obtained the articles of clothing later offered in evidence against him. The situation in this particular was not unlike that presented in Mallory, where the court had concluded that 'the consent was an immediate accompaniment to a confession of the crime and derives color from the confession.' Some hours later he was arraigned," said the opinion.

"Thus, his admissions, his reenactment of the crime, his consent to the visit to his apartment and his turning over the clothing were all unwarned, and the evidence had been so developed during a period following by many hours his arrest the previous evening."

TIME ELEMENT CITED

On this score, the court of appeals declared: "All must fall together, as *Mallory v. United States* requires, for he was not arraigned until 'judicial caution had lost its purpose.'"

Judges E. Barrett Prettyman and Walter M. Bastian heard the case in the court of appeals with Judge Danaher.

Watson is currently serving a prison term of from 13 to 40 years for breaking into an apartment and raping an airline stewardess.

In its decision, the court of appeals pointed out that Watson had asked reversal of the conviction on the ground that District court had erred in the denial of his motion to suppress the use in evidence of certain articles of clothing seized without a search warrant from appellant's (Watson's) apartment in that the Government had failed to establish a waiver of appellant's fourth-amendment rights or a voluntary consent to the search.

MALLORY CASE CALLED PARALLEL

The court commented on the motion, but pointed out that since the appeal was argued last June 10, the Mallory case had been decided. In connection with the Mallory case, the court declared the circumstances there narrated so closely parallel those in the instant case that we see no basis for distinction.

In the Supreme Court's recent decision reversing the rape conviction of Andrew R. Mallory, the Court held that Mallory was held too long between arrest and arraignment. His confession reportedly came 7½ hours after his arrest. The opinion has been interpreted as barring headquarters questioning of suspects that leads to confessions.

The Mallory decision has created nationwide alarm in law-enforcement circles and prompted a series of hearings by a House Judiciary Subcommittee exploring the possibilities of legislation.

School Construction in Federally Affected Areas

SPEECH
OF
HON. JAMES P. S. DEVEREUX
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. DEVEREUX. Mr. Speaker, I would like to ask 1 or 2 questions of the gentleman from Montana. There is no question about the fact that if 874 were added to this bill by the other body the committee would go along with it?

Mr. METCALF. I cannot speak for the committee. The gentleman from North Carolina [Mr. BARDEN] is chairman of this committee. As far as the

ubcommittee is concerned, we voted unanimously for 874 as well as 815.

Mr. DEVEREUX. Did the subcommittee recognize the urgency as far as planning is concerned? We are particularly concerned about that in some sections of my State. We are interested in the planning phases of maintenance and operation.

Mr. METCALF. Planning was considered by Secretary Folsom and he sent his recommendations up feeling it should not be extended. We in the subcommittee discussed that.

Indirect Taxes

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Lancaster (S. C.) News of August 12, 1957:

INDIRECT TAXES

Everybody talks about taxes. And, in doing so, practically everybody talks about direct, visible taxes, such as those on income and property. That's natural enough, for we can actually see and feel the inroads those taxes make. They come out of pocket, or are withheld from our pay checks, or are a specified part of mortgage installments.

But the tax problem and the tax burden don't end with these taxes—not by a long shot. Hidden or indirect taxes, which enter in the cost of anything, are a huge item of expense to the American people. As a matter of fact, at many income levels they are a much larger item than direct taxes.

Bem Price, an Associated Press Newsfeatures writer, has come up with an interesting account of what is involved. As examples, he takes a cheap commodity and an expensive one—a loaf of bread and an automobile. "Actually," he says, "nobody has managed to count the taxes included in the final price of either." It's an impossible job * * * for in the case of bread alone you would have to trace back to the taxes on the machines that made the machines that made the machines that planted and harvested the tax-supported wheat, grown on tax-paid land by an income-tax paying farmer.

The same problem arises in the case of a car—Hildebrand – Nite Pats – Aug. 20—43305 the car. However, there are certain taxes that can be accurately totaled up. Mr. Price takes a car carrying a Michigan price of $2,000. The figurable tax is $559.83, of which $488.81 is hidden so far as the purchaser is concerned. Included are estimated taxes on materials and parts, estimated income and other taxes paid by the manufacturer, similar taxes paid by the dealer, and so on. If the car is bought at a distant point instead of Michigan, the hidden transportation tax adds further to the cost.

Going back to bread, Mr. Price quotes the Tax Foundation as counting 151 identifiable taxes which are passed along to the consumer. An authoritative estimate holds that taxes take about $1 for every $5 spent on food. Searchers have run down 116 taxes on a man's suit, 600 on a house and 150 on a woman's hat.

Dickson J. Preston of the Scripps-Howard staff also has produced an interesting piece on hidden taxes. He says that about 20 percent of all you spend is absorbed by taxes, and in the case of many items the proportion is much higher—nearly nine-tenths of the price of a bottle of whisky, for instance. And he quotes another Tax Foundation report, concerning a man earning $4,500 a year. This man pays a total Federal, State and local tax bill of $1,393. The visible part of that is only $387. The invisible part is $1,006.

The moral is found in Bem Price's last paragraph: "The man who wrote that song about the best things in life being free had better have another look. He might change his tune."

Smoking and Lung Cancer

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. WATTS. Mr. Speaker, in view of the extensive publicity that has been recently given to the proposition that there is a casual relationship between smoking and lung cancer, I feel that the observations set forth by Dr. Milton B. Rosenblatt, in a letter to Dr. Leroy E. Burney, Surgeon General, United States Public Health Service, dated July 15, 1957, will be of substantial and constructive interest to everyone. Certainly, every bit of information, both pro and con, treating of this delicate and serious problem must be made available to all.

Dr. Milton B. Rosenblatt is associate professor of medicine at New York Medical College and visiting physician and chief of the chest clinic at New York City Hospital.

Dr. Rosenblatt, with Dr. James R. Lisa, director of the pathology service, New York City Department of Hospitals, is author of an authoritative medical book entitled "Cancer of the Lung—Pathology, Diagnosis, and Treatment," published by the Oxford University Press, New York City, 1956. Six other medical authorities contributed chapters to this book on aspects of the disease in which they specialize.

Dr. Rosenblatt is also a fellow of the American College of Chest Physicians, the American College of Cardiology, the New York Academy of Medicine, and the American Medical Association.

The Rosenblatt-Lisa book has received favorable notice in medical and scientific journals both here and abroad.

Both Dr. Rosenblatt and Dr. Burney have approved the insertion of this letter in the RECORD.

The letter follows:

NEW YORK, N. Y., *July 15, 1957.*

Dr. LEROY E. BURNEY,
Surgeon General, United States Public Health Service, Washington, D. C.

DEAR DR. BURNEY: In an article in the New York Times on July 13, 1957, statements from my book Cancer of the Lung were quoted in regard to your taking an official position on the etiological role of smoking in lung cancer.

There is no question of the responsibility of the Public Health Service in bringing health facts to the attention of the health professions and the public. Should not this responsibility be extended to include a presentation of all the facts from responsible sources? In an issue which seriously involves the public's welfare and which is so highly controversial, the official promotion of one point of view denies the public the opportunity to evaluate the data which reject the proposition that a casual relationship between smoking and lung cancer has been established. May I summarize some of the facts:

1. Cancer of the lung has been recognized for more than 150 years antedating the popularity of cigarette smoking by more than a century.

2. In hospitals interested in the disease, and/or with routine autopsies, there has been no real increase in lung cancer with respect to total cancers. This holds for the 19th century as well as for the 20th century. For example, in a survey of the hospitals conducted by the London County Council, the percentage of lung cancer to total cancers was 25 in 1936 and 27.1 in 1947.

3. The attempt to implicate tobacco was first made in this country by Adler in 1912. Inasmuch as cigarette smoking had not yet achieved popularity, the onus was placed on cigars. With the greater consumption of cigarettes in later years, the blame was gradually shifted to cigarettes, finally culminating in the recent barrage of statistical epidemiological studies conducted on the grand and loud scale.

4. A statistical association does not imply a cause and effect relationship, particularly, when the validity of the conclusions is seriously questioned by such responsible statisticians as Joseph Berkson of the Mayo Clinic or Edward Lew of the Metropolitan Life Insurance Company.

5. Bronchogenic carcinoma has never been produced by tobacco or its products in any experimental animal despite the multiplicity of attempts. Dr. Greene, of Yale, who has devoted a lifetime to experimental cancer research found no casual relationship between smoking and lung cancer. Actually, he found tobacco tar to be among the lowest of the carcinogenic agents used experimentally. The production of skin cancer by tobacco products is of little significance, particularly, when reputable investigators could not reproduce the experiment.

6. History has repeatedly demonstrated that whenever an inaccessible cancer becomes accessible, the incidence automatically increases. Prior to 1930, the clinical facilities for the diagnosis of lung cancer were few and far between even in thoracic disease hospitals. The perfection of diagnostic tools (exfoliative cytology, bronchoscopy, radiology, and exploratory thoractomy) occurred within the past 25 years. This is obvious to all who have worked through this era. Many hospitals now perform more bronchoscopies per day than they did per year a quarter of a century ago. The records of a world-famous cancer institute show that its staff recognized only about half a dozen lung cancers annually before 1930.

7. Lung cancer is a disease of older age groups. There are more older people among us and more potential candidates for lung cancer. The total number of cases is increasing but the rate of increase is slowing down and will eventually be stabilized like laryngeal or other upper respiratory cancers in which diagnostic methods have been long established.

8. The nasopharynx and the larynx are greatly exposed to tobacco products and if tobacco is a carcinogen for the lung, it should also act on the upper respiratory passage. However, no statistical association has been demonstrated between increased consumption of cigarettes and increased incidence of upper respiratory cancer. In 1940, the United States death rate from laryngeal cancer was 1.1 per 100,000 and in 1950, it was 1.2 per 100,000.

9. The predominance of the disease in males has lent support to the smoking

theory on the assumption that men are the heavier smokers.[1] Be that as it may, women have been smoking prodigiously for a great many years. If smoking were a factor in lung cancer, the ratio between male lung cancers and female lung cancers should be gradually decreasing over the years. However, although the disease is increasing in females, the ratio is always predominantly in favor of the male suggesting that the greater susceptibility of the male is based on more basic sexual factors.

10. The prevalence of lung cancer is more related to diagnostic facilities than it is to smoking, air pollution, or other urban factors. No matter how remote the community, the establishment of a diagnostic center inevitably results in a greater incidence of lung cancer. A survey in East Pakistan disclosed 20 new cases over an 18 month period; only 2 of the new cases were heavy smokers and these used the hukka, a water-filtered pipe.

The recent increase of lung cancer throughout the world has occurred in countries where cigarette consumption has increased (United States, Canada, Italy), and it also occurred in countries where cigarette consumption remained fairly stationary (Germany, Austria, Turkey, Japan). National origins have also been implicated in lung cancer. In an epidemiological study in New Zealand, Eastcott found a higher incidence of lung cancer among those who were originally born in England, the risk of contracting lung cancer being proportionate to the years in which they were exposed to the English environment. Smoking was absolved inasmuch as the smoking habits of both countries are similar.

11. The epidemiological studies, unsupported by corroborative experimental data, show only the number of smokers who have lung cancer. Any other conclusion is speculative. In a disease like cancer, in which so little etiological data has been established, it is presumptive to rely on epidemiological studies which are questioned by statistical experts and refuted by clinical experience.

Until the etiology of lung cancer has been firmly established more will be gained by a circumspect point of view. Medicine has had its share of collossal blunders in the past. Not too long ago, tuberculosis was attributed to night air and lung cancer, to tuberculosis.

Respectfully submitted.

MILTON B. ROSENBLATT, M. D.

P. S.—References are available at the end of chapter 11, Cancer of the Lung, Oxford University Press, 1956.

The Small Farm

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the South Carolina Gaffney Ledger of August 13, 1957:

THE SMALL FARM

An official of the Department of Agriculture recently stated that, in his opinion, there were too many farms in the United States. While the official may be right, we dislike accepting such a statement.

We like to believe that in this country there is always room for the free farmer, who wants to till his land and make his life by working the soil. We hesitate to accept the conclusion that farming is only for the big operator, the mass-farmer, so to speak.

We think that America will be a stronger Nation, and a greater one, as long as the individual and his family can farm a small area, living with the soil and keeping in touch with the earth in this fashion. We think that no occupation is nobler than that of farming.

We suspect the trouble with the farmer today and the farm situation in the United States is that the farmer does not get an adequate share of the income and profits from his products. We think the Agriculture Department would do well to concentrate its efforts in this direction, rather than in the negative field, by concluding that we have too many farms.

Actually, the one-family farm can operate relatively cheaply today—with a few mechanized vehicles—because much of the labor is performed by the family itself, in the tradition of the farm, and therefore labor costs are kept down to a minimum.

If the farmer were getting his fair share of the income and profits derived from farm products, there would always be room in this country for the one-family farm. We hope there always will be.

Jury Trial for Editors?

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. POFF. Mr. Speaker, it begins to appear that some of the newspaper editors who so vigorously supported the House version of the civil-rights bill and who so militantly opposed the jury-trial amendment have suddenly discovered that the bill may not after all be entirely meritorious in every detail. They are afraid that one provision in the bill may possibly expose them to criminal prosecution for the disclosure of matters discussed in executive session of the Civil Rights Commission. In connection with such prosecution they have not, significantly, protested the fact that they will be entitled to the protection of a jury trial.

Touching that point in a most piercing way was an editorial in the August 18, 1957, edition of the Sunday Star which, under leave to extend my remarks, I quote herewith:

IF THIS BE TREASON

Some of the editors around the country are quite upset over one of the provisions of the civil-rights bill which could affect them. Under that provision, approved by House and Senate, anyone who releases or "uses" without the consent of the Commission on Civil Rights any testimony or evidence given in executive session of the Commission shall be fined or imprisoned.

The protesting editors, knowing they would print such testimony if they could get it, say this provision is very bad, and they argue that it infringes upon freedom of the press. Maybe so. Yet the editors may not realize how fortunate they really are. For if they were prosecuted for violating the objectionable provision, they would at least have the right of jury trial.

According to some of the propaganda emanating from the Department of Justice which some of the editors have been parroting, jury trial has no place in the civil-rights bill. What is sauce for the goose, however, is sauce for the gander. Why should editors have jury trials? Perhaps the juries would not convict. What should be done, therefore, is to "strengthen" the provision. It should be amended to give the Attorney General the right to bring a civil action in the name of the United States to prevent acts on the part of editors in printing unauthorized news that leaks from executive sessions of the Commission. This would follow the basic pattern of the civil-rights bill in seeking to protect the right to vote. Clothed with this new power, the Government could try offending editors without a jury. The process would sustain the power and dignity of the Federal judiciary, as this empty phrase goes, and send the editors to jail without undue delay.

That, at least, is the line some of the editors have been taking in opposing the Senate's jury-trial amendment. The civil-rights bill, therefore, should not be "weakened" or "emasculated" or "nullified" or "destroyed" by giving offending editors jury trials, or by safeguarding the freedom of the press at the cost of interfering with the rights of the Commission on Civil Rights to the privacy of its executive sessions.

The irony of political circumstance which finds able editors defending freedom of information while swallowing the hokum that some citizens should forfeit the freedom of trial by jury is inescapable. So if this be treason, make the most of it.

The Jaycee Safe Driving Program

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. OSTERTAG. Mr. Speaker, I am sure the Members of this body are familiar with and applaud the efforts of the United States Junior Chamber of Commerce to encourage safe and responsible automobile driving on the part of our teen-agers and to report the progress being made. These efforts are made effective through the Jaycee chapters and members in the several States. The written examinations and road tests provided for afford an opportunity for all teen-agers to demonstrate to their community that they are interested in increasing their knowledge of traffic laws and improving their driving ability, and that actually they are doing so.

Now in its sixth year as a national junior chamber of commerce safety program, the Teen-Age Road-E-O has gained steadily in teen-age participation. The demonstrated value of this type of traffic safety programing has attracted the support of teen-agers themselves, their parents, educators, traffic authorities, and community leaders. Each year, State and National organizations, all interested in traffic safety, contribute time, abilities, and money to make every Teen-Age Road-

E-O a success. Businesses, law enforcement officials, driving instructors, and insurance personnel cooperate with the Jaycees in staging the local, State, and National Teen-Age Road-E-O programs.

On June 30, last, I had the privilege and pleasure of attending the New York State Teen-Age Road-E-O held in Batavia, N. Y., in my congressional district. Upon this occasion the Batavia Jaycee Chapter, under the chairmanship of Mr. E. A. Thornton, Jr., of Batavia, was host to the participants. Some seventy-odd teen-agers from all parts of the State were there to sit for the written examination and participate in the driving tests. I was deeply impressed and encouraged by what I saw there. There is much to hope for from the enthusiasm and determination of those young people and the results of their performances.

I am proud to report at this time that the United States Junior Chamber of Commerce has honored the State of New York for conducting the outstanding Teen-Age Road-E-O in the Nation. The welcome and gratifying decision to do so was made upon the basis of the overall excellence of the Batavia event the splendid percentage of participation of Jaycee Chapters in the State the effective promotion program used and the size and scope of the awards banquet.

A handsome trophy was presented to the State by the national Jaycee organization. Its executive board made the presentation to Past New York State Jaycee President F. Joseph Leone at a luncheon meeting in Tulsa, Okla., on July 26. The inscription upon it read: "United States Junior Chamber of Commerce Outstanding Safe Driving Teen-Age Road-E-O 1956–57—New York—State President F. Joseph Leone, State Chairman E. A. Thornton, Jr." This is the first time that such an award has been made and we of New York State are justly proud of this outstanding record of achievement.

Communist Menace

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. DEROUNIAN. Mr. Speaker, one of the greatest hazards to our way of life is the refusal or inability of our people to recognize the subversive individual for what he is. I commend to you the following article by David Lawrence, which appeared in the Herald Tribune this morning, August 20, 1957:

TODAY IN NATIONAL AFFAIRS—SPY ARREST, MORROS REPORT CALLED A WARNING TO GULLIBLE

(By David Lawrence)

WASHINGTON, August 19.—The arrest of a high officer of the Soviet secret police who has been gathering and transmitting secret defense data from this country to the Communists, and the revelations of an American businessman who has for 12 years been an undercover agent of the FBI, participating in Communist espionage operations in America from the inside, ought to open up the eyes of many well intentioned but incredibly naive Americans who have been pooh-poohing the Communist menace.

Boris Morros—a counterspy for the FBI—issued a few days ago, with the permission of the United States attorney in New York, the most significant statement about Communist activity in this country that has yet come to light. He said:

"I know from personal information and experience that Soviet espionage has made considerable infiltration in this country. Many of the agents working for Russia are important people, financially independent and often held in high esteem. Many of the Soviet's most active workers in this country don't come from the rank and file, nor the underprivileged. They are people who have the kind of contacts which will be useful to the Soviets, and they are being paid to do their jobs of treason in the United States."

Those Supreme Court justices who live in a vacuum might well ponder what this undercover man now tells. Likewise, those so-called liberals who have been unwittingly lending their prestige to a kind of blanket protection of Communists and sympathizers—as being merely addicts of some kind of philosophy or political belief—might prepare for a sad disillusionment as they read what Boris Morros has learned about the work of Soviet spies in America.

MUST HAVE CONTACTS

For no Communist spy calls directly on a newspaper editor or on a Member of Congress or on a political leader to exercise influence. Somewhere in between the espionage apparatus and the official or institution sought to be reached is a contact—with no foreign accent or identification—who attempts to use Americans as tools of Moscow. This is the most baffling kind of screen that faces the detective arm of the Government, the FBI. Sometimes there is another type of contact who himself is unaware that anything has been planted on him. Also there may be other intermediaries beyond him who help to relay a suggested course of action which ultimately would be favorable to the Communist cause, particularly in the field of propaganda.

Then there is the cover technique by which, according to Mr. Morros, 55 business firms in the United States were covers for Soviet espionage. Mr. Morros told the House Committee on Un-American Activities how the Communists had proposed to expand his own small recording company in Hollywood.

"This firm," said Mr. Morros, "was to serve as an espionage cover and provide an opportunity to legitimize Soviet agents as representatives of the firm."

COURT STAND RECALLED

Yet a majority of the Supreme Court say they don't know what an un-American activity is and why the committee wants to expose un-American activities.

"I want to emphasize," says Mr. Morros, "that the Russian plot is far more strongly organized in this country and throughout the world than is generally understood by our people. * * *

"Another Russian agent, a prominent American woman * * * not only said the same thing (suspicion about Morros) but she reported her suspicions to the second secretary of the Russian Embassy in Washington. I had a number of close shaves but none closer than when this woman's report on me was received in Moscow while I was there, conferring with the heads of the Russian secret police."

Yet there are many persons who want to throw monkey wrenches into the machinery of exposure which congressional committees have been using effectively. Also, there is a concerted effort to assist in the evasive tactics of witnesses who could, if they chose, give important information that would tell the FBI and the public about spies and their contacts with Americans.

Unfortunately, the Supreme Court—by ruling that the first amendment as well as the fifth amendment now can be invoked to help conceal treason—has thwarted the efforts of the Government to obtain much data necessary to protect the security of the United States.

Maybe the testimony by Boris Morros will open the eyes of the American people to the barriers and obstacles being placed in the path of investigative agencies by well-meaning but misguided and ill-informed persons in what amounts to a protection of the espionage being conducted by the Soviets inside America.

The Capitol Guide Service

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I am introducing today for appropriate reference a bill to establish a free guide service for the United States Capitol Building.

The Capitol Building is the only building in Washington where visitors are charged for guide service.

The White House visitors do not have to pay for the privilege.

One of the very interesting and curious institutions in the Nation's Capital, familiar to anyone who has visited here, is the Capitol Guide Service. This service has persisted for at least 80 years in its present form, so I have learned, and the 2 million to 3 million people who visit the Capitol Building annually are led to believe that they are required to pay a 25-cent fee for the services of these guides. Few know in advance of the charge and fewer still know that they are free to roam over the Capitol Building by themselves without paying the fee—they feel they have to pay to see their own Capitol.

The anomaly of a guide service in the Capitol Building of a major Nation charging the sightseers for services is unique, and is remarked on constantly by visitors from abroad, being compared unfavorably with practices in their own countries.

Personally, I never have had the slightest complaint to make about any of the Capitol guides as individuals. These guides are unusually fine men and women who make a contribution to an understanding of their Government by those who visit Washington, D. C. I simply am commenting on the practice of leading visitors to the Capitol Building—who, after all, as citizens and taxpayers, own the very building housing the Congress—to believe they must pay to see their own property. Ever since I first had the privilege of going through this building, I have been convinced that it, of all buildings in the United States, ought to have free guide service. The present system just grew up without any thought being given to a permanent program.

I visited a few foreign capitals when abroad in the Navy during World War II and I have talked to widely traveled Members of the Congress as well as other experienced travelers and the consensus is that the system of charging is distinctive and that there is no foreign capital, and no capital in any of the 48 States, which has a similar system.

Control of the Capitol Building is vested in the President of the Senate and the Speaker of the House of Representatives and these distinguished officials delegate their authority to a board, composed of the Sergeant at Arms and Doorkeeper of the Senate, the Sergeant at Arms of the House of Representatives and the Architect of the Capitol.

I would like to see the uniform practice for guide service established in the Nation's Capital applicable alike to the White House and the other Federal buildings, extended to include the Capitol Building. The practice of charging, and herding visitors to this great Capitol Building into groups, to make sure that all pay and few escape, seems to me to be a cheap and degrading one.

According to the best information I have been able to gather on the subject, the present guides make at least $10,000 a year.

Legislation was considered by the Congress in the 1920's to set up a free guide service but affirmative action to change the system did not result. Perhaps the time has come to abolish the present pernicious and unwise system and establish a permanent and dignified guide service for the Capitol Building, one more in keeping with our historic character and traditions.

It is interesting to note that on February 12, 1925, Congressman Taylor, Democrat, Colorado, sponsored legislation at that time to establish a permanent guide service and told the Members of the House of Representatives that:

In 1876, during the Centennial Exposition at Philadelphia, great crowds visited Washington and came through this building. Up to that time there had been no guide system of any kind. There were some shell-game and three-card fellows, numerous pickpockets, and other crooks got in here. As a result Congress decided to establish some system in the handling of tourists, and they appointed five guides to superintend the sightseers, and they were allowed to collect tips as their remuneration. That is the way this thing started.

I include here an editorial from the Washington Post and Times Herald of August 18, 1957, entitled "The Bite in the Capitol":

THE BITE IN THE CAPITOL

Many persons who have been made to feel that they were encroaching on a private preserve as they browsed through the Capitol without joining an organized tour will appreciate Representative FRANK THOMPSON'S suggestion that free guide service be provided. The Capitol is the center of interest for millions of tourists who visit Washington. They ought to be able to see it and to hear a bit of the history that has been made within its walls without being solicited for a fee. No doubt the guides who now do the work are able and conscientious, and since they draw no salaries from the Government they must necessarily charge visitors for their services. Courtesy tours by salaried guides would certainly be much more in keeping, however, with the dignity of a great nation.

Address by Mr. Henry Loomis, Director, Office of Research and Intelligence, United States Information Agency, Washington, D. C., at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States Held at Harrisburg, Pa., July 10 Through July 14, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. VAN ZANDT. Mr. Speaker, at the 38th annual encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States, held at Harrisburg, Pa., July 10 through July 14, there were several outstanding addresses delivered by prominent officials of the Federal Government in keeping with the theme of the encampment, Defense Means Freedom.

On July 13, 1957, the following address, entitled "Propaganda in the Struggle With Communism," was delivered by Mr. Henry Loomis, Director, Office of Research and Intelligence, United States Information Agency, Washington, D. C.:

PROPAGANDA IN THE STRUGGLE WITH COMMUNISM

(Remarks of Henry Loomis, Director, Office of Research and Intelligence, United States Information Agency, before the 38th Annual Encampment, Department of Pennsylvania, Veterans of Foreign Wars, Harrisburg, Pa., July 13, 1957)

It is always a pleasure to meet with a group such as yours, who have demonstrated their awareness of and interest in foreign affairs. Your previous speakers have discussed the various aspects of foreign affairs—I would particularly like to concentrate on a specialized phase—that of information and propaganda.

In his recent television presentation to this country, Khrushchev merely repeated the basic Communist belief in the inevitable triumph of the Communist way—which he called the socialist way. In order to achieve this eventual triumph, nothing is overlooked. No tactic is rejected—any zigzag in policy is acceptable—threats, violence, compromise, concession—peace postures—anything which serves to advance the cause. Strategy may change but the goal remains the same—world domination.

The Communist arsenal is fitted with many weapons. One of the most important has been propaganda.

The step-up in the total propaganda effort of the Communists to the free world has been increasing steadily over the past several years and we estimate that the step-up of 1956 over 1955 is between 10 and 15 percent.

But the most important development is the emergence of Red China as a major propagandist.

The warhead of propaganda is semantics. The manipulation of words to produce the desired effect—to confuse—to stimulate support—or to dissolve opposition. The Communists attempt to capture words such as peace, democracy, peoples, socialism. Thus, Mr. Khrushchev speaks of the ultimate socialism of our grandchildren when he means the communism of our grandchildren.

Just how does Communist propaganda maintain its appeal to all peoples in light of recent events? The zigzags may be obvious to us but they do work. Through counterattack and falsification they lessen the impact of bad situations. When the crisis occurred in Hungary, what was their propaganda tack? First they emphasized Suez—then they counterattacked. The Hungarian revolution was, they said, obviously a Western invasion—and had the Soviet Union not courageously intervened, the situation would have lead to world war III and the bomb. The commies provided white papers, news stories, pamphlets, and films to all parts of the world—and even staged public trials—to prove this line.

It would be very wrong to assume that the Communist propaganda output is ridiculous—to assume that they are merely dispensing obvious lies. On the contrary. They appeal to the natural aspirations of people. In Asia and Africa, for example, they appeal for immediate solutions to colonial problems irrespective of the practicability while we attempt to work out real solutions which the extremists tend to consider too slow.

The warhead of propaganda is semantics. The manipulation of words to produce the desired effect—to confuse—to stimulate support—or to dissolve opposition. The Communists attempt to capture words such as peace, democracy, peoples, socialism. Thus, Mr. Khrushchev speaks of the ultimate socialism of our grandchildren when he means the communism of our grandchildren.

Just how does Communist propaganda maintain its appeal to all peoples in light of recent events. The zigzags may be obvious to us but they do work. Through counterattack and falsification they lessen the impact of bad situations. When the crisis occurred in Hungary, what was their propaganda tack? First they emphasized Suez—then they counterattacked. The Hungarian revolution was, they said, obviously a western invasion—and had the Soviet Union not "courageously" intervened, the situation would have led to world war III and the bomb. The Commies provided "white papers," news stories, pamphlets, and films to all parts of the world—and even staged public trials—to prove this "line."

It would be very wrong to assume that the Communist propaganda output is ridiculous—to assume that they are merely dispensing obvious lies. On the contrary. They appeal to the natural aspirations of people. In Asia and Africa, for example, they appear for immediate solutions to colonial problems irrespective of the practicability while we attempt to work out real solutions which the extremists tend to consider too slow.

As I mentioned earlier, Communist China has emerged as a major propagandist. In many areas of the world, their propaganda has advantages. China has become a world power in the last 5 years and makes the claim that its experience is therefore more helpful to the other newly emerging independent countries and those striving to be independent. The Chinese are nonwhite and non-European, which gives them an advantage in Asia. They have demonstrated a subtlety and flair for propaganda which, in many areas, has made them a more effective opponent than the Russians. Naturally, the large numbers of overseas Chinese—about 12 million—give them a special target.

The Communist propaganda apparatus is large and complex. Three major devices are used. First, government-to-government relationships which provide the normal tools available to any major country—diplomatic missions, cultural attachés, friendship societies. A single free world country may have as many as a half dozen bilateral friendship societies, including Soviet, Chinese and satellite. One of the half dozen societies may have as many as 100 branches within the country. The second propaganda device is the activity of local Communist parties which exist in every country, though they are illegal in some.

The third device is front groups, both national and international—all of which are controlled by Communists—although often this control is covert and not apparent to many well-meaning but naive members. There are 13 international fronts—the major ones include organizations such as the World Peace Council and the World Federation of Trade Unions. Others are aimed at lawyers, doctors, women, youth, and so on. Each front group has its own propaganda, hewing to the party line.

All three of these propaganda devices make use of the normal channels of communication. For example: the Russians alone published 28 million books in free world languages in 1956—in the first 6 weeks of 1956, Red China sent more juvenile books into Southeast Asia than had the free world countries during the entire year of 1955. Communists broadcast 2,141 hours to the free world and produced 182 films in 1956.

Thus far I have dealt with only their positive propaganda directed to the free world. They also spend considerable money on defensive effort—for example: approximately $115 million was spent last year just in jamming the broadcasts from the West—incidentally, this is $20 million more than the entire 1958 budget for the whole United States Information Agency.

What is the United States doing about this Communist propaganda?

Responsibility for the official information effort of your Government rests with the United States Information Agency. It has a dual role—positive—to explain America and American policy abroad—and negative—to combat the lies of communism.

To see how this works exactly, I would like to explain how a typical post in the Mideast looks and operates. It would have on its staff 5 to 10 Americans and 30 to 40 citizens of the Mideast country. The major post would be in the capital city and probably there would be posts in the provinces.

These people, working with the United States Ambassador and Embassy, handle the public relations of the United States in that country.

They serve as press officers, issuing material for use in the local press and radio and providing background information on a myriad of subjects from official American policy to current situations in American education to facts about the Hungarian revolution.

They operate an information center and library—often the only public library in the country—where people may come for information, to learn English—to see and meet Americans. These officers must be adept in the use of motion pictures, showing movies at the center, and taking them into the villages through mobile units—movies covering everything from health and sanitation to current news events.

Our officers must work closely with ministries of education, local institutions of learning—community cultural leaders and students. They must interview and select candidates for exchange scholarships. They must be equipped to conduct classes in basic English—they must even be able to call a square dance when the occasion presents itself. In short, they must, day and night, perform a myriad of duties all aimed at improving the position of the United States in the country.

To aid these field officers, materials are sent out from USIA—Washington—books, pamphlets, news and feature stories, exhibits, packaged radio and TV shows, films. Most of the material sent from Washington is translated and adapted in the field. Frequently this semifinished material is given to local people who use parts of it in their own publications. One of our primary duties is to provide reliable, basic facts about the United States for a host of people. This has paid off—even in countries as sophisticated as England, reputable editors come to us to check their facts about the United States.

Our officers work long and hard hours—they often endure real physical hardships with sometimes considerable health risk. On small posts, away from the capital, they are sometimes the only American in miles—often the only contact which people will ever have with America.

The United States has its allies, who, from time to time assist in the job of countering Communist propaganda—but they do not explain America.

Of course, the United States Information Agency is not the only source of information about the United States for overseas people. Where there is a sizable United States industry, its actions and its public relations policy have a major local impact. American communications outlets, particularly, have a major impact—wire services, newspapers, book publishers, motion-picture productions. But these private concerns, of course, are not primarily interested in explaining United States Government policy or Americans. That is the primary interest of the United States Information Agency.

Obviously, none of these private groups can be centrally directed—nor should they be. Much of what they do is helpful to USIA. Some of it is neither helpful nor a hindrance—frankly, a little of it has from time to time been counterproductive.

To achieve some unity of action abroad the President recently inaugurated the People to People program, of which the VFW is an important part. This effort is, necessarily, nongovernmental. USIA does stand ready to help or advise when called upon. As the President has said, the job of creating understanding between peoples is too big for one agency, too big, indeed, for Government itself. It demands the active participation and support of all Americans.

You cannot win the propaganda battle once and for all—it is a continuous ebb and flow. For example, the effect of Hungary is rapidly wearing off. None of us, either the United States Information Agency or the American people—can relax, any more than a business can give up advertising because its sales increased this year.

We must keep punching away, day and night. This is a long-range struggle we're engaged in. The Communists view it that way and we must too.

Shaker Heights Sun-Press Nation's Top Suburban Weekly

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MINSHALL. Mr. Speaker, it gives me great pleasure to call to the attention of my colleagues the recent journalistic honors awarded to the Shaker Heights Sun-Press. This outstanding publication under the editorship of my good friend, Harry Volk, assisted by his most accomplished and efficient staff won top honors in a national contest for urban and suburban weeklies conducted annually by the Accredited Home Newspapers of America.

The Sun-Press took 5 first-place citations in the category of weeklies with from 41,000 to 50,000 circulation. It was awarded first place for: First, General excellence; second, Community service; third, editorial and news content; fourth, best use of illustrative material; and, fifth, color printing.

I am particularly proud to bring this to your attention, for not only does the Sun-Press serve nearly one-half of my congressional district, but I know at first hand what a wonderful job Harry Volk has done in building this newspaper over the past few years from a little throwaway to a newspaper of general circulation, and it is an accomplishment of which Harry Volk can well be proud.

This is not the first time that the Sun-Press has merited national recognition, for only a short time ago, Time magazine mentioned it in a most favorable manner citing the outstanding coverage this newspaper has.

My sincerest congratulations to Harry Volk and the members of his Sun-Press staff.

The Reserve Program

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. SIKES. Mr. Speaker, I have long been of the opinion that our great country must have a reservoir of trained available manpower in reserve to back back up our standing military force if we are to maintain our military strength. Recent developments have indicated that there is a move to weaken this Reserve strength. I am so strongly interested in what is happening to the Reserve that I have addressed the following letter to the Secretary of Defense:

AUGUST 19, 1957.

Hon. CHARLES E. WILSON,
Secretary of Defense, the Pentagon, Washington, D. C.

DEAR MR. SECRETARY: Members of Congress heard with satisfaction Defense Department statements 2 years ago that plans were in the making to expand and strengthen the Reserves as the standing force is reduced in strength. These policy announcements were made in testimony on the Armed Forces Reserve Policy Act of 1955.

The concept that this Nation rely for its military security upon a relatively small but highly trained and gifted standing force, supported by a huge reservoir of trained available manpower in Reserve was given to us by President Washington and has remained ever since among America's proudest and most realistic traditions.

At the conclusion of World War II, Congress and the leaders of the Defense Estab-

lishment were in agreement that the Nation must keep in readiness its huge population of experienced and battle-trained soldiers, sailors, and airmen. An incentive program, aimed particularly at keeping available for possible call-up our Reserve officers was put into effect, and now has been expanded to bring into the trained military manpower pool those who would serve in the enlisted ranks.

There now are widespread reports that new Defense Department policies are replacing these incentive policies, and whether by accident or design, many of the older officers are discouraged and even dismayed by what some consider to be efforts to force them into premature retirement.

As an example of the incentive in reverse is the removal of the United States Army Reserve school trainees and other officers from a part-time pay status. Some of these Army Reserve officers have taken this as an implied suggestion that they withdraw from the training program. Whether or not that was intended, it readily can be seen that the abandonment of a training activity whose cost was relatively insignificant in a $40-billion military program might be subject to such interpretation.

More discouraging to the Reserve officer, however, has been the imposition of very low age ceilings on the United States Army Reserve school trainees, which will have the effect of forcing to the sidelines many of our finest, experienced officers with proven mature leadership capacities.

The overall effect of an unjustified curtailment of the Reserve training program could be dangerous to our security.

Our traditional reliance upon the Reserves has been more than simply a safeguard based upon superior numbers and training. The United States has survived because of the fighting spirit of our Armed Forces who have been called temporarily from civilian life to repel a military threat. In our tradition, we know this as the spirit of the minuteman—in the pattern of the American patriot who was called from his plow, his shop, and his home in 1776 to wrest our independence from the mother country. We cannot risk loss of this spirit, and a blow at our Reserve leaders, as a group, involves such a risk.

We in Congress are concerned that the civilian policymakers of the Department of Defense may have overlooked this possible effect. It is not pleasing to see our citizen-soldiers, sailors, and airmen given cavalier treatment when their desire is to be ready to serve their country in time of need. It makes us wonder if Defense leaders are dropping our guard and perhaps inviting disaster.

It is hoped that careful scrutiny will be given to all aspects of the current new policies governing Reserve training. The committees of Congress will expect to review thoroughly all decisions which affect this program, particularly those which appear to be a departure from our traditional concepts.

With good wishes, I am,

Sincerely,

ROBERT L. F. SIKES,
Chairman, Army Subcommittee,
House Appropriations Committee.

"Thirty-one Knot Burke" Steams Ahead

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks, I herewith include an editorial from the San Diego Evening Tribune of Friday, August 16, 1957. This editorial, "'31-Knot Burke' Steams Ahead," is a highly deserved tribute to Adm. Arleigh A. Burke, whom we know and admire as the recently reappointed Chief of Naval Operations.

As the editorial points out, Admiral Burke, as Chief of Naval Operations, is still going full steam ahead in assuring this Nation of a modern, versatile, highly mobile Navy that is an increasingly indispensable feature of our national security.

In this connection, the editorial points up the farsighted, technological advancements that are being made in our seapower under the present leadership of our Department of the Navy.

Thus, the editorial places particular emphasis upon the effective teamwork that characterizes the top-level relationship in the Navy. I am glad to note that the editorial specifically underlines a situation which has been the inspiration for many favorable comments by Members of this House. I refer to the widely admired relationship that exists between the Chief of Naval Operations and the Commandant of the Marine Corps. The Burke-Pate team, based upon the personal and mutual respect and understanding, that exists between them provides, as the editorial also points out, perfect support for the able civilian leadership of Navy Secretary Thomas S. Gates, Jr., in integrating our naval forces in the Department of Defense.

As a member of the House Armed Services Committee I have personally been impressed by the fine relationship that exists between the Navy and the Marine Corps within the Department of the Navy. This fine Navy-Marine Corps relationship is, I believe, the direct result of the example set by the personal and professional relationship existing between Admiral Burke and General Pate. This Burke-Pate relationship, so faithfully reflected in Navy and Marine Corps organizational matters, is a most reassuring and refreshing one in view of the frequent reports of dispute and argument within the Pentagon.

The organizational efficiency and smooth personal relationships that have become the hallmark of the Department of the Navy under Secretary Gates are a genuine source of satisfaction to all who are interested in our national security. Unquestionably this fine Navy and Marine Corps relationship which stems from the Burke-Pate spirit of teamwork could well serve as an example for other agencies with the Department of Defense.

I commend the following editorial to the attention of the Members of the House.

"THIRTY-ONE-KNOT BURKE" STEAMS AHEAD

During World War II, Arleigh A. Burke earned the colorful nickname of "31-Knot Burke" for his habit of pushing his destroyer units at just under boiler-bursting speed.

Today, as an admiral and chief of naval operations, Burke still is going full steam ahead—at far faster speeds than 31 knots—as he completes his first term and begins a second one as CNO.

This is a significant anniversary. It is the first time since World War II that a CNO ha taken office for the second time. Upon com pletion of his second term, Burke will becom the first CNO since 1927 to have held th office for 4 years.

But far more than lengthy tenure is in volved in any discussion of Arleigh Burke This Nation can take pride and assurance in the Navy's top man for the progress he ha wrought in our seapower and in his grasp o naval strategy and significance.

During his first term as CNO, the Navy launched the U. S. S. *Forrestal*, the first of line of giant new carriers—actually floatin airbases. Since 1955, the Navy has sent aloft such speedy jets as the *Skylancer*, *Crusader*, *Skyhawk*, and the *Martin Sea Master*. Tw more nuclear-powered submarines, the *Seawolf* and the *Skate*, have joined the *Nautilus* the world's first atom sub.

Burke fully understands the importance of the earth's water surface and its control by peaceful naval surface, subsurface and aerial forces.

And he is one of the most articulate and effective spokesmen in the country when it comes to championing the Joint Chiefs of Staff system which gives the Navy a full voice in overall military affairs—as opposed to a single, Prussian-style command.

The high degree of efficiency of the Department of the Navy is credited to the effective teamwork in which Burke functions so capably with Gen. Randolph McC. Pate, Commandant of the Marine Corps. The personal mutual respect and understanding of the two uniformed heads of the Department unquestionably provide perfect support for the able civilian leadership of Navy Secretary Thomas S. Gates, Jr., in integrating our naval forces in the Department of Defense.

America is fortunate in having a man of the stature and ability of "31-Knot Burke" at the helm of its naval operations in these swiftly changing times.

An American Legion Post Speaks on Immigration

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. DEROUNIAN. Mr. Speaker, the New Hyde Park Post, No. 1089, of the American Legion, which is in New Hyde Park, N. Y., adopted the following resolution on August 15, 1957:

Whereas the Walter-McCarran Immigration Act, after 5 years of intensive investigation and research, was overwhelmingly passed by both Houses of Congress; and

Whereas the objectives of the act are to keep from American shores criminals, Communists, and subversives, and to preserve the historic national origins quota system of immigration; and

Whereas the act represents the most liberal immigration law in American history; and

Whereas organized pressure groups, some of them subversive, have launched an intensive attack against the Walter-McCarran Act, and introduced proposals which if enacted into law would virtually wipe out all of the protection against unrestricted immigration; and

Whereas the 16th anational convention of the Communist Party of the United States on February 12, 1957, passed a resolution to give high priority to a plan of action on a national basis to destroy the Walter-McCarran Act: Therefore, be it

Resolved, That the American Legion, New Hyde Park Post, No. 1089, does hereby oppose

y further attempts to weaken, destroy, or peal the Walter-McCarran Immigration d Nationality Act either by direct weakening amendments or by any other legislative ction. And be it further

Resolved, That copies of this resolution be rwarded to Senators and Congressmen repenting legionnaires of New Hyde Park ost, No. 1089.

Adopted by the New Hyde Park Post, No. 00, American Legion, this 15th day of ugust 1957.

Certified:

HAROLD A. SANDFORD,
Adjutant.

Lt. Gen. Thomas W. Herren

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. RAINS. Mr. Speaker, on July 31, 957, a distinguished son of Alabama and faithful servant of the United States, t. Gen. Thomas W. Herren, retired rom the Army after serving more than years.

General Herren marked his long years f service with the outstanding qualities f integrity, intelligence, and fortitude. e is a credit to the traditions of faithful ational service and sacrifice which have een characterized by military service.

He was born in Dadeville, Ala., August , 1895, and was graduated from the Uniersity of Alabama in 1917. He immediately entered the Army and received a ommission as second lieutenant after ompleting the officer's training course. hortly afterwards, he decided his lifeng career by accepting a commission in he Regular Army.

General Herren served in France durg World War I, and returned to the nited States to serve as a distinguished orseman in the old cavalry units. He as well known in and out of the Army s an expert polo player and a champion horseman.

During World War II, he took three egiments of his division, the 70th Inantry, into Marseille and moved the orce, named Task Force Herren, to the est bank of the Rhine River where deensive positions were set up. The task orce played an important part in halting he last-ditch German offensive effort of ate 1944. When the remainder of the ivision arrived in France, Task Force erren was dissolved, but General Heren continued to demonstrate his leaderhip and skill as a valued subordinate.

After the war, General Herren held imortant assignments in Korea, and as the hief of Army Special Services where he id much to improve the Army's splendid ntramural athletics activities. He was ell known to many of us while he served s commander of the Military District of Washington.

In 1952, General Herren returned to orea, where he served as chief of civil ffairs, and later as the commander of he Korean Communications Zone.

General Herren's enormous capacities or leadership and administration typied his service in the Korean war. He was the engineer for the pattern of prisoner exchanges which repatriated gallant American fighting men. He met the demands, often urgent, for critical military supplies on the front lines, and he skillfully helped to maintain the democratic Government of Korea on a firm footing. His work was often behind the scenes, and rarely made the headlines, but it was the sustaining lifeblood of the action in Korea.

Subsequently, General Herren took command of the vast Northern Area Command of Germany at a time that the democratic Republic was truly beginning to assume its position among the leading nations of the world. Through his skillful, tactful, and understanding direction, lasting bonds were cemented between the American and German peoples. In the short span of 8 years, one of Germany's fiercest fighters had become one of its stanchest friends.

In December 1954, General Herren took command of the First United States Army, where he directed the Army units in New York, New Jersey, and New England. In this populous area of the United States, General Herren became a valued counselor, benefactor, and rescuer.

During the disastrous hurricanes and New England floods of 1955, General Herren directed the skillful and humanitarian efforts of his troops to avert tragedy which might well have followed had he not acted quickly and decisively. In the flight for freedom of the Hungarian patriots, it was General Herren who personally directed the opening and Army operation of the Hungarian Refugee Center at Camp Kilmer. He threw excuses and delays out the window and prepared the Kilmer center in a few days for the tremendous influx of grateful Hungarians who have come to be a world symbol in defiance of the evil forces of communism.

In his capacity as senior member for the Army to the Mililtary Staff Committee of the United Nation, General Herren won the respect and admiration of that august body. He strengthened relations among the various armed services in his area, and he was counted as a valuable friend by his New York City neighbors. His life is reflection of the highest standards of service to his country.

The citizens of the United States together with their elected servants give their sincere thanks to Lt. Gen. Thomas W. Herren for his faithful and effective service, and all wish him every happiness in his retirement.

Workers' Paradise?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of August 16, 1957, commenting on the way the Communist regime in Poland handled the recent streetcar strike at Lodz:

WORKERS' PARADISE?

The Communist regime in Poland won a pyrrhic victory at Lodz when it succeeded in crushing the strike of streetcar workers through familiar tactics—the employment of force. Regular troops and the so-called workers' militia, meaning strong-arm squads of Reds, came to the assistance of the local police, employing guns, clubs, and tear gas to subdue the workers. Thus, Poland and the rest of the world, free and slave, were treated to another demonstration of the love and consideration of the Communist masters of the land have for their subjects.

It will be interesting to see how the Reds, pledged to aid downtrodden, explain this "settlement" of the walkout. In the first place, the workers were not making extreme demands, seeking only an increase in wages from 15 to 20 cents an hour, so life might be sustained. They asked also an end to the lottery system under which they were paid according to the amount of collections.

For seeking relief from these intolerable conditions in what is supposed to be a workers' paradise, they were pushed around by thugs until they capitulated. All demands, of course, were denied.

But this is not the last of the incident. The Reds may not know it, but they have a lion by the tail, not just at Lodz and Poznan, but everywhere. Poland is ready to snap, but apparently the people want to be sure there will be no repetition of Hungary when they make their bid for freedom.

The Red leaders in Warsaw these days must find their seat just as uncomfortable as their contemporaries in Moscow despite all the bluster with which they are confronting enemies at home and abroad.

Bernard M. Baruch

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News on the occasion of the 87th birthday of that great humanitarian and American, Bernard M. Baruch:

HAPPY BIRTHDAY BERNARD M. BARUCH

(By Harry H. Schlacht)

On Monday Americans will honor Bernard M. Baruch on the occasion of his 87th birthday. We express our gratitude for his great contributions to his country and to humanity. We pray God that he will be spared to us for many more years of useful and honorable service.

If we were asked to name the man who has contributed most to America's greatness in the last half century, we should place Bernard M. Baruch at the top. He is a monarch of the mind, a giant of the American spirit. He has crowded into his life the achievements of a veritable host of men. His gifts are varied and his pursuits many.

Mr. Baruch has been for America first and always above all the rest of the world. His is a virile Americanism. It is the philosophy of his life, the touchstone of his thoughts, the mentor of his actions.

He is giving himself to his country and his country's cause, justifying the application of Paul's tribute to the Macedonian church: "They first gave themselves." Mr. Baruch is known as a President maker, a

presidential adviser, a park-bench statesman. He has never held public office, but he has been the head coach of his country.

His towering integrity, his mighty heart, and his greatness of soul exercise far-reaching influence on world events. He is among the foremost leaders of the common good of our generation. He is a genius as a leader of men.

His deep sympathy and sincere interest in all phases of human activity has attracted the admiration and confidence of the people of our Nation. A fidelity of purpose and a profundity of moral rectitude guides him in his public and in his private life.

His splendid optimism, his lofty patriotism, and his unbounded faith in humanity never desert him. A magnificent individuality coupled with a magnetic personality endears him to all. His superb courage is neither halted by the magnitude of the task before him nor by the criticisms of those who differ with him.

Bernard Baruch is the apostle of peace. His is the authentic voice of our country. In Europe kings, presidents, and premiers have honored his name and heard his voice. He speaks in denunciation of duplicity, cruelty, bigotry, and hate. He speaks in the name of standards unsullied and ideals sublime.

In every act, and in every utterance, his only motive is "my country." His generosity knows no bounds. His life is an answer to that noble sentiment voiced by the poet, S. W. Foss:

"Bring me men to match my plans,
Men with empires in their purpose,
And new eras in their brains.
Pioneers to cleanse thought's marshlands,
and to cleanse old error's fen;
Bring me men to match my mountains—
bring me men."

Loyalty and duty and reverence urge us to write, while memory is clear and events are fresh, what we know of him upon whom his fellow men place such great faith. Let us propose a universal toast to the health of Bernard M. Baruch. Let us resolve to do our full duty in the pursuit of his high ideals and concepts. Let us give thanks to Almighty God for him.

Address by Congresswoman Kathryn E. Granahan, of Pennsylvania, at Annual Session, Imperial Court, Daughters of Isis

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mrs. GRANAHAN. Mr. Speaker, on last Sunday it was my privilege and pleasure to address the opening meeting of the 43d annual session of the Imperial Court, Daughters of Isis, as this group began an outstanding convention in my city of Philadelphia.

A number of the Members have inquired of me about the speech I made at that affair and indicated that there was some interest in my remarks among the membership of the House. I am flattered to think that is so. In any event, and in view of the inquiries, I am including the text of my talk under unanimous consent in the Appendix of the CONGRESSIONAL RECORD, as follows:

To the imperial commandress and to all the members of the Daughters of Isis, I bring you greetings from Philadelphia—and a warm welcome to each and every one of you. We are pleased and delighted to have this wonderful group meeting in our convention hall. I bid you welcome on behalf of everyone in this great city.

Believe me when I say that I am deeply flattered—and that is the only word for it—to be invited to address this great gathering. The letter which came to me from my fellow Philadelphian, your imperial publicist, Mrs. Louise Stewart Jones, was so complimentary that the moment I received it I immediately accepted and said I would come.

Congresswomen are not immune from flattery, and a comparatively new Member of Congress such as I am is still at the stage of being a little surprised to be singled out for attention.

But it was not just the nice invitation, addressed in such flattering terms by Mrs. Jones, which convinced me I should quickly accept the invitation. It was, rather, some of the information which I received about this organization, and the work you do, which convinced me I wanted to come and speak to you and meet with you and join you in this affair honoring your imperial commandress.

The world is full of a lot of things, and everyone is so busy that frequently we neglect to stop and look at the things of real value all around us. Each day, we have problems in the operation of our households, or problems on the job of one sort or another, or problems in finding the right shoes to go with the new dress or hat, or problems in paying off debts or buying a car or a million and one other things. The day ends and we are exhausted and we wonder where all of our efforts have gone—and what we have accomplished.

As individuals, I am sure all of us have had that experience from time to time. There are never enough hours in the day, never enough days in the week, for us to be able to do the things we plan for and intend to do. We just never seem to have enough energy to carry out our good intentions.

But through your organization, I note that you have found the time and found the energy and found the leadership and found the will to do many fine things as a group. And for that I salute you and congratulate you.

You seek, through this organization, to achieve as your goals the virtues ascribed to the goddess from whom your organization's name is derived—the ability to change evil to good, to change sorrow to joy, to change poverty to plenty, to change ignorance to shining light.

You could have no greater goals, no finer goals.

And I will say this, too: If we are, in fact, to carry out the theme of your convention—Building for Tomorrow's World—then not only your organization, but all Americans must endeavor to change evil to good, to change sorrow to joy, to change poverty to plenty, and to change ignorance to shining light.

And the people in every land must join us in that endeavor.

We have in our power—in our country—the ability, just by a push of a button, to turn darkness to daylight, and life to death just by pushing a button, or throwing a switch. And in other countries—for instance, in the Soviet Union science has reached a similar pinnacle—it can also accomplish the same miracle of brightening the sky with a brilliance which outdoes the brilliance of the sun—at the same time plunging mankind to destruction.

That is a great scientific accomplishment—there is no doubt about it. Scientists have used their God-given brains and reasoning power to unlock the secrets of nature, to give them the power of destroying whole nations, whole continents, and in fact, the whole human race, and every thing which lives or breathes on this earth.

"Give us time," the scientists might well be saying to us, "and we will figure out how to blow up not only a continent but the entire earth, the moon and the nearer planets, and perhaps the entire universe."

That is one way that mankind can be said to be building for tomorrow's world. But it is building to a sorry goal if all effort goes toward mass destruction.

Who builds for a better world of tomorrow?

Who organizes the brains of man to seek the end of suffering, the elimination of cancer, the destruction of poverty, the opening of new opportunities for every person—for every man, woman, and child on this earth?

Well, for one, I think this group the Daughters of Isis, is building in the right direction. You may or may not have in your membership the genius the world needs who will find the solution to cancer. But that does not deter you from doing your part. There is a role for everyone in the fight on cancer, and you are making your contribution by the funds you provide in the fight.

Jonas Salk developed the polio vaccine, and we honor him for it. But one man alone cannot eliminate polio. Everyone must help. You are helping, and I know will continue your efforts to see to it that every child and eventually every adult in the vulnerable age groups is vaccinated against polio.

These are just some of the things you do in behalf of a better tomorrow through the activities of this organization. You have proved how an organization set up primarily for social fellowship can be utilized also for great good for your fellow citizens.

To me, that is the reason for life, and the reason for organizations of people, and yes, even for governments.

The test of our worthiness on earth is what we do for each other—not what we can grab for ourselves. We learn that in our churches, and we learn it in the closeness of our families as we grow from childhood, and we learn it in our schools—or we should.

But how often we forget. And how easy it often is to forget.

In our country, and even in Washington, there are frequently voices raised to appeal not to the greatness in men, but to the weaknesses in the character of human beings. The process of government is sometimes used not to help but to harm—to harm the great majority of the population in order to grant special privilege or special treatment to a few.

It is a great tribute to the essential goodness and rightness of the American form of government that these raids on the public interest are getting harder and harder to accomplish, but that does not prevent many groups and individuals from making the attempt nevertheless.

I think there is a greater alertness these days on the part of the newspapers, joined by radio and television, in trying to keep the people informed on these self-seeking and self-serving efforts, but nevertheless, I know it is hard—it is extremely hard—for the average citizen to keep up with each new development. Even for those of us in the Congress, it is difficult to keep track of each step and each development on the major legislative issues which arise in one House or another, and are shuttled back and forth in committee, on the House or Senate floor, in conference committees, and so on.

I know you are interested in the subject matter of the civil-rights bill which has so dramatically dominated the Washington scene these past few months, and yet I will tell you right now, as one who is intensely

terested in that bill and who is deeply ncerned about the attempts which have en made to water it down or kill it, that one can yet really tell you what is going happen on it.

Those of us who are sincerely concerned d want a good bill are deeply anxious. e have argued among ourselves hour after ur in the cloakroom of the House and in e Chamber and in our offices over the best olicy to follow at this point.

We want a bill which is meaningful and hich will do some real good. We do not ant to kill off the possibility of having any ongress at all by insisting on the unobtainble perfect bill. On the other hand, I do ot want to settle for the milktoast bill hich passed the Senate. Is there a real ossibility of compromise—or is this issue ce again going to be shaped and decided nd determined by those who want no effecve civil-rights legislation?

I just don't know at this moment. I wish could bring you a final and decisive word this. All I can do is assert to you my wn sincere conviction that we must not rrender to those who would deny qualified mericans the full rights of citizenship, inluding—and especially—the full rights of oting in our elections.

It is not my intention to be political at his fine gathering, because I know that you ave in your membership the same diversity f political views as one would find in any arge gathering of Americans. But I must eak what is in my heart in connection ith this great issue which we have been ebating in the Congress.

And this fact strikes me and worries me eeply: Why was the Attorney General of he United States, the man who drafted the ivil-rights bill, not on hand to defend it nd fight for it and explain any unclear feaures of it when the fight was hot and heavy n the Senate?

Why did he pick that particular time to o to London to make a political speech atacking former President Harry Truman's adinistration?

It seems to me—and I make no apology or this statement—that if Mr. Truman were n the White House during this bitter struggle he would not have allowed his Attorey General to be off somewhere abroad aking political speeches attacking the Hoover administration, but would have insisted on his chief lawyer being right on hand every moment of the debate to fight for his handiwork, and to go down the line for the principles of civil rights and decency.

And that's where the present Attorney General should have been.

If he could not have explained his bill better than he did to the President, so that the President would feel he knew what was in the legislation he was recommending, the Attorney General could at least have been on hand to explain it to critical Senators who were intent on tearing it to shreds.

If this bill had in it some of the things the President admitted he feared might be in it, then what sort of relationship is there between the President and the Attorney General? Was the Attorney General guilty of deliberately misleading the President about this bill?

If so, then I would say the Attorney General should either be asked by the President to resign or should be impeached. That is a strong statement to make, and I do not make it without a great deal of thought. The developments over this civil-rights bill have been little short of scandalous—the way the President supported it and then backed away from it and expressed doubts about it and allowed its enemies to use his own doubts to help shred the bill. If the President was misled, or not properly informed on this legislation, the fault lies in his Attorney General—an official who could not even be bothered to be on hand in Washington when the bill was under its most damaging fire.

If we are going to build for a better tomorrow—and if we are to try to enlist all of the other nations of the world to join us in the hard tasks which must be accomplished if we are to achieve a better world—then we, in this country, at least, have got to stop fooling each other. We have to stop trying to trick each other for possible political advantage or other purposes. We have got to stop misleading each other—or trying to mislead each other.

Facts are sometimes elusive. We must search for them. We must think about their meaning, their significance. We must seek out the divine guidance we need to understand the facts.

It is a hard and difficult process, but in a democracy it is a process which must take place among all citizens. We must be encouraged and stimulated to think our problems out together.

But we cannot think out the issues if we are being deliberately mislead or unlead. In that connection, our President must show real leadership and understanding not just of the overall aims or objectives but of the day-to-day details of achieving those goals.

He must work terribly hard at the job if the job is to be done. He cannot assign this responsibility to underlings. Under the Constitution it is his job, and under our way of doing things, he alone can execute its responsibilities.

Now I hope what I have said is not taken to be partisan, for I do not mean it that way at all. We must look at these problems objectively. Neither party is ever completely right on any issue. Neither party is ever completely wrong on any issue. We must weigh the facts in each case.

On the question of human rights or human dignity the protection of the individual from violence or discrimination or persecution based on un-American concepts of race or creed or color the question is not partisan in that both political parties have in their membership high officials who oppose civil-rights legislation. Largely, this is a sectional issue. Republicans and Democrats alike from the South joined to try to kill this legislation. This is often lost sight of, in view of the fact that the South is so often regarded as a one-party area. But there are Republican Congressmen from the South and they were just as vehemently against civil-rights legislation as Democratic Congressmen from the South. So we cannot win this battle by ascribing partisan political praise or blame.

But win it we must.

The Supreme Court and the lower Federal courts have led the way in recent years, in contrast to the experience of only 20 years or so ago when the Supreme Court was standing squarely in the way of progress. Now it leads the way.

And to me the most remarkable and encouraging and heartwarming feature of this great advance in human decency, as represented by the Supreme Court, is that the southerners on that Court were in agreement with the northerners on the need, for instance, of integration of the schools—on the unconstitutionality of segregation in the schools—the most significant single forward step in civil rights, I believe, since the report of the Truman Commission on civil rights of 10 years ago.

This means to me that the fight for civil rights in the South is certain to be won. Politicians who play the theme song of divisiveness and segregation and hate are going to learn that this issue has gradually lost its appeal to thinking people. They are going to find that it is poor politics, and is no longer the sure-fire road to votes and election.

I look forward confidently to that day. It will be part of the better world of tomorrow which you and I and all of us here today look to and pray for and are going to work for. And that is the kind of work which brings joy in the doing. Thank you, and have a wonderful time in Philadelphia.

St. Stephen's Day

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. O'HARA of Illinois. Mr. Speaker, on August 20 the people of Hungary again will observe St. Stephen's Day, and it is fitting that on that day our thoughts and prayers should be with the valiant men and women of Hungary whose hearts were set on the day when again they shall dwell in a land of freedom.

Over 900 years ago, Stephen I of Hungary fought to preserve Hungary's right to choose, without outside coercion, her own form of government and to follow the dictates of her own conscience in choosing the religious faith she wished. His deeds of courage were successful, for he introduced Christianity into Hungary and established the Hungarian state on a healthy base. And throughout the years Hungarians have considered Stephen I such an outstanding patriot that they set aside one day in the year to celebrate his life, works, and achievements.

Today, however, the Hungarians look more than ever to Stephen as their symbol of liberty and justice, for once again Hungary has been forced into an abyss of despair and darkness by the forces of foreign tyranny and despotism. But, we ask, what possible succor can Hungary hope to find from a past so far removed from the realities of the 20th century? The answer is the past never is far removed from the present, for it is a part of the whole fabric of man's struggle for right, decency, and a better way of life.

Tyranny and genocide are not new phenomena in the world. But as civilization has advanced and become refined so have the methods and techniques for making all the forces of evil more terrifying and capable of destroying civilization completely. But Stephen's stand against tyranny and oppression 900 years ago is the symbol for present-day Hungarian resistance to those same forces. Let us look more closely at the life of Stephen to see what is the real significance of his continuing adulation.

Stephen I knew that if Hungary was to survive as a nation, her ideas and her goals had to be free to develop. He knew initiative and progress suffocated in an atmosphere of oppression and subjugation. Thereupon, he waged many wars against his oppressors, so that the Christian faith would survive and the Hungarian state would be preserved. And this struggle was not without adversity, for his enemies were in the homeland as well as outside Hungary.

Stephen's greatest triumph over the forces of evil was his uprooting of idolatry among his people. Of course, this act did bring down upon him the wrath of many dissident groups. In fact, in 998 Stephen had to attack a rebel group who had resisted this action against paganism. The church also became the disseminating center of information on cultivation of crops and the use of manual arts. The churchmen, by their examples, taught the villagers and farmers western methods of agriculture and western methods of arts and handicrafts.

Last October in Hungary the spirit of St. Stephen I reasserted itself, when unarmed workers rose in rebellion against domestic traitors and foreign encroachers to preserve their personal integrity and national existence. It is true these courageous Hungarians were not able to crush the despotic domestic and foreign elements as had Stephen of old, but it showed 900 years of time had not eroded Hungary's innate love of justice and liberty. Nor will that spirit die under the heavy hand of Soviet Communist genocide and deportations.

Today we Americans are bearing witness to the continued courage of the Hungarian refugees who gained entrance into our country; we can be proud of our action which made that immigration possible. Of course, we could hope for more liberal and definite provisions in our immigration laws which would allow them to stay permanently or to have a regular status as immigrants. The fight for freedom by these refugees was for the whole world, not for one country, and should be recognized openly as such a fight. We are indeed proud to have them in our midst, and also wish to join with freedom-loving Hungarians everywhere in saluting the first Hungarian prince of peace, St. Stephen I.

The President's 48-Carat, Multimillion Dollar Boondoggle

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, 58 bills to prohibit Government agencies from acquiring or using National Grange headquarters site in Washington, D. C., without specific congressional approval have been introduced in the House of Representatives. Similar or identical measures have been introduced in the Senate by 12 Senators on a bipartisan basis.

One of the sponsors of this legislation in the House, the gentleman from Washington [Mr. MACK], explained the matter as he saw it this way on Friday, August 2, 1957—CONGRESSIONAL RECORD, pages 12251 and 12252:

> It is generally admitted that the Federal Government will have to pay $500,000 or more for the Grange property if it is acquired by GSA by condemnation. In addition to this half a million dollars that will be paid for the property the taxpayers will be put to the expense of tearing down the present building, clearing its site and then sowing this 3,500 square feet of land to lawn and planting it to garden. This means a cost of as much as $150 to $200 a square foot for a lawn. Some lawn.

Some lawn, indeed. In addition to the National Grange headquarters there are other beautiful, modern, efficient buildings on Jackson Place, adjacent to the Grange Building, which are considered by many to be among the finest office buildings in Washington. Among these are the International Bank Building, the Brookings Institution Building, and the United Auto Workers AFL–CIO Building. These buildings can serve the Federal Government well and it would be sheer extravagance and waste to destroy them.

There are other significant and important structures facing Lafayette Park which go back to the last century and are intimately connected with the history of the Nation's Capital. Many distinguished architects and the congressionally chartered National Trust for Historic Preservation strongly recommend that these buildings be preserved and that the new Federal Office Building, FOB No. 7, Veterans' Administration—be confined to the Pennsylvania Avenue, 17th Street, and H Street sides of square 167. If this course were followed the buildings on Jackson Place and the National Grange Building would be preserved.

On July 17, 1957, President Eisenhower transmitted to the Congress the recommendations of the President's Advisory Commission on Presidential Office Space for razing the present buildings on Jackson Place and the historic State, War, Navy Building as well. The President urged that these structures be replaced by expensive Federal buildings to house White House employees. The gentleman from Ohio [Mr. MCGREGOR], according to the Washington Evening Star, estimated it would cost $6 million to tear down the old State Building and said:

> If we keep giving space to White House employees, I have the feeling that the executive branch will keep hunting people to fill it.

The gentlewoman from Ohio [Mrs. BOLTON] had this to say about the State, War, Navy Building in a letter in the CONGRESSIONAL RECORD of August 13, 1957, page A6624:

> The $6 million it would cost to destroy the building might certainly be well used for cleaning it and altering the interior to a more useful arrangement of the rooms.
>
> I protest, as strongly as it is possible for one person to do, what I consider ruthless destruction of one of the most perfect examples of French renaissance architecture in the United States. Tied in as it is with our history, how can we give consideration to its destruction?

The Washington Post and Times Herald of June 4 reported that the distinguished Speaker of this House, the gentleman from Texas [Mr. RAYBURN] was one of the traditionalists who were rallying to defend the State, War, Navy Building from destruction. The Speaker was quoted as saying he was "very much opposed" to tearing this landmark down, and that if the building "does not suit them on the inside, then they can do as they did at the White House" and renovate its interior. He was reported as opposing any efforts to obtain congressional funds for the purpose of building a replacement.

The President's plans for expansion of the White House office space are made necessary by the Eisenhower way of doing business—first developed at SHAEF headquarters during World War II and at NATO—and a staff expansion of unprecedented magnitude is planned to fill these buildings.

The President's plans for 2 office buildings to house an expanded staff constitute a 48-carat, multimillion dollar boondoggle.

I can just imagine the kind of campaign that would have been mounted by the Republican Members of the Congress if either President Franklin Delano Roosevelt or President Harry S. Truman had made such recommendations to the Congress.

How things have changed.

As the columnist George E. Sokolsky wrote in the Washington Post and Times Herald of August 20, 1957:

> A criticism of President Eisenhower for pursuing some policy that Roosevelt or Truman pursued is very wicked. It was all right to oppose Roosevelt and Truman, but it is bad form and intellectual degradation even to whisper a suggestion that while Mr. Eisenhower is a pretty decent person, he is not a deity to be adored and salaamed.

An unparalleled opportunity is presented in the President's grandiose plans "for the next hundred years" to save the American taxpayers several millions of dollars.

The President recently recalled his 1952 technique of using a small piece of pine wood which he broke in half, saying "Here's what you get for 15 cents now."

The President's plans for staff and office expansion certainly offer vivid proof of how far this administration has progressed from its thinking in the 1952 campaign when it was running for office.

I have discussed certain aspects of this matter many times before and call your attention particularly to my statement in the CONGRESSIONAL RECORD of July 31, pages A6183–A6186. I am confident this statement of mine contributed to the understanding which my colleagues have today as to the true size and shape of the President's glorified boondoggle.

On Thursday, August 15, I introduced H. R. 9313, a bill to prohibit Government agencies from acquiring or using the National Grange headquarters site without specific congressional approval, to provide for renovation of the old State Department building, and for other purposes.

This measure has as its purposes (1) saving the National Grange headquarters building and the many important structures in the White House-Lafayette Park area from being destroyed; and (2) saving the taxpayers of this country several millions of dollars that would be needlessly wasted if the President's plans for expansion of his staff and office space are carried out as presently contemplated.

My bill, H. R. 9313, is complementary to a bill, H. R. 9060, introduced by the

entleman from Montana [Mr. METCALF], and a companion measure to H. R. 9660 introduced in the Congress by Senator JAMES E. MURRAY for himself and Senator MICHAEL J. MANSFIELD as S. 2724.

The Metcalf-Murray bill designates Lafayette Park, the Dolly Madison House, and the Commodore Stephen Decatur House as national historic sites.

I am very pleased to be able to say to you today that a number of my colleagues have joined me in sponsoring measures identical to my H. R. 9313 and that these measures are a decided improvement over the bills which have been previously offered on the National Grange headquarters site problem.

The following have joined in sponsoring my measure: the gentleman from Kansas [Mr. BREEDING], the gentleman from Pennsylvania [Mr. CLARK], the gentleman from Maine [Mr. COFFIN], the gentleman from Washington [Mr. MAGNUSON], the gentlewoman from Idaho [Mrs. PFOST], the gentleman from Illinois [Mr. PRICE], the gentleman from Pennsylvania [Mr. RHODES], the gentleman from Illinois [Mr. BOYLE], and the gentleman from Oregon [Mr. PORTER].

I include here an interview with one of the leading American architects, Frederick Gutheim, a distinguished author, and Washington editor of the magazine Progressive Architecture which was carried in the Washington Post and Times Herald of March 15, 1957. Also included is the text of my bill, H. R. 9313.

[From the Washington Post and Times Herald of March 15, 1957]

LAFAYETTE SQUARE PLAN OFFERED

A Washington architect recommended yesterday that the residential aspect of Jackson Place NW. be preserved in planning Government office structures in the block.

Frederick Gutheim, of Dickerson, Md., writing in the current issue of Progressive Architecture, said this would be the best solution in trying to preserve the once fashionable street and yet answer pressing demands from the White House and its agencies for more working space.

Gutheim said "tall office buildings that have been allowed to intrude on Jackson Place could be replaced with structures in residential scale." However, he said, "suitable private organizations such as the National Trust for Historic Preservation, should be permitted to occupy these structures.

One such structure might serve as an official residence for the Vice President, he suggested.

The Government is planning to build a 27-million office building in a block bounded by Jackson, Pennsylvania Avenue, and 17th and H Streets, NW. All existing buildings, except Blair and Blair-Lee House and Decatur House, would be torn down.

Gutheim said a "frankly utilitarian structure—about all we can expect of Federal building in these preoccupied and uninspired days—could be allowed" on the 17th Street side.

As Gutheim saw it the pressures for the Government office building stem from the White House organization and its vast expansion by the Eisenhower administration.

A staff expansion of unprecedented magnitude was required by the Eisenhower way of doing business at SHAEF headquarters during World War II and at NATO, according to Gutheim.

H. R. 9313

A bill to prohibit Government agencies from acquiring or using the National Grange headquarters site without specific congressional approval, to provide for renovation of the old State Department Building, and for other purposes

Be it enacted, etc., That no portion of lot 816, square 167, in the District of Columbia (the headquarters and property of the National Grange of the Patrons of Husbandry) shall be acquired for or used by any agency of the Federal Government.

SEC. 2. The Administrator of General Services (hereinafter in this act referred to as the "Administrator") is directed to withdraw the declaration of taking of such lot 816 heretofore filed by him in the United States District Court for the District of Columbia and to take such other action as may be necessary to restore title to such lot 816 to the National Grange of the Patrons of Husbandry.

SEC. 3. No building situated on lot 3, 4, 22, 46, 48, 809, 810, 811, 812, 813, 814, 815, 819, 822, or 823, square 167, in the District of Columbia shall be razed by any agency of the Federal Government, but each such building may be improved, altered, added to, or repaired in such manner as (1) not to materially alter the appearance of its exterior (thereby preserving the historic Jackson Place and Lafayette Park), and (2) to make it suitable for use by the Federal Government. Nothing in this section shall be construed to prohibit the construction of the Federal Office Building, FOB No. 7 (Veterans' Administration), which has the General Services Administration prospectus number 3–DC–05, on lot 9, 25, 50, 800, 801, 802, 803, 804, 805, 806, 807, or 808 in square 167 in the District of Columbia.

SEC. 4. The Administrator shall make such improvements, alterations, additions, and repairs to the old State Department Building situated on the southeast corner of the intersection of 17th Street and Pennsylvania Avenue NW., Washington, D. C., as may be necessary to make such building suitable for use as an office building by the President of the United States, except that no such improvements, alterations, or repairs shall materially alter the appearance of the exterior of such building.

Lutheran World Federation, an Example in World Fellowship

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, an event of the greatest importance for the development of closer international relations on a people-to-people basis, is taking place in Minneapolis, Minn., August 15 to 25. Quite apart from the religious significance which, of course, is great, the Lutheran world federation's third quinquennial assembly is a wonderful demonstration of free congregation of free people for a common purpose.

Lutherans came to Minneapolis from all over the world to attend this history-making conference. There are representatives from Germany, Chile, Indonesia, Japan, India, to name a few of the 32 nations represented. This is the first time the United States has been so honored as to be host to this great assembly which has been called only twice before in history.

I was so fortunate as to be able to attend this historic gathering and was tremendously impressed by the variety of costumes, the sounds of different languages, the color, the warmth and the friendliness and understanding in evidence on all sides.

Under leave to extend my remarks, I have requested permission to insert three articles reporting the assembly:

[From the Minneapolis Tribune of August 18, 1957]

THEY CAME FROM MANY LANDS AND THEY TALKED ABOUT THE LORD

(By Ed Magnuson)

Now it was in the city of Minneapolis in the State which was known as Minnesota that the people came from many lands and talked in many tongues about the wonders of the Lord.

And they assembled together in a large building which the people of those days called the auditorium and they sat at long tables which were covered with green cloth. Men of dark skin and men of white sat they side by side and smiled one unto the other.

They were met in the name of the Lutheran world assembly and they were quiet as they listened to those amongst them who did rise to speak before a curtain which was light blue and in its center was the sign of the cross in red and in gold.

And the words of the speakers were written on white paper so the other could consider them with great care. And the words were carried through the air to wondrous machines at the green tables and each man could hear the words in a tongue which he knew.

And the name of each man and the name of each woman was written on a white card and the name of his land was imprinted upon a white silk banner so all would know who his neighbor was.

And it came to pass that Austrians were seated beside Australians and men of Hungary beside men of Iceland and men of Germany beside men of France. And if they did not always agree on all things, they spoke of their differences without hate and each listened carefully one to the other.

Their chairs were of chrome and the cushions were of bright red or bright blue. And their garments were of many kinds, some according to the dress of their 32 lands as had been the custom for generations before them.

Above their heads were large blue flags and there was a red heart on each flag and within the heart was a black cross and these flags were the symbol of the love they shared for the Lord.

And above the flags sat thousands upon thousands of other people who had come to watch this remarkable thing that had occurred. They talked quietly among themselves when the speaker was not of their own tongue or they followed the words on the white paper.

Some had come bringing all of their children and some were young and some had known many years and they remarked to one another about the strangeness and the goodness of the sight before them.

And when the members of the assembly tired of talking and of listening, their leader did call a rest period and the large hall did become noisy with their walking and their laughter and their conversing one with another.

And many among them did go forth into the halls and did partake of food and drink provided by women of the temples of the city. And the food they called cookies and the drink they called coffee.

Now in the halls there was a great friendliness as the men of one nation talked with the men of another about things of small moment and they did pat one another on the back and they did smile.

And underneath the great hall other people did walk among stalls in which were displayed the goods a temple must have. There were among them vestments and toys for the nurseries of children and musical organs and stained glass windows and all manner of wondrous things.

And there were books of the church and works of art and charts of the world showing where the work of the Lord was being carried on. And mothers carrying babies and women of high fashion and many other people did look and did wonder.

And it was in another large room that travelers to the city did have their needs cared for and there they were helped to find places to sleep and places to see and they could receive epistles from their homeland and have their questions about the strange city answered.

And so the people who were met together did both laugh about small things and think seriously about the things of the spirit.

And their leader told them there were vehicles there to carry the women to the shops of the city.

And he did tell them that there was a great need on the earth for men to work together in accomplishing the work of the Lord and that they should love one another as He had loved them.

All this did come to pass in the city of Minneapolis on the 17th day of August in the year of our Lord 1957.

[From the Minneapolis Tribune]

BISHOP SAYS REDS CAN'T KILL CHURCH—EDITOR DEPLORES SMALL EFFECT OF CHRIST ON UNITED STATES

(By Daniel J. Hafrey)

The Christian church will survive the onslaught of communism in Eastern Europe, a man who has had a major share in keeping it alive told the Lutheran World Assembly, Saturday.

"It has never happened in our age that the state could permanently subdue the church," said Bishop Otto Dibelius, of Berlin-Brandenburg, whose congregation straddles the Iron Curtain.

The same meeting heard a leading Lutheran editor deplore the fact that Christian morality and conscience have remarkably little effect on American public life.

"Thus it is more important in America whether a man is against private property than whether he is against God," said Dr. G. Elson Ruff, Philadelphia, Pa., editor of The Lutheran.

"And being a Communist is more frowned upon than being an atheist."

Addressing a panel session on church and state, the fighting German churchman who has won worldwide respect for his sturdy opposition to nazism and communism said:

"The church has an eternal life. Thus it can be patient. We may suffer occasional defeats. But the church will always arise and recover as long as it is faithful and loyal to its fate."

"Our personal lot is immaterial," added the cleric who has been called the "one-man Berlin airlift" because of his unceasing trips from his headquarters in the West to East Berlin.

"Our children and grandchildren will win the battle, for our Lord won't desert us."

Dr. Ruff, to illustrate his point—without mentioning any names—spoke of Lutherans such as Representative WALTER, Democrat, of Pennsylvania, in whose opposition to immigration laws favored by most churches little Christian morality is noticeable.

And he referred to a great Lutheran State nearby which has sent such a man as Joseph McCarthy to the United States Senate.

Even where religious attitudes have entered into public acts, he said, such as into the 18th amendment (prohibition), they have been misguided.

Somehow, in our day-to-day affairs, he said, the gulf between Christian principles and public decisions has grown too wide. Among possible exceptions to this general State he singled out the Augustana Lutheran Church.

Particularly he referred to Luther W. Youngdahl, former Minnesota Governor appointed a Federal judge by President Truman, who wrestled with his Christian conscience and came up with a Christian decision in the Lattimore case.

Youngdahl dismissed the Government case against Owen Lattimore, former Johns Hopkins University professor accused of working for the interests of Russia.

Youngdahl's stand and similar ones by others, Dr. Ruff said, are just surface signs of much thinking being done by Americans now about morality. He added:

"Christian morality is beginning to have its effect on American Government. We American Christians are coming to understand that the church has insights of tremendous values which may influence the state."

Discussing the relation of church and state in America for the benefit of foreign visitors, Dr. Ruff pointed out that the state is absolutely neutral toward religion. Thus, he said, a teacher may not even put up the Ten Commandments in a classroom.

But this does not mean, he said, that the state is unfriendly toward the church. Religion is important in this country, he added, but because of the bewildering multiplicity of churches here, neutrality is the only possible approach.

The third panel member, Dr. Kristian Hansson, director general of the Ministry of Church and Education of Norway, described the relations of church and state in a nation with an established religion, as Norway is.

CHUCH MUST SERVE WORLD, GERMAN SAYS

Christianity must be more than just "a pious feeling on Sunday morning," the Lutheran World Assembly was told Saturday night.

In order to be a vital force in today's world, the church must show its concern for the entire community and the entire world, said Dr. Reinold von Thadden-Trieglaff, founder of the German Kirchentag (church rally) movement.

"The church does not exist for itself," he stressed to his audience in the Minneapolis auditorium. "It exists to serve the world."

He continued: "The test of a church that is alive is not only a growing membership and an increasing budget.

"A deeper test is whether the society in which the church is called to serve is being transformed."

Out of this realization, said Von Thadden, descendant of a 600-year-old noble family who lost his estate during the war, has grown his movement "to bring the church to the people, to bring it to bear on today's realities."

Out of this, he added, have grown the mammoth rallies, attended by as many as 500,000 persons, at which people from all walks of life gather to discuss life in the light of Christianity.

"At these rallies," he said, "we discuss not only the question of personal salvation, but also the burning problems of politics, of social welfare, of family life and education."

Addressing the same meeting, Dr. George Aus, vice president of Luther Theological Seminary, St. Paul, said Christian congregations must be more than mutual admiration societies "made up of nice people like ourselves."

He reminded his audience that "as the Body of Christ it is our mission at home in the congregation to be His heart, sharing His concern for others."

Where this concern is real, he said, "it cannot rest until it has reached the furthest most nook and cranny of the parish; to the rich, the poor, the broken-hearted and the indifferent, the learned and the unlearned—those who know they need a physician and those who think they don't."

On the heels of Friday's proposal for a study of Roman Catholicism, the assembly yesterday was warned of a "theological offensive" by the Catholic church.

"If we lose the field theologically," said Dr. Vilmos Vajta, Geneva, Switzerland, director of the federation's department of theology, "we have lost everything."

He pointed to the fact that the Catholic offensive has "gained converts of leading theological and cultural personalities."

A call for an honest, frank look at theological differences was issued yesterday by Dr. Han-Werner Gensichen, Madras, India, in a talk on "The Unity of the Church in Christ."

He referred several times to his experiences in India where Lutherans and other Protestants—by means of such discussion—have attained a high degree of cooperation in the United Church of South India.

MINISTER TO REVIEW LUTHERAN SCHOOL LIFE

The Rev. H. Hermon O. Hendrickson, Edmonds, Wash., will review the history of Lutheran Normal school, Madison, Minn., at the school's sixty-fifth anniversary reunion Friday.

The dinner, which is open to all students and their wives or husbands, will be at the Minneapolis YMCA. Reservations may be obtained from Mrs. E. B. Eliason, 3731 Oakland Avenue.

Biography of George Augustus Finch

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, August 20, 1957

Mr. BRICKER. Mr. President, I have asked the Library of Congress to prepare a short biography of the late George Augustus Finch, along with a bibliography, and a list of the productions of his lifework. I ask that they be printed in the appendix of the RECORD.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

BIOGRAPHY OF GEORGE AUGUSTUS FINCH

George Augustus Finch, noted as an authority in the field of international law, was active in many other areas of endeavor. He was also recognized as an excellent lecturer, teacher, and author. Always, throughout his long and exemplary career, George Finch devoted his tireless efforts to the establishing, maintaining, and teaching of the principles of world peace on the lasting basis of law and justice.

Born in Washington, D. C., to James and Emma Finch on September 22, 1884, George Finch sprang from a long line of Washingtonians. His great-grandparents settled in the area during the early 19th century. His formal education, too, terminated in the same city of his birth and lifelong residence.

In 1907, George Finch received his bachelor of laws from Georgetown University. Forty-one years later, in 1948, he received an honorary doctor of laws degree from the University of Thessalonika, Greece.

Although George Finch received his law degree in 1907, his associations with institutions of higher education did not cease. In 1928 he became a member of the Advisory Committee on Research in International Law of Harvard Law School, a position he held until his death. From 1945 until 1952, Mr. Finch was active as a professor of international law in the School of Foreign Service, Georgetown University. He also lectured at universities and law schools the world over.

In 1905, George Finch married Mae Wright. This long and happy union lasted more than 50 years. Six children were born to the Finches: Eleanor Harrison, Augusta Emma, David Wright, Mary Roberta, George Augustus, and Beatrice Anne.

George Finch began his long and illustrious career in Government service. He first worked as a clerk in the War Department in 1905. The following year, 1906, he joined the Department of State and served as a law clerk until 1911. In 1909, while with the State Department, George Finch gained recognition for the manner with which he discharged his duties as the Secretary of the American Commission to Liberia.

That same year, 1909, George Finch joined the staff of the 2-year-old publication, American Journal of International Law. He served continuously with the Journal in various capacities until his death in 1957. He began his association with the publication as its business manager. From 1914 until 1924, Mr. Finch was secretary of the board of editors of the Journal as well as its business manager. He was elected managing editor in 1924. In 1943, he succeeded Prof. George Grafton Wilson as editor-in-chief upon the latter's retirement from office. In 1953, Mr. Finch retired from the active position he held to become the honorary editor in chief and honorary vice president of the Journal.

During his tenure in various capacities associated with the publication, George Finch devoted his energies and abilities not only to the administration of practical affairs, but also to the maintenance of a high standard of scholarship in its contents, to which he contributed in good measure. Under his capable leadership the American Journal of International Law published many important contributions to the subject of international law both in articles and editorials by authorities in the field.

George Finch joined the War Industries Board in 1918 as an expert on international problems. In 1919, he served the United States again as the assistant technical and legal adviser of the American Commission To Negotiate Peace.

His worldwide travels equipped George Finch with an understanding and an insight which enabled him to deal with international legal problems with great dexterity. He represented the United States at several inter-American conferences. Not only was Mr. Finch familiar with the inter-American nations, but he had widely traveled in Asia and central and western Europe. His knowledge, gained from experiences in these countries, qualified George Finch as a consultant to the United States delegation at the San Francisco Conference on the United Nations. He also served as the vice chairman of the American Bar Association's committee on peace and law through the United Nations.

Another aspect of the career of George Finch began in 1911. In that year he became associated with the Carnegie Endowment for International Peace in the division of international law. From 1911 until 1940, Mr. Finch served as the assistant director of the division. He became the associate director and a trustee in 1940, and, from 1943 until 1947, he served as the director. He was a counselor to the Carnegie Endowment from 1947 until 1950.

George Finch was an active participant in the affairs of the American Institute of International Law. He was the assistant secretary general of the institute from 1927 until 1942. In 1942 he became a member of the executive council of the organization. He was also elected president, in 1945, of the Inter-American Academy of Comparative and International Law at Havana, Cuba.

More recently, George Finch is remembered for the active and wholehearted support he gave to the Bricker amendment to limit the President's treaty-making powers. He had worked on the American Bar Association's Committee on Peace and Law which consulted with Senator BRICKER regarding his position on treaties. Mr. Finch also drew up a statement for the Senate Judiciary Committee on the latest revision of the amendment. He offered his valuable opinions in testimony several times during congressional hearings regarding the amendment.

A noted authority on treaty-making powers under the Constitution, George Finch was the author of learned articles regarding the case for the Bricker amendment.

On July 4, 1957, George Finch suffered a heart attack. The attack proved fatal, and he died on July 17, 1957.

BRIEF CHRONOLOGY

1884, September 22: Born, Washington, D. C.

1905: Married J. Mae Wright, clerk, War Department.

1906–11: Law clerk, Department of State.

1907: Bachelor of laws, Georgetown University.

1909: Secretary, American Commission to Liberia.

1909–24: Business manager and secretary of the board of editors, American Journal of International Law.

1911–40: Assistant director, Carnegie Endowment for International Peace, division of international law.

1918: Expert on international questions, War Industries Board.

1919: Assistant legal adviser, American Commission to Negotiate Peace, in Paris.

1924–43: Managing editor and secretary, American Journal of International Law.

1927–42: Assistant secretary general, American Institute of International Law.

1928–57: Member, advisory committee on research in international law, Harvard Law School.

1940–43: Associate Director, Carnegie Endowment for International Peace, division of internal law.

1942–57: Member, executive council, American Institute of International Law.

1943–47: Director, Carnegie Endowment for International Peace. Division of international law.

1943–53: Editor in chief and vice president, American Journal of International Law.

1945–57: President, Inter-American Academy of Comparative and International Law.

1945–52: Professor, international law, Georgetown University.

1947–50: Counselor, Carnegie Endowment for International Peace. Division of international law.

1953–57: Honorary editor in chief and honorary vice president of the American Journal of International Law.

1957, July 17: Died.

Dr. Robert G. Neumann Analyzes France and the Algerian Crisis

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 20, 1957

Mr. HILLINGS. Mr. Speaker, yesterday I placed in the RECORD the first of three articles by Dr. Robert G. Neumann, professor of political science at the University of California at Los Angeles on France and the Algerian crisis. Following are two articles:

FRANCE AND THE ALGERIAN CRISIS—II

(By Robert C. Neumann)

Tension and dissatisfaction in Algeria do not date from yesterday. The inequality between the European and Moslem populations was most clearly expressed by the system of electoral colleges through which 1 million Europeans elected as many deputies as did well over 8 million Moslems. The orientation of Algeria emphasized winegrowing which made Algeria a less favored economic extension of France, rather than certain cereals which would have been more advantageous for the economy and the consumption of the Moslems. Resistance to the industrialization of Algeria did not give the Moslems a sufficient opportunity to develop an adequate middle class from which the required number of civil administrators might have sprung.

This point must not be exaggerated. The French did invest a great deal in the country. They modernized it and gave it standards of health and social services unequaled in any of the Arab countries. Moreover, a certain number of Algerians did enter the civil service and the army, and some of them reached high positions and had Frenchmen under them. But this was certainly not an adequate number by far. Hence, dissatisfaction began to seize wider and wider circles. They were often suppressed, but during World War II the atmosphere of liberation was in the air and certain statements by General de Gaulle raised hopes of a new kind of regime. These hopes and aspirations were pushed and nourished by nationalist movements, one of which was the movement of the Algerian manifesto of Ferrhat Abbas and the other the Algerian national movement of Messali Haj. These movements grew in numbers, but they achieved no tangible results.

What really tore the matter wide open was the decision of the Mendès-France government to grant independence to Morocco and Tunisia. Nationalist agitation had reached considerable heights in those countries while Algeria remained relatively calm. Now, after many vicissitudes, they had achieved their aim; yet, Algeria remained unchanged as before. How could the French have believed that they could get away with this?

There are several reasons. To the French public and the French Parliament the new status of Morocco and Tunisia was presented as "independence within interdependence," presumably a new formula which would somehow keep a measure of the "French presence" intact in those two countries. But this was an empty phrase: the rush of events bypassed all finely wrought legal formulas and the two countries achieved their full independence actually before the treaties with France were ratified. This made the contrast between Tunisia and Morocco on the one hand, and Algeria on the other, much sharper than anticipated.

The French like to say that Algeria is different from Tunisia and Morocco and so it is. Algeria is very much larger and more important. But Tunisia and Morocco have a national tradition which Algeria lacks and which explains in part why those two countries were able to develop a nucleus of managers and civil servants while Algeria lagged behind. On purely objective grounds the French statement that Algeria is less ready for independence than either Tunisia or Morocco is certainly true. But it would have been against human nature if the Algerians themselves had not viewed it otherwise. And yet, if large and generous concessions had been made at that time and applied quickly, all might have been well. But the dogma of the "one and indivisible republic," so illusory and yet so tenaciously upheld by the French, made it unthinkable that any part of the sacred soil of France should have a different status from any other part and that Algeria should be permitted to develop a separate personality. And so nothing was done and tragedy was invited.

In all fairness I must state that there were many Frenchmen who understood the needs of the hour. But a radical change in Algeria would have run up against much opposition in France and furious resistance among the Europeans in Algeria. The Europeans persuaded Government and Parliament that they knew "their" Arabs and that all would stay quiet. The French aristocrats had also know "their" people before the great Revolution. This patronizing attitude which often hides the absence of real knowledge and understanding is the surest road to the guillotine.

The consequences of this blindness appeared quickly enough. Resistance to French rule became violent; the former, relatively moderate Algerian political movement which became known as the Front ments were bypassed and outclassed by a of National Liberation (FLN). What the world has since come to call "the war in Algeria" had begun.

It is well to understand what kind of a war this is. Many Americans are under the impression that this is an uprising of the masses against French rule. Some think of it as a regular military operation in the style of the war in Indochina. This is a most inaccurate picture. In the first place the FLN is not a popular, mass movement like the Neo-Destour of Tunisia or the Istiqlal of Morocco, but a very loose association of independent operators, groups, or grouplets. On this point there seems to be general agreement among people whose views on Algeria are otherwise diametrically opposed. There are some chiefs, like Ben Bella whom the French captured through the use of a doubtful ruse; there is Quamrun, the military leader who enjoys a certain authority. But there is no evidence of a specific policy or direction. Ferrhat Abbas, who suddenly went over to the FLN tries to look and act like their minister of foreign affairs but his authority is somewhat doubtful.

Their methods of combat are most effective. They are the traditional ways of the terrorists. The number of active FLN fighters is surprisingly small. Official estimates run from 20 to 30,000. This is probably inaccurate as their is a considerable infiltration from Tunisia. But even if their numbers had doubled they would still be a mere handful against the over 400,000 well-equipped French soldiers stationed in Algeria. But numbers matter little in this deadly game. The principal target of FLN furor are not Frenchmen but Moslems. For each Frenchman killed 10 Moslems become victims of the FLN. Every Moslem who shows any sign of collaborating with the French, or even of being a moderate is marked for assassination and the FLN succeeds only too often. Several hundred, as many as 800 per month, are thus dispatched.

Of course they also kill Frenchmen. Attacks on isolated farms were frequent. Cars are shot at or destroyed by mines. With increasing frequency there are ambushes and usually small-scale fights with troops. If possible, they try to attack units of recently arrived draftees whose training may not as yet be up to snuff. Quite frequently FLN attacks are seemingly aimless, a grenade under a bandstand at a dance, a grenade tossed into a store crowded with Europeans and Moslems alike, a grenade tossed into a crowd taking a Sunday afternoon stroll. A grenade * * * it is an endless story.

What is the FLN trying to achieve? Surely it cannot hope to throw 400,000 French soldiers into the Mediterranean by such means. The answer is simple. Terror as a combat weapon is not designed to defeat troops in the field but to bring life to a standstill. If the Moslem population refuses to serve the Europeans, to cooperate with them in any way, the French will simply have to give up even if they do not lose a single soldier or a single gun emplacement. If the FLN can establish a parallel administration, that is to say if it can establish a secret network of agents whom the people will follow rather than the official administrators, French administration will grind to a halt. This is why the attacks are mainly directed against Moslems, in order to frighten them into obedience to the FLN. But the exercise of actual power has always legitimized power according to the islamic tradition and makes a considerable impression on the Arabs. Hence, people are not merely terrorized into the arms of the FLN; the effectiveness of the terror is impressive and seductive to many Moslems and not all conversions are by direct force.

The most bitter FLN hatred is reserved to the followers of Messali Haj's Algerian National Movement (MNA). This was once the most radical of the Algerian groups but has long since been bypassed by the FLN. The MNA has little strength left in Algeria, but it dominates among the 300,000 Algerians working in France. This is not surprising. These Algerians are able to enter France freely and work there under conditions which are superior to those of Algeria because they are French citizens. As such they benefit by all the provisions of the far-reaching French social-security system, get better wages than they could get at home. They live frugally and send most of their money home to their families. Thus, the 300,000 in France effect perhaps 2 million people at home, a considerable number.

Therefore the FLN must strike against the MNA in France proper. There is hardly a day without a murder and tempers are rising in France.

Back in Algeria FLN terrorism arouses French counterterrorism. The young soldiers, especially the tough paratroopers, the elite of the elite, are getting rattled over these attacks that dart out of the dark and which cannot, apparently, be combated effectively by ordinary military means. And so, sometimes, when they get hold of a suspect they may commit acts which do little credit to France. These acts are certainly not the wish of the French Government. They are the result of taut nerves cracking under the intolerable strain of an invisible enemy who could be anybody in a crowd. They stem from the frustration of a war which can seemingly be neither won nor lost. They stem from bitterness over buddies shot in the back in silent streets or ambushed in the lonely bled.

And then there are the violent European crowds who, after burying their dead resulting from a grenade tossed into a dancehall, suddenly get out of control, roam the streets and kill every Moslem in sight. This suits the FLN fine. It makes it more difficult for Moslems to remain neutral; it is to remind them that they can never feel safe with the French. Another example of the old rule that extremists feed one another.

France and the Algerian Crisis—III

(By Robert G. Neumann)

Paris.—The Algerian nationalists, the FLN, are determined to oust the French, to achieve independence and to be masters in their own homes. The Europeans are just as equally determined to stick it out. Make no mistakes about it: these Algerian Europeans are not just a bunch of colonialists fighting to keep their privileges. These are determined men who have made up their minds to defend the only homes they have ever known and to defend them come what may. One day when I was waiting in the Hotel Matignon, the French Prime Minister's office, I met a group of Algerian mayors coming out. Some of them were pro-French Moslems, most of them were Europeans. As human specimen they rather impressed me and reminded very much of the American memory of the West. These were men who knew how to live in the wilderness, who had become used to danger and had accepted it as a normal part of their existence. They looked far less worried than the French ministers who had received them. Some of them were hopeful over the measures taken by the French Government, others were skeptical. But if need be they were all quite prepared to continue to live under the present condition of strife without end. They were supremely confident of their own ability to hold out; their only fear was that France might not continue to support them.

What is to be done? France is a free country and hence all shades of opinions can be heard, from those who want to drown the rebellion in blood to those who want to pull out immediately and abandon everything. But the more rational spirits will certainly

reject either of these extremes. The French military effort is already very great. A drowning in blood could only be contemplated by a wholesale killing of Moslems; nobody but a few isolated desperados could think in those terms. Nor can France simply pull out and leave over a million Europeans and untold Moslems who had worked with them to their fate. Only the Communists seriously advocate such a course of action.

All serious discussion evolves more or less around two themes. The first is the work of Robert Lacoste, Governor General of Algeria. It envisages the creation, my military means, of pacified zones in which the Moslem population, then presumably free from FLN pressure and threat, will be encouraged to form its own local government and gradually develop a responsible, native leadership with whom a more permanent settlement could then be negotiated. Such negotiation would not consider independence but a better way of allowing the two communities of Algeria, the Moslems and the Europeans, to live together in peace and equality. No return to the old, unequal double-college system of voting is contemplated.

The Lacoste plan has many difficulties but it hinges above all on the practical possibility of establishing such control that terrorism becomes impossible and large numbers of Moslems may feel safe in collaborating with the French administration. I have been assured on the part of well qualified authority that this plan is making headway. Others dispute that strongly. I cannot pronounce this statement true or false until I go to Algeria and see on the spot. But I must admit to considerable skepticism. This is not the first time that Mr. Lacoste has been confident and subsequent events did not support him. Worse, his plan seems too easily disturbed. It is not too difficult to slip a couple of men with knives and grenades into almost any area. A few explosions, a few cut throats and the Moslems discover that under these circumstances nobody can really guarantee their safety. I think in general it is safe to say that Mr. Lacoste would have to produce very impressive, concrete results, before his plan is considered realizable, both in France and especially abroad.

The other road is that of negotiation. Many people here talk about negotiations without being really quite sure what that means. Algeria is at war; hence, any negotiation to bring about a cease-fire and eventual peace must take place between the two parties who do the actual fighting: France and the FLN. Some people here rave about negotiating with somebody else, of finding a valid "opposite number" (interlocuteur valable). The logic of the situation, however, is inexorable: the FLN may represent little or nothing at all. It may be disunited and have no political direction. But it does the fighting. If you want to stop the fighting by negotiation you have to negotiate with them primarily or even exclusively. If you do not want to do this it would be better not to talk about negotiations.

There are other consequences which follow. If the French were to start negotiating with the FLN in earnest the importance and prestige of the FLN would greatly rise. Some believe that in that case their political leadership might become more unified and more moderate. This seems to be the hope of President Bourghiba of Tunisia but there is no guaranty that this would actually be the case. And whatever the outcome, if a cease-fire could be negotiated it would certainly, at the very least, give the FLN a most prominent place in the future life of Algeria and that means that eventual independence is inevitable. Bourghiba sees this very clearly and he is trying to induce the FLN leaders to be more moderate because in that case, victory would soon be in their hands. It is perhaps an indication of their immaturity that they do not see the wisdom of this counsel.

The best that could be expected from negotiations with the FLN would be gradual independence which would give the Europeans time to adjust themselves or leave. But even that is not certain because the recent events in Morocco and Tunisia have shown that events which were supposed to take a certain amount of time may become telescoped into a day. The Europeans in Algeria understand this quite well and that is why most of them are bitterly against any negotiations. Some people believe that if the French Government were to take this road the Europeans of Algeria would rise up in arms and take over the country (Algeria) under the benevolent neutrality of the French army and police who would not turn against their fellow countrymen.

One thing seems clear: the Lacoste plan of pacification and the encouragement of a more cooperative Moslem leadership on the one hand, and the idea of negotiation with the FLN on the other, are mutually exclusive. One cannot expect a considerable number of Moslems to come out for cooperation if one plays with the possibility that they may one day be left to the tender mercies of the FLN. And on the other hand one cannot expect to negotiate seriously with the FLN while at the same time pushing a plan which is designed to exclude the FLN.

And yet the French Government does seem to do both. The Lacoste plan is the official version but contacts with the FLN leadership have recently been admitted by premier Bourgès-Maumoury. To give the French Government the utmost benefit of the doubt it is perhaps fair to say that this seeming lack of logic is the result of a genuine division within the Government itself, where Governor-General Lacoste leads the tough faction and his colleague, Foreign Minister Pineau (both are Socialists), favors negotiations.

This was brilliantly illustrated by a recent event. The French Government used the occasion of the international conference of free trade unions in Tunis to make contacts with the FLN leadership. A special envoy was sent who met the FLN leaders. The latter wished to consult their chief, Ben Bella who is in prison in France. They sent him several messages which were to be delivered by his lawyer who is also the general secretary of the leading Tunisian party, the Neo-Destour of President Bourghiba. But when the lawyer landed at Orly Field (Paris) he was arrested and the incriminating documents naturally found on him. As the French Government must have had at least semiofficial knowledge of this trip this action seemed to make no sense at all. But it is now pretty clear that this was a move of the Lacoste faction against the Pineau faction which was to expose the tentative negotiation attempts and thus make their resumption more difficult.

And so, as the difficult U. N. debate over Algeria approaches it is not quite certain what the French Government's policy is. Some people here suggested that if France is condemned by the U. N. or is in danger of such condemnation it should quit the organization. But surely this is the counsel of despair. The U. N. and its majority may be judges of doubtful validity but France can hardly afford to isolate itself as the unhappy experience of the Suez debacle has amply demonstrated. And this time it would be even more isolated because Great Britain is not supporting such a French policy.

Many people here speak of institutional reforms, of a Federal structure by which a semiautonomous Algeria might remain attached to France. Some think of a federation of North Africa, including Morocco, Tunisia and Algeria maintaining some sort of commonwealth-type relationship with France. These are serious plans but they are secondary. The first and inexorable decision is that between negotiation with the FLN or a purely French solution along the Lacoste line. Until this decision is resolutely taken all discussions of institutional reforms remain purely academic exercises without concrete value.

Can the French Government, any French Government make such a fateful decision? The notorious instability of French Governments makes this difficult. A short while ago, Christian Democrat (MRP) Pierre Pflimlin almost became premier; he only failed by a few votes. Had he been elected, his policy would probably have been quite different from that of the present Premier, Bourgès-Maunoury. In October, when the National Assembly reconvenes, the picture could easily be reversed. How can a long-range policy emerge under such circumstances?

Short of a national catastrophe which might bring a strong man, such as the still immensely prestigeous Gen. Charles de Gaulle to power, there is only one policy-making group of stable composition in France, and that is the Parliament. What is needed of Parliament is a process of deep soul searching and something like a newly concurrent majority for a specific Algerian policy. This is not easy for French debates are more brilliant than constructive and compromise is not considered a virtue.

The hour is desperately late. A few days ago, one of France's really grand old men, former Premier and Foreign Minister Robert Schuman told me of his long experience which had taught him that often a bad decision is better than no decision at all. A bad decision can perhaps be lived with and adjustments are often possible. But absence of decision usually makes the situation worse. These are great words of wisdom which the French Government, the Parliament and public opinion should seriously ponder. The coming U. N. debate in the fall will be bitter and contains many dangers for France. France must make up its mind quickly and resolutely, lest the debates of October become the Ides of March.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

National Security—A Vital Factor in Excessive Oil Imports Situation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. JOHNSON of Texas. Mr. President, there is no question at all that a point exists at which imports of oil into the United States become a threat to our national security.

That fact was brought out forcefully in an editorial published recently in the Fort Worth Star-Telegram, one of Texas' truly great newspapers.

The only way, says the Star-Telegram editorial, that we can be sure of having enough oil in case of emergency is to rely upon our own resources.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECURITY A REAL FACTOR IN OIL DISPUTE

The Wall Street Journal, whose editorial page we respect tremendously, leaves us a little perplexed at its stand on the question of oil imports, which the President has just undertaken to restrict in the interest of the domestic oil industry.

If we understand the Journal correctly, it argues against the control of imports with the contention that the way to conserve our own oil is to leave it hidden in the ground and to use oil from overseas, and that this also provides the consumer with cheaper petroleum products and keeps the thumb of Government off the oil business.

This is one way of looking at it, but we cannot believe it is the right way or that any such program would be in the national interest. If there were no possibility of war it might work for a time to the consumer's advantage, as long as a domestic industry remained to provide competition. But eventually it would kill or drastically curtail the production of domestic oil and the search for new United States reserves because it costs less to produce oil in the big foreign fields.

Since there is no way of assuring ourselves war will not happen and since war would immediately endanger foreign petroleum supplies, it is a fair question to ask what we would do for petroleum in such an event if the domestic industry had been crippled and our unfound reserves remained safely hidden in the ground. It is not beside the point to inquire what would have happened in the Suez Canal crisis if we had been dependent upon oil from the Middle East. The American motorist would have been garaged for the duration, and an oil policy would have been promptly reversed.

More is involved in this question than conservation. While conservation of United States oil obviously is important, and while the import of some volume of foreign oil obviously relieves the drain on our own resources, there is a point at which imports become damaging to the domestic industry. And a vigorous domestic industry, we are persuaded, is essential to our strategy of defense.

Price itself, even from the viewpoint of the consumer of oil products, would seem somewhat less important than the assurance of an oil supply in event of emergency, and the only way that can be accomplished with certainty is to rely upon our own resources.

Record of Italians in the United States

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared paying a well deserved tribute to loyal Americans of Italian descent.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BEALL

I wish today to offer a strong protest against a vicious insult which has been directed against all loyal Americans of Italian descent, against the good citizens of Italy itself, and, in fact, against every person who believes in the principles of truth and fairness.

This insult was delivered recently by one of our retired admirals during testimony on proposed changes in the Immigration and Naturalization Act.

These changes, incidentally, were ones offered by the Eisenhower Administration to wipe out the injustices and hardships which have arisen as a result of certain sections of the McCarran-Walter Immigration Act.

I shall not dignify the unfortunate statement made by the retired admiral by repeating it at this time but, as a cosponsor of immigration legislation which would eliminate the type of petty prejudice which he supported, I should like to make a few comments of my own.

It is only natural that we deplore slurs against our fine Italian-American citizens because each such lie insults a culture which is 3,000 years old and which has contributed immensely to the progress of civilization in every corner of the world.

Some idea of the advancements and glories which have flowed in unceasing torrents from the shores of Italy to other lands and climes can be gained from a visit to the Albert Memorial in Kensington Garden, London. There it will be found that of the 169 statues representing benefactors of our humanity, more than half pay honor to Italians.

In Italy was cradled and nourished the poetry of antiquity, and in Italy was found a group of historians who would preserve and continue the registry of civilization.

When one thinks of literature, the theater, architecture, sculpture, art, navigation, science, music, or religion, it is impossible not to think of the men and women of Italian blood who were primary contributors to their development.

Ovid, Horace, Michelangelo, Verdi—I could go on and on and on. With each name, though, I think of a dozen more, and with each of the dozen comes the memory of the renowned accomplishments of still another dozen. It is not necessary that I call this honor roll.

Suffice it to say that in age after age Italy has enriched civilization through her thought, talent and work, so that all the world can join with Macaulay, the English historian, in the tribute he offered when he wrote:

"Italian civilization, nearly 3,000 years old, has never faded out.

"The nights which have descended on Italy have been nights of Arctic summer, the dawn always reappearing before the reflection of the preceding sunset has faded from the horizon."

I have commented in a very general way on the contributions which Italy has made to the entire world, and now I should like to discuss some of her gifts to our United States.

Any schoolboy will tell us, of course, that Christopher Columbus discovered America, and that the very name "America" is derived from that of an Italian mapmaker and navigator, Amerigo Vespucci.

In addition, there have been such men as Cabot, who laid the foundation for English settlements in this country; Verrazzano, discoverer of New York Bay, and Malespina, who explored the West. Nor can we forget that Paolo Busti founded Buffalo; Father Cataldo, Spokane; Henry DiTonti, Detroit.

In 1773, Philip Mazzei, a physician of Tuscany, became a companion and adviser to Thomas Jefferson. The most interesting fact about Mazzei, however, is that he was the first writer to present the cause of the colonies to Europe and to encourage support from many Europeans of culture and refinement who had been deprived of liberty in their own homelands.

One of the greatest of the Italian heroes of the Revolution was Col. Francis Vigo. In Vincennes, Vigo County, Ind., an immense boulder placed over his grave by the Francis Vigo Chapter of the Daughters of the American Revolution bears this inscription:

"Francis Vigo—Patriot—Whose devotion to the cause of American Liberty made possible the capture of Fort Sackett, February 25, 1779. Born in Mondovi, Piedmont, Italy, 1744. Died, Vincennes, Ind., 1836."

Another, Cosmo de Medici, a Florentine captain, organized the first troop of light dragoons in the Revolution and fought with distinction throughout the war, many times under the direct command of Washington.

Now we come to the present day, which also brings us face to face with the pros and cons of the Italian immigration issue.

If immigration from Italy were a detriment to the United States, as some misguided persons have claimed, we would not have in this body such a man as our worthy colleague from Rhode Island, Senator PASTORE.

If immigration from Italy were a detriment to the United States, as some misguided persons have tried in vain to prove, we would not have in the other House of this Congress such men as Representatives

ADDONIZIO, ANFUSO, CRETELLA, FINO, MORANO, RODINO, and SANTANGELO.

These men are representative of the thousands of Italian-Americans who are serving America faithfully and loyally in the executive, the judicial, and the legislative branches of the government, on the national, State, and local levels.

At this time I would like to pay a very special tribute to the Marylanders in public and semipublic positions who can point with just pride to their Italian background.

Again, it would be impossible to name them all.

I will mention, however, that in Baltimore alone we have such men as Mayor Thomas D'Alesandro, Jr., a former Member of the House of Representatives; Judge Anselm Sodaro, of the supreme bench, who formerly served as State's attorney; State Senators Joseph A. Bertorelli and Anthony F. DiDomenico; State Delegate Samuel A. Culotta, who is also a counsel to the Senate Judiciary Committee and venerable of the Lord Baltimore Lodge of the Order of Sons of Italy in America; Joseph F. DiDomenico, commissioner of the Maryland Department of Labor and Industry; Mrs. Agnes L. Giordano, chairman of the State board of hairdressers and beauty culturists; and Dr. Frank C. Moreno, member of numerous State boards and commissions, civic leader, and philanthropist.

I would like to mention hundreds more—for instance, the great Metropolitan Opera diva Rosa Ponselle—but time forbids.

Instead, I will turn once again to the national picture to pay tribute to a very special group of Italian-Americans, and I will then conclude my remarks.

The men to whom I wish to direct my special praise are the ones whose patriotism is reflected, in part, in the rollcalls which echo throughout our land each Memorial Day and whose names are etched in the Defense Department's records of wearers of Purple Hearts and other decorations.

Now I should like to end my statement by quoting the words of Charles E. Russell, the historian. Mr. Russell wrote: "From the southern shore of Europe projects a peninsula of no great size, partially filled with mountains and with stretches of land no better than any other terrain, and yet out of that strip of land has emerged a great flaming dynamic force that has influenced the entire Western World and made that world what it is, in its anatomy, in its essence and function, purely Italian."

Proposed Electoral Reform

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Key West Citizen of Tuesday, August 13, 1957, entitled "Electoral Reform Due."

The only comment I wish to make, Mr. President, other than to state that this is in my judgment a worthwhile editorial, is that the title should read "Electoral Reform Long Overdue."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ELECTORAL REFORM DUE

Once again the ever-recurring attempt to reform the election laws is bobbing up in Congress. The latest proposal is to allow each State to divide its electoral votes by congressional districts.

This constitutional amendment has been introduced in the Senate by two Democrats, Montana's MIKE MANSFIELD and South Carolina's J. STROM THURMOND, and by two Republicans, South Dakota's KARL MUNDT and New Jersey's ALEXANDER SMITH.

Many observers have felt that the present system of electing a President is not in the best interest of the United States nor a healthy democratic process. As the current system now works, the candidate who receives the largest number of votes in a State receives all of that State's electoral vote.

In other words, if one candidate received 10 more votes than his next highest opponent, and just a few more votes than the third-ranking candidate, he would nevertheless receive all the State's electoral votes—and the votes of far more than 50 percent of those who went to the polls on election day would not even count.

Under the proposed system, a State's electoral vote would possibly be split as to congressional districts. Therefore, if half a State's congressional districts voted in favor of one candidate and the other half voted for another candidate, the State's electoral vote could be split and the votes of most of those who went to the polls would usually count.

Back in 1950, the Senate voted 64–27 for a plan whereby each candidate would receive in the various States the proportion of the electoral vote in that State equal to the proportion of the popular vote. The House, however, failed to pass this constitutional amendment with the necessary two-thirds majority, and thus ended that effort.

The question has come up again in recent years and, in 1956, the Senate voted, by less than the required two-thirds, however, in favor of another electoral vote amendment.

The latest one seems to have a fairly good chance of passage. Eventually, the electoral voting system will be changed for it is obviously unfair for the highest candidate in a plurality to receive all the electoral votes, voiding the votes of all those who voted for the other candidate, or candidates.

The Farm Program

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup for August 15, 1957, and August 19, 1957, prepared by the public relations department of the Farmers Union Grain Terminal Association.

There being no objection, the GTA Daily Radio Roundups were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, AUGUST 15, 1957

Yesterday we were telling you about a magazine, Capper's Farmer, that has stiffened its back, and is now fighting to save farm price supports. And, not long ago, we saw how another magazine, Prairie Farmer, admitted that it had been wrong in selling the idea that all farmers needed was efficiency and free markets. It changed its tune and conceded this wouldn't do the job in winning for farmers the bargaining power they so desperately need. To get such bargaining power takes laws—takes price supports. That's one of the economic facts of life.

So, there we've got a couple of heartening examples of magazines starting to do something to really tell the farmers' side of the story. But such enlightenment is not universal among magazine publishers. For example, one of the old enemies of farmers and their efforts to build bargaining power through laws is Time magazine. It's part of a huge publishing empire of five other magazines, including Life and Fortune, as well as a string of radio and TV stations.

Time is an old hand at doing a hatchet job on farm programs. The current issue features an article in which it unleashes another attack on these programs and, as always, fails to tell the true facts. It starts murdering the truth right in the headline, calling the farm situation, "The $5 Billion Farm Scandal." In claiming that farm price supports are costing, annually, $5 billion or most of that figure, the magazine, of course, has given its readers a completely distorted picture. The editors could easily have checked to learn the truth, but didn't do so.

President Eisenhower blundered into the same trap last April, and shortly thereafter Members of the Senate told the true facts in Congress. Their breakdown showed that not much over $1.2 billion was in the form of direct benefits to farmers. The rest of the budget of the Department of Agriculture was going for programs to help people abroad—a foreign policy matter, or in programs that benefited all the country, like the meat-inspection program, the national forests, and school lunches. And then there are the loan programs like REA and FHA—money repaid by the borrowers.

But Time does its job of discrediting the effort to build price-support programs by using that $5 billion figure. It wants to end the programs. It has no constructive alternatives to offer. Yet it admits that a farmer is helpless in a free market. Its editors are telling the truth when they concede that "In a free market, even modest surpluses can send farm prices sinking drastically." And they tell the truth when they point out that farmers don't have collective bargaining power like big corporations or big labor unions, and that "Vulnerable as they are, the farmers must look to Washington for help." But Time, which is an old hand at getting subsidies in the form of low mail rates, continues to fill the air with attcak on price supports for farmers.

Farmers have a tough job fighting back against such powerful enemies of farm programs that protect farm prices. They've got to do that through their own organizations, such as GTA, the co-op way, marketing grain for farmers and working to get better farm laws.

GTA DAILY RADIO ROUNDUP, AUGUST 19, 1957

The people who view events in the Nation's Capital from the sidelines are still reminiscing with wideyed wonder at the massacre of the so-called farm bloc in Congress. A newspaper columnist writes that, "One of the extraordinary political phenomena of the Eisenhower administration is the complete and utter collapse of the once-powerful farm bloc. Its dissolution," the writer states, "is so complete it does not even put on an interesting struggle these days."

How well the farmers know that? They have waited in vain for a workable farm program, that would help feed into family farm pocketbooks a more nearly equitable share of

the national income. What has happened to the farm bloc? This newspaper columnist takes the charitable approach and says its death is the result of widespread population shifts, the flight from farm to city. One politician points out that when he arrived in Washington, back in New Deal days, about 300 out of the 431 Members of the House of Representatives had to pay attention to farm needs and complaints. Now only about 100 have their ears tuned to the farm grassroots.

This is a logical approach, no doubt, but it overlooks the fact that the farm bloc did not die a natural death. It was murdered. In a vicious, organized campaign, the farm bloc was run into the ground—beaten to death. The death campaign was organized by no other than Secretary of Agriculture Ezra Benson. He's in solid with the Eisenhower administration, and it backed him in every move he made.

Benson used great political know-how in ripping apart the cohesive group of Senators and Representatives, who had become known as the farm bloc. He played the cheap feed interests of eastern chicken raisers against the western feed-grain growers. By juggling price supports, he set northern corn against southern peanuts, and Great Plains wheat against Delta cotton. In a final blow, he insinuated to city consumers that farmers were reaping the benefits of high retail food prices—obviously an untruth—but effective for propaganda and political purposes. No longer do big-city Congressmen trade votes with farm-State Members.

Thus, the farm bloc was dismembered, and its epitaph might well read: "Here lies one of the great keystones of American agriculture, done to an untimely death by one Ezra Taft Benson, and much mourned by the farmers of the Nation." Even so, there is for farmers a fresh hope in the elections of 1958 and 1960. If farmers are to have the program they need—and, frankly, that the Nation needs, to keep the overall economy in balance—they must use their ballots to make the changes in Washington that must be made.

Awarding of Government Contracts on Competitive Basis

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the recent issue of Southern Textile News. It is entitled "Let's Stick to Competitive Bids," and it supports my bill, S. 5, which would prevent the channeling of Government contracts to labor-surplus areas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S STICK TO COMPETITIVE BIDS

Senator STROM THURMOND, of South Carolina, has written a bill which would require that Government contracts be awarded on a strictly competitive basis, eliminating special considerations for disaster or labor-surplus areas. This bill, it seems to us, is worthy of full support and consideration. Competition is the basis on which our entire economy operates. Any attempt to step in, suspend the normal laws of economics, and award bids on a negotiated or appointive basis opens the door to the worst type of graft and corruption. In addition to this such measures have the further evil of directing us toward a controlled, socialistic economy.

Since the early days of our Republic, there have been those who wanted to use Government funds as a political football to be tossed around at the will of those who happen to be in power. As long as the Government, like any sensible buyer, gives its business to those who offer the best value for the money involved, we can have some hope of keeping the situation under control. The minute we adopt any other standard, however, and award contracts on the basis of need, economic planning, or any other artificial factor, we can expect nothing but trouble.

A few years ago when Mike DiSalle, Chester Bowles, and other bureaucrats were trying to tell the American people how to run their business, we discovered that nobody is wise enough to operate our economy by means of arbitrary rules and forced regulations. Communist countries such as Russia and China are finding out the same thing. Therefore, we had better keep the planners and the politicians out of our Government procurement programs. If we want welfare, let's turn it over to the Welfare Department; if we want to build up or preserve industry in a certain section of the country, why not get the local chamber of commerce on the ball? What we don't need, though, is for a bunch of piddlers and meddlers to start doling our procurement money here and there according to the pressures of the moment. That would be a good way to tear up our private-enterprise system and give rise to even more waste in Government.

Texas Newspaper Opposes Proposed Revisions in Firearms Regulations

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. JOHNSON of Texas. Mr. President, opposition is being expressed in many quarters to proposed revisions in regulations on sale of firearms and ammunition.

In Texas, the Tyler Courier-Times, a leading newspaper in the eastern part of our State, says editorially that the issue involved is "whether under the guise of executive department regulation, our rights in the private ownership of firearms can be strangled little by little without legislative action of any kind."

I ask unanimous consent that the thought-provoking editorial from the Courier-Times be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPOSED FIREARMS REGULATIONS

Attempted Government control of private property is rooted in proposed revisions in the administrative regulations for enforcement of the Federal Firearms Act.

A public hearing will be held on the proposition August 27 in Washington.

Some tight controls in interstate traffic in firearms and ammunition are being sought. There are new demands that every firearm be minutely marked as to its manufacturer, his address, serial number, model number, caliber number, and other details. A mountain-size amount of details would continue after the firearm entered trade channels, involving numbers, names, and numerous other entries and descriptions. The same endless process would apply to ammunition. Receipts would be signed and countersigned in each transaction and any revenue officer, if designated for the part, could enter and examine all the books, papers, records, etc., with all the authority and thoroughness of probing into the affairs of a moonshine booze maker.

Understandably, the proposed regulations have aroused the ire of many law-abiding, gun-owning citizens and of such groups as rifle clubs, sports associations, fish and game clubs and veterans', fraternal and patriotic organizations.

These opponents invite others to join in opposition to the proposed regulations and they ask that individuals and clubs urge their Congressman or Senator to help beat down the proposition that is regarded as an invasion on personal rights.

It is a vital question to every individual who believes in the right of American citizens to possess personal firearms for lawful purposes, free from arbitrary and unnecessary governmental control. The issue here is of far greater importance than the merit or lack of merit of any of the proposed regulations. The issue is whether under the guise of executive department regulation, our rights in the private ownership of firearms can be strangled little by little without legislative action of any kind.

Alabama and the River Boom

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. ROBERTS. Mr. Speaker, since the very beginnings of time, water has been a powerful influence in the development of men and nations. That this influence has not diminished is attested by the fact that today there is in progress a gigantic industrial boom along the waterways of the United States.

In 1955 new plants valuated at $6.5 billion were located on waterside sites. That was triple the 1954 total. During the first half of this year, already, more than $3½ billion have been earmarked for construction of industry along waterways.

In 1952 the midcontinent of the United States outstripped the industrial East as a producing area. The main reason was because industries, leaving the East, are settling along the inland waterways. In recent years freight business on waterways in this country has increased from 10 to 15 percent each year. Traffic on the inland waterways has tripled since 1946.

As these developments take place, the areas around the waterways are undergoing almost revolutionary changes. New towns and villages have sprung up, existing cities are bursting at their prosperous seams, and population centers are being rearranged.

Mr. Speaker, within the not-too-distant future, there will be another important industrial boom along another

important waterway. I refer to the Coosa-Alabama Rivers in Alabama, one of the principal rivers of the Southeast, which extends from the Blue Ridge Mountains of northwest Georgia and southwest Tennessee southwesterly across the Piedmont Plateau down to the lowlands of the Gulf Coastal Plains in Alabama. The river cuts diagonally across Alabama to where the Tombigbee River joins it to form the Mobile River 45 miles north of Mobile, Ala. The river system touches every county but one in Alabama's fourth congressional district, which I proudly represent.

This area will reap a bountiful harvest of industry and growth when the waterway is developed in accordance with plans well underway. The Alabama Power Co. intends to build four new dams on the Coosa River and to improve one existing dam. The dream we of Alabama share is that soon the Coosa-Alabama Waterway will be complete with a comprehensive system of locks and dams, a waterway navigable from Rome, Ga., to Mobile, Ala., with ample hydroelectric power and industrial sites.

Mr. Speaker, these thoughts are an outgrowth of an editorial I read in the August 18 issue of the Selma (Ala.) Times-Journal. This editorial points up the extreme value of river development about which I have been talking.

I submit the editorial:

A VISION TO BE CAPTURED

If the Times-Journal were to attempt to present on its own authority even a reasonable estimate of what can be expected in the way of expansion for this section from development of the Coosa-Alabama River system, no doubt many would brand us as wildly visionary.

Yet there are numerous substantial facts from the record of experience which prove that sound waterway development always results in gigantic economic progress for a large area around it. Some of these expansions come immediately, while others accrue over the years, but never in recent times has there been adequate development of a feasible waterway program which did not carry the Midas touch.

For instance, just a few days ago the Times-Journal printed a dispatch from the Associated Press telling of almost overnight development of an extensive boom area in northern New York as the result of start of construction on the St. Lawrence seaway.

Every village in that area, we are told, literally is bursting at its economic seams as the result of an influx of thousands of high-type workers, who are contributing not only bustling prosperity but sound citizenship as well.

Assurance that this construction prosperity will not be a short-lived impetus has been given by steps toward permanent location in the area of several multi-million-dollar industries which will exploit water supplies, hydroelectric power, and cheap transportation resources made easily available by the seaway. Almost unlimited recreational possibilities also comprise a potent attraction.

It is just such industrial miracles as these, that undoubtedly would be regarded as fantastic on the basis of mere assumption, which inspired the Wall Street Journal, widely known business newspaper, to make an exhaustive survey of what it terms the Nation's "riverbank boom."

It found that "there's an industrial boom surging along the Nation's waterways."

Citing the fact that in 1955 manufacturers and public utilities picked waterside sites for a hefty $6.5 billion worth of new plants, more than 3 times the 1954 total, the Wall Street paper adds "in the first 6 months of 1956 they stepped up this pace, earmarking $3.6 billion for construction along waterways."

"What's back of the river bank boom?" the paper asks.

It answers its own question by explaining that industry's postwar urge to decentralize has sent companies scurrying around the United States looking for new plant sites.

"Two assets," we are informed, "are common to all waterway sites: Low cost transportation and ample water supplies. These advantages have grown more alluring as rail and truck rates have risen and water shortages have gripped many parts of the Nation. Some water sites, too, offer sources of cheap hydroelectric power.

"The comeback of waterways now is well under way," the Journal declares.

Here, in brief form, is an answer to those who persist in the conviction that Coosa-Alabama waterway development is nothing but a vision and always will remain so.

What they overlook is that visions are things to be captured—and put to work.

We can capture the vision of the Coosa-Alabama if our people so will it. We can sponsor development of this prospectively great river system so effectively and rapidly that the first culminations of it could be realized in our time. Beyond that, we could leave a great industrial asset and economic force for the generations coming behind us.

To do that, we have got to work at the job—all of us.

We have got to capture that vision.

Mutual Security Statement by Secretary Dulles

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 19, 1957

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the statement on mutual security made by John Foster Dulles, Secretary of State, before the Senate Appropriations Committee on August 19, as printed in the New York Times of August 20:

DULLES STATEMENT

The House of Representatives, in its pending bill appropriating funds for the Mutual Security program, has made drastic cuts. These are superimposed upon substantial cuts already made by the authorizing legislation. Also they are superimposed upon cuts made in prior years against the judgment of the executive.

The cuts proposed for this year are, in the aggregate, of a magnitude and character to raise grave policy questions.

There can be honest differences of opinion as to how much money is required to carry out United States policy. But the cuts of prior years have brought the common defense into an area of serious risk. In Greece, Turkey, Pakistan, Vietnam, Free China, Korea and elsewhere, there is concern because the needed military effort is creating an inflationary threat not counterbalanced by our defense support. In other countries bases essential to the common defense are endangered because it is felt that the risks are not being adequately compensated for. When, in the face of that situation, the amounts requested by the President for the current year are cut to the figure now in the House bill, the effect is to challenge the Mutual Security policy itself.

The fact is that the Mutual Security program, which has been successfully holding together the free world and protecting it from Communist depredations, cannot continue to function vigorously and well under such treatment as is accorded by the current House appropriations bill.

MILITARY ASSISTANCE

The President requested $1.9 billion of new funds for military assistance, together with the reappropriation of certain unobligated balances. The House of Representatives cut this request by $650 million.

It is the judgment of the President and the immediately retired and present Chairman of the Joint Chiefs of Staff, that such a reduction in military assistance, the impact of which would come primarily in supplying new types of weapons, would deeply concern our allies, and that, particularly in the case of NATO, the failure to supply certain types of new weapons would have a serious effect upon our NATO alliance.

The report of the House Committee on Appropriations does not make clear whether the committee has a different political and military budget, or whether it is the judgment of that committee that it is now unimportant to the United States whether or not the strength of our military allies disintegrates.

We believe, however, that the Congress before it finally acts should be aware of what it is doing to the security of the United States by making it impossible to supply our allies with the military equipment needed to maintain the effectiveness and morale of their fighting forces.

DEFENSE SUPPORT

I turn now to the matter of defense support. This is money which enables those of our allies which are economically weak to maintain the military forces which we judge necessary for their security. The President asked for $900 million. The House bill would appropriate $621 million.

There is need to extend defense support to 14 allies, chiefly in the Middle and Far East. Over $600 million is required to enable five countries, Korea, Free China, Vietnam, Pakistan, and Turkey, to support the 2,100,000 men they now have under arms. These five countries all lie along the Sino-Soviet border. They are all faced by powerful Communist forces. They have all been subjected to repeated Communist threats. The United States, by treaties overwhelmingly concurred in by this Senate, has found that the peace and security of the United States would be in jeopardy if they should be attacked by Communist aggression.

It is the considered judgment of the President and his military advisers and of the Secretary of State that the House cut in defense support would make it impossible to maintain in these areas, adjudged vital to the United States, the strength necessary to defend them.

The report of the House Appropriations Committee does not make clear whether it judges that the danger is past.

Again, before the Congress finally acts, it should be clear what the issues are and what, and where, is the responsibility.

SPECIAL ASSISTANCE

I turn now to the matter of special assistance. The Executive requested $300 million. The House provides $175 million. Already $100 million is required for specific programs underway. These would have to be cut nearly in half.

The $200 million, requested for emergencies, would also have to be cut nearly in half, to about $115 million. This is substantially less than the actual emergency

needs which have had to be met during each of the last 4 years.

There is no single item more vital than this President's emergency fund. At least that is the judgment of the executive branch of the Government and that is a judgment buttressed by experience.

Obviously, the House Appropriations Committee report takes the view, not shared by the President, that there are less apt to be emergencies in the future than in the past. We hope that it is right. But we think it is reckless to proceed on the assumption that what saved Iran, Vietnam, Guatemala, Jordan, and the Hungarian refugees may not be required again.

DEVELOPMENT LOAN FUND

I turn now to the development loan fund. This was designed to make it possible for underdeveloped countries, most of whom have recently achieved new political freedom, to find the way, in freedom, to strengthen their economies so that they would not turn to communism to find that way.

The plan of doing this by loans rather than grants and seeking a long-range approach was based solidly upon the notable study made by the Senate Special Committee To Study Foreign Aid on which your chairman and banking minority members served.

The President recommended that the fund be launched with an assured capital of $2 billion; to be provided in three annual increments. The House bill would appropriate $300 million.

The purpose of the fund is not to piddle away money but to engage in selected well conceived major, long-range projects which would really help get the economy out of the rut and make it easier to bring in private capital, world bank loans, etc.

The treatment accorded by the House bill is so severe as to jeopardize the basic concept that underlies the fund. In effect, the House bill is a policy measure, running contrary to the almost uniform judgments of the executive, the Senate Foreign Relations, and the House Foreign Affairs Committees and also the judgments of numerous special groups who have been studying the matter for the Executive and for the Congress during the past year.

TECHNICAL ASSISTANCE

I turn now to the item of technical assistance. The Executive requested $151 million. The House appropriated $125 million. The House action was designed to bring the program down to the level obligated for fiscal year 1957. However, this ignores the fact that in 1957 two countries, Spain and Yugoslavia, had their technical aid financed from what was then known as defense support. Also it is deemed important in 1958 to extend technical assistance to several newly independent countries. If we cannot slightly enlarge the program it will mean either cutting the present programs elsewhere or else giving no aid to these newly eligible countries.

CONCLUSION

The House action, should it stand, would involve a serious crisis of confidence in the United States and the dependability of its policies.

Throughout the postwar decade, the Congress, whether it was Republican or Democratic, and on a bipartisan basis, has, broadly speaking, followed and implemented the Mutual Security policies proposed by the President and approved by the Foreign Relations and Foreign Affairs Committees.

If the Congress is no longer willing to follow that kind of leadership, then the free world in turn may not be prepared to follow the leadership of the United States and the whole foundation of our security structure is endangered. Our allies, their forces, our bases abroad, all are required for the security of the United States. If the Congress is unwilling to do what is necessary to maintain them, then we face a new insecurity and a future of grave risk.

Mutual Security Statement by Admiral Radford

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the statement on mutual security, made by Admiral Radford, retired, Chairman of the Joint Chiefs of Staff, before the Senate Appropriations Committee on August 19, as printed in the New York Times of August 20.

RADFORD STATEMENT

I welcome this opportunity to again appear before your committee in support of this year's mutual-security program. Exactly 1 month ago, in my then official capacity as Chairman of the Joint Chiefs of Staff, I appeared before you and stated unequivocally that I thought this program was both necessary and modest, and that it was an essential part of our own national-security program. I still think so.

Reading the record of the debate on this program which took place last week in the House of Representatives, I am appalled at the fact that we have not been able to put this program in its proper perspective before the American people. I say this because those Members of Congress who argued against the program, or for a greatly reduced program, for the most part, sincerely and undoubtedly reflected the views of their constituents.

This opposition presented the program as a vast boon-give-away program reminiscent of the WPA era. When I hear statements like that made by sincere Americans, it worries me. They are just not compatible with the military facts of life as they exist today. The time is past when we could depend on our vast industrial capacity to build a war machine that would pull us through—after an emergency occurred. The time is past when we would be given time to train our reserves of manpower, equip them, and transport them overseas to meet an enemy.

DEPEND ON FORCES IN BEING

In the next war, whether it be of the global or limited variety, we are going to depend almost entirely on trained forces in being and already in place in the danger spots around the world. That is where our mutual-security program comes in. For the past 9 years we have been developing a national-defense posture which is integrated with, and depends upon—let me repeat that—depends upon indigenous forces and bases around the world. There are two alternatives to such strategy:

First, United States forces in much larger numbers could take the place of these indigenous forces. In most allied countries, they would be welcomed as visible evidence of our determination to stand with them against the Communist menace; but it would require a major mobilization effort on our part, and nearly every able-bodied young man of military age would spend several years in his life in military service overseas. The cost would be staggering.

Or, second, we could adopt a fortress America concept. In the world we live in today, such a concept is entirely negative and would merely mean that we postponed an ultimate and violent showdown with international communism or, in the long run, would capitulate.

BIPARTISAN SUPPORT CITED

The program of national security which has been followed for the last 9 years is a positive program and has had bipartisan support. It is, in my opinion, the only program which offers us the hope of avoiding global war, and without such a war, of ultimately prevailing over Communist enemies who are still determined to destroy our way of life if they can.

If our national security program is to be changed, let us make the change advisedly and not cover up the facts of life with arguments which avoid or hide the real issues.

I am sure that the mothers—the mothers—the wives—in our country would vote for an adequate mutual security program if they understood it. Our mutual security program is not foreign aid—it is not a giveaway program—it is a program which is in the best interests of the people of the United States and their friends and allies of the free world who want to stay free. It does not mean that we hire our friends to do our fighting for us as the Communists so often charge. It means that each country in the free world is prepared to do what it can to defend itself and counts on the great reserve of power in the United States to come to its assistance when trouble starts.

OFFERED RECOMMENDATIONS

I do not maintain that our handling of the military aid program has been perfect. As I have traveled around the world in the last 4 years, I have found evidence of mistakes in judgment and in administration. Whenever this happened, I took immediate corrective action if within my field of authority or dispatched recommendations for changes to higher authority.

Let me point out that this mutual security program in its magnitude and complexity is probably without precedence in history. Certainly, it is much more difficult to handle than the lend-lease program of World War II. The personnel of the Defense Department—civilian and military—in Washington and abroad are doing their best to administer the program efficiently. We have made great progress in the last 9 years—and admit there is still room for improvement.

What we cannot admit is that this program can be materially reduced without endangering the entire foundation of the collective security policy the United States has been following for the last 9 years. As I said earlier, if this policy is to be changed, let us make that change the issue straightforwardly.

I am certain there is not one citizen in the United States who wants war. Therefore, I am equally certain that if all our citizens understood the mutual security program for what it is—an important part of our national program to prevent war—they would unanimously vote for it.

Red Spies and Naive Americans

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an enlightening article by the distinguished newspaper columnist and magazine editor, Mr. David Lawrence. It is entitled "Red Spies and Naive Americans," and it appeared in the August 20, 1957, issue of the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED SPIES AND NAIVE AMERICANS—NEW REVELATIONS OF SOVIET ACTIVITIES CITED AS PROVING MENACE IS REAL

(By David Lawrence)

The arrest of a high officer of the Soviet secret police who has been gathering and transmitting secret defense data from this country to the Communists and the revelations of an American businessman who has for 12 years been an undercover agent of the FBI, participating in Communist espionage operations in America from the inside, ought to open up the eyes of many well-intentioned but incredibly naive Americans who have been pooh-poohing the Communist menace.

Boris Morros, a counterspy for the FBI, issued a few days ago, with the permission of the United States attorney in New York, the most significant statement about Communist activity in this country that has yet come to light. He said:

"I know from personal information and experience that Soviet espionage has made considerable infiltration in this country. Many of the agents working for Russia are important people, financially independent and often held in high esteem. Many of the Soviet's most active workers in this country don't come from the rank and file, nor the underprivileged. They are people who have the kind of contacts which will be useful to the Soviets, and they are being paid to do their jobs of treason in the United States."

Those Supreme Court Justices who live in a vacuum might well ponder what this undercover man now tells. Likewise, those so-called "liberals" who have been unwittingly lending their prestige to a kind of blanket protection of Communists and sympathizers—as being merely addicts of some kind of "philosophy" or "political" belief—might prepare for a sad disillusionment as they read what Boris Morros has learned about the work of Soviet spies in America.

For no Communist spy calls directly on a newspaper editor or on a Member of Congress or on a political leader to exercise influence. Somewhere in between the espionage apparatus and the official or institution sought to be reached is a "contact"—with no foreign accent or identification—who attempts to use Americans as tools of Moscow. This is the most baffling kind of screen that faces the detective arm of the Government, the FBI. Sometimes there is another type of "contact" who himself is unaware that anything has been "planted" on him. Also, there may be other intermediaries beyond him who help to relay a suggested course of action which ultimately would be favorable to the Communist cause, particularly in the field of propaganda.

Then there is the "cover" technique, by which, according to Morros, 55 business firms in the United States were "covers" for Soviet espionage. Morros told the House Committee on Un-American Activities how the Communists had proposed to expand his own small recording company in Hollywood.

"This firm," said Morros, "was to serve as an espionage cover and provide an opportunity to legitimize Soviet agents as representatives of the firm."

Yet a majority of the Supreme Court say they don't know what an "un-American activity" is and why the committee wants to expose "un-American activities."

"I want to emphasize," says Morros, "that the Russian plot is far more strongly organized in this country and throughout the world than is generally understood by our people. * * *

"Another Russian agent, a prominent American woman * * *, not only said the same thing [suspicion about Morros], but she reported her suspicions to the second secretary of the Russian Embassy in Washington. I had a number of close shaves, but none closer than when this woman's 'report' on me was received in Moscow while I was there 'conferring' with the heads of the Russian secret police."

Yet there are many persons who want to throw monkey wrenches into the machinery of exposure which congressional committees have been using effectively. Also, there is a concerted effort to assist in the evasive tactics of witnesses who could, if they chose, give important information that would tell the FBI and the public about spies and their "contacts" with Americans.

Unfortunately, the Supreme Court—by ruling that the first amendment as well as the fifth amendment now can be invoked to help conceal treason—has thwarted the efforts of the Government to obtain much data necessary to protect the security of the United States.

Maybe the testimony by Boris Morros will open the eyes of the American people to the barriers and obstacles being placed in the path of investigative agencies by well-meaning but misguided and ill-informed persons in what amounts to a protection of the espionage being conducted by the Soviets inside America.

Students in Staples Win National Honors

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Minneapolis Morning Tribune of August 19, 1957. The article relates to a teacher in Staples High School, in Staples, Minn., and the question of vocational education. The news story relates to the importance of vocational education activities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDENTS IN STAPLES WIN NATIONAL HONORS

(By Miriam Alburn)

STAPLES, MINN.—One of the proudest high school teachers in Minnesota right now is Michael Matanich.

Matanich, who teaches the vocational machine shop classes in Staples High School, has just seen his boys beat every other school in the country in one classification of the annual Ford Motor Co. industrial arts competition.

John E. Wicht, Jr., a farmer's son from Aldrich (in the Staples school district), won 1 of 32 outstanding achievement awards, along with first place, for precision work on expansion reamers.

In the same class—machine shop division, for which contestants enter blueprints and the objects made—Staples students took third place (Stanley Tyrrell), fourth (David E. Mertens), an honorable mention and two place awards. In other words, all the important winnings but second place.

The contest drew 50,000 entries.

Matanich has seen his students burst ahead in this contest from 2 fifth places 2 years ago, to the best record in the State last year, and now the impressive collection of cash awards and medals.

Wicht's achievement will mean a trip to Dearborn, Mich., for Matanich and Wicht, an 18-year-old football tackle, 6 feet 5 tall.

Wicht graduated in June and is now working at Northern Ordnance in Minneapolis, as are all the other 17 members of that class in shop work. The visit to the Ford plants will be his first plane trip and his first trip outside Minnesota, according to the teacher.

With Matanich the record of awards stands for much more than the momentary honors. It is an indication of the ambition and perseverance which permeate his classes. The fact that big industrial employers in the Twin Cities grab his graduates as soon as they leave the commencement stage is an even more important indication.

How does this teacher do it? How does he achieve this enthusiasm and devotion to high-quality work, not just in a few top students but throughout his classes?

"I encourage the students' confidence in their own work," says Matanich. "I say, 'you'll only get out of a job what you put in—and even if you don't win a first place, if you exert all your effort, you're qualified in this field.'"

Matanich promotes competition in his classes constantly.

"In our way of life in the United States, there's always competition; if you're not good, you're replaced," he reminds his boys.

He starts early fostering interest in shopwork. One of his sidelines is fixing broken bicycles for the little kids in the neighborhood of the school.

"They come in here to ask me about their bikes, then they look around and get interested in the machines," he says.

Occasionally a teacher brings a class of youngsters to visit.

"I talk to them quite seriously—even the second graders," Matanich says. "They don't understand all of it, but they remember when it's time to decide about taking machine shop courses."

The teacher, a Virginian, taught at Chanute Field, Ill., during the war and was a tool maker in Chicago after the war. He came to Staples 6 years ago.

He praises the Staples school board and the other leaders who had the vision to build and equip the big shop in the annex to the high school.

The town is now convinced of the value of the project, as it is apparent that the training leads many of its boys to good jobs.

"Every little town should know this—that it is worthwhile to put more money into education," Matanich says firmly.

The big ambition tied to the boys at the training lathes is that in time the program may help to bring new industry to Staples.

The town, a northern Pacific division point where most of the wage earners work in the railroad repair shops, sees some of those specialized jobs disappearing as steam engines go out and diesels come in.

So Staples, a community of nearly 3,000, is searching for small industry which might move in. The town knows it has two basic drawing cards—the railroad and a new labor supply, coming out of that high school shop.

U. S. S. "Arizona"

SPEECH
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. JOHANSEN. Mr. Speaker, I share in the gratification over the action of the

House in passage of H. R. 5809, to authorize construction of a U. S. S. *Arizona* memorial at Pearl Harbor.

I am sure that the survivors of those who made the supreme sacrifice appreciate this added evidence that devotion to country has not been forgotten.

Residents of the Third Congressional District of Michigan who are entombed in the *Arizona* are Edward Charles Morse, of Battle Creek; Laddie James Willette, of Battle Creek; Paul Daniel Keller, of Coldwater; Cecil Eugene Whitcomb, of Homer; and Frank Hendricksen, of Kalamazoo.

Texan Gives Literary Treasure From Spain to All Americans

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. YARBOROUGH. Mr. President, the Austin Independent School District of Austin, Tex., is noted for the excellence of its faculty and the high quality of its instruction.

Within the last 2 months 2 teachers in the Austin public school system have received national recognition. In June Mr. Guy Bizzell, a teacher of English and Spanish, won the National Teaching Award presented by McCalls magazine. Mr. Bizzell is at McCallum high school. And now, Miss Eloise Roach, of Stephen F. Austin high school, has had published by the University of Texas Press, operated by the University of Texas and noted for its scholarly publications, the book Platero and I.

This book is one of the rare treasures of literature. This translation gives that great Spanish classic to English-speaking people everywhere. This is the first authorized and complete English-language translation of the book.

The New York Times' book review section and other scholarly publications have hailed this book. Life magazine has a 10-page full-color spread on the book.

Eloise Roach is a teacher of Spanish and French, and she has been with the Austin school for many years. A quarter century ago she fell in love with Platero and resolved to translate it. In 1936 she journeyed to Spain and visited Jiménez, who approved the chapters which she showed him and gave her translation his blessing.

Returning to the United States, she attempted without success to find a publisher; few Americans then had ever heard of Jiménez. It was only after the Nobel Prize was announced for Jiménez that Miss Roach got out her manuscript again and submitted it to the University of Texas Press. This time the complete translation was sent to Jiménez, now at the University of Puerto Rico, and he authorized its publication.

This is a great achievement for this fine representative of the Austin school system. It is also a fortunate one for English-speaking people.

Mr. President, I ask unanimous consent to have the article entitled "United States Premiere for Famous Tales of a Donkey," in the August 19 edition of Life magazine, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES PREMIERE FOR FAMOUS TALES OF A DONKEY

To millions of children—and grown-ups—in the Spanish-speaking world, a little donkey named Platero is as familiar as Winnie-the-Pooh or Peter Rabbit is to readers of English. "Platero," wrote his creator, "is a small donkey, a soft, hairy donkey; so soft to the touch that he might be said to be made of cotton, with no bones. * * * I call him softly, 'Platero,' and he comes to me at a gay little trot that is like laughter of a vague, idyllic, tinkling sound. * * * When on Sundays I ride him through the lanes in the outskirts of the town, slow-moving countrymen, dressed in their Sunday clean, watch him a while, speculatively: 'He is like steel,' they say. Steel; yes. Steel and moon silver at the same time."

The man who wrote this is Juan Ramón Jiménez, a Spanish poet who won the 1956 Nobel Prize for Literature and, at 75, is a living legend in the Spanish-speaking world. His best-known book, Platero y yo (Platero and I), is a warmly humorous and moving evocation of his young manhood in his native town of Moguer (below) in southwest Spain. This week the University of Texas Press will publish the first authorized and complete English-language translation of it, by Eloise Roach. To celebrate this introduction of the great work to its English-language audience, Life sent Photographer Mark Kauffman to Moguer to re-create the scenes of which Jiménez wrote.

The simple style and compact storytelling of Platero make it ideal for young readers. But beneath its charm lies a poetic distillation of love and sorrow, life and death, violence and peace, in a setting that seems universal. To Jiménez, who left Spain after the start of the civil war in 1936 and now lives in Puerto Rico, Platero and I conveys much of what he has tried to say in a lifetime of poetic writing. But of his art, Jiménez says, "God is my favorite poet."

Eisenhower's Methods

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Adrian Daily Telegram of August 19, 1957:

EISENHOWER'S METHODS

What kind of a President do the American people want?

Do they expect him to crack the whip over the heads of Members of Congress, compelling at least those who are members of his party to do his bidding and do it quickly?

Or do they expect the President to submit a legislative program and suggested appropriations, explain the whys and wherefores but leave to Congress the adoption or rejection?

These questions are prompted by questions reporters have asked the President in recent press conferences. They have asked Mr. Eisenhower to comment about recent charges made in Congress and elsewhere that he has been weak in supporting administration proposals. By the phrasing of the questions they have suggested that Mr. Eisenhower does not use fully or effectively the power and prestige of his office.

Replying to such questions, the President has patiently pointed out his conviction that the executive and legislative branches of our Government are equal in authority and responsibility. It is not his policy, he says, to use the tricks of intrigue or the pressure of intimidation in dealing with Congress. He prefers to rely upon persuasion and soundness of his case. He said:

"If that is wrong politically, well then I suppose you will just have to say I am wrong, but that is my method."

One reporter offered the President an easy way out by attributing Mr. Eisenhower's difficulties to a weakening of influence resulting from the two-term limitation upon the Presidency. But Mr. Eisenhower refused to take advantage of that.

Some Members of Congress, and from both parties, have been disappointed because the President did not pound the table and insist upon passage of legislation they favored. But it is a fair guess that they would have been alleging dictatorship and shouting other critical words if he had insisted upon passage of bills they did not like. And these critics seem to forget also that the President deals with a Congress organized by and controlled by the opposite political party.

In such circumstances there is not much a President can do but reason with the opposition. Ranting and roaring would get him nowhere. Besides all that, we've an idea that the people do not want a President to try to make Congress a rubber stamp.

Our Ambassadors

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mrs. BOLTON. Mr. Speaker, before the Congress closes, I would like to bring to the attention of all who are interested one of the paramount requirements which our United States must meet if she is to protect her people and give leadership to the free world.

It is of the greatest importance, Mr. Speaker, that we build a Foreign Service second to none, consecrated to the protection of our citizens wherever they may go and to all the implications of such protection.

To this end we must be certain that those who enter our Foreign Service as a career have every opportunity to be made aware of the far-reaching responsibilities they assume and be given the training and the knowledge and the pay that will keep them alert and eager to do their best.

We now have an increasingly good Foreign Service Institute which not only prepares new men and women, but gives refresher courses all along the way that prepare them for top posts. This institute deserves to have Members of Con-

gress make themselves thoroughly aware of the courses available and the work done.

Considered as an outstanding, satisfying career as such, it is interesting to note that the career ambassador has been on the increase, as he should be. The records show that under the Roosevelt administration 51 percent of the American ambassadors were career officers. Under Secretary of State Herter recently testified before the Senate Foreign Relations Committee that today 68 percent of our ambassadors serving abroad are career men. This reportedly is as high as the percentage has ever been since the establishment of the career service.

Of the 16 noncareer ambassadors nominated this year, only 3 were without previous Government experience. These 3 had broad executive experience in business; while of the other 13, 3 had previously served as ambassadors and 10 had held other high Government positions.

It seems to me, Mr. Speaker, that we have really begun to build.

Charles E. Lofgren, National Secretary, Fleet Reserve Association

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. WILSON of California. Mr. Speaker, since 1922 the enlisted men of the United States Navy have had a determined champion representing them in Washington in the person of Charles E. Lofgren, who is retiring this year as national secretary of the Fleet Reserve Association.

Charlie Lofgren has testified on behalf of all pay legislation affecting the Navy for the past 35 years. He has been an articulate spokesman for the enlisted personnel of the armed services, and his well-deserved retirement is bound to leave a void that will be difficult to fill.

As evidence of the high regard and sincere esteem with which he is held by many fellow members of the House Committee on Armed Services, under unanimous consent, I include as a portion of my remarks copies of letters addressed to Mr. Lofgren by members of this committee and other members with whom he has worked for many years.

I know I speak for the entire membership of the Armed Services Committee when I personally wish Charlie Lofgren many more years of happy yet productive life.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D. C., August 15, 1957.

Mr. CHARLES LOFGREN,
National Secretary, Fleet Reserve Association, Washington, D. C.

MY DEAR MR. LOFGREN: I have learned, with deep regret, that you are about to retire as National Secretary of the Fleet Reserve Association.

I cannot believe it possible that your retirement from this splendid organization will mean the termination of your long and distinguished association with the Fleet Reserve. Therefore, I will assume that I may in the future think of you and the Fleet Reserve Association as one and the same.

I want to take this opportunity to tell you that in my opinion you have not only ably represented the Fleet Reserve and the Fleet Marine Corps Reserve, but also many millions of other men who have served in our Armed Forces. In your many appearances before the Committee on Armed Services you have always stood for sound principles in legislation affecting pay, retirement, promotion, and other matters of vital concern to service personnel.

You have established an enviable record as an able advocate and a staunch representative of a distinguished naval organization. I wish you well for everything in the future and sincerely hope that your good advice will continue to be available for many, many years to come.

Very sincerely,

CARL VINSON,
Chairman.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D. C., August 19, 1957.

Mr. CHARLES LOFGREN,
National Secretary, Fleet Reserve Association, Washington, D. C.

MY DEAR MR. LOFGREN: It has come to my attention that you are about to retire from the Fleet Reserve Association.

It will be difficult for me to think of the Fleet Reserve Association without your presence before the Committee on Armed Services to express the views of your association on legislation affecting the personnel of our armed services.

In the many years that you have appeared as a witness my respect for your ability and your reasonableness has grown.

I can assure you that the Navy Department, the Fleet Reserve Association, the Committee on Armed Services, and in many ways, all of the enlisted personnel of our armed services, will be conscious of your absence.

I sincerely hope that the years ahead hold many pleasant thangs in store for you and that your sound counsel will continue to be available to all who have learned to hold it in such high regard.

Sincerely,

PAUL J. KILDAY,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 16, 1957.

Mr. CHARLES LOFGREN,
National Secretary, Fleet Reserve Association, Washington, D. C.

DEAR FRIEND: Word just reached me that you are soon to retire as national secretary of the association.

I would like to take this opportunity to express my sincere appreciation of your many instances of cooperation with me personally; and, of course, your help and cooperation with the Armed Services Committee, of which I am a member. I hope we may still see you around from time to time.

You have made a distinguished record representing this worthy organization and I wish you continued success and high achievements.

With kind personal regards,

Cordially,

CLYDE DOYLE,
Member of Congress.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D. C., August 16, 1957.

Mr. CHARLES LOFGREN,
National Secretary, Fleet Reserve Association, Washington, D. C.

MY DEAR MR. LOFGREN: On the occasion of your pending retirement as national secretary of the Fleet Reserve Association, I wish to take this opportunity to express to you the admiration I have for you personally and the Fleet Reserve Association.

I have observed your conduct before the Committee on Armed Services on many occasions. I have always found you to be a man of high integrity, extremely well informed, and invariably guided by sound principles in all of your testimony.

I think it is sufficient for me to say that on every occasion when you appeared before the committee your stature rose even higher. May I wish you every success in the future and also express the hope that your sound counsel and advice will always be available to the Fleet Reserve Association, the United States Navy, and the House Armed Services Committee.

Sincerely,

LESLIE C. ARENDS.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 21, 1957.

Commander CHARLES LOFGREN,
National Secretary, Fleet Reserve Association, Washington, D. C.

DEAR COMMANDER LOFGREN: I want to join with your thousands of friends in wishing you well in your retirement and expressing my personal gratitude for the magnificent job you have consistently done for naval personnel, whether active or retired.

We will all miss working with you, but know that, despite your retirement, you will ever be behind all those working for the common cause.

Most sincerely,

CRAIG HOSMER,
Member of Congress, 18th District, California.

Cargill: 92 Years as "Servants to Agriculture"

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article that appeared in the Minneapolis Sunday Tribune of August 18, 1957, entitled "Cargill: 92 Years as 'Servants to Agriculture.'" It is a very informative article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARGILL: 92 YEARS AS "SERVANTS TO AGRICULTURE"
(By Russell Hurst)

A rural mailbox mounted on a common post with 2 others 17 miles from downtown Minneapolis marks the entrance to the headquarters of the Nation's largest grain-handling firm.

The name on the box: "Cargill, Inc." Down a winding, black-topped roadway flanked by tree-studded hills, up a gentle

slope and you arrive at an imposing Norman mansion.

Inside is the nerve center of the only firm in the Northwestern United States that had more than a billion dollars' worth of sales last year.

In the industry itself, Cargill has been established for decades past as one of the major grain firms of the world.

The public, however, has heard relatively little of the company, since its officials long have shied away from the idea that bigness in itself is worth telling the world about.

Cargill's size, and it is an enormous operation in many respects, has been played in a low key party because of a traditional rural distrust of big business.

"But times have changed," said Cargill MacMillan, 56, who assumed the presidency this month, succeeding his brother, John, 61, who stepped into the role of board chairman and chief operating officer.

"Farmers today realize that bigness can also mean efficiency. We like to think that we can pay more for the farmer's product. And that's how we've grown," he said.

That simple formula obviously has worked.

From a single country elevator in Iowa close to a century ago, the Cargill interests have bloomed steadily into a network of elevators, plants, warehouses, seaport facilities and offices from coast to coast and in several foreign countries.

"Sales have passed the billion-dollar mark," MacMillan said. "However," he was quick to add, "many firms make more money than we do.

"In a word, though, we have big sales and we operate on a small unit margin with a small staff" (5,000 employees).

Last year the firm handled 14 million tons. (You'd need 4,662 freight trains, each handling 60 carloads of 50 tons per car to move that volume—or 1,400 shiploads of 10,000 tons per ship.)

Manufactured products accounted for 2 million tons. These included feeds, copra, coconut oil, soybean meal and oil, linseed oil and meal, resins, seed, and specialty oils.

But while processing accounted for about one-seventh of the volume, it brought in about half the firm's total income—a figure which is not made public.

Cargill MacMillan bears the name of two families long synonomous with the grain industry.

His grandfather, W. W. Cargill, acquired an interest in several grain elevators in Iowa shortly after the Civil War.

In the years following, he entered a number of partnerships in the grain business, most lasting of which were with his brothers, Samuel D. and James F. Cargill.

John H. MacMillan, who had married W. W.'s daughter, became manager of the Cargill interests in Minneapolis in 1903, 3 years after the present president was born at La Crosse, Wis.

MacMillan was joined by his brother, Daniel D. MacMillan, and later by Austen S. Cargill, youngest son of the founder, and the trio set about expanding the firm's elevator facilities, country operations, and sales organizations. Austen Cargill, who retired as board chairman in 1953, died earlier this year.

Cargill MacMillan started with the firm after graduating from Yale in 1922. His first job was handling statistics, a task he felt ill prepared for. So he asked for, and obtained, a short leave to study the subject in depth at Cambridge University, England.

He returned in 1923, became a grain merchant the next year, and gradually entered the administrative end in the late 1920's. He became a director in 1930, vice president in 1936, and executive vice president in 1950.

Along the way, he gained the respect of the industry and those close to him for a perceptive, methodical yet humanistic approach.

Through the years he has been chiefly responsible for personnel policies that have kept Cargill employes ahead of or even with large-corporation employe benefits elsewhere.

"He likes people instinctively," said a close associate. "You get that impression when you first meet him.

"And you go away with the feeling that you've been analyzed and evaluated—with a gentle touch—and you don't resent it."

MacMillan arrives each workday from his home at Orono, a 10-minute drive, at 8:45 a. m.

Conferences with key executives usually consume the next hour and a quarter until 10 a. m., when most of the lake office staff adjourns to the employe cafeteria for coffee.

(As is the case at many companies, "coffee" means "business as usual," but at a different pace.)

Returning to his second-floor office, which follows the French provincial decor of the rest of the building, MacMillan launches into a loose routine in which correspondence and a steady stream of phone calls are sandwiched between report reading and conferences.

Outside the office, MacMillan likes golf (he shoots in the 80's), he plays less frequently than in previous years ("that handicap keeps getting bigger").

Hunting game birds and fishing for trout fill much of his leisure time. Indoors, he reads pocket thrillers or heavies in geology, archeology, and history. "There is nothing in the middle—it's one extreme or the other," he confessed with the chuckle of a man who enjoys a joke on himself.

In carefully measured words, MacMillan sketched the overall role—the mission—of the Cargill complexity:

"We look upon ourselves as servants to agriculture.

"Our principal 'product' is the ability to smooth out a production-consumption pattern in an industry where production hits in a rush and consumption is spread out over a long period."

This takes:

Vast sums of money. Cargill is one of the largest users of bank credit in the nation.

Vast storage facilities. The firm's 100 strategically located storage depots will hold 135 million bushels, largest of any single company. (The 14-million-bushel elevator at Port Cargill includes a 7-million-bushel bin, largest of its kind in the world.)

Technical know-how necessary for having the right grain at the right place at the right time.

Cargill frowns on speculation. The firm believes it is unnecessary because of the hedging facilities provided by the futures market, which eliminates most of the risk.

Hedging is the process of offsetting a purchase of cash grain with a similar sale in the futures market to protect the original purchase price.

(In the futures market, farmers, elevator men, millers, processors and others buy and sell grain to be delivered at some later date. Grain delivered on futures contracts must meet official grading requirements.)

"This is an incredibly efficient business," MacMillan said. "We average about $200,000 in annual sales per employee; but," he added, "our net profit on sales per unit is very low."

Macmillan turned for a bristling moment to the subject of Government handling of grain:

"Our best service is distributing as cheaply as possible—and we think the Government is doing just the contrary.

"For example, in the main, the Government uses rail transport, whereas Cargill would use the cheapest form available, be it rail, barge or truck.

"They shouldn't be in the business," he snapped.

"The Government is doing it less efficiently at the expense of the taxpayers. It's costing millions of dollars a year."

Continuous research has been one key to Cargill's growth.

"I guess we were doing research—of the most practical kind—before we thought of applying a label to it," MacMillan reflected.

A great uncle, James F. Cargill, invented cribbed storage, which is the design of today's typical country elevator.

MacMillan's older brother, John, had a leading role in two developments that revolutionized the grain-handling business:

Temperature control inside huge storage bins. Cargill officials believe no one else has duplicated the process, and they won't elaborate on how it's done.

Equipment for unloading huge bins in jig-time. These methods also are kept within company circles.

"We had some Russian visitors once," MacMillan recalled. "We showed them a bin and told them we could unload it overnight. They laughed it off as impossible.

"The next day we showed them the empty bin—but didn't tell them how it was done."

The MacMillan brothers complement each other.

"John is energy and creative thinking personified," said one business intimate.

John is credited with many firsts in the industry, including huge-capacity storage, control systems, barge design, and seaport elevator construction.

His inventions range from air-supported structures patented 20 years ago to ship hull designs that increase the propulsion efficiency of river, lake, and ocean-going vessels by 15 to 20 percent.

His associates cite his fearless approach to pioneering steps and a penchant for efficiency and economy as John's trademarks.

The Cargill chain of command begins with the MacMillan brothers and 7 other members of a close-knit directorate, only 1 member of which is not in the company (James Dorsey, Minneapolis attorney).

Members, in addition to the MacMillans and Dorsey, are H. Terry Morrison and Erwin E. Kelm, executive vice presidents; Fred Seed, vice president and head of the vegetable oil division; James North, president of Nutrena Mills; R. C. Woodworth, vice president for public relations; and A. G. Egermayer, vice president for financial matters.

Next comes a group of five key upper echelon men: H. Robert Dierks, vice president for grain; H. B. Juneau, vice president, administrative division; C. W. Mooers, vice president and treasurer; Donald C. Levin, secretary; and R. J. Harrigan, vice president and comptroller.

Problem solving isn't complicated by long-distance calls to scattered executives. Most of these men are available immediately at the lake office, where informality (everyone is on a first-name basis) is the rule.

It's an unlikely setting for the headquarters of a billion-dollar business.

The 63-room mansion (17 bathrooms) was acquired from Rufus M. Rand, Jr., former Minneapolis businessman, who used it as his Minnetonka Lake home.

Thick carpeting extends through most of the offices, heavy ornate chandeliers shed their light over smooth-topped desks and complex business machines.

The president's office looks more like a sitting room. MacMillan's uncluttered French provincial desk—with cubbyholes on the left—sits unobtrusively in a corner. (Its mate, with cubbyholes on the right, is in John's office.)

The firm's founder looks down from a portrait over a fireplace imported from a European castle.

Through the branches of fir and oak trees spaced on a well-manicured lawn sloping down from the front of the mansion, the visitor can see a huge kidney-shaped swim-

ming pool, and farther away, Grays Bay, where the waters of Minnehaha Creek begin a meandering course to the Mississippi.

"We were among the first to leave downtown," MacMillan noted. "And we've found it a good move—both economically and because we've achieved greater efficiency in a relaxed atmosphere."

Most incongruous of the various offices and conference rooms is the wire room—a a miniature grain exchange—where clerks post market figures on a long blackboard. Merchandisers sit at a battery of desks facing the board.

The communications center handles from 4,000 to 6,000 messages a day, ranging from crop reports to actual transactions, giving the company up-to-the-minute information on every grain market in the country.

The lake office is home base for the top operating executives of Cargill's major divisions. The five operating divisions and their activities, in profile, are:

Grain: Buys grain at country and terminal market levels, collects and stores stocks of grain in terminal and subterminal warehouses, and sells grain to flour millers, feed manufacturers, alcohol and beverage distillers, cereal manufacturers and other processors.

Vegetable oil: Operates plants which extract vegetable oils, principally from soybeans, flax and copra; sells oils and meal byproducts to processors who manufacture feed (including Cargill's own feed division), refined oils, paint and other products. Also refines technical oils and synthetic resins.

Nutrena Mills, Inc.: Operates the feed division, a subsidiary company. Manufactures and sells feed for cattle, dogs, poultry, hogs and other farm and domestic animals.

Cargo Carriers, Inc.: Transports grain and other commodities by water, rail and truck; merchandises various cargo commodities. Uses 40 percent of all Great Lakes grain space.

Hybrid corn: Produces and distributes hybrid corn throughout the Corn Belt.

In addition, the administrative division, a nonoperating element, exercises top management control, coordinates staff activity and provides services which can be performed most economically and efficiently through a central agency.

Research now is centered in a new two-story laboratory building a half-mile down McGinty road from the lake office.

Other research facilities are located in Minneapolis and St. Peter, Minn., Missouri, Iowa, and Florida.

About one-fifth of Cargill's 5,000 domestic employees are in the Minneapolis area. Four offices are maintained in downtown Minneapolis, in addition to a feed plant and an oil plant.

Stretching from coast-to-coast and from North Dakota to Texas is a network of more than 200 installations including elevators, plants, offices, country stations, feed warehouses and research centers.

The number of installationsa has been doubled in the last 10 years. Personnel has more than tripled in the last two decades.

North of the border, Cargill operates through four Canadian subsidiaries and employs about 50 grain merchandisers.

Largest producer of hybrid seed corn in Argentina is Cargill Sociedad Anonima Commercial & Industrial, which also has a branch in Chile. Only two of the employees are Americans. The balance—up to 1,000 during harvest—are Argentines.

Cargill is an important factor in world trade of agricultural commodities.

Through the firm's 9 seaport grain elevators located on all 3 coasts pass hundreds of millions of bushels of United States surplus grain, soybeans, soybean oil, and meal and animal feeds.

Cargill carries on the management, transportation and sale of export grain to the point of turning it over to foreign buyers. Export volume has reached an all-time high this year.

Greatest growth in the company's 91-year history has come in the last 5 years, during which 8 seaport facilities were added.

Diversification—always allied closely to the firms roots in agriculture—has brought entry in the last year alone into salt distribution, briquet manufacture, molasses and poultry and petlitter-processing.

Five new elevators, each with more than a million bushels' capacity, were completed in Minnesota and North Dakota.

A multi-million-dollar soybean oil extraction and refining plant was opened in Memphis, Tenn., an automated livestock feed plant completed at Peoria, Ill., and so the story goes.

Future expansion and refinement of Cargill facilities and techniques is a foregone conclusion. "No company like ours can afford to stand still," said MacMillan.

Greater initiative probably also will be forthcoming in the vital area of public relations.

Cargill has been little publicized in the past for two primary reasons:

It's largely a family-owned firm with no public stockholders to report to.

Cargill officials disdain boasting of size and growth.

"But we've found that when we have infrequently hit the newspapers, it was usually over a court case," MacMillan explained, "and we saw signs of negative reactions that would not have been there had the public known the company better."

Last year the firm hired one of the country's biggest public relations firms. Result, an enormous improvement in that area, according to MacMillan.

No change of direction can be read into the recent change that put Cargill MacMillan into the presidency, said MacMillan.

An ironclad company rule is retirement at 65.

"We reorganized to pass on the chain of command—to pave the way for bringing up younger blood," he said.

The younger blood, consisting of a large number of young executives, includes Cargill MacMillan's sons, Cargill, Jr., and Whitney; John's sons, John Hugh MacMillan III and William Duncan MacMillan and Austen Cargill's son, James.

Their challenge, in the new president's words: "Continued growth—through continued service to agriculture."

Appearance of Representative Charles O. Porter on Meet the Press

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. NEUBERGER. Mr. President, on August 4, 1957, a most unusual honor came to Representative CHARLES O. PORTER, of the Fourth Oregon District. It is comparatively rare for a freshman Member of the House of Representatives to be interviewed on the National Broadcasting Co. network program, Meet the Press. On that occasion, Representative PORTER was interrogated by four veteran interviewers and newspapermen. They were Luke P. Carroll, New York Herald Tribune; Marquis Childs, St. Louis Post-Dispatch; Richard Wilson, Cowles publications, and Lawrence E. Spivak, regular panel member.

Incidentally, one of these outstanding journalists has told me that he thought Representative PORTER was one of the most adroit and effective public figures yet to appear on Meet the Press.

Representative PORTER has taken a particular interest in the entire controversy surrounding the Government of the Dominican Republic because Gerald Murphy has tragically disappeared in that country. Mr. Murphy is an outstanding airplane pilot, 23 years old, and a resident of Eugene, Oreg., where his parents live. Eugene is located within the Fourth Oregon Congressional District.

So that Members of the Senate may learn of the questions put to Representative PORTER and his answers, I ask unanimous consent that the full text of the Meet the Press program of Sunday, August 4, 1957, be printed in the Appendix of the RECORD.

There being no objection, the text of the program was ordered to be printed in the RECORD, as follows:

MEET THE PRESS—AMERICA'S PRESS CONFERENCE OF THE AIR

(Produced by Lawrence E. Spivak; guest, Representative Charles O. Porter, Democrat, of Oregon; panel, Luke P. Carroll (New York Herald Tribune), Marquis Childs (St. Louis Post-Dispatch), Richard Wilson (Cowles publications), Lawrence E. Spivak (regular panel member); moderator, Frank Blair)

ANNOUNCER. Now, Meet the Press, the prizewinning program produced by Lawrence E. Spivak. Ready for this spontaneous, unrehearsed conference are four of America's top reporters. Please remember, their questions do not necessarily reflect their point of view; it is their way of getting a story for you. While Ned Brooks is on vacation, here is our guest moderator of Meet the Press, Mr. Frank Blair.

Mr. BLAIR. Good evening and welcome once again to Meet the Press. Our guest this evening is Congressman CHARLES O. PORTER, Democrat from Oregon. Most freshman Congressmep are seen and not heard, but Mr. PORTER in his first 7 months in office has been involved in a sensational cloak and dagger tale of international intrigue. His speeches in Congress on the subject have been widely reported. He has been the hero of Calypso ballads in Latin American countries. He has been attacked as a self-appointed international revolutionary by fellow Congressmen, and he has been advised by police authorities to carry a gun for protection in our Nation's Capital.

The facts in the case are these: Dr. Jesus de Galindez, a Columbia University teacher and a critic of Generalissimo Trujillo, the dictator of the Dominican Republic, disappeared from New York City without trace on March 12,1956. Gerald Murphy, a young airplane pilot from Congressman PORTER'S home town in Oregon, told friends he had flown an invalid believed to be De Galindez from the United States to the Dominican Republic on that date. Then on December 4, 1956, Gerald Murphy himself disappeared in the Dominican Republic. Congressman PORTER insisted there is a direct link between the three events and persistently demanded an investigation. Congressman PORTER'S one-man crusade, and an aroused public opinion, forced State Department action, and as a result the Dominican Republic has taken an extraordinary step in international affairs. It hired an American public relations man, Sidney Baron, who hired the American law-

yer, Morris Ernst, to investigate the Murphy-Galindez mystery. This investigation is soon to begin. And now seated at the press table, ready to interview Congressman PORTER, are, Marquis Childs of the St. Louis Post-Dispatch, Richard Wilson of Cowles Publications, Luke P. Carroll of the New York Herald Tribune, and Lawrence E. Spivak, our regular member of the Meet the Press panel. Now Congressman PORTER, if you are ready, we will start the questioning with Mr. Spivak.

Mr. SPIVAK. Congressman PORTER, in Coronet magazine recently you were quoted as saying this: "The shocking fact is that a highly paid organization of killers is at large in our country, operating chiefly in New York City and Miami, whose job it is to assassinate or intimidate the enemies of Trujillo in the United States. They don't draw the line at expatriate Dominicans. They will murder Americans, too." That is a serious charge against a man who has long been considered a friend of this country, Generalissimo Trujillo. You are a lawyer; have you evidence that will stand up in court to prove these sweeping statements?

Representative PORTER. Yes; I have such evidence. Of course, this charge didn't originate with me, and I wouldn't say that Generalissimo Trujillo has long been regarded as a friend of the United States by many people who have facts similar to this. We can cite all sorts of cases; we can start with people like Bencosme and Requena. We can name cases that are very familiar in New York. But we can come down to date, if you want evidence of this network of terror. You can recall a radio show that Ed Murrow had not long ago and how 50 of the 130 people he talked to didn't want to say anything or have their names used. In answer to your question, yes, I do have.

Mr. SPIVAK. You say that, as a lawyer, you have evidence to make out a case on which a jury would convict the people you mention.

Representative PORTER. The crime of murder in the Murphy case; yes. I suppose it is no crime to have a network of terror, specifically, although it is something that we don't want to have here.

Mr. SPIVAK. Are you prepared to furnish this evidence to Morris Ernst, who is now carrying on the investigation of the charges?

Representative PORTER. No; I am not, and that represents a change in my point of view. I have given all this evidence as I have gotten it to the FBI, because they are the ones conducting the investigation. I told Mr. Ernst just last week when he called me that I was going to give him full access to my files. I have thought the matter over, and even before I received telephone calls from people who said, "Don't show him letters I wrote to you because if they get back to Trujillo—," I decided I would not make this material available to Mr. Ernst. He, in effect, is working for Trujillo, and I would be turning over information to him which would mean trouble for these people who are helping our Government to solve the case.

Mr. SPIVAK. You say you have given this evidence to the FBI?

Representative PORTER. Yes; I have.

Mr. SPIVAK. I take it you have great confidence in the FBI as an organization?

Representative PORTER. I have great confidence.

Mr. SPIVAK. Do they know what you know—that there is a network of spies here—and are they letting these people get away with murder?

Representative PORTER. No; I wouldn't say that; I would say the FBI is working hard on this case. I am not one of those who thinks the FBI is infallible. I think they are fallible like the rest of us.

Mr. CARROLL. To go back to Mr. Ernst for a moment, Mr. Porter, do you think it is impossible for him to make an objective study of this crime?

Representative PORTER. I don't know Mr. Ernst. I know him by reputation. I know people who like him and respect him. The circumstances, I think, just make it impossible for him to come up with a conclusion that the public will accept, because he is paid by the man who is charged with the murder.

Mr. SPIVAK. But he has said that if he is handicapped in any way he will get out of the investigation.

Representative PORTER. Then, I think he should get out now, because I think he is handicapped by the way he has gotten into the investigation.

Mr. SPIVAK. It is impossible for some of our authorities to question some of the people in the Dominican Republic who may or may not be involved—the former consul general in New York. Why would you not allow Mr. Ernst to question him and then to turn over his material to the proper authorities? Wouldn't you be one step ahead that way?

Representative PORTER. I am not saying there are not advantages in it, but I think the disadvantages overweigh the advantages because it will make people think because a man like Ernst is in this, those who do know him, that we are going to come up with something that we can rely on. It won't be anything that will be generally acceptable because it can't be. But Espaillat, the man you are talking about, could come up here and be questioned as we have asked, twice, officially, of the Dominican Government. They want to cooperate. If they want to clear the record, let them send General Espaillat up here. Why have their client, or their attorney, go down to the Dominican Republic to question him there? To me, that doesn't seem in accordance with the usual processes of investigaton.

Mr. CHILDS. You and others have repeatedly made charges in the Galindez and Murphy cases, but there has never been anything more than circumstantial evidence in these cases, isn't that correct?

Representative PORTER. Many people, Mr. Childs, go to prison, to death, on what is called circumstantial evidence. Actually there is also real evidence—the forged note.

Mr. CHILDS. That is not proof of murder in itself.

Representative PORTER. But to show that someone who is accused of murder would make up a purposeful lie, as in this case the Dominicans did when they presented us an explanation of Jerry Murphy's death. Circumstantial evidence and real evidence—those are the two classes of evidence, if you want to make the legal distinction, but circumstantial evidence when it is powerful, when it convinces a lot of juries, every day——

Mr. CHILDS. But you, as a lawyer, would hesitate to send a man to death on circumstantial evidence?

Representative PORTER. It is done all the time. I hesitate to send any man to his death, but——

Mr. CHILDS. Let me ask you this further question. The murderer or murderers are obviously in the Dominican Republic, won't you say?

Representtaive PORTER. I would say the murderer or murderers, the actual ones are dead, but they were in the Dominican Republic.

Mr. CHILDS. Or those who ordered the murder?

Representative PORTER. Yes.

Mr. CHILDS. Then, do you see any point in this grand jury investigation that is now going on? Do you think this is a complete dead end, Congressman?

Representative PORTER. No, we can't reach Trujillo himself, because of international law. He is the man, I believe, who ordered the murders. Getting his minions like John Frank, who has been indicted for being an agent and having a part in this—and I am told by high State Department officials that much of the evidence which has to do with connecting the Dominican Government will come out in the course of the trial of John Frank, and, I assume, any other trials that result from the present grand jury's indictments.

Mr. CHILDS. You think the administration moved quickly enough and vigorously enough in this case?

Representative PORTER. No, indeed.

Mr. CHILDS. Do you think anything more than the indictment of an incidental person such as Mr. Frank will come out of this grand jury investigation?

Representative PORTER. After they began to move they got Mr. Frank, but not in the very first, last December and January when they wanted to slough this thing off, and when Trujillo had every reason to think they would slough it off because he had always gotten such fine treatment by our Government, many of whose personnel treat him as though he is respectable when he is not.

Mr. WILSON. Mr. Porter, some of your critics speak of the anti-Trujillo script writers as being responsible for building up what they say is this fanciful tale of kidnaping and murder. Your insertions in the CONGRESSIONAL RECORD on this subject are quite comprehensive and even journalistic in tone. Did you write all of those, or did you get any help in writing them?

Representative PORTER. I had help from the Library of Congress experts in this matter, but every word that went in there could have been based on fact, much of it was based on facts by people who know more about historical matters and current matters than I do, but they are my words, and nobody writes my script.

Mr. WILSON. You got no help from anybody except the Legislative Reference people?

Representative PORTER. That is correct.

Mr. WILSON. You state that you have evidence that a crime was committed here. What evidence do you have that either de Galindez or Murphy is dead?

Representative PORTER. This is the old problem of the corpus delicti which many people think mean the dead body, but, of course, it is the body of the wrong in crime. Murphy disappeared in December, and he is gone. De Galindez disappeared. We have a great deal of circumstantial but very strong and legally acceptable evidence to show that they were murdered because they crossed Mr. Trujillo.

Mr. WILSON. What evidence, sir?

Representative PORTER. Starting at the first we know that de Galindez worked for Trujillo for some time. He went there and was there during the war. He learned about Trujillo's methods, he went to Columbia to write his thesis about Trujillo, a thesis which was very detailed with regard to Trujillo's wrongs and the kind of government he had. Trujillo didn't want that published. We have evidence that he especially didn't want it published because it showed how his own bloodline was not exactly pure, in his own terms. It showed things which he didn't like, at all. Shortly, after it was finished, before it was published, he disappeared. After there had been threats, which had been reported to the FBI, from people we know were working for Trujillo. The circumstances of his disappearance pointed a finger at Trujillo. Of course, there was this blind alley. The evidence is very complete. I couldn't go into all of it. There is a good deal of it.

Mr. WILSON. You haven't cited any evidence that would impress me, as a curbstone lawyer, but let me pass that. The Dominican Ambassador de Moya asserts that the answer to de Galindez' death—he was a Span-

ish Basque, as we all know—he says, "The answer is to be found in Manhattan's Spanish-speaking colony, and I have a feeling that the final solution is not far distant." What is your reaction?

Representative PORTER. Like so many of Ambassador de Moya's statements, it isn't supported. As a matter of fact, one of your panel members knows that de Moya is a liar, because he lied to him and was found out. The Ambassador made statements like that in San Francisco about this Murphy-de Galindez operation being a Communist plot. Going back to your question about evidence, our State Department, based on FBI findings, has already said there is a connection between Murphy and de Galindez.

Mr. WILSON. I want to ask you about this note which was found in de Galindez' apartment. Much has been made of the note as being a substantial piece of evidence. In this note it was stated that his kidnapers—he apparently assumed he might be kidnaped—should be looked for in the Dominican Republic. Is it true that this note was not found until the third search of the de Galindez apartment, although when it was found it was lying in plain sight on top of a desk and that two previous searches had failed to disclose it?

Representative PORTER. I have heard those allegations. I do not regard the note as the most important item of evidence in hooking de Galindez to the Dominican Republic. I do not know whether it is true.

Mr. SPIVAK. You yourself and others have said that Trujillo knows how to get rid of a man in this country. Why would he kidnap him and take him over there to get rid of him when you can buy somebody in this country to "bump a man off" for a good deal less?

Representative PORTER. I think there are two answers to that. One is that he wanted to stop publication of the book, which he would do, if he just disappeared. If he dies, it goes to his heirs. The other explanation, which is probably more credible, is that in this book he had written, "The Era of Trujillo," he had criticized the Generalissimo, said he had part Negro blood, pointed out the illegitimacy both above him, and below him, something about his children being born at embarrassing times and by two different marriages. That sort of thing, we are informed, made the Generalissimo very angry, and he said he was going to have de Galindez eat this article; he wanted personal revenge.

Mr. SPIVAK. But you yourself said in that Coronet article, "Only one thing could successfully silence the work. De Galindez must disappear." He hasn't silenced the work. Some of these things appeared in Mexico, they appeared in Chile, and chapters have appeared already here. He hasn't been successful, at all, has he?

Representative PORTER. He hasn't always accomplished what he wanted to accomplish.

Mr. SPIVAK. Congressman Reece recently charged you appear to have used your office "for the purpose of advocating the violent overthrow of the Dominican Government." Would you like to see that Government overthrown by revolution?

Representative PORTER. I would.

Mr. SPIVAK. Do you think such overthrow would be in the interest of this country in view of what is happening in all of Latin America?

Representative PORTER. I favor people any place, whether in Hungary or Poland or any other country where there is a dictator, overthrowing that dictator. I would not take any personal part in it, but I sympathize with people who want to overthrow dictators.

Mr. SPIVAK. And you would take chaos at this time in that country rather than a strong dictator who has been a friend of ours?

Representative PORTER. Chaos, Mr. Spivak, does not come from an emerging democracy; it comes from the death pains of a dictatorship. I would say the chaos, at least, is leading to something which means freedom and justice, and the dictatorship is not.

Mr. SPIVAK. What do you want to get out of all this thing? Do you want to send Marines over there, to bring Trujillo back here and try him?

Representative PORTER. No; some of my criticis have said that that is what I have in mind, but I have never advocated that. We know that that wouldn't work. All that I want our country to do is to differentiate between the dictators and the democracies and frame our policies accordingly. If we just publicly said which are the dictators and which are the democracies, we would be a big step ahead.

Mr. SPIVAK. Don't you think our President and Secretary of State have said that? You are not the only man who said that.

Representative PORTER. A high State Department official told me the other day that the reason President Eisenhower had never said "Bravo, Colombia" after Colombia came out on May 10 from 8 years of dictatorship—the President said nothing because he thought he would make Venezuela which is a dictatorship, of course, mad.

Mr. SPIVAK. At one point you called for an investigation by the Organization of American States. You felt that was the only way to get anywhere with this. But you also said "Again and again Latin Americans tell me they have no faith in the OAS, because it is controlled by the dictators with the tacit approval of the United States." Why would you want an organization which you yourself have condemned to do the investigating?

Representative PORTER. I have been told by some responsible Latin Americans that the reason they believe that is because the United States has been treating these dictatorships as though they were respectable. If we change our attitude, the OAS would change its attitude and could be effective in promoting inter-American relations.

Mr. CARROLL. To go back to the former Dominican Republic Consul General in New York, General Espaillat, you have suggested that he come to the United States and subject himself to our juridical system. Would you apply this in reverse, if a representative of the United States was involved in some questionable matter, or if the Government wanted to investigate to make inquiry of a representative of the United States and if that government was a backward, primitive, even Communinst country, would you say "Yes, our representative should be turned over to that country?"

Representative PORTER. I would say, yes, if the circumstances were exactly the same as in the case of Mr. Espaillat.

Mr. CARROLL. Who would determine those circumstances?

Representative PORTER. The circumstances in this case are very plain.

Mr. CARROLL. They are plain to you.

Representative PORTER. They are plain to everybody in New York, or everybody who has followed this case. He said time and again, "I want to cooperate to the fullest extent. My country is innocent; we are much wronged." And then what happened? Two days after the State Department sent a note to his Government saying, "We want Espaillat available, amenable to the usual processes of investigation and trial," he packed up on the fourth and went back to the Dominican Republic and refuses to come out. In other words, he turned tail and ran.

Mr. CARROLL. Wouldn't this be a precedent in diplomatic relations? Has it ever been done before?

Representative PORTER. We had no way to demand it. We have no way to require it. I don't know whether it has or not.

Mr. CARROLL. I think not. Let me ask you one question about Generalissimo Trujillo's holdings in the United States: You have asked that these be investigated. Have you any evidence at all to indicate what the result of that investigation might be?

Representative PORTER. The evidence I have is that he own considerable real estate in Florida, in New York, and some Middle Western cities—that he has very considerable holdings in the United States.

Mr. CARROLL. What would that prove one way or the other?

Representative PORTER. It would prove for one thing we shouldn't send him $250,000 a year point 4 aid, and we shouldn't as Look magazine says in an issue coming out this week, give him $6 million in military aid.

Mr. CARROLL. Do you think all this money is going to Trujillo?

Representative PORTER. I know it is. There is nobody familiar with the setup down there who doesn't know he controls the economy of the country. It is his plantation, and then we give him aid.

Mr. CHILDS. While advocating we stop our aid to four Latin American dictatorships, you have gone along with the administration in urging or continuing aid to Tito in Yugoslavia because you said we would get some benefit out of this. Isn't it true that now that Tito has made his peace with Moscow, there is no point in this?

Representative PORTER. And, the aid to Yugoslavia is conditioned on that. If we consider him lost to the other side, we don't give him aid. That is the way it should be done. If we see a military advantage in terms of security to the American people, sure, we "sup with the Devil with a long-handled spoon," but we don't do it when there is no military reason for it.

Mr. CARROLL. It is a pretty risky policy, though, isn't it? Do you make a distinction between a dictatorship of the left and the right?

Representative PORTER. No; I say they are the same, but where we have a military advantage to gain—I don't say we are close to them or show we like them or think they are respectable, but we have bases in Spain because it is going to mean our protection. Then we deal with the government, and we spend $400 million there.

Mr. CARROLL. Our new Ambassador in Cuba, Mr. Smith, has just spoken out apparently against the Batista dictatorship. Do you think this is right, or do you think it was a blunder?

Representative PORTER. I think it was very right, indeed. I think, Mr. Smith is to be congratulated for speaking up as an American would. He didn't speak up against the regime; he spoke out against the terroristics or the police methods, turning the fire hose on some defenseless women who were protesting a treaty that had been violated namely, that American arms were being use to kill their boys. The Ambassador simply said, "I'll give this my serious consideration," which he should do, because those arms were given to Cuba on the basis they would not be used internally. I say, Mr. Smith is acting as a good American and not as his predecessor did, who was so close to Batista that everybody, all the oppressed people in Cuba—and there are some oppressed people there—thought that the American Government was on the side of the dictator.

Mr. WILSON. Mr. PORTER, you mentioned the article in Look magazine which charges that a half dozen very well known people in this country, including a son-in-law of Secretary Dulles and several other prominent people—a relative by marriage to the President's wife have received large sums of money, some of them as high as $270,000. Are they a part of all this scheme of Trujillo's to spread a network of terror?

Representative PORTER. He works in two ways, Mr. Wilson, generally, cold cash or cold terror. He gets what he wants either by spending his money, or he gets it by sending his boys to do it another way. So it is part of his way of exercising his influence for his own profit, his own power.

Mr. WILSON. Does he get his money's worth out of these highly placed people?

Representative PORTER. I don't know. Some of them I suppose he does, and some he doesn't.

Mr. BLAIR. There is one question I would like to ask you before we conclude: Do you carry a gun?

Representative PORTER. Whenever I think it is reasonably necessary. The Washington police have so advised me, and when I think it is necessary I carry it.

Let's Tighten Safety Standards in Plants Using Nuclear Radiation Materials

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 20, 1957

Mr. WILEY. Mr. President, a recent issue of the Department of Labor magazine, Monthly Labor Review, contained an important article as regards the problem of expanding workmen's compensation coverage for employees working in hazardous nuclear energy industries.

The plain fact is, as a recent AFL–CIO sponsored conference pointed out, that in dealing with radioactive materials, literally hundreds upon hundreds of plants throughout the United States are for the first time venturing into an area in which the highest precautions must be continually observed.

The health of worker and supervisor forces is directly involved, as is the health of entire communities.

Meanwhile, there is need for a tightening of State and local safety codes and safety inspection systems, as well as a need to strengthen workers' compensation coverage. My own State is but one of 15 out of the 48 States in the Union offering the kind of broad-scale workmen's compensation for radiation hazards which is essential in this day and age.

Obviously, nuclear energy holds great promise for the Nation. But we cannot have "horse and buggy" safety standards in the atomic age. I am sure that thinking management will agree, as will all other segments of society.

Let us not allow carelessness to result in wholesale tragedy which some day might have to awaken us to this problem. Let us show foresight and vision. Let us neither be fearful about atomic energy to the point of paralysis nor reckless to the point of folly.

I send to the desk three related items:

(a) The first consists of excerpts from the article from the Monthly Labor Review.

(b) The second is an excerpted article from the July 27 New York Times showing widespread violations of the radiation code in one State, New York.

(c) The third is an excerpted article from the March 8 issue of Labor's Daily illustrating hazards affecting all kinds of workers in plants using radioactive isotopes.

I ask unanimous consent that these articles, necessarily abridged, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Monthly Labor Review for April 1957]

WORKMEN'S COMPENSATION AND RADIATION HAZARDS

(By Earl F. Cheit, St. Louis University)

(EDITOR'S NOTE.—The AFL–CIO Conference for Affiliated Unions on Atomic Radiation Hazards was held in Washington, D. C., on February 27 and 28, 1957. The following paper was one of several delivered at the 2-day meeting of experts in various fields of atomic science and of union leaders associated with the industrial application of atomic energy.)

New industrial methods and materials are frequently accompanied by new job hazards—for example: enameling processes and the danger of lead poisoning; fluorescent lighting and berilium-caused death and disease; increasing industrial uses of atomic energy and radiation injury and disease. As the industrial uses of atomic energy develop, the possibility that [more] workers will be exposed to disabling ionizing radiation makes urgent a reexamination of what protection is available to them.

In only 15 States (California, Connecticut, Indiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Washington, and Wisconsin) can we say with certainty that [such] cases will receive full coverage, unlimited medical benefits, and in general, the same protection offered all other injured workers. The other State laws offer combinations of uncertain coverage, limited medical benefits, and indefinite recovery.

Beyond the general weaknesses in the compensation protection of some States are others which have special significance for radiation cases. And unless many States make significant legislative changes, workers suffering radiation-caused disability will joint a group of second-class beneficiaries under a system whose first-class citizens are not to be envied.

Basically, the radiation hazard of atomic energy is an occupational disease problem. Disability or death due to explosion or burn are clearly covered under all laws. But for those persons who escape death or immediate injury from atomic blast and who are subsequently afflicted, the problem of tracing disability to the accident and of gaining coverage may be more difficult. These persons, as well as those disabled from chronic exposure to ionizing radiations (a more significant group numerically), [will] likely encounter barriers to compensation for their disabilities.

Chronic exposure, either externally or through inhalation or ingestion, [may] cause injury or disease if it exceeds permissible safety limits. But, as experience with cases of tissue damage or ulcer from over-exposure to X-rays or radium rays has taught, radiation-caused disease or injury may not develop its symptoms or create disability until months or even years after the harmful exposure.

Bone tumors suffered by young women working with radium dial paint in the 1920's were discovered as early as 2 years after exposure; yet new ones have been discovered as late as 1954, some 36 years after exposure.[1] Data from the [National] Cancer Institute, United States Public Health Service,[2] reveal that although the average latent period of occupational skin cancers due to X-radiation is 7 years, this period ranges from 1 to 12 years. Lung cancer from ionizing radiation has an average latent period of 25 to 30 years, and a latent period range of from 7 to 50 years.

Hopefully, there is much that can be done in the prevention of disability due to chronic exposure to ionizing radiation. With the aid of its labor advisory committee, and the published radiation protection standards of the Atomic Energy Commission, New York State has developed and put into effect a pioneering safety code for atomic radiation covering industry in that State.[3] Recommendations for legislative action in this field are available,[4] as are details for procedures, evaluation, and control of radiation hazards.[5] Even more encouraging, where such procedures and precautions have been used, safety records, such as those reported by the Atomic Energy Commission, have been very good.[6]

But sometimes exposures within permissible safety limits can later prove harmful. Industrial cases in which workers are not protected by safety standards must look to workmen's compensation laws for their economic rehabilitation. But they will find that disability due to occupational disease does not receive as good coverage or protection as does disability due to accidental injury under our compensation laws.

No one would seriously argue that a worker suffering bone destruction or a tumor due to chronic job exposure to radioactive material is less a casualty of industry than a coworker who loses a hand in a machine tool mishap, yet the compensation laws of many American jurisdictions will deny these workers equal treatment. There are three barriers to equal treatment: (1) failure to cover occupational disease; (2) time barriers to occupational disease claims; and (3) poorer medical benefits than those provided for the accidentally injured.

COVERAGE FAILURE

Two States, Wyoming and Mississippi, provide no workmen's compensation coverage for injury or death due to occupational disease. By contrast, full "blanket" coverage of all occupational disease is provided by 33 compensation laws.[7] The remaining 19 jurisdictions[8] offer the limited "schedule" type of coverage—that is, compensation only for certain stated diseases. The number of diseases covered ranges from 6 in Louisiana to 46 in Texas.

Experience under the laws of those States which have provided full coverage for some years seems to indicate quite clearly that [despite fears to the contrary] the costs of such coverage have actually proved to be remarkably small and have created no great problems of abuse or administration.[9] Even when a flood [of accrued liability cases] has been threatened, such as in nontraumatic occupational loss of hearing, the provision of adequate protection has proved neither burdensome nor beyond administrative solution.

* * * * *

Schedules of occupational-disease coverage tend to become inflexible; change is resisted; and even when schedules are revised, they very quickly become obsolete as the processes of work change. Most States with occupational-disease schedules include radiation-caused disability. But after a study of these schedules, Ashley St. Clair, an official of a leading compensation-insurance carrier, concluded that "in a number of these laws * * * the description used is so restrictive that some workers in those States who hereafter suffer radiation diseases as a result of work exposure to radioactive isotopes or to other forms of atomic energy will not be entitled to compensation benefits. * * *"

TIME BARRIERS

The statutes of limitations which many jurisdictions maintain are only slightly less

Footnotes at end of speech.

Footnotes at end of speech.

serious in their effect of barring compensation for disability due to occupational diseases. In all States a claim will be denied unless two notices are filed within a specified time after the disability. Although these requirements vary from State to State, the first notice, that to the employer, must be given usually within a month of injury; and the second, that for filing a claim, must be made within 1 year. * * *

But a limitations statute can deny disabled workers benefits that are rightfully due them. This problem could be particularly acute in cases of radiation injury and diseases where the latent period may range as long as 50 years. Failure to give timely notice to the employer has in the past proved a minor problem, since it has been easily excused. But for many jurisdictions such a waiver is not likely under the second time limit—that for filing claims. In general, these statutes of limitations can be grouped into two types—those which run from the date of last exposure (or last day of work for the employer) and those which do not run until the date of disability. It is the former type of bar which, unless changed, will operate to preclude claims of many (perhaps most) radiation cases.

* * * * *

Fortunately, the harsh effects of the statutes of limitations have been reduced through liberal court interpretation. Case law has in several jurisdictions stated that the time bar will not run until the disease is reasonably discernible,[10] or until the first manifestations of the disease, or until it is reasonably discernible that the disease is due to the employment. Although liberal court interpretation has brought many welcome changes to workmen's compensation laws, it is no substitute for adequate legislation.

MEDICAL BENEFITS

Some victims of radiation disease will be denied equal treatment with accidental injury cases because of the statutory limits on medical benefits for occupational disease. Like the occasional indemnity benefit limits found in the laws, most of these apply to silicosis and asbestosis cases only. Nevertheless, they are part of the larger problems of limits on medical benefits under compensation laws. Perhaps the easiest way, briefly to examine the amount of medical care which radiation cases will receive under present-day workmen's compensation is to divide the laws into two groups. In the first group are those compensation laws which offer both full occupational disease coverage and unlimited medical benefits; in the second group are laws which limit either occupational disease coverage or medical benefits to the occupationally diseased, or both.

Twenty-five[11] of our 54 workmen's compensation jurisdictions[12] provide complete protection. Radiation cases, as well as all other occupational disease victims in these jurisdictions, will be assured of coverage as well as of unlimited medical benefits. Only one thing mars the admirable record of these 25 laws—7 of them also provide for time bars to recovery which run from last date of exposure (or employment). These are Delaware, Florida, Hawaii, Nebraska, North Dakota, Oregon, and South Carolina.

The second group—those that limit coverage and/or medical benefits to occupational disease cases—[is composed of 29 laws]. Radiation disease victims in these jurisdictions will face a wide range of situations—most of them undesirable.

* * * * *

To anyone who has had experience with the treatment of radiation cases, the meaning of these limits on medical benefits is devastatingly clear. Treatment may require months, sometimes years, and often, many thousands of dollars. There has been an encouraging trend toward unlimited medical benefits, but until the remaining 17 jurisdictions[13] who limit them revise their laws, it is clear that radiation cases stand a poor chance of getting adequate medical care in these States.

SPECIAL PROBLEMS

Radiation cases raise other important workmen's compensation issues. Since radiation hazards are likely to produce cases with long latent periods, the question of how their liability should be apportioned between employers is bound to become an important one. So will the long-debated issue of the right to select a physician for medical care. Efficient administration of the specialized medical care needed for radiation cases may require a greater degree of supervision over medical care than now exists under our workmen's compensation laws. In fact, it is sometimes suggested that because of their somewhat unique nature these casas be given separate and special administration under the laws. Methods of insuring workmen's compensation liability may also be outmoded for this new hazard.

SUMMARY

Regardless of the level of this protection, radiation cases can be assured equal protection with victims of accidental injury when all States: (1) adopt full coverage of occupational diseases; (2) adopt flexible statutes of limitations on claims filings; (3) remove barriers to equal medical benefits; and (4) where they exist, remove other special requirements for occupational disease benefits.

RADIATION CODE FOUND VIOLATED—STATE SURVEY SHOWS LAXITY IN 6 PERCENT OF PLANTS—TIGHTER REGULATION IS SOUGHT

(By A. H. Raskin)

State inspectors found violations of the safety code on the industrial use of radioactive material in 6 percent of the plants they surveyed in the code's first 18 months of operation.

This was disclosed in a report filed with Industrial Commissioner Isador Lubin yesterday by Dr. Morris Kleinfeld, acting director of the division of industrial hygiene of the State labor department.

Dr. Kleinfeld made it plain that he considered the number of plants in which the exposure of workers to radiation exceeded possible limits to be relatively low. He added that after the violations had been disclosed only 1 of the 9 plants involved had failed to bring its dose rate down to levels at or close to those prescribed in the code.

The State has begun court action against the one noncomplier. Three of its nine employees were reported to have suffered injuries as a result of chronic excessive radium dosage. Another company moved out of the State for economic reasons after being cited for infractions of the code.

GROWING HAZARD FORESEEN

The report indicated that only a handful of the State's 7 million workers were now employed in industrial applications of radioactive material outside the national security field. The total exposed to ionizing radiation, even of the minimal variety, was put at 3,500. This represents only 1 percent of the combined work force in the 320 plants that registered under the safety code.

However, Dr. Kleinfeld warned that, in terms of the strength and diversity of sources, the hazard was of sufficient magnitude to justify the increasing effort devoted to its control.

[From Labor's Daily of March 8, 1957]

"STRANGE" DISEASES PLAGUE ATOMIC WORKERS—INDUSTRIES VIOLATING STANDARDS OF SAFETY

(By Al Toffler)

WASHINGTON.—Last week a bawdy-house madam, a two-bit gambler, and a few petty politicians appeared as witnesses before a Senate probe attempting to substantiate charges of labor racketeering. Their testimony became front-page headlines across the Nation.

But, at the very moment that the hearings were taking place, another, far more significant labor event was occurring at Washington's ornate Mayflower Hotel, a few miles away from Capitol Hill.

The meeting was the first national conference on atomic radiation hazards held by any nongovernmental or nonscientific group. Sponsored by the AFL–CIO, it brought together 150 union officials, safety and compensation specialists, and—more important—dozens of honest-to-goodness atomic workers from installations all over the country.

These men are on the firing line every workday of their lives, and they had more than a few uncomfortable stories to tell. But reporters weren't there to listen.

IMPORTANT TO YOU

That radiation hazards are of vital concern to you, even if you live a thousand miles from Oak Ridge, Tenn., should be obvious. In case it isn't, take a look at these facts about the spread of new, potentially dangerous processes involving use of radioactive materials.

At the end of 1951, less than 500 institutions—hospitals, schools, laboratories, and research institutes—were authorized by the Atomic Energy Commission to procure and use radioactive isotopes. By 1956, according to Leo Goodman, nuclear-energy expert for the United Auto Workers, this figure had skyrocketed to 5,600.

You may think that the radiation danger exists only in big, well-marked installations guarded by sentry posts and high wire fences.

If so, you're wrong. It may exist in the building next door to your home, or—without your knowing it—in the shop where you work. For radioactive substances are now in use in thousands of big and small plants for a wide variety of purposes.

At the end of 1951, there were 134 industrial firms using isotopes of sufficient potential danger to require licensing by AEC. As of May 1956 the number had zoomed to 1,360 in 44 States. And this represents companies, not individual plants. GM, for example, with its scores of factories, is only one of the 1,360.

* * * * *

The spread of these new processes is continuing at an accelerated pace. Experiments now underway may lead soon to additional applications in plants breeding, pest control, food preservation, and other fields.

What has all this meant to the workers directly involved?

Charles Romine is a husky, healthy-looking atomic worker at the Goodyear Atomic Corp.'s big Portmouth, Ohio, installation where uranium 238 is produced. He is president of Local 10689, Oil, Chemical, and Atomic Workers.

Indignant and articulate, Romine told me that within the last 2 weeks 1 member of his local, a man named Herbert Smith, died of leukemia, a rare blood disease closely linked to radiation. The man was healthy and working until about 3 weeks before his death. Nobody spotted the disease in advance.

Two other men, Romine charges, are in hospitals now with lung cancer and are expected to die, if the doctors are right in their predictions. The company has taken the position that the cases had no connec-

---

Footnotes at end of speech.

Footnotes at end of speech.

tion with the work, but the men were employed in "contaminated areas," according to Romine.

* * * * *

STANDARDS VIOLATED

Other Oak Ridge unionists at the conference told of three cases of mental disorder that were traced to kidney ailments—also frequently associated with radiation.

The unionists charge that the companies violate even the AEC's loose prescribed safety standards every day of the week. At Oak Ridge, for example, Green says, decontamination crews always work in hot areas where the radiation exceeds AEC's so-called permissible limits. He charges that the company constantly underplays the dangers of radiation and coaxes the workers to work in high radiation areas. It tells them that AEC standards are so strict that a little laxity won't hurt.

The truth is, many unionists and scientists agree, that AEC's standards are far from being stringent enough.

In fact, safety standards are so abused, the union men say, that the conference went on record calling for a sweeping investigation of situation by Congress. But that didn't get in the papers either.

Anyway, Congress is busy investigating labor racketeering.

New York Times Appraisal and Praise of Senator Paul Douglas

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include an article by Edward H. Collins on the first page of the business and financial section of the New York Times of August 19, 1957, as follows:

BATTLE ON INFLATION—AN APPRAISAL—AND PRAISE—ON THE FIGHT MADE BY SENATOR DOUGLAS TO CUT SPENDING

(By Edward H. Collins)

In the course of last week's hearings on administered prices before the Senate Antitrust Subcommittee, Senator ESTES KEFAUVER introduced figures from certain trade journals that purported to show that the United States Steel Corporation's estimates on the dollar amount of the steel price increase of June 28 underestimated its potential inflationary significance.

One gathered, however, that he regarded the increase, even on the basis of the company's own figure of approximately $170 million as constituting a destabilizing influence on the economy.

This writer would be inclined to agree with the chairman's position on this point. But he is also inclined to agree, and much more emphatically, with the position taken by another Senator who, as recently as August 8, attacked another inflationary action of approximately the same magnitude but incomparably more indefensible. That Senator was PAUL DOUGLAS of Illinois, who happens to be not only far and away the ablest economist in that chamber, but who, by virtue of his frequently demonstrated capacity for putting the country's welfare above his own immediate political fortunes, enjoys a public respect and a public confidence that knows no party lines.

The object of Mr. Douglas' attack that day was the then pending Public Works Appropriation bill. Had this one-man fight on that $900 million piece of political log rolling succeeded, the Senator from Illinois would not only have saved the country's taxpayeqrs $213 million; it would also have reduced the potential inflationary pressure on a highly vulnerable segment of the national economy by the same amount. And the passage in his speech with which it was particularly easy to agree was this:

"The Senate Committee on Finance is holding a very elaborate study of inflation. The Secretary of the Treasury and the chairman of the Federal Reserve Board have been subjected to lengthy and punishing questioning as to why they have not been able to check this inflation. I think some of that intellectual effort could also be employed in the field over which we have some direct control, namely, our appropriations."

Like the rest of us, every Senator can be expected, presumably, to have his own particular weaknesses in the eyes of his colleagues, and the key to Senator DOUGLAS' weakness (if one likes to think of it that way) is visible here in that telltale word "intellectual."

The trouble with the Senator from Illinois, it seems, is even after 9 years in the Senate he has shown little disposition to relinquish the sense of human values acquired in the previous 30 years of his life, most of it devoted to the teaching and writing of economics.

It seems to be widely agreed that he still cherishes what must seem to those of his colleagues, to whom running for office and holding office has long been both a vocation and avocation, as an almost pathological confidence in the human intellect. To be more explicit, he has an unshakable belief in the ability of the human intellect, acting under the discipline of logic and driven forward by the merciless application of human energy (sometimes referred to as hard work) to provide the answers to the great economic and social problems of our times.

HIS OWN WEAPON

Once one understands the seriousness and the unique nature of this affliction of Senator DOUGLAS it is easy to understand why he should disdain the fight on inflation in the news headlines and should elect to use the weapons in which he places his greatest confidence and in the handling of which he is most accomplished.

It takes a high degree of courage for a Senator to challenge his colleagues to their faces; but to think of the episode of August 8 as merely an exhibition of courage would be to give the Senator from Illinois but a fraction of the credit he deserves, for not even his defeat in this doomed cause by a vote of 85 to 1 can erase, or dim the fact that his speech on that day can be rated among the best of his many masterpieces and an example of sound economics and unanswerable logic.

Senator DOUGLAS laid the economic foundation for his plea by showing, with appropriate statistics, that the pending measure called for spending another $900 million on the very products in which inflationary pressures are strongest. He then proceeded to remind his colleagues that virtually everyone of them was in agreement on the principle that public works programs should be accelerated in times of recession.

"Should we not realize," he asked, "that the logical corollary of this principle is that public works projects should be slowed down in times of boom and inflation, such as the present?"

UNANSWERED QUESTION

These points were, of course, logically unassailable. But they didn't answer the question of how the job of cutting back this $900 million spending program, representing well over 400 different projects, was to be carried out. If the Senator from Illinois had no plan, if he was proposing to use the meat-ax approach, or if he had in mind some other oversimplified formula, he would clearly be wasting his time. That would provide his colleagues with the very out they needed—an excuse, even if a feeble one, for proceeding, as they intended to do, to pass a measure that in essence meant that they placed their own and each other's local political popularity above the welfare of the country.

But these 85 Senators with a single mind were given no escape hatch. Senator DOUGLAS quickly made it clear that he was not opposing worthy projects, which, he declared, were in a decided majority; he was seeking to sidetrack, for the time being at least, those projects that couldn't justify themselves in the economic climate prevailing today.

There is not space here to give a detailed account of how, with the aid of some very able staff assistants, he studied everyone of the more than 400 projects involved, tested them in terms of what is known as their benefit-cost ratios (as worked out by the Army engineers), and showed, at least to the satisfaction of this nonexpert on such ratios that enterprises with a ratio of 1.40 or below were expendable.

It would appear that the Senator's colleagues were equally convinced, because not one of them, including such usually vocal experts as Senator KEFAUVER and Senator KERR, showed any inclination to throw so much as a single dainty punch in the direction of the Illinois assassin. Unfortunately, it is necessary to add, in the light of the 85 to 1 vote that came a few minutes later that if they were convinced, they were against their will.

Let's Begin the War Against Fire Ants

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. ROBERTS. Mr. Speaker, until one has actually seen what damage the imported Argentine fire ant can do, it is hard to realize the dire necessity for immediate action to eradicate this pest. Earlier this year, I walked across Alabama farmland and saw the havoc that had been wrought by fire ants. The ravage was typical of what is happening in an ever-spreading section of our country.

In March legislation which I strongly supported was enacted, authorizing the Department of Agriculture to enter into a program to eradicate this uninvited and dangerous pest. Up until now, USDA has dragged its feet on this program, claiming that it did not have the money to implement this project.

I am extremely happy that both Houses of Congress now have approved funds to initiate an eradication program. The $2.4 million authorized in the supplemental appropriation budget for combating fire ants is not much, considering the vast job that must be done, but it is a start, a step in the right direction, and I am grateful. Thousands of stricken farmers and cattlemen are also grateful.

Mr. Speaker, even while there was no action taken by the Department of Agriculture to fight fire ants, some States have taken the initiative in finding products to eradicate this pest which is taking an annual toll of millions of dollars.

In Arkansas, Union County has successfully ridden itself of the fire ant. I have a report which shows how successful their program was. Using granular heptachlor at the rate of 2 pounds per acre and applying this chemical by air, ground, and hand equipment, the State's plant board covered 11,153 acres.

Mr. Carter P. Seymour, head of the department of plant pathology and entomology, Arkansas State Plant Board, reports that he has reinspected the treated area and is unable to find any fire-ant activity in mounds located within the treated area.

This, Mr. Speaker, shows that fire ants can be beaten. I submit that they must be beaten. The experiment station at Alabama Polytechnic Institute reports that fire ants are known to be in 40 or more counties in Alabama and are spreading rapidly. If left alone, the pests will multiply to such an extent that the value of land will drop and certain farming operations will become very difficult, if not impossible. In many instances, this has happened. This is typical of what is happening in a number of States.

One of the problems which has been necessary to overcome is very technical, since it involves pesticide residue in milk. The fire ant prefers open, sunny sites in pastures or uncultivated areas, but they also build their mounds in woods and cultivated areas. These mounds average in size from 10 to 12 inches high, but around posts, stumps, or bunches of grass, they sometimes reach 2 feet or more in height.

On pastures, farmers must be extremely careful since many chemicals which have been used have been found to show up in the milk of dairy cows or in the fat of meat animals. At present, the only product cleared under the Miller pesticide residue amendment to the Federal Food and Drug Act is heptachlor. This chemical, when used as it was in Arkansas, that is, as prescribed, does not show up in milk or meat; and farmers do not have to worry about their products being seized by Food and Drug as being adulterated.

In short, Mr. Speaker, we have a chemical—heptachlor—which can safely and effectively kill fire ants; and we have funds—$2.4 million—to initiate an eradication program. I see no reason why the Federal Government, through the Department of Agriculture, should not begin immediately full-scale war against fire ants.

St. Stephen, Symbol of Hungarian Freedom

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. HOLLAND. Mr. Speaker, in the days before the Communist occupation, August 20, St. Stephen's Day, was a happy feast day in Hungary. On this occasion the Hungarian people with great pomp and religious ceremony celebrated the feast of the saint who brought them out of the darkness of paganism into the light of Christianity.

Although the Hungarians today will not be celebrating this holy day with jubilance, they nevertheless will observe it with solemn prayer. They still piously and graciously cherish the memory of Saint Stephen. They remember that during his reign, Hungary was a free nation ruled by Christian laws rather than by fear, as it is today.

St. Stephen was a deeply religious monarch. It has been said that all his life he had Christ on his lips, Christ in his heart, and Christ in all he did. When he became King in 1000 A. D. he vowed that the task of his reign would be the extension of Christianity throughout his kingdom. He accomplished this by rooting out idolatry, breaking the power of paganism, and establishing monasteries and churches throughout Hungary.

King Stephen was also a benevolent monarch. He passed good laws and saw to their execution. The King was easily approached; he listened to all his subjects no matter how minor their station in life. A large sum of his royal funds were distributed to the poor. Under his benign leadership Hungary became a great nation. He died in the year 1038. Forty-five years later he was canonized by Pope Benedict IX.

Today, the Communists will prevent any open celebration of this great feast day. Nevertheless, the day is still hallowed to his memory. The Hungarian people still refer to his holy acts, judgment and knowledge. He still is a source of inspiration to them during these troubled days. On this holy day, they will fervently pray to St. Stephen to ask God for sustenance enabling them to endure the brutality of communism.

To all Hungarians St. Stephen is a symbol of a free Hungary where truth and justice prevailed and where the dignity of man was recognized. Consequently, on this August 20, they will be praying for the return of this freedom. All freedom-loving people will join them in their prayers.

Address by Hon. Basil L. Whitener to Adelphotis Arahoviton Karyae Annual Greek-American Reunion

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. ALEXANDER. Mr. Speaker, on Sunday, August 18, 1957, our colleague, Congressman BASIL L. WHITENER, of the 11th District of North Carolina, delivered an excellent address to the Greek-American Society known as Adelphotis Arahoviton Karyae at its annual reunion in Gastonia, N. C.

This assemblage of approximately a thousand Americans of Greek descent is an annual occasion in Piedmont North Carolina. It brings to that area citizens from all parts of the United States.

The sentiments expressed by Congressman WHITENER as to the worth and value of our citizens of Greek descent conforms to the high regard which I have for those splendid citizens. It is, therefore, a pleasure for me to bring to the attention of our colleagues in the House the splendid address made by our colleague, Mr. WHITENER.

ADDRESS BY HON. BASIL L. WHITENER TO ADELPHOTIS ARAHOVITON KARYAE ANNUAL GREEK-AMERICAN REUNION

I consider it an honor and a great privilege to have the opportunity to meet with you this afternoon. Of course, I always feel at home among my friends of Greek ancestry.

For many years it has been my great pleasure to attend your annual reunion held here

at Karyae Park. Each of these events has been most enjoyable and informative. The bringing together of your friends and relatives from every section of the United States is of great value to you in keeping the ties of kinship and friendship more tightly bound.

This convocation of distinguished and splendid citizens also constitutes a great compliment to the people in our section of North Carolina. All of us appreciate your selection of this beautiful property at the foot of Crowders Mountain as a permanent park and recreational facility for the ingathering of your families and friends for a week each year.

And may I say to you that the churches of all faiths, the civic clubs, and the citizens generally appreciate the generosity of your society in making these excellent recreational facilities available to them for public gatherings and events. This is a further evidence of the type of unselfish citizenship which is exercised by you from day to day.

And, I will say to you that I personally am deeply appreciative of the warm friendship which I have had through the years with so many of you. In the professional, political, and social activities in which I have participated you have been most helpful and generous toward me.

Your devotion to the principles upon which our great Nation is founded and your glorious heritage of enlightened civilization stretching back through 3,000 years of history have always been an inspiration to me. Free people everywhere have been fascinated and thrilled by the magnificent history of Greece. One never tires of reading and studying of the land of Aristotle, Socrates, Hippocrates, and Demosthenes.

Greece has given so much beauty to the world. The art galleries in every land reflect her glory. The mind of man from early antiquity has been enriched and disciplined by Greek philosophy, and Spartan courage has thrilled all ages and given hope to mankind in its unceasing struggle for liberty.

No country on earth can boast of a more glorious, constructive, or romantic history than Greece.

Our Nation's Capital is full of Greek temples. I remember the first time I saw the United States Capitol. This beautiful shrine of representative government is supported by countless columns whose very names reflect the glory of ancient Greek cities and islands. The fluted and delicate columns of beautiful Corinth support the wing where I sit as a Member of the House of Representatives. Throughout our magnificent Capitol Building are many stately Ionic and Doric columns of polished marble. To walk among the Government buildings in Washington actually is to take a journey into the distant past and stroll over the slopes of the majestic Acropolis.

The civilized world owes a debt to Greece impossible to repay in material things. Wherever you find men who love freedom and cherish the forms and modes of representative government, you will find friends of Greece. She gave the first representative government to the world, and it was her blood and treasure that was first sacrificed in order that civilization might not perish from the earth.

Had there not been a Greece the world would not have successfully struggled forth from the savage bondage of antiquity. Had there not been a Greece our Christian faith would not have flourished so soon after the crucifixion of the Man of Galilee.

Greece has been a defender of the Christian faith for nearly 2,000 years. Her devotion to the teachings of Christ has been and is reflected in the character of her people. The very name of Christ—Christos—is Greek. The New Testament was written in the Greek language and for many centuries even the Old Testament was preserved in the Greek language.

It was to the Athenians that Paul preached his great sermon that has come down in ringing tones through the ages to comfort mankind.

Greece is the cradle of democracy, the lover of liberty. She is the mother of philosophy and creator of the drama; the patron of medicine, philosophy, mathematics, astronomy, and oratory.

The bonds between the United States and Greece have been strong and enduring for many years. The American people, ever mindful of the price paid for their own liberty, have been quick to support and cultivate the friendship of other nations devoted to democratic principles and representative government. No one can deny that this mutual friendship has been of inestimable value to both nations.

When the heroic Greek struggle for independence broke out in 1821 the United States rallied to the side of the Greeks. The American people sympathized with the Greek patriots in their effort to throw off the tyrannical yoke of foreign despotism. Our great statesmen, Henry Clay and Daniel Webster, lifted their eloquent voices in support of Greece. President Monroe in a message to Congress paid special tribute to the Greek patriots fighting for their liberty. Greek independence became a reality, and the spirit of freedom in the hearts of her people remains alive and vigorous unto this day.

Greece has known great tragedy in her march through history. She has been trampled upon by barbarians of old and frequently threatened by totalitarian foes in modern times. All too well we remember the yoke of Turkish domination that strangled Greece until the early 1920's, and we shall never forget Greece's heroic defense against the German and Italian invaders in World War II.

Conquered after stiff resistance, the Greek nation continued to harass the invader and keep large numbers of Italian and German troops immobilized.

After the defeat of the Axis powers Greece again faced a grave problem that threatened her free existence. International communism decided to make Greece a testing ground for Marxist ideology. The memory of Greek resistance to that menace is fresh in our minds.

As she had resisted other forms of tyranny over the mind of man during 3,000 years of history the Greek nation successfully threw off the yoke of Communist domination. Today she stands as a stalwart sentinel in the front line of the defense of the free world.

America is proud of Greece and her unsurpassed contribution to civilization. America is proud also of the many thousands of her citizens of Greek ancestry.

Our great Nation is made up of people of many lands. Here they have been assembled, and in our wonderful climate of freedom they have been welded into a common Nation.

Some of our American citizens of foreign birth have found it difficult to become assimilated into American life. They have held on to their ancient customs and allegiances, and as a result they have been accused by some as not being first-class American citizens.

Such has not been the case of the Americans of Greek descent. Wherever Greek immigrants have gone in the United States they have become active and patriotic American citizens. They have bought homes, established businesses, and assumed an active part in the social, educational, and religious life of their communities. They have been proud to call themselves Americans and anxious to fulfill their obligations of citizenship.

When one reads the list of persons of Greek origin who have become leaders in the business and professional life of the Nation, one realizes how completely our people of Greek ancestry have become a part of America.

In every phase of American life we find outstanding examples of your contribution to our society. The story of men like Spyros Skouras, head of the giant 20th Century Film Corp., is in keeping with the best American business tradition. A poor immigrant boy, he rose to be a giant in his industry, and his many philanthropic activities have done much to help his fellow Americans.

In the entertainment world we also have of Greek ancestry the famous Elia Kazan, noted for his production and direction of such films as On the Waterfront. Of Greek origin is Dimitri Mitropoulos, conductor of the New York Philharmonic Orchestra. And in the popular music field the Andrew sisters, who are of Greek ancestry, are internationally known.

In the field of government and politics, we find that Americans of Greek ancestry have been honored by election to public office in every part of the country. San Francisco has the able and popular George Christopher as mayor. Just below us in South Carolina, Peter Lempesis is serving as the mayor pro tempore of Charleston. And you and I are all proud of our mutual good friend, Ernest Kerhulas, who has served with such distinction as mayor pro tempore of the lovely resort city of Tryon, N. C., in my own congressional district. Then, too, one of your sons, young George Miller, is making a great contribution to good government in Charlotte, the metropolis of the two Carolinas, as he daily serves as prosecuting attorney in the Charlotte municipal court.

I do not want to overlook another great man whose tireless efforts have contributed immeasurably to the spiritual life of the United States. I refer, of course, to the great Archbishop Michael, head of the Greek Orthodox Church in North and South America. Archbishop Michael's tireless efforts in behalf of his great church and of Americans of every creed is an example of the highest type of religious leadership.

Yes, the roll of distinguished Americans of Greek origin is a long and honorable one. There are countless other examples of their accomplishments which time limitation will not permit us to discuss.

Your people have a record of patriotic citizenship that is admired and respected by all America. Here in the Carolinas your splendid contributions toward the betterment of your individual communities has endeared you to all of our citizens of whatever national origin, or religious persuasion. You are thought of as proud and honorable Carolinians. I know of no greater tribute that can be paid to any segment of our society.

In conclusion, I would like to say that your community and Nation as a whole is appreciative of your leadership in the area of good citizenship.

Ours is a great freedom-loving country. The blood of many lands and many races flows in our veins. No finer blood is to be found than that of the Hellenic race.

I salute you for your many past accomplishments and envision for you an even greater role in the life of this great Nation of ours as she marches forward to a more glorious future.

Disposal of Federally Owned Property at Obsolescent Canalized Waterways

SPEECH
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. BLATNIK. Mr. Speaker, I yield 5 minutes to the gentleman from West Virginia [Mr. BAILEY].

Mr. BAILEY. Mr. Speaker, I am very much surprised at the position of the gentlemen on the left side of the aisle who have discussed this proposal. The gentleman from California, my good friend Mr. SCUDDER, referred to it as a charity proposition. I wonder what he thought I had in mind during the last 11 years when I voted for a half billion dollars for flood-control improvements in the State of California. It was not charity.

Mr. SCUDDER. It was not charity.

Mr. BAILEY. I would like to say the same thing for the distinguished gentleman from Washington [Mr. MACK]. I voted for improvements on the Columbia River and the Coulee Dam. Yet they talk now about a charity proposition.

Mr. MACK of Washington. Every project on the Columbia River was recommended by the Army engineers and the Bureau of the Budget. In no place has the Congress given them more money than recommended by the Bureau of the Budget.

Mr. BAILEY. We are talking about the Government taking care of its just responsibility. I want to pay my respects also to the gentleman from Ohio [Mr. MCGREGOR]. S. 1520 was sponsored by Senator REVERCOMB, a Republican Member of the Senate from the State of West Virginia. This particular project is in a Republican county. Your Congressman is just acting as a Boy Scout in the hope of doing a good turn for some people in Wirt County, but the Army engineers have that included.

I want the opportunity of making good, so I am supporting the Senator's position.

Mr. McGREGOR. Mr. Speaker, will the gentleman yield?

Mr. BAILEY. I think I will not yield.

Mr. McGREGOR. The gentleman used my name; I think he should yield.

Mr. BAILEY. The gentleman has 10 minutes in which to discuss the matter.

I like for people at least to be consistent. The situation is this: In 1874 a private corporation built five locks on the Little Kanawha River in the State of West Virginia. It is a small river intersecting the Ohio River at Parkersburg, W. Va. It was operated as a private concern until around 1905, at which time Congress appropriated funds to purchase it and Army Engineers took over its operation. They continued to operate it as a navigation project until the close of World War II. I think about 1947 was the last active participation. It was neglected by the Army engineers over the years right following World War II until 1954. In 1954 a break occurred in the lock which diverted the flow of the Little Kanawha River considerably.

Right there is the time when the Army Engineers' responsibility began. They totally ignored doing anything about this situation in 1954 when this break in the locks occurred. It is their business and it was their business to keep those locks in repair, or at least it was their business to take action at the end of World War II when they ceased to use it as a navigation facility. It was their business then to try to get rid of the responsibility. But they waited until 1955, 2 years ago, and Public Law 996 was the result of it. But their responsibility began at that time.

They have continued to neglect it despite Public Law 996 passed by the 84th Congress. They are still neglecting it because they have not done anything to comply with the provisions of Public Law 996. They never even asked for an appropriation of the $20,000 which was carried in Public Law 996.

So the responsibility of the Federal Government is well established. They failed to take care of this situation.

Let me explain to the members of the committee the situation affecting the State fish hatchery. It is true that the fish hatchery is not on the water impounded by Lock No. 3; it is Lock No. 4; but the Army Engineers allowed Lock No. 4 to wash out completely. There was damage to the State fish hatchery and they submitted to me an estimated cost of building a retaining wall. That estimated cost was turned over to the committee by former Congressman Burnside when we were considering Public Law 996. It was in the amount of $94,000.

On two separate occasions I have visited the scene of this particular lock. I have inspected the fish hatchery and the damage that has been done there. I have consulted with property owners whose property has been damaged. This land is particularly susceptible to caving banks. It is mostly sand. When the current of the stream is changed and it hits a bank of the river, there is undermining. If it were possible to do so, I could take the members of the committee and show you 50 or 60 acres of land that have fallen into the riverbed. This is fine bottom land, and it has been lost forever due to change in the course of the river.

The people there are not responsible for this situation. Those property owners are not responsible. I want to say to the Members of the House that unless this legislation is approved and this committee report is agreed to, the Government will face damage suits involving $4 million or $5 million filed by 8 or 10 property owners, the State Conservation Commission of the State of West Virginia, and other people who have been adversely affected by this situation just because it was not taken care of at the time it should have been by the Army engineers.

Mr. Speaker, at this time I wish to yield to the distinguished gentleman from West Virginia's Fourth District who at one time was a Member of Congress when this particular county was a part of his district. The gentleman is thoroughly familiar with the situation and I am going to ask him to make a statement.

Mr. NEAL. I thank the gentleman. It is rather surprising to me that some Representatives of other States of the Union who have proverbially participated in the great benefits of public works in their own areas now come before the House today and object to an appropriation as small as this in an area of a State that has been neglected not only in the way of public works but it has been the little stepchild ever since we have had support prices on grains and anything else of that nature. It has had to bear its proportion of the cost without in any way participating in the benefits.

The State of West Virginia is entitled to a proportionate amount of public funds in whatever way it may be spent, provided there is a useful purpose. I consider this proposition a very useful purpose.

While it is not in my district, it just borders on my District. The little Kanawha Basin from the headwaters to the point where it empties into the Ohio River is one of a series of mountains and lowlands. The floodwaters run off very rapidly. The floods they have down there do a great deal of destruction. Where this little stream flows into the Little Kanawha Valley is an area of the State of West Virginia where droughts are frequent, where the rains are heavy and where the runoff is heavy. For the protection of those people who have farms along the river it is very important that they have some storage of flood waters some place.

It is probably 10 to 12 miles from the point of this proposed dam down to the mouth of the river at Parkersburg. As has been said before, the dam at the mouth of the river is now being maintained by the Army.

As a matter of flood protection this is not such a great problem because it is only 10 to 15 miles from the dam to the mouth of the river, but as a matter of water storage for these farmers in this valley who have to dig deep for their water and who during the dry season are almost without water at all, this would be a wonderful protection.

When the Department of Agriculture goes all over the country and enables headwater areas to build dams for the preservation and conservation of water, that is one thing. Here we have the Public Works Committee representing the Army engineers proposing to have a proposition built on a navigable stream that serves the very same purpose as these headwater dams and construction works due to the preservation of the water system.

To my mind, this is not asking too much. I have visited this location personally and I know the damage that has been done up and down this valley by reason of these heavy floods and by the diversion of the stream and by reason of a portion of it having fallen in, depositing material on the other side. To my mind, the amount of money that is necessary to do this job is not too much. It is not overestimated, when you accept

the committee's recommendation of $112,500.

May I say to the gentleman from West Virginia [Mr. BAILEY] I sincerely hope that the Members of this House will see his side of the proposition and sustain the committee.

Mr. FALLON. Mr. Speaker, if the gentleman will yield, I believe, Doctor, you will recall that several years ago a committee, of which you and I were members, went on a trip to the great Northwest and inspected some public-works projects. We looked over projects that cost, some of them, $300 million and $400 million. Is it not ironic for you to come in here and ask this House for $112,500 in the face of what we have seen all over this country in public-works programs?

Mr. NEAL. As I said in the beginning, it seems unusual and rather surprising that representatives from States who have asked so much and received so much public funds for various improvements that are not any more deserving than the one we present today should oppose this. I feel they are just a little inconsistent, even though they are members of my own party.

Mr. BAILEY. I thank the distinguished gentleman from the Fourth West Virginia District. He knows the situation and he had given you the facts.

Mr. Speaker, there is another item of responsibility that would attach to the Army engineers. This little county seat town of Elizabeth, of some 1,200 or 1,500 population, has drilled some water wells along the riverbank from which they get their water supply. When this dam was breached and the impounded waters receded and disappeared, their water wells dried up, and they are going to have to redrill them much deeper in order to maintain their municipal water supply. So I again point out that through the neglect of the Army engineers not handling this property and not taking care of it when the first break came, great sections of it have washed away since then until practically the entire dam has to be rebuilt and the locks sealed off. So, there is a definite Government responsibility, and that is all I am asking for at this time. And, I am certainly objecting to anyone referring to it as charity when again I want to say to you that I have voted for hundreds of millions of dollars—yes, even billions of dollars—for reclamation projects and for flood control projects in the districts of the gentlemen who are today raising the question about the difference between this project and those they were interested in.

Mr. SCHERER. Mr. Speaker, will the gentleman yield?

Mr. BAILEY. I yield to the gentleman from Ohio.

Mr. SCHERER. I believe the gentleman stated that a great deal of damage has resulted from the neglect of the Army engineers in the maintenance of this dam and lock. Did I understand correctly?

Mr. BAILEY. I inferred as much, yes, and I am correct.

Mr. SCHERER. Then the gentleman said that the Government was facing a series of damage suits totaling possibly $5 million or $6 million.

Mr. BAILEY. I say that individuals have already consulted attorneys, and I know the State conservation commission is getting ready to file a suit against the Government.

Mr. SCHERER. What assurance do we have that if we pass this legislation no suits will be brought?

Mr. BAILEY. This bill provides that the responsibility for the maintenance of it rests with the people, and I can assure you there will be no suits filed if this lock is repaired.

Mr. SCHERER. In spite of the fact that this damage of $5 million or $6 million has already been sustained, you can assure us that if we pass this legislation the Government will not be facing those suits?

Mr. BAILEY. There will not be any suits filed by the State conservation commission. I could not speak for the individuals, but I think they will assume the same attitude. We want the lock repaired. We need it, and we are not interested in bringing suit. We are entitled to it. I hope it will be the pleasure of the House to support the findings of the conference committeee.

Mr. O'HARA of Illinois. Mr. Speaker, will the gentleman yield?

Mr. BAILEY. I yield to the gentleman.

Mr. O'HARA of Illinois. Mr. Speaker, am I to understand that the people of West Virginia and all of its officials believe that this is absolutely necessary for the good of West Virginia?

Mr. BAILEY. Yes, sir.

Mr. O'HARA of Illinois. Is it not a fact that West Virginia has received practically nothing from the Federal Government in the way of public works, at least to compare with that received by other States?

Mr. BAILEY. That is true. For the benefit of the gentleman, may I remind him that the last military construction bill carried one item for West Virginia. That was the first installation that West Virginia has received in 2 or 3 bills of that kind. It was the only State of the Union that had not received a military installation.

Mr. O'HARA of Illinois. Mr. Speaker, I can say to the gentleman from West Virginia that West Virginia being in this situation and facing this need and having received so little from the Federal Government, it will have the support of our Democratic colleagues from Illinois.

Mr. BAILEY. I thank the gentleman.

Fantastic Federal Aid to Dallas County Revealed

EXTENSION OF REMARKS

OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. SISK. Mr. Speaker, the gentleman from Dallas, Tex., Mr. ALGER, has placed his newsletter in the CONGRESSIONAL RECORD each week. These statements have told at great length what a statesman is the gentleman from Dallas, and he has been modest enough to admit that he is apparently the only Member of Congress interested in economy in Government.

I have nothing against newsletters, and believe they often are useful in informing the people of governmental actions. But the gentleman from Dallas is unusual in that he is one of the few, and perhaps the only, Member of Congress who places his newsletter in the RECORD each week, at a cost of some $200 per week to the taxpayers, for the purpose of saying he is opposed to spending Government funds.

In Dallas, Mr. Speaker, it is chic in some circles these days to be a Republican, and in those same circles it is popular to condemn Federal grants, loans, or any form of Federal assistance. The gentleman from Dallas, who apparently represents a very vocal oligarchy in his city, does not deviate from the norm in this respect, with relation to his public utterances and literary efforts.

But the idea that Dallas does not want, and does not accept, Federal funds is so false and misleading I am almost willing to ask the Federal Trade Commission to investigate it as unfair advertising. While the gentleman from Dallas, Mr. ALGER, and the Dallas Chamber of Commerce board of directors flay Federal aid in all forms, that aid pours into Dallas County in great abundance. It is a well-known fact that Dallas has two full-time paid lobbyists in Washington for the purpose of obtaining Federal projects, and furnishes them with an almost unlimited expense account, a suite of rooms at a swank hotel, and a modern office in downtown Washington.

I do not condemn the programs, for the most part, that are made available to the good people of Dallas. But I do think this House should be informed as to the true amount of Federal funds and projects going into this conservative stronghold, Dallas County, Tex., United States of America. For the facts are not consistent with Mr. ALGER's public statements.

Let me say at this point I believe I am privileged to make these remarks for two reasons: first, I am Texas born, and although I hold the State of California near and dear to my heart, I am not anti-Texas nor anti-Dallas. As a matter of fact, I have been in Dallas many times, and I found it to be a beautiful city populated by many very cordial, friendly, fair people. Second, the fact that the gentleman from Texas [Mr. ALGER] spends tax money in reproducing remarks showing him to be economy minded is a direct invitation for the full facts to be brought out.

I believe at this point I should relate that while the gentleman from Dallas was in his district recently, telling the people how he opposes foreign aid and other spending programs, a huge foreign-aid program was then under House consideration. On July 15, 1957, a foreign-aid bill came up in which the House trimmed more than $800 million from the measure: Mr. ALGER was not present

in this Chamber to vote either way on the measure. I submit that Mr. ALGER can fight programs to which he is opposed much more effectively in Washington, D. C., than he can in Dallas.

I have said that many of the Federal projects in Dallas are good ones. That is true. But it is not true of a proposed Federal building there, which is billed as a $24 million building, but which will actually cost much more. According to General Services Administration, this huge Federal building is apparently for the sole purpose of consolidating agencies from their present widely scattered locations. The GSA admits the Federal Government already owns one enormous building in Dallas at 1114 Commerce Street, but says it is not quite nice enough for their purpose.

Now it would cost only $870,000 to renovate the present building in Dallas. But apparently the administration had rather spend a great deal more money. This proposed new building would be financed at 4 percent interest rates, and during the first 25 years the Government would pay out $2,361,000 annually. At the end of that time, there would still be an annual custodial and maintenance upkeep cost of approximately $746,000 annually. The upkeep on the new building would be almost double the present $428,000 total rent the Federal Government pays annually to provide space for these widely scattered agencies that will be brought into this costly new building. Average cost to the Federal Government for this building will be $1,553,800 annually for a period of 50 years.

It would appear that if the gentleman from Dallas is really as economy minded as he would have us believe, he would protest the construction of this building. I am sure that, being a member of the Republican Party, which controls the executive branch, he could convince the Government this is an extravagant spending proposal. But I have searched the CONGRESSIONAL RECORD in vain for an objection to this construction by the gentleman from Texas [Mr. ALGER]. I point out, too, that the gentleman from Texas [Mr. ALGER] is a member of the committee to which such construction matters are assigned for the necessary legislative action, and that he cannot, therefore, logically plead ignorance of this proposed building. Yet, within his committee he has not opposed this costly proposal. Now, he is either for economy or he is either for construction of this Federal building at great expense to the taxpayers. The gentleman from Texas [Mr. ALGER] cannot be for both. How will he declare himself on this matter?

Dallas is a prosperous city. It is a city of wealth and great abundance. Yet, according to the Texas Education Agency in a report dated August 1, 1957, Dallas County last year received Federal funds in the amount of $135,437.93 for its school-lunch program. And the Government gave Dallas County a total of $613,276 in Federal subsidy for its lunch program since 1952, and an additional $96,941.08 for its school-milk program. In addition to this, the Federal Government has reserved approximately $654,000 for Dallas County schools under the Federal-aid-to-impacted-areas program. The gentleman from Texas [Mr. ALGER] says he is against Federal aid to education. Does it not follow, then, that he wants the benefits herein described withdrawn from the schoolchildren of Dallas? And yet, I have not heard him make such a suggestion.

Dallas County last year received $249,617 from the Federal Government for medical research, and another $53,899 for dental research. In fact, the Federal Government has sent almost $847,000 into Dallas County for this research during the last 10 years, and put up $1,500,000 in Federal funds to help construct a fine hospital completed there in 1955. It would appear that the gentleman from Texas [Mr. ALGER] and his conservative physician friends would have objected to the Federal Government's helping the sick folks of Dallas.

According to Charles R. Grant, budget officer of the Department of Agriculture, Dallas County, during fiscal years 1955 through 1957, received $7,496,000 in Federal money from the Agriculture Department. I believe the gentleman from Texas [Mr. ALGER] has been in Congress during that period, and, although he has said he is opposed to farm subsidies, the records do not show that he has protested 1 penny of the money sent into Dallas County.

During the year ending June 25, 1957, the Small Business Administration granted 52 loans in Dallas totaling $1,849,913 of Federal money, and additional $69,420 in disaster loans. No protests are filed.

Mr. ALGER hates Federal contributions, social security, and what he calls Government handouts if we can believe his newsletters. Then how does he feel about the people of Dallas County who receive $1,641,281 per month—or almost $20 million per year—in connection with the old-age and survivor's insurance program? Some 31,582 Dallas residents receive such checks every month. Does the gentleman from Dallas wish these checks to be discontinued? If he does, why does he not say so? And if he does not, then why does he insist upon verbally flaying that program that assists so many of his constituents?

According to the Veterans' Administration, for the year ending June 25, 1957, some 3,523 Dallas residents obtained GI home loans totaling more than $41 million, with a Government guaranty of $22,945,706. Since the end of World War II, veterans in Dallas County have received loans on 45,575 GI homes for a total of almost $350 million, with a Federal guaranty of more than $194 million. Would Mr. ALGER, have these more than 45,000 Dallas families move out of their homes because a Government program is involved? No telling how many of these veterans and many others received $75 monthly Government checks for some time while attending Southern Methodist University in Dallas under veterans' educational program. Would the gentleman from Dallas have these veterans surrender their diplomas from SMU because they are trained by Federal assistance?

I do not have the figures, but I am certain that much money from the Federal Government goes to thousands of Dallas County veterans in connection with pensions and disability compensation. Mr. ALGER says he is opposed to the veterans' program. Does he mean the Dallas County veterans should turn back their checks to the Government?

Another example of these terrible Federal funds is found in connection with Love Field, a commercial airport located in a heavily populated section of Dallas. Then entire project at Love Field was created and constructed outright by the Federal Government at a cost of $3,412,000, and all told the Government has given $5,832,109 to Love Field construction, expansion and renovation. And even this does not account for all Federal funds going into Dallas County for the use of airports there. The total figure for all Dallas County airports is $7,465,866. Why does not Mr. ALGER protest this encroachment by the Federal Government upon Dallas' commercial air industry?

Mr. ALGER recently attacked a flood-control project passed in the district of one of his Texas colleagues, shortly after the area for which it had been passed had suffered a damaging flood. He issued press releases and wrote in his newsletter that he could not in good faith vote to spend Federal money on the project. Where was Mr. ALGER's good faith when the Government was considering a project known as the Dallas floodway? I did not see him rise to object to the fact that the Federal Government is putting up $8,996,000 in Federal funds for this project, while the Dallas local government will put up only $1,400,000.

In addition to the federally financed Dallas floodway, Dallas directly gets the benefit of three other dams, located in adjoining counties, costing a total of 36,123,000 Federal dollars for construction, maintenance, studies, and general operation. The dams were constructed for the primary purpose of helping Dallas citizens. Would Mr. ALGER say to the Government: "Remove these dams, they are not needed nor wanted by the people I represent, because they were constructed by tax funds"?

And how about those socialistic military payrolls? In Hensley Field, Dallas, the Federal Government last year paid out $1,462,000 to civilian employees, and another $1,526,000 to military personnel stationed there. Grand Prairie Naval Air Station in Dallas County got $581,415 for the civilian payroll and another $2,104,000 for the military payroll, during the past year. Should the merchants of Dallas reject these "evil" Federal dollars, I ask the gentleman from Dallas?

Even those payrolls pale when compared with the Federal contracts given Temco Aircraft Corp. and Chance Vought Aircraft in Dallas County. According to the Department of Defense, the Government contracts at Temco total $33 million, and at Chance Vought the total Government contracts amount to $463 million. Yes, these plants are free enterprise in name, but who will dispute the fact that money from the

Federal Government provides employment for thousands of Dallas citizens and brings food to their tables? Should these plants be moved from Dallas County, Mr. ALGER, or should the Government cancel its contracts because you say you are opposed to Government in business?

There are many Government employees in Dallas, and they receive a great deal of Federal money with which they pay their local taxes, buy their cars, their food, their clothes, their entertainment, and other items from Dallas businessmen. Mr. ALGER apparently has not protested any of the fine buildings and projects constructed by Federal money in Dallas, nor the excellent equipment placed in these buildings by Federal funds. But how has Mr. ALGER reacted to the workers who are employed in these buildings and on these projects? Why, he has voted against pay raises in Congress that would give these many Dallas employees added compensation, and allow their purchasing power in Dallas to increase for the benefit of the local economy.

Dallas Post employees number 2,505, and in a single year, fiscal 1957, their payroll amounted to $11,431,000. Would Mr. ALGER have mail service in Dallas discontinued because it costs some Federal funds to provide service? Would he toss the faithful Dallas postal workers out of jobs? Or, does he feel he is being big hearted because he has not asked for their jobs, but "only" opposed their recent pay raise, designed to bring up their standard of living?

There are numerous other Federal offices of regional and district importance in Dallas, including the District Internal Revenue Office, the Immigration Service, Customs, General Services Administration, Regional Post Office Department, Small Business Administration, Department of Labor, and so on. I don't have the figures for all these agencies, but let us consider one as an example.

Let's look, for instance, at the Regional Veteran's Administration office in Dallas. The Government constructed a hospital there at an original cost of $11,397,652. The real estate was purchased at a cost of an additional $10,358,263. The Government has since invested more than $2 million in additional equipment, and the payroll at the Dallas VA office is almost $5 million—to be exact, $4,899,804 per year.

How about the Commodity Credit Corporation? Well, one man, the epitome of conservatism," received more than $8 million from this agency for storing Government wheat, then became outraged when the Government insisted he make good on most of the wheat because he allowed it to spoil and ruin from faulty storage. And that is only one case of Federal money being released in Dallas through this agency.

Dallas County has some excellent roads and highways. Some 109.9 miles of this was constructed by Federal funds totaling $19,128,800 through fiscal 1957, from fiscal 1953. I will bet Mr. ALGER drives on those roads, and I know many of his constituents do. Shall we rip the roads up, I ask the gentleman from Dallas, who loves economy and hates Federal money?

Why, Mr. Speaker, I don't believe there is a field in which Dallas citizens have failed to receive some Federal aid. At Seagoville, Tex., in Dallas County, the Government spent a great deal of money constructing a Federal Correctional Institute. During fiscal 1957, the Federal Government spent $752,919 operating this correctional institute. Would Mr. ALGER say open the gates, turn the inmates loose on Dallas County's law-abiding citizens and never mind the danger, because, after all, we'll save the Government some money?

Now the figures I have recited to you certainly do not account for all Federal money in Dallas County. Think of the untold dollars that could be added to this total if one but had the time to figure them out. This does not include construction and upkeep of many regional and district offices, salaries for each of these agencies employees, and many, many other items. The best I can figure, the total amount of Government expenditures revealed here today, counting grants, loans, gifts, subsidies, guaranties, and other programs, is $902,105,597, and that is only a drop in the bucket, as I only hit the high spots.

So let the gentleman from Texas [Mr. ALGER], and the Dallas Chamber of Commerce directors, and others of this high oligarchy which prides itself in "controlling" Dallas County, cease from their verbal spoutings against Federal aid, while they enjoy the fruits of Federal aid in so many, many ways. Let us dispel the idea that Dallas County is so conservative it stands alone without any Federal assistance. Let the Dallas Morning News, which gleefully chronicles the statements of the gentleman from Texas [Mr. ALGER], to all and sundry, reflect for a moment on the good the Federal Government has done for Dallas County. Let this newspaper and the chamber board of directors and its Congressman realize, for once, that the Federal Government is here to help, not hurt, our people.

I am sure the great majority of the thinking people of Dallas already know these facts. I am sure the average Dallas resident loves his city, loves his State, loves his Nation, and the Government that works for the benefit of the people. Most thinking Dallas people, I am sure, are fully aware of the bountiful blessings they enjoy, and will no longer be fooled by the utterances of the gentleman from Dallas [Mr. ALGER], who wants to pretend Dallas gets no Federal aid, who wants to speak against Federal aid, but who knows within his heart that the good people of Dallas benefit from almost every Federal program known to the mind of man.

Either the gentleman from Texas [Mr. ALGER] is opposed to these programs, and is, therefore, against the benefits his city and its people get, or he is not opposed to them. And if it is the latter, Mr. Speaker, then he should change his speeches to fit his views accordingly.

I hope, Mr. Speaker, this has set the RECORD straight with relation to "conservative Dallas and its Federal-aid-hating leaders."

Twenty-second, Twenty-third, and Twenty-fourth in a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. MICHEL. Mr. Speaker, following are the 22d, 23d, and 24th in the series of editor's letters by Mr. F. F. McNaughton currently being published in the Pekin Daily Times, Pekin, Ill.:

[From the Pekin Daily Times of August 15, 1957]

THE EDITOR'S LETTER

(By McNaughton)

In fairness to Russia, I think I should write this.

Russia fears Germany.

Twice in the memory of most adult Russians, Germany has jumped on Russia.

In both cases, Germany, damaged Russia savagely. It is as though you, a farmer, had a neighbor farmer who twice had jumped on you and beaten you, and busted your skull with a rifle butt, and rammed a bayonet through your body a few times.

How would you feel toward that neighbor?

I can remember when I said, after Germany had done it only once, that Germany must never be allowed to lift its head again.

Then Germany did it again.

The person in Russia whom I most surely believe (he has lived there as head of a big news agency for many years) told Ceil and me that he believed 25 million Russians were killed in the last war. A Russian woman whom we knew in America said: "The men of my age were killed."

One thing sure:

Russian men of that age are not in sight. Women are doing the work from hotel clerks to hog tenders.

"I was here during that war," said our friend. "I was in Moscow when the Germans bombed and shelled it. The Germans destroyed city after city; and killed entire armies. They came within an ace of destroying Russia.

Now, oddly, we Americans have gotten around on the side of the Germans. We are mad at the Russians because they object to Germany being reunited and made strong again.

But the Russians—they cannot understand why we encourage an enemy that not only has fought us twice in one generation, but started both fights, and (especially if they get strong) probably will start world war III.

The Russians pointed out that Germany already has recovered so well that it is the most prosperous nation in Europe. England is poor. France, Italy, Spain, Austria are much poorer. Sweden, Norway, Finland, Denmark, Holland, Belgium, Luxembourg, Switzerland, Portugal, and Greece are little. But Germany is getting richer and stronger every day, and (Russia believes) more dangerous again. Why (asks Russia) put a gun in the hands of a man who has twice run amuck already?

[From the Pekin Daily Times of August 16, 1957]

THE EDITOR'S WIFE SPEAKS TODAY

"Now you come see us."

Isn't that what every polite guest says to a host who has gone all out to please?

We have met some pleasant and gracious Russians who have put themselves out to be kind to us, but when we invite them to

"Come see us sometime," they reply, sometimes sadly:

"Your Government won't let us."

We've invited Britons—and they have come.

We've invited Arabs—and they have come.

We've invited Indians—and they have come.

But Russians?

I don't know much about such things, but they tell me Communists are barred from visiting America.

And fingerprinting.

No Scotland Yard, no uppish dictator anywhere in this world has ever demanded that we be fingerprinted upon entering a country.

Russians tell us that the United States requires that tourists from Russia be fingerprinted. Wisdom may dictate that this is necessary; but Russia thinks it is an insult.

Mister Mac and I both think that the best way to convince Russians that the American way is better than the Communist way is for ordinary Russians to come over and see the American way of life.

We wish a million would come.

We think it is highly important that since those Russian farmers visited the United States a couple years ago, there has been unrest among farmers wherever Communist dictators make farmers work as hired hands of the state. Perhaps my husband will write more about this tomorrow.

[From the Pekin Daily Times of August 17, 1957]

THE EDITOR'S LETTER

(By McNaughton)

There's unrest on Communist farms.

You may recall that I wrote that the two things most damaging to communism in recent months were:

1. Massacre of Hungarian workingmen and students on orders from Moscow;

2. Russia's permitting some of her farmers to come to America to see how American farmers work and live.

Both were major boners.

The second was made much worse by permitting Russian reporters to come along with the Russian farmers.

You know the song:

"How you gonna keep 'em down on the farm, after they've seen Paree?"

No Russian who has ever seen an Illinois farm would ever again be content as a hired man of the state on a collective farm.

You remember the political upheaval here in Moscow this summer, with Khrushchev coming out on top. The first government decree issued after that was:

"Ease up on farmers."

Do farmers like collective farms on which the state owns the land and the former owners work as hired men?

They do not.

Here is the proof.

When Tito in Yugoslavia gave farmers permission to dissolve collective farms, the farmers quit in a rush and went back to individual farming.

I've just talked to a well-informed Pole and he told me that when Gomulka gave Polish farmers permission to quit collectives, 80 percent of them quit the collectives in a few months. I verified later that Poland has only 2,200 collective farms left. They had 10,600 last year.

In Hungary, after the massacre, half the collective farms collapsed.

Some of the big bosses in Moscow must find this hard to understand for plainly many peasants are better off in collectives than in the old days; but it must be the natural yen of a man of the soil to be his own boss and reap the profit from his own toil.

So, when you add the discontent of the farmers to the fact that the collective farm plan is failing to come anywhere near American production, you can see that communism in agriculture in Russia (and China) may fail—and if it does, can communism live?

New Idea Division of Avco Manufacturing Corp.

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. McCULLOCH. Mr. Speaker, on page A6621 of the Appendix to the RECORD, dated August 13, 1957, appears extension of remarks of the gentleman from Michigan, Mr. DINGELL. The remarks refer to the New Idea division of Avco Manufacturing Corp., which is located in my district, fourth, Ohio.

I am in recipt of a letter from Mr. Blair Williams, assistant general manager of New Idea which contains some pointed statements concerning such extension. The letter will follow my remarks.

I suggest that Mr. Williams' letter be carefully read by every person who was, or may now, be interested in the dispute, which, fortunately, was settled by mutual agreement 10 days, or more, ago:

NEW IDEA DIVISION,
AVCO MANUFACTURING CORP.,
Coldwater, Ohio., August 20, 1957.

Hon. WILLIAM M. McCULLOCH,
New House Office Building,
Washington, D. C.

DEAR MR. MCCULLOCH: My attention has been directed to an extension of remarks the Hon. JOHN D. DINGELL, Democrat, of Michigan, placed in the Appendix of the CONGRESSIONAL RECORD on Tuesday, August 13, in which he presented inaccuracies, misleading statements and false inferences about a labor dispute that had existed in your district and which had been settled to the satisfaction of all parties more than 48 hours before he chose to make this improper use of the CONGRESSIONAL RECORD.

I protest the use of the CONGRESSIONAL RECORD of the United States in this unorthodox manner. However, because this ill-considered and improper attack has been made by Mr. DINGELL on Avco Manufacturing Corp., and on its New Idea Division in Coldwater, Ohio, I respectfully request that the following facts be given equal prominence.

As evidence of the satisfactory settlement of this work stoppage, I quote from a statement issued jointly by a company representative and S. K. Brock, president of the New Idea local of the Steelworkers which was published in the Daily Standard, Celina, Ohio, on Monday, August 12: "* * * the new settlement, which assures almost 3 years of uninterrupted labor-management relations, will be extremely beneficial to both parties."

To give you the major features of the new contract, I quote from a joint company-union release to newspapers made on Saturday, August 17:

"The farm equipment plant (New Idea, at Coldwater) resumed full production August 12, after union members unanimously accepted the agreement at a meeting August 11.

"The new contract expires April 15, 1960, and contains automatic wage increases in lieu of a wage reopening arrangement as in the past.

"The wage increase that was put into effect immediately provides for a 14-cent increase in the lowest labor grade. Employees in all other labor grades will receive a 9-cent across-the-board increase plus additional increases in each grade of 1 cent increments.

"Across-the-board increases of 7 cents in 1958 and 8 cents in 1959 are included in the contract. Under the new agreement, wages reflecting the first of these increases will range from $1.69 to $2.65 per hour through 18 labor grades.

"Other economic increases include improved hospitalization and insurance benefits and increased vacation pay. A cost-of-living provision based on the BLS index level of November 1957 will go into effect July 1, 1958, should any increase in the cost of living occur. An extra half holiday has been added, bringing the total paid holidays to seven and one-half.

"The contract provides also for arbitration of incentive standard grievances and incentive payment figured on a job basis."

Parenthetically, in reference to the second paragraph of the news release, the company insisted on a 3-year contract with a no-strike clause to insure labor peace—something New Idea has not experienced since the steelworkers became the authorized bargaining agents for its Coldwater employees. It is my understanding that our new contract grants more generous increases than any negotiated in our industry to date in 1957.

Mr. DINGELL refers to a wage lower than 50 cents an hour below that paid by other organized companies in the industry. He doesn't state what companies, or what industry. I wish to point out that in a comprehensive survey of farm-equipment factories, made by New Idea before the strike, in no case was there a wage differential even approximating the amount to which Mr. DINGELL referred. Indeed, New Idea wage rates before the strike compared favorably with those of other farm-equipment plants, and our new rates place us among the highest in our industry.

Mr. DINGELL states that New Idea can afford to meet the wage standards generally prevailing in the steel industry. I'm sure you know that manufacturers of farm implements cannot be correctly placed under the broad heading of the steel industry. the farm implement-industry, in general, pays lower wages than the steel industry, because of the type of production work done. Farm-equipment production involves lighter work and a smaller percentage of highly skilled labor than steel production.

New Idea, in its months of negotiations with the steelworkers, was in a real sense fighting the farmer's battle against price increases on the machines they use to earn their living. Our sales are to farmers, and their plight—caught in a cost-price squeeze for several years—is of especial interest to us, as it is to the Congress. Farming is the critical area in the national economy. In our judgment it is not practical for New Idea to pass on to farmers the full impact of higher costs resulting from wage increases and other employee benefits.

In a prestrike survey of 13 other manufacturers in this area, employing from 89 to 1,700 production personnel, New Idea wages were shown to be above the average and the only ones ranking above New Idea in wage rates were those having a higher percentage of highly skilled employees.

Mr. DINGELL made passing reference to cost-of-living clauses. As examination of our new contract would reveal, the cost-of-living section as agreed to by the company, incorporates the steelworkers' own cost-of-living escalator clause.

Mr. DINGELL brought up the subject of defense contracts. New Idea is Avco's farm equipment division and has no defense contracts. During the firm's 58-year history, it has had only 3 small Government contracts, in 1951, amounting to only $336,000.

Mr. DINGELL implied that Avco's profits are such that the company could well afford to grant wage increases of most any size,

while the truth of the matter is the corporation showed a substantial loss for the latest full year—1956. Each division of Avco is expected to stand on its own feet, and New Idea itself lost money in 1955 and has not made adequate profits in the last 4 years. A major factor has been the frequent strikes by the steelworkers at this location, totaling 7 months in the past 4 years.

Your efforts to give the above facts equal prominence to the inaccuracies, misleading statements, and false inferences made by Mr. DINGELL will be appreciated not only by myself, but by many other citizens in this area who know the issues involved in the work stoppage and who share my happiness that the community now looks forward to at least 3 years of labor peace.

Sincerely,

BLAIR WILLIAMS,
Assistant General Manager.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Subject Dogs to Poison Gas and Thus To Repeat Observations Made on Gassed Soldiers in the First World War."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO SUBJECT DOGS TO POISON GAS AND THUS TO REPEAT OBSERVATIONS MADE ON GASSED SOLDIERS IN THE FIRST WORLD WAR

This experiment is reported in the Journal of Clinical Investigation, volume 26, No. 5, dated September 1947, pages 936–944. It is reported by its perpetrators: H. D. Bruner, Robert D. Boche, Charles C. Chapple, Mary H. Gibbon, and Miles D. McCarthy.

This group of investigators starts right out by admitting, in their article, that doctors have known since World War I that the breathing of atmosphere having abnormally high oxygen content is the best treatment for poison-gas cases. That is, a poison-gas case—if there were any today—would be treated in an oxygen tent.

The investigators knew that before they started their experiment, and they knew it when they got through: But it is only fair to mention that, if their experiment had seemed to show that oxygen therapy is not worth while in poison-gas cases, sensible doctors would have paid no attention to them whatever, since sensible doctors know that oxygen therapy is indicated in such cases.

Here is the way the vivisectors justify this experiment while flying in the face of the fact that their whole admitted purpose was to learn nothing substantial whatever: They cite the fact that doctors, since the First World War, have had "a uniformly high opinion of breathing oxygen." They state that "the use of oxygen in subsequent accidental poisonings has confirmed that evaluation"; that is, the evaluation given to oxygen therapy during World War I. But the vivisectors go on to say, "While it is generally agreed that oxygen therapy is clinically indicated * * * no data have been found which permit statistical confirmation." In other words, here were some vivisectors setting out merely to pile up statistics, which they thought valuable.

Their method of going about it was to use phosgene gas on dogs in groups of 4 or 6. Phosgene gas is a cyanide product. The dogs exposed to it were placed in a special chamber where the gas was poured in upon them for periods of 30 minutes.

Then came the part of the experiment which perhaps was most interesting, at least from the standpoint of the dyed-in-the-wool gambler. A lottery was held to determine which of the gassed dogs would be given oxygen therapy and which would be allowed to go untreated.

The unluckiest group—that is, the group for which the vivisectors decided to do nothing—was put aside, while its members were free either to recover or to gasp out their lives as quickly as they could.

There is little point in going into the terrible details of poison gas. Everyone is generally familiar with them. The symptoms include nausea horrible gasping. Who has not seen a motion picture, at one time or another, showing the plight of a soldier in World War I staggering through a gassed area, coughing and clutching miserably at his throat? Indeed poison gas is generally conceded to be so cruel that the whole world long since has agreed to outlaw it altogether. Even the Nazis abided by this decision during the recent war—so that poison gas is used today, apparently, in only one place: the vivisectional laboratory, where nothing is barred, no matter how repulsive it may be to humanitarians.

The dogs to be treated, meanwhile, were placed in an oxygen chamber and kept there either for 72 hours or until they died, even in spite of receiving treatment. It should be noted that the original gassing was so severe as to invite death even with treatment.

Indeed the gassing was so severe that about two-thirds of the untreated dogs died; and almost that percentage of the treated dogs also succumbed. However, as the vivisectors point out, the abnormally large amount of oxygen breathed by the dogs under treatment had, in itself, a harmful effect. That is, the oxygen content was just naturally too high—higher than would be used in the sensible treating of human patients. Therefore the vivisectors admit that it is impossible to tell whether many of the treated dogs died as a result of the phosgene gas or of the oxygen treatment itself.

Consequently, the vital statistics developed in this experiment admittedly mean very little even as meaningless statistics.

NATIONAL HUMANE EDUCATION ASSOCIATION.
CHICAGO, ILL.

Time for Adjournment

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. BETTS. Mr. Speaker, the title of the following editorial should be "Time for Adjournment." Appearing in the August 19 issue of the Marion (Ohio) Star, it reflects the feeling in the Eighth District of Ohio that the people want Congress to quit and go home. It also points up the fact that some of the issues which we here in Washington think are important are not received with the same enthusiasm at home:

Reports from Washington of plans to push for adjournment of Congress not later than August 24 are being heard in an atmosphere of complete consent from the constituents of Representatives and Senators.

There is no popular pressure on Congress to stay in session beyond August 24. There has been no popular pressure on Congress to stay in session this long.

The 1st session of the 85th Congress has been and will continue to be free from pressure. The only issue that generated any steam was the budget, and the pressure that was built up against a $72 billion budget was dissipated by adroit management which made it appear the total would be whittled down without drawing blood or leaving scars.

The civil-rights issue, which threatened to start a filibuster in the Senate, also was adroitly handled. Aside from it, no other proposal could have produced a time-consuming deadlock.

The circumstances of deadlock were not present this year. There were no burning isues to inflame public opinion. President Eisenhower's proposals for legislation were neither arbitrary in nature nor in the manner of their presentation.

Adjournment by August 24 is entirely feasible. There is a time for Congress to get out of Washington, just as there is a time for everything else—and the time this year is before Labor Day.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment Concerning the Administration of Adrenalin to Cats Which Have Been Skinned Alive."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT CONCERNING THE ADMINISTRATION OF ADRENALIN TO CATS WHICH HAVE BEEN SKINNED ALIVE (DEPARTMENT OF PHYSIOLOGY, UNIVERSITY OF BUFFALO SCHOOL OF MEDICINE)

This test was carried out in the department of physiology, University of Buffalo School of Medicine. It was reported by the men who performed it, Charles E. Whitcher and Fred R. Griffith, Jr., in the American Journal of Physiology, volume 156, dated January 1949, pages 114 through 116.

Adrenalin, being a stimulant, normally causes a slight rise in temperature soon after it is administered.

On the other hand, it is well known that the skin is an animal's heat regulator: If all the skin is removed, temperature may be expected to drop.

At the risk of oversimplifying this experiment to a slight extent, it may be said that the Drs. Whitcher and Griffith, Jr. reasoned that if a cat were skinned alive, even the administration of adrenalin wouldn't prevent the animal's temperature from dropping.

So they proceeded to make temperature comparisons between skinned cats and an-

other variety of creature which they described as an intact cat. That means a normal cat wearing a skin.

The vivisectors used 14 cats in this experiment, removing all skin save on the heads, feet, and tails. Each animal was given what the vivisectors call anesthesia by means of dial urethane (Ciba).

It just happens, however, that dial urethane (Ciba) is not an anesthetic. It is a hypnotic drug, somewhat stronger than a sleeping pill, to be sure—but still a hypnotic and not an anesthetic. The Ciba people do not sell it as an anesthetic.

In this experiment (though the vivisectors do not say so) the dial urethane probably had two advantages. First, it rendered each cat dopey enough to make him largely unable to fight back against having his skin torn off. Second, it did not, of itself, cause the sort of temperature drop usually associated with real anesthetics. And that was important—because the vivisectors wanted to measure the drop in temperature resulting from being skinned, not the drop resulting from being given an anesthetic.

With the cat completely skinned, the doctors placed a thermometer in his rectum, gave him adrenalin, and then watched him for half an hour—noting that his temperature, sure enough, did decline markedly.

There is no statement as to what happened to each cat at the end of the half hour, though it is only reasonable that all had to be destroyed—probably as painlessly as possible under the circumstances.

NATIONAL HUMANE EDUCATION ASSOCIATION.

CHICAGO, ILL.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Determine How Much Pressure Must Be Applied to an Animal's Tail To Cause It To Rot Away."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO DETERMINE HOW MUCH PRESSURE MUST BE APPLIED TO AN ANIMAL'S TAIL TO CAUSE IT TO ROT AWAY (DEPARTMENT OF PHYSIOLOGY, UNIVERSITY OF MINNESOTA)

This strange test was reported in the American Journal of Physiology, volume 158, dated July 1949, pages 113 through 118, by the two men who carried it out—Arnold L. Lehmann and Roger M. Reinecke, of the Department of Physiology, University of Minnesota.

At first glance, the reader will wonder how on earth two sane human beings could have thought of such an experiment—let alone suppose that it could have had an actual purpose.

Actually, it did have a "purpose," in a sense. That is, it appears to be utterly without relationship to anything sensible whatsoever—and yet it does bear some slight relationship to work that already has been carried out by doctors engaged in treating day-to-day patients. The connection is slight, but admittedly it does exist.

First let us examine the technique of this experiment. The Vivisectors Lehmann and Reinecke knew to start with that if blood circulation is cut off in any member of the body, the result will be that the member will "die" and rot away.

Accordingly, they worked out a novel way to cut off circulation in the tails of mice, and thereby to cause those members to rot.

The implement used in this "work" is described as a pneumatic sheath. Imagine the sheath for a sword. Imagine that when the sword is in the sheath, the mouth of the sheath can be made air tight. Then imagine that a hole in the sheath makes it possible to connect an air hose so that compressed air can be forced into the sheath, thereby building up pressure on the sword blade.

Now, a sword blade would not be affected much by a sheath full of compressed air—but the tail of a mouse is a little more sensitive.

The Vivisectors Lehmann and Reinecke fitted sheaths to the tails of a large number of mice and then built up the inside air pressure, more in some cases, less in others. When the air pressure became sufficiently greater than the blood pressure, it squeezed shut the blood vessels within the tail, thus cutting off the flow of blood. Anyone who has had a tourniquet applied to his arm for a few seconds can understand to some degree how this would feel.

The experimental animals spent not a few minutes but an entire week with their tails under high air pressure.

What the vivisectors learned, according to their report, was this: If a tail is kept under a pressure of 30 millimeters of mercury for a week, recovery still is possible. But if the pressure is held at 40 millimeters, the tail will rot away. That is what the experimenters learned. It is what they reported. It is substantially all they reported.

The reader may wonder, now, what bearing this has on any sensible medical problem. The answer is that the bearing is slight. It is this; In recent years, practicing doctors have worked out a form of dressing for wounds known as a "pressure bandage." It is especially useful in treating such things as burns.

Formerly, burns were coated with tannic acid. This caused a crust to form over the burned area, and thus prevented seepage of plasma. But at the same time, infection almost always formed to some extent under the crust. But with a sterile dressing, kept under pressure by means of elastic material, infection can be avoided and at the same time the pressure can be made sufficient to prevent the seepage of blood plasma from the surface of the wound.

The question, then, is how tight may a pressure dressing be without causing serious damage to the circulatory system? Practicing doctors of course know the answer. They learned by tentative trials with their human patients—subjecting those patients to careful "experiments" which, nevertheless, were bound to be an improvement over the old tannic acid system.

That, presumably, is what gave the Vivisectors Lehmann and Reinecke their basic idea for squeezing animals' tails to dry rot and death. The reader may form his own opinion as to the need for this particular animal experiment in the interests of medical science.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Observe the Carbon Dioxide Content After 'Sharp Freezing' the Brain of Conscious but Paralyzed Cats."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO OBSERVE THE CARBON DIOXIDE CONTENT AFTER "SHARP FREEZING" THE BRAIN OF CONSCIOUS BUT PARALYZED CATS (DEPARTMENTS OF PSYCHIATRY, PHARMACOLOGY AND BIOLOGICAL CHEMISTRY, UNIVERSITY OF ILLINOIS COLLEGE OF MEDICINE)

This experiment was reported by its authors—James A. Bain and J. Raymond Klein, of the Departments of Psychiatry, Pharmacology, and Biological Chemistry, University of Illinois College of Medicine—in the American Journal of Physiology, volume 158, No. 3, dated September 1949, pages 478 through 484.

The vivisectors set forth at the outset that upsets in the central nervous system are linked to the degree of concentration of carbon dioxide in the blood as it passes through the brain. That is, extensive breathing of carbon dioxide can cause panting, convulsions, and coma. At the same time, petit mal (a slight epileptic attack) can be relieved by forcing the victim to breathe a higher concentration of carbon dioxide.

Knowing this, the vivisectors decided that they wanted to pile up some exact statistics on the subject. Specifically, they wanted to make notes concerning the amount of carbon dioxide found in the blood and brains of animals which had been forced to breathe various concentrations of it and which, also, had been given various sorts of drugs intended to produce convulsions and certain other unpleasant conditions.

One medical critic, looking over the report of this experiment, made the following observation: "The exact point of all this escapes me. Either it is an investigation of a high, complex, and distinctly theoretical nature, or else I am feeling more than usually dull this morning."

At any rate, it may be of interest to examine the technique used by the vivisectors. The subjects of the experiment were cats, apparently at least 13 in number. Each cat, to use the vivisectors' own wording, was "paralyzed with dihydro-β-erythroidine." This does not mean that the cat was placed under anesthesia. It means simply that the cat was given a drug which caused paralysis. The cat's breathing, from that point onward, had to be accomplished by means of artificial respiration.

The cat then was strapped down, and the top of its skull was sawed off to expose the brain.

Then various cats were treated in various ways. Some breathed room air; some breathed varying concentrations of carbon dioxide. Some were stimulated to the convulsive stage by electrical shock. Others were thrown into convulsions through injection into the veins of a number of drugs—

bicarbonate, hydrochloric acid, sodium cyanide, and metrazol.

One cat was subjected to an additional bit of surgery; the vivisectors cut into its neck and tied off the carotid arteries.

One hour after the start of such procedures, each cat was given the final blow; its exposed brain was "sharp frozen." That is, the vivisectors poured into the brain cavity a quantity of liquid air, having a temperature of 320° below zero Fahrenheit. The liquid air treatment of course killed the cat, because it instantly caused the animal's brain to be frozen rock hard. The frozen brains then were removed for examination.

In connection with this experiment, it may be noted that doctors often object to the word "vivisection," meaning "to cut up alive," because (they contend) experimental animals never really are cut up alive. The present experiment offers an interesting sidelight on the truth or falsity of this oft-repeated medical statement.

It may also be noted that the experimenters in this case drew the following conclusion from their work. They state in their report that the breathing of carbon dioxide "raises the convulsive threshold to certain drugs and to electric shock, whereas it lowers the convulsive threshold to other drugs." This was known, of course, before the start of the experiment.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Observe the Effects of Intense Chilling Applied to 21 Dogs."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO OBSERVE THE EFFECTS OF INTENSE CHILLING APPLIED TO 21 DOGS (DEPARTMENT OF PHYSIOLOGY, BOSTON UNIVERSITY SCHOOL OF MEDICINE)

This adventure into science was carried out by the Drs. Hans O. Haterius and George L. Maison, of the Department of Physiology, Boston University School of Medicine. They reported this apparently pointless experiment in the American Journal of Physiology for February 1948.

The technique employed by Haterius and Maison was very simple. They took dogs—21 of them in all—and immersed them up to their necks in a tub of ice water having a temperature just barely above the freezing point. The idea in submerging an animal up to his neck was to observe the length of time it would take him to sustain a collapse.

Haterius and Maison, having caused an animal to collapse, then proceeded to rewarm him in another tub with water at a temperature of about 112° F. If the dog managed not to die they sometimes put him back in the ice water to see how well he could withstand a second supercooling.

Those with pure scientific curiosity may be interested to know that a dog placed in water just above the freezing point may collapse in as little as 67 minutes—although his ordeal may extend to 193 minutes, 3¼ hours for all practical purposes.

The vivisectors made some interesting observations in connection with their report on all this. Here is what they had to say about anesthesia:

"While recourse to anesthesia in this type of experiment is difficult of defense on a strictly physiological basis, it proved desirable from certain standpoints to induce an initial narcosis sufficient at least to offset the intense psychomotor disturbances otherwise incurred by abrupt immersion in a chilled bath."

What the experimenters mean is that anesthesia itself tends to lower body temperature, among other things, and consequently an animal under anesthesia would succumb to the cold water treatment more quickly than an unanesthetized animal. However, the vivisectors did not wish to be disturbed apparently, with the intense psychomotor disturbances displayed by their subjects—which is to say, shivering and perhaps involuntary and voluntary struggles—so they gave to each dog, not anesthesia, but such light and short acting drugs as sodium pentothal in sedative doses. This would be something like taking the cold water treatment after being anesthetized only to the extent of having swallowed a sleeping tablet.

Incidentally, Haterius and Maison apparently consider themselves fairly merciful at that, for in their article they refer to the fact that C. R. Spealman did this same experiment without any pretense at anesthesia whatever. He reported his work along this line in the American Journal of Physiology, volume 146, page 262, issued during 1946.

In the course of their article Haterius and Maison make an interesting observation. They announce the finding that continued shivering is a distressing experience. And they add that concentration is difficult, one thought dominating—the desire for termination of shivering.

And while their 21 experimental dogs, one after the other, were lying in the iced water, presumably dominated by a desire for freedom and the termination of shivering, Haterius and Maison learned the best treatment for an animal suffering from supercooling. They learned that the proper therapy in such a case is to warm the animal up. They say so in their article. That statement is, in brief, their total scientific contribution which might be regarded as constructive. To be specific about it, they found that an animal which had been in the cold water long enough to collapse as a result of either the failure of his heart or of his lungs, usually could be revived by being placed in a bath of warm water.

It is interesting to note that out of the total of 21 dogs, only 8 died as a result of the treatment meted out to them by Haterius and Maison. The other 13 lived—and possibly were subjected to other vivisectional whimsies later on.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Demonstrate Certain Known Characteristics of Shock by Mashing the Legs of Dogs With a Rawhide Hammer."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO DEMONSTRATE CERTAIN KNOWN CHARACTERISTICS OF SHOCK BY MASHING THE LEGS OF DOGS WITH A RAWHIDE HAMMER (DEPARTMENT OF PHYSIOLOGY, COLUMBIA UNIVERSITY)

This experiment was the project of Magnus I. Gregerson and Walter S. Root, of the department of physiology, Columbia University. They reported on it in the American Journal of Physiology, volume 148, dated January 1947, pages 98 through 123.

On a great many occasions—but especially during the First World War—doctors treating human patients noticed a reduction in blood volume during the development of shock. It was this observation, made in Flanders' Field, which caused doctors to realize that transfusions should be given in shock cases.

However, Gregerson and Root decided that it would be interesting to watch blood volume drop in dogs as a result of shock. It should be noted that they knew at the outset that blood volume could be expected to drop in shock cases. In this experiment, Gregerson and Root were not searching for a means of preventing shock. They were not searching for any details as to the proper administration of plasma. They were not searching for a cure for anything in particular. They were intent merely upon shocking dogs by means of a procedure which neither man nor dog very well could be expected to encounter in ordinary living.

The "surgical" part of this experiment was very simple. The dog was strapped down. He was given a very light administration of ether—apparently enough to make his struggles ineffective, but, according to Gregerson and Root, not enough to blot out his sense of "feel." To use their own words: "Although we were able to produce a fatal shock consistently in a high percentage of the animals, we never eliminated the element of 'feel'."

Protective hair covering over the dogs' hind legs was removed with clippers. Then a rawhide mallet was brought into play. Each dog received from 700 to 1,000 blows on each of his hind legs. Perhaps it would be well to let the vivisectors tell this part of it in their own words: "The contusions (injuries) produced marked swellings and hemorrhage into the tissues. The swelling extended into the flank and groin. The first few hundred blows usually caused a greater degree of swelling than did the later blows."

The ether, never given in any great amount, was stopped as soon as the beating was finished. The dog was allowed to get up, if he could, on his mashed hind legs.

Of 30 dogs treated in this fashion, 25 died—but first they lived, for periods ranging from a bit less than 1 hour to 9 hours and 21 minutes.

Numerous interesting observations were made: Dogs able to survive for less than 2½ hours panted and gasped. An injured dog, allowed to drink water, immediately vomited. When death was near, the animals frequently twitched. These are the contributions to scientific knowledge made by the vivisectors Gregerson and Root.

It has been noted that of 30 dogs, 25 died within less than 10 hours. But what of the other 5?

They were brought back to the vivisection room the following day to be beaten again. Three of them died the moment they were placed once more upon the vivisection board.

Apparently they died of terror. Here is the way the vivisectors express it: "We have seen three dogs which survived shock suddenly expire the following day when they were again placed upon the animal board. We do not know how great a role this may play in our experiments" (the placing of the animals on the board, that is).

The vivisectors give no clue as to the ultimate fate of the surviving dogs in this experiment.

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Verify Certain Failures Already Confirmed in Human Surgery."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO VERIFY CERTAIN FAILURES ALREADY CONFIRMED IN HUMAN SURGERY (DEPARTMENT OF SURGERY, HARVARD MEDICAL SCHOOL, AND THE DEPARTMENT OF NEUROLOGICAL SURGERY, CHILDREN'S HOSPITAL, BOSTON)

This experiment, or long series of experiments, was reported in the Journal of Neuropathology and Experimental Neurology, volume 7, No. 2, dated April 1948, pages 123 through 143. The following vivisectors made the report: Franc D. Ingraham, Donald D. Matson, Eben Alexander, Jr., and Robert P. Woods, of the department of surgery, Harvard Medical School, and the department of neurological surgery, Children's Hospital, Boston.

The experiments had to do with the disease known as hydrocephalus, which means a collection of fluid in the ventricles of the brain. The brain ventricles are a series of connected cavities running through the brain; and under normal circumstances fluid rises from the blood stream, flows into these cavities, through them, and out of them again, being absorbed by other body tissues and finally being carried away by the blood stream as waste.

But when the exit from the brain ventricles becomes plugged up, the fluid has nowhere to go. The volume of the fluid rises, exerting undue pressure throughout the brain. After exhibiting numerous distressing symptoms, the patient generally dies. That is hydrocephalus.

Naturally, doctors would like to find a way to relieve this ailment, and as a matter of fact, serious surgeons have been trying to do so for years. At one time or anothers, they have operated upon human patients, and while some of them have rendered favorable reports, others have not. The general consensus is that hydrocephalus is not likely to respond to surgical techniques for a number of technical reasons.

At the risk of oversimplifying, it may be said that about the only apparent surgical approach is to create or to install an artificial passage leading from the brain ventricles, around the stopped-up point, and thence back to the blood stream. The trouble is that venous blood pressure is always greater than brain-fluid pressure, even when the fluid pressure is much too high—so that the flow of liquid in the artificial drainage passage tends to go in exactly the wrong direction. This is unfortunate, but it seems to be just as flat and final as the loss of a leg.

Nevertheless, the Drs. Ingraham, Matson, Alexander, Jr., and Woods went right ahead with their experiment. In their report, they noted that it has been "apparent to surgeons interested in hydrocephalus for a long time" that a shunt, or detour, around the stopped-up point would seem to be necessary. They noted that surgeons have tried to accomplish this—but they called it unfortunate that most of the methods * * * have consisted of sporadic clinical trials in uncontrolled individual instances or in small series of human cases."

It may be proper to point out that the word "uncontrolled" is uncalled for in the above quotation and that the phrase "small series of human cases" tends to belittle the work of surgeons attending real cases merely on the basis that such surgeons do not rush through the volume of work that may be done on a limitless supply of animals.

Before examining their procedure, let us see what the vivisectors produced as the achievement of their experiments. First, they appear to have had less surgical success in treating hydrocephalus than has been reported by various surgeons; and, second, they produced the following nonsurprising conclusion: "It is felt * * * that all attempts to achieve ventricular decompression by ventricular-venous shunt will fail and should not be submitted to clinical trial."

Now let us see what they did in order to reach this scientific discovery concerning matters previously discovered.

They first operated on a number of dogs, inserting rolls of cellophane in the vessels intended to carry fluid out of the brain-ventricle system. This produced hydrocephalus in from 8 to 14 days—including paralysis, loss of muscular control, weakness, loss of appetite, drooling, irregular breathing, palsies, and coma. The vivisectors said nothing about pain, because while they, of course, were able to observe the palsies, only the dogs were in position to observe the pain.

The vivisectors found (though all doctors know it anyhow) that temporary relief of hydrocephalus results from a brain puncture in which excess fluid is removed through a hole drilled in the frontal part of the skull. This treatment, they reported, often causes an animal to revive, howl, and struggle.

There is little need to describe here the surgical failures the vivisectors encountered in their efforts to create shunts by surgery. This work, at least, was done under anesthesia. But it met with no success, and the animals that were submitted to it lived only until they were sacrificed for examination—or until they died natural hydrocephalic deaths, often a matter of weeks after the ailment had been given to them.

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Make Further Recordings of Brain Waves of Animals Suffering Fatal Convulsions."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO MAKE FURTHER RECORDINGS OF BRAIN WAVES OF ANIMALS SUFFERING FATAL CONVULSIONS (DEPARTMENT OF PSYCHIATRY, UNIVERSITY OF ILLINOIS COLLEGE OF MEDICINE)

The vivisectors Arthur A. Ward, Jr., of the department of psychiatry, University of Illinois College of Medicine, reported this experiment in the Journal of Neurophysiology, volume 10, No. 2, dated March 1947, pages 105 through 112.

In his report, he stated that he had tried the experiment on a number of dogs and cats. Specifically, however, he gave details only concerning his cat work, since the results on the dogs had been entirely similar.

His purpose in this experiment was to measure certain brain waves, minute electrical activity of the brain of a creature suffering deadly convulsions which are of a subcortical nature and therefore beyond the animal's control. Vivisector Ward supplied numerous charts of the brain waves in question, but he did not suggest a manner in which these could be put to any particular use.

His method of producing convulsions consisted to giving each animal an injection of sodium fluoroacetate. There was no question, of course, of using any anesthetic whatever for this series of tests.

One hour after receiving his injection, the animal began to retch and drool. He showed appearances of fright, began looking for a hiding place, and emitted what Ward calls distressed crying.

In a few minutes, the animal began suffering violent fits of an epileptic nature. His back bent involuntarily, his legs stiffened, and often he was thrown to the ground.

At first, these terrible seizures came only once in every 10 minutes or so. But as time passed, the seizures became more frequent and more severe. Finally, the animal passed into a state of continued seizure. This continued until death, an occurrence which took place after a total elapsed time of from 3 to 5 hours, depending on the individual animal's ability to stand the strain.

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today, referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment Into the Injurious and Fatal Effects of Injecting 'DFP' Into Rabbits."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT INTO THE INJURIOUS AND FATAL EFFECTS OF INJECTING DFP INTO RABBITS (ARMY CHEMICAL CENTER, IN MARYLAND)

This procedure was carried out by A. M. Freedman and H. E. Himwich, at the Army Chemical Center, in Maryland; and it was reported by Freedman and Himwich in the American Journal of Physiology, volume 156, dated January, 1949, pages 125 through 128.

There is a drug called di-isopropyl fluorophosphate (DFP for short), and the experimenters knew in the first place that rabbits would be injured by heavy doses of it. They reasoned that if the drug were to be injected into a rabbit's leg, the leg would show signs of injury before the head would—and if it were injected into the neck, trouble would start in the head before it reached the hind leg. This profundity is something like stating that if one is kicked in the shin, his shin will hurt before he develops a headache—or like saying that if ink were injected into the arm, the blood in the arm would be stained black before the blood in the little toe.

The vivisectors have a more ponderous way of stating it, of course. They put it this way: "Symptoms and lethality may be expected to vary with the site of injection."

So they set out to prove this weighty point. They strapped down their rabbits and gave each one a short pentothal anesthetic. As they explain it, the anesthetic lasted only while they were attaching electrodes to the rabbit's brain and while they were placing injection tubes in one or more of the rabbit's major blood vessels.

Then—with the rabbit fully conscious—they began injecting DFP. They made observations as to how the rabbit acted under this treatment. The electrodes attached to the rabbit's brain enabled them to note the strength of the electrical impulses or brain waves, which the animal's brain gave off. To use their own words, the vivisectors timed pethal exitus—meaning that they noticed how long it took the rabbit to die.

Injections were given at several points in various rabbits: (a) at the cafotid arteries, (b) at one of the carotid arteries, (c) at the femoral vein, (d) at the femoral artery, (e) and at the portal vein.

Incidentally, each rabbit, not being under anesthesia, received a dose of curare sufficient to paralyze him so that he could not fight back.

Results of this experiment were very interesting: If DFP were injected into the leg, lively activity was noted by the vivisectors. If it were injected close to the intestinal tract, hypermotility was observed—meaning violent changes in breathing took place. And finally, when it was injected into the neck, near the head, convulsions of the epileptic type were produced—and death ended the experiment.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Deliver Electric Shocks to the Brains of Unanesthetized Animals in Ways Never Tried Before."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO DELIVER ELECTRIC SHOCKS TO THE BRAINS OF UNANESTHETIZED ANIMALS IN WAYS NEVER TRIED BEFORE (DEPARTMENT OF ANATOMY, CHICAGO MEDICAL SCHOOL, AND JAMES W. WARD, OF VANDERBILT UNIVERSITY MEDICAL SCHOOL)

This procedure was described in the American Journal of Physiology, volume 158, No. 3, dated September 1949, pages 474 through 477. The report was made by the men who performed the experiment—George Clark, of the department of anatomy, Chicago Medical School, and James W. Ward, of Vanderbilt University Medical School.

Clark and Ward begin their report by recalling that "a number of (previous) reports have been made of the effect of stimulation of the cerebral cortex in anesthetized animals, but we have found none concerning the effects of concurrent or immediately consecutive stimulation of two or more cortical points."

This passage means that numerous vivisectors have made copious notes on what happens when one shocks an animal's brain, one point at a time. But Clark and Ward thought it would be interesting to deliver the shocks two or more at a time. Also, they mention in their article that fruitful results have been noted as a result of trying this experiment on animals under anesthesia. They were not satisfied with that. They wanted to shock the brains of animals not under anesthesia.

Here was their technique: They collected a number of immature monkeys and (using anesthesia) they operated on the animals to place electrodes in contact with their brains at numerous points. That is, each monkey emerged from his surgical operation with a number of electrical connections imbedded in his skull and all ready to be hooked up with an outside electrical power supply.

The next day, when the monkeys had recovered from this rather startling piece of surgery, they were experimented upon. Each monkey was strapped into an examining chair. Using no anesthesia, the vivisectors then proceeded to give the monkey a sort of scientific hot foot—in his head. Power was supplied from a 60-cycle sine wave current derived from the lighting circuit. Of course, the usual voltage was greatly reduced to prevent the monkey from dying outright at the first jolt to his brain.

The results recorded by the vivisectors as a result of this experiment are very illuminating. Let us examine a sample.

Monkey No. 23, after being strapped down, was shocked via electrode No. 2, the current being delivered for 4 seconds. His head turned to the left, but no eye movements were observed. That result could have been predicted on the basis of similar experiments previously made.

Then Monkey No. 23 was given another jolt—this time via electrode No. 4. As a result, the left leg was flexed. That, too, could have been predicted on the basis of previous experiments.

Then came the big moment. Monkey No. 23 was shocked through both electrodes at once.

Sure enough—his head turned leftward and his left leg also was flexed. Whatever else may thereby have been proved, it undoubtedly is safe to say that the vivisectors demonstrated that both electrodes were working fine.

By way of conclusion, the vivisectors reported that, in general, double shocks delivered to the unanesthetized brain invariably produce more reaction in the victim than do mere single shocks. The vivisectors definitely did not suggest, however, any methods by which these data might be put to practical use.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Investigate a Particular Phase of the Phenomenon of Pain."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO INVESTIGATE A PARTICULAR PHASE OF THE PHENOMENON OF PAIN (NORTHWESTERN UNIVERSITY MEDICAL SCHOOL, CHICAGO)

Vivisectors frequently declare that there is no pain connected with vivisection; but in making this statement they overlook many things—including such laboratory experiments as the ones which are conducted for the purpose of investigating pain itself.

The present report appeared in the Journal of Neurophysiology, volume 12, No. 1, dated January 1, 1949, pages 1–15. The report was made by the vivisectors Irving C. Sherman, Eli L. Tigay, Alex J. Arieff, and Maurice A. Schiller, all of the Northwestern University Medical School, Chicago.

We have no desire to suggest that this experiment was particularly painful, as painful vivisectional procedures go; but it should be noted that the experimenters were dealing with pain itself, and they were reobserving certain characteristics of pain which have been observed before. Thus, we wish to make two points: (a) that the experiment dealt primarily with pain and, (b) that there appears to have been no particular point in performing it.

The vivisectors Sherman, Tigay, Arieff and Schiller begin their report with a discussion of certain general principles concerning pain which have been known for a long time—that if a major nerve is cut, a loss of feeling results in the area which the nerve formerly served; that, after a time, sensation tends to return; that this is due to the fact that nerve fibres in areas adjacent to the paralyzed area learn to reach out and pick up pain responses in the area where the nerve connection no longer exists.

In connection with this experiment, the vivisectors severed the sciatic nerves in the hind legs of a number of cats. The sciatic nerve is the principal line of nervous communication leading from the spine to the leg.

After the cats recovered from the cutting of their sciatic nerves, there was a period during which they could feel nothing in their hind legs. But as they moved along on the road to recovery, sensation began to return to the maimed legs so that the cats again showed a tendency to withdraw their feet when these members were squeezed by the vivisectors.

The vivisectors now restrained the cats and indulged in repeated pinpricking of the hind legs. This, they say in their report, allowed them to determine the areas in which the animals could and could not feel pain.

The vivisectors make this sage observation: "When the pain was perceived the animal would cry, shiver, or withdraw the foot."

The vivisectors do not go into detail concerning the extent to which they indulged in pinpricking, nor do they make any statement concerning whatever other methods they may have used to prove that their cats—sciatic nerves or no sciatic nerves—still were capable of being hurt in their hind legs.

We are unable to state, meanwhile, exactly what addition to scientific knowledge this experiment made or could have been expected to make.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Study the Known Results of Freezing a Member in Which the Nervous System Has Been Destroyed."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO STUDY THE KNOWN RESULTS OF FREEZING A MEMBER IN WHICH THE NERVOUS SYSTEM HAS BEEN DESTROYED (SCHOOLS OF MEDICINE OF YALE AND INDIANA UNIVERSITIES)

This procedure was described in the Yale Journal of Biology and Medicine, volume 21, No. 5, dated May 1949, by the Vivisectors E. Lempke and Harris B. Shumacher, Jr., of the Schools of Medicine of Yale and Indiana Universities.

The vivisectors in this case wished to see whether the effects of frostbite are more or less severe in a foot or a leg whose nervous system has been cut away by surgery. Of course, they knew the answer to this question in advance. In their own report, they start right off by pointing out that Hyndman and Wolkin have reported that in human patients denervated skin remains warm longer and does not become as cold as normal skin. The vivisectors remark that this peculiarity of nerveless tissue "is readily demonstrable on all patients who have been treated by sympathectomy"—that is, treated by the cutting of the nervous system by surgery.

"On the basis of what we know * * * it could be anticipated that sympathectomy would afford some protection against frostbite," observed the vivisectors. Let us note that they knew this before performing their experiment. Let us note also that the knowledge is largely of academic interest to the extent that not even the Vivisectors Lempke and Shumacher would venture to suggest that patients have their nervous systems ruined by surgical means in order to protect themselves against the possibility of frostbite.

At any rate, knowing what the end result of their experiment would be, the vivisectors went to work. Here's what they did.

They performed operations upon 10 dogs, cutting the animals' nerves in such fashion as to disconnect the nerves of 1 hind leg from all the other nerves in the body. This was done under anesthesia which the vivisectors describe as light—though why it should have been light is a question which they do not venture to explain.

After each dog had recovered from his sympathectomy—that is, 8 days after the sympathectomy—the vivisectors again took him in hand and removed all the hair from his hind legs. Both his hind feet up to the hocks then were placed in a freezing mixture consisting of ether chilled by solid carbon dioxide. Temperatures ranged from 15 degrees Centigrade to 30 degrees Centigrade—which is to say, as low as 22 degrees below zero Fahrenheit.

This sharp freezing was performed under more light anethesia—and again the vivisectors do not bother to say why they kept the anesthetic light. We may note, however, that recovery from a light anesthetic would occur very soon, perhaps even within a few minutes after the actual freezing of the hind legs had occurred.

With both hind legs thus frozen solid, each dog was returned to his cage to wake up and experience the torments of how it feels to have the hind legs frozen as hard as a sharp-frozen steak. As the animals lay in their cages, their feet began to thaw out and swell. In some cases the swelling was so marked that the skin was torn apart. The vivisectors, meanwhile, made observations on the extent of the swelling and on certain other symptoms in which they were interested. Their observations continued until gangrene developed in the maimed and frozen members—or until a particular dog somehow managed to recover. Needless to say, all the legs were horribly injured. A few of them actually fell off.

In the end, the doctors succeeded in restating the fact which they had known in the first place—namely that the effects of freezing are not quite so severe if all the nerves have been severed in advance.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks and in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Observe Anew That Cats Can Survive Immense Convulsions."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO OBSERVE ANEW THAT CATS CAN SURVIVE IMMENSE CONVULSIONS (ALFRED ULLMAN LABORATORY FOR NEUROPSYCHIATRIC RESEARCH, SINAI HOSPITAL, BALTIMORE)

This procedure is recorded as experiment No. 15,957 in the proceedings of the Society for Experimental Biology and Medicine, volume 65, No. 2, dated June 1947, pages 348–351. The report was made by the Vivisectors H. S. Rubinstein and Albert A. Kurland, of Alfred Ullman Laboratory for Neuropsychiatric Research, Sinai Hospital, Baltimore.

The two vivisectors lead off by remarking that cats have been shown to be able to withstand terrific convulsive shocks of electricity without dying.

However, the vivisectors observe, there are a few graphic reports of the exact types and kinds of brain waves which a cat suffers during convulsive shock. That is, not very many people have bothered to draw specific pictures of the zigzagging waves. Just what those pictures could be used for, the Vivisectors Rubinstein and Kurland do not happen to explain, but they do describe the manner in which they went ahead to make such pictures.

Twelve cats were used in this experiment. Each cat had electrodes attached to its skull to record the minute brain waves. Heavier electrodes were attached elsewhere for the purpose of shocking the animal. The cat—entirely without anesthesia—then was placed in a shielded box; and within the confines of that small prison cell, began to come the shattering jolts of electricity.

Each shock was made strong enough by the vivisectors to cause the cat to suffer a marked convulsion. Shocks were delivered 5 minutes apart. If the cat survived a good many of these, it was removed from the box to be shocked again some other day. Some of the cats were thrown into as many as 9[illegible] separate convulsions within a period of 3 weeks. Some died too soon to endure that much.

Among all 12 cats, 7 died, 5 lived.

The vivisectors conclude their report substantially where they started—by remarking that cats show a surprising ability to recover from shock treatment. It should be noted, by the way, that the shock treatment given the cats was far more severe than any shock treatment ever given to human patients. The vivisectors do not attempt to explain what connection there might be between the shocks given to their cats and the shocks sometimes given to human patients by physicians who are seriously attempting to relieve illness.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "Another Experiment To Study the Results of Smashing a Dog's Hind Legs."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

ANOTHER EXPERIMENT TO STUDY THE RESULTS OF SMASHING A DOG'S HIND LEGS (SECTION OF PHYSIOLOGY, BIOLOGICAL LABORATORY, PRINCETON UNIVERSITY)

In recent months, a great deal of public attention has been drawn to the fact that the vivisectors, Gregerson and Root, indulged in the procedure of tying down a number of dogs and pounding their hind legs to pulp with a rawhide mallet. But it should be noted that Gregerson and Root are by no means alone in the performance of this procedure which has horrified so many people.

Let us examine the American Journal of Physiology, volume 140, No. 4, pages 490–498, dating all the way back to January 1944. At this point in the medical literature there is an article by the vivisectors, W. J. Eversole, W. Kleinberg, R. R. Overman, J.

W. Remington, and W. W. Swingle, of the section of physiology, biological laboratory, Princeton University.

As early as 1944, these five vivisectors were pointing out that "traumatization of the leg muscles has been used often to produce shock in dogs." They then go on to name some of the vivisectors who have beaten dogs' legs to pulp and have written articles about it. These include the following: Blalock et al.; Parsons and Phessister; O'Shaughnessy and Slome; Lorber, Kabat, Welte and Freedman; Kendrick, Essex and Helmholz; Best and Solandt—and, last, but far from least, Dr. Donald Meek of the University of Wisconsin, who is the man who once testified before a legislative committee, "No agony is too acute to be inflicted upon an infinite number of animals if in the opinion of the least member of any medical faculty there is the slightest chance for adding to the sum of human knowledge—and this without reference to the question of whether such addition shall be of any practical use or not."

So—Vivisectors Eversole, Kleinberg, Overman, Remington, and Swingle decided that they also would have a turn with the rawhide mallet on the hind legs.

Their particular specialty, they observe, is that they were studying the "nervous factor" occurring in dogs which have had their legs mutilated.

Specifically, the vivisectors in this particular experiment mutilated first a group of 15 dogs and then a second group of 12. They used an ether anesthetic during the actual beating which was administered to each animal—after which they allowed each animal to recover and consciously linger between life and death as the result of the fearful injury it had sustained.

In the group of 12 dogs, the vivisectors gave an additional spinal anesthetic with the result that 3 of the 12 animals survived. Perhaps this may be due to the fact that these 12 suffered far less than the 15 dogs in the other group.

In the group of 15, the animals were kept on their backs, fastened to the "animal board" and left in that position either until they died or until a total of 7 hours had elapsed. All but one died. Fourteen of them in from 1 to 8 hours, the average being 4 hours of torture while stretched upon the animal board. Of the group of 12 dogs which were given spinal anesthesia and put back in their cages instead of being left on the board, 3 recovered, 4 lived a comparatively great length of time—as much as 24 hours in one case—while the rest died in a period of about 4 hours.

This experiment would seem to prove two things: (1) That an animal won't die so quickly if he is treated a little less savagely, and (2) that the vivisectors, Gregerson and Root, have a great deal of company when it comes to the practice of smashing dogs' legs with a rawhide mallet.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Observe the Results of Choking a Group of Dogs to Death."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO OBSERVE THE RESULTS OF CHOKING A GROUP OF DOGS TO DEATH—DEPARTMENT OF PHYSIOLOGY, UNIVERSITY OF MINNESOTA

This procedure was reported by three men—Francis J. Haddy, Gilbert S. Campbell, and M. B. Visscher, all of the department of physiology, University of Minnesota, in the American Journal of Physiology, volume 161, No. 2, dated May 1950, pages 336–341.

As the vivisectors point out, it often has been noted that pulmonary edema, or a swelling in the tissue of the lung, has been seen to occur whenever it is made difficult for a creature to breathe. This is true whether the creature is strangled, whether an obstruction is placed in his throat, or whether he is unable to take air into his lungs properly as a result of having a disease, such as infantile paralysis.

So, knowing that this pulmonary edema with consequent strain on the heart always takes place in any sort of strangulation case, the vivisectors decided in this instance to reproduce the choking effect in a group of dogs—though, of course, the dog choking was to be done in a fashion that would never be encountered in actual day-to-day experience.

Now it should be noted that the vivisectors used anesthesia. The particular type of anesthesia administered was pentobarbital sodium, 30 milligrams for each kilogram of a particular dog's weight. This is the normal amount of anesthesia to keep an animal asleep for perhaps 2 hours—but it should be noted that these experiments "in most instances were permitted to run as long as the animal lived and varied in length from 1 to 24 hours."

Let us see precisely what the vivisectors did. They ran catheters (or tubes) through the pulmonary artery and through the pulmonary vein in order to measure blood pressure at the heart. They inserted somewhat similar tubes in large blood vessels running beneath the flesh of the hind leg and in other large vessels located in the neck. The vivisectors say this: "Induction of anesthesia and insertion of the various cannulae and catheters (tubes) consumed a period of approximately 2 hours."

In other words, the vivisectors seem to be telling their colleagues at this point that the animals awakened and became conscious at just about the time when the business part of the experiment was due to begin. Each dog subjected to this experiment, we may assume, awakened to find half a dozen or so of his major blood vessels rigged up to an extensive "plumbing system," and his body strapped helplessly to a standard "animal board."

Now the "resistance to breathing" were installed. That is, some sort of impediment was placed in the dog's air-way. In one group of dogs, the vivisectors permitted the animals to breath out freely enough, but they made it difficult for the animals to inhale. Specifically, each animal could draw air into his lungs only against a resistance of 15 to 20 centimeters of water. To say it another way, the dog's lung muscles, before drawing in any air, first had to do enough extra work to move a column of water 15 to 20 cubic centimeters in height. This does not sound like much, perhaps, but it makes a very great amount of extra work when applied to the commonplace task of breathing.

The second group of dogs was permitted to inhale freely enough, but this group could not breathe the old air out except against a resistance of 15 to 20 centimeters of water.

A third group literally was "half drowned." That is, dogs in this group suffered the partial flooding of their lungs by massive quantities of salt water.

As the vivisectors had known it would, the treatment applied to all three groups of dogs caused edema, or the gathering of body fluid within the tissues of the desperate animals' lungs. In the end, all the dogs died. The vivasectors made extensive measurements of the precise amounts of swelling and of the precise changes in blood pressure.

In their article, however, the vivisectors give no clue of one thing which may have been a considerable factor contributing to the death of the victims: specifically, they gave no data as to how much the death of each dog may have been hastened as a result of terror induced by the slow strangulation process to which he was subjected.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals and birds, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To See How Long It Takes To Starve a Pigeon to Death."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO SEE HOW LONG IT TAKES TO STARVE AND FREEZE A PIGEON TO DEATH (MEDICAL DIVISION, ARMY CHEMICAL CENTER, MARYLAND)

Before discussing this experiment, it may be well to ask the reader this question: "In order for your doctor effectively to treat any illness you may have, do you think it is vital for him to know precisely how long a pigeon can live without food at a temperature of 40° below zero Fahrenheit?"

If you answer yes, then undoubtedly the following experiment was important. But if your answer is no, then you may be inclined to wonder why grown men wasted their time on such an experiment—for it should be noted here and now that pigeons, for some reason or other, are very much more nearly impervious to cold weather than are human beings. The length of time that a pigeon can survive in the cold does not correspond at all with the length of time that a man could survive.

This experiment was reported by the Vivisectors Eugene Streicher, Donald B. Hackel, and Walter Fleischmann, of the Medical Division, Army Chemical Center, Md. They reported their work in the American Journal of Physiology, volume 161, No. 2, May 1950, on pages 300–306.

Briefly, as the vivisectors explain in their article, they knew that pigeons could stand a great amount of hunger and cold before dying. The question was to determine precisely and exactly how much.

Each pigeon used in this test first was placed in a sealed jar and after a time the air he had been breathing in the jar was examined—this giving the vivisectors an accurate index as to his metabolism (the rate at which his body was burning up his food energy) in a normal temperature.

Thereafter, the pigeon in his jar was placed in a cold chamber whose temperature was 40° below zero Fahrenheit. This experiment

involved not one pigeon, of course, but a good many. At intervals of 24 or 48 hours, certain pigeons were removed from the cold and were killed and studied.

Others continued simply to freeze and starve in the cold chamber.

The details of the metabolism of the birds are of course merely the highly technical story of a living organism's struggle to survive in a set of impossible circumstances. In the end, the vivisectors learned that husky pigeons could live under these circumstances for as long as 144 hours—6 full days—before losing their unsporting battle with the cold chamber.

Of course, no anesthesia was used in this experiment.

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment Into the Effects of Striking a Dog's Exposed Brain With a Steel Weight."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT INTO THE EFFECTS OF STRIKING A DOG'S EXPOSED BRAIN WITH A STEEL WEIGHT (DEPARTMENT OF MEDICINE AND DIVISION OF NEUROLOGICAL SURGERY, AT THE UNIVERSITY OF CHICAGO)

This diverting procedure was carried out by 3 vivisectors: Lillian Eichelberger, Jerry J. Kollros, and E. Earl Walker, of the department of medicine and division of neurological surgery, at the University of Chicago.

They made their report on it in the American Journal of Physiology, volume 156, dated January 1949, pages 129 through 136.

For a long time, it has been contended generally that if a living creature receives a blow on the head hard enough to be described as "concussion," swelling will occur shortly afterward. Numerous experiments prove this, and it has been borne out anyhow by ordinary clinical observation.

Incidentally, one of the treatments often used in concussion involves the intravenous injection of a normal solution of salt and water. Clinical observation generally has indicated that such treatment is advisable.

But the Drs. Eichelberger, Kollros, and Walker wished to make more profound studies. They wanted to measure the water, nitrogen and electrolyte concentrations in brains that had been subject to concussion.

In order to achieve pure concussion, they rigged up a novel apparatus. In the first place, they removed a piece of the skull bone from each of 28 dogs, thus exposing the brains. Then they carefully placed above these skull holes a 5-foot length of hollow pipe. They placed water in the pipe to a depth of 2 inches.

With this set up in place, they dropped into the pipe a steel weight, weighing 140 grams (4½ ounces). The idea was that the weight hit the surface of the water after a 5-foot drop—and the blow was transmitted evenly by the water to all exposed surfaces of the brain.

The Drs. Eichelberger, Kollros, and Walker report that the shock to the animals was considerable. Some only missed a heart beat. Others had to be given artificial respiration.

The weight dropping procedure was carried out under nembutal anesthesia—but then the animals were placed in their cages to revive. At various times after the concussion, the dogs were killed, their brains removed, and studies made. Four of the dogs were killed as soon as 15 minutes after concussion. Probably they still were under anesthesia and did not suffer at all. The other dogs, however, had more time to lie in their cages and think over the effects of a severe blow delivered to a hole in the head.

Four dogs were allowed to live from 1½ to 3¼ hours; 6 of them were allowed to go for 5 hours; 3 suffered for 24 hours; and the unluckiest 3 of all were allowed to live for periods from 48 to 72 hours.

Here is what the experiment proved.

It proved that brain concussion does not cause swelling—a conclusion disputed in many quarters.

And it showed that the brain tissues had suffered a loss in sodium and sodium-chloride (salt). Thus, the doctors concluded that the dogs would have been helped if they had been given injections of normal solutions of salt and water, a point well known before the experiment was started.

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Pile Superfluous Detail Upon Certain Facts Long Since Known and for a Long Time Regularly Used."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO PILE SUPERFLUOUS DETAIL UPON CERTAIN FACTS LONG SINCE KNOWN AND FOR A LONG TIME REGULARLY USED (DEPARTMENT OF NEUROLOGY AND NEUROLOGICAL SURGERY, UNIVERSITY OF ILLINOIS COLLEGE OF MEDICINE, AT CHICAGO)

The following account has to do with an experiment which has been done countless times over dozens of years. It is perhaps one of the most horrifying experiments ever recorded in vivisectional literature. The present report comes from the Journal of Neuropathology and Experimental Neurology, volume 7, No. 2, dated April 1948, pages 182 through 189. The report was made by O. Sugar, J. G. Chusid, and J. D. French, of the Department of Neurology and Neurological Surgery, University of Illinois College of Medicine, at Chicago.

A word of explanation is necessary here. If you go to your family doctor and complain that your left little finger often feels insensitive and that your left eyelid sometimes shows a strange and uncontrollable droop, the chances are that your doctor will touch a point on the right side of your head and ask you if you have received a hard bump there lately. If you answer, in amazement, that you did receive such a bump some time ago, your doctor probably will send you to a brain specialist who may, after careful examination, perform an operation to relieve pressure at a point on the right side of your skull.

The reason this is possible is that doctors, long ago, noticed the connection between certain brain injuries and certain later symptoms in other parts of the body. Little by little, they thus "mapped" the brain.

That is, the brain surgeons learned what brain areas control which parts of the body—and they learned to relieve brain injuries, always with the reservation, of course, that there is and always will be a limit to the amount of surgical tinkering that can be done with any brain no matter how desirable such work otherwise might seem.

But the vivisectors Sugar, Chusid, and French were not content with these practical and workable facts. Like so many other vivisectors, they wanted to pile up the most minute details on "brain mapping," even if such details scarcely could be expected to have any practical use, and even if the very minuteness of the details tend to make them meaningless and perhaps confusingly unreliable.

Here is the technique the vivisectors followed on numerous occasions:

They strapped down a monkey and gave him Dial, sold as an analgesic rather than an anesthetic. They reinforced this somewhat with a modified form of ether gas "during the beginning of the surgical procedures," to use their own words; but they stopped the ether "well before the beginning" of the real business of the experiment.

To use the vivisectors' own words again, "No further anesthesia was used, even in experiments which lasted many hours." However, they did keep the monkey from going into profound shock by warming him with an electric blanket. It should be stressed that the reason anesthesia was not used in this experiment—save as a convenience to the vivisectors just at the start—was that the fullest success of the experiment depended upon the monkey's ability to feel, to respond, to twitch, to jump, to struggle, moan, and—in short, suffer.

In the past, vivisectors have performed experiments such as this under anesthesia—not so in the present case.

Here is what happened to the monkey. The entire top of his skull was sawed off so that his brain was left bare. Probably he did not feel much pain for the few minutes preceding the time when he regained full consciousness and full ability to react to what was going to be done to him "in experiments which lasted many hours."

With the monkey conscious, the vivisectors now began to poke here and there at his brain with electric needles. On a chart conveniently nearby, they recorded the exact way in which the monkey showed his suffering. A poke at one part of his brain would cause his leg to twitch. Another poke would cause his leg to twitch somewhat differently. Yet another poke would wring a groan from him. Another would seem to make it impossible for him to groan. More pokes would cause his face to be contorted. And so on.

The vivisectors missed none of this. They posted three observers—one to watch the lower extremities, one to watch the upper extremities, and a third to watch the changes of expression on the victim's face.

Their report did not state which observer found his point of observation the most fascinating. However, disregarding the harm done to the monkeys, it appears that no harm was done to science in general—for,

after discounting the numerous differences in detail between the human and the monkey brain, the results produced by the vivisectors seem to be generally not out of agreement with truths about the brain which brain surgeons long have known.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks and in the Senate today referring to experiments on animals and birds, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "A New Experiment To Observe the Deaths of Animals Whose Hind Legs Have Been Beaten to Pulp."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

A NEW EXPERIMENT TO OBSERVE THE DEATHS OF ANIMALS WHOSE HIND LEGS HAVE BEEN BEATEN TO PULP (DEPARTMENT OF PHYSIOLOGY, UNIVERSITY OF GEORGIA SCHOOL OF MEDICINE)

Here is yet a third report on an experiment which involves strapping down a number of dogs and using a heavy mallet to pound the tissues of their hind legs to pulp, thereby causing fatal shock.

It was reported in the American Journal of Physiology, volume 161, No. 1, dated April 1950, pages 125–131, by the six vivisectors who performed it—J. W. Remington, W. F. Hamilton, H. M. Caddell, G. H. Boyd, Jr., N. C. Wheeler, and R. W. Pickering, all of the department of physiology, University of Georgia School of Medicine.

Apparently the idea of studying the shock that occurs in a dog whose hind legs have been mashed with a hammer is capturing the imagination of vivisectors everywhere; for an examination of the medical literature shows this selfsame procedure cropping up lately with surprising frequency.

In this particular experiment, the vivisectors lead off by asking a question as to how much—or to what extent—death may be due in such shock cases to vasoconstriction, which means the closing down of blood vessels. The vivisectors explain that it was their purpose to check on whether vasoconstriction is a factor in death by preventing vasoconstriction from occurring in the present cases. They prevented its occurrence by giving their victims small doses of a drug called dibenamine which is known to check vasoconstriction in dogs.

In 9 undosed dogs which had suffered the fate of having their legs mashed, death was universal in periods ranging from 1 or 2 to several hours. But in the dogs which had been given a dose of dibenamine, 8 out of 9 survived and even the ninth one, which died, managed to hang on to life until he had dragged out 15 terrible hours. By the way, the vivisectors mention that no water was given to any of the survivors for a period of 24 hours.

Of course, the vivisectors used anesthesia during the short time required to mete out to each dog his fatal beating; but each animal recovered from his anesthesia soon enough so that he was in just as good a position to observe his own plight as were the vivisectors themselves.

All of this—aside from whatever cruelty may be involved—means very little, since it is well known that severe blows administered to a man cause an immediate drop in blood pressure and consequently a quicker occurrence of shock than is the case in a dog whose blood pressure first rises. Hence it is difficult, perhaps impossible, to translate the results of this experiment (if any) from dog to man.

Suffice it to say that here we have yet another glimpse of "scientists" systematically beating animals to death with the measured and scholarly blows of a massive hammer. Against the backdrop of what we like to consider a civilized society, it is indeed an interesting picture.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Redemonstrate the Effect of Breathing Carbon Dioxide During Convulsions."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO REDEMONSTRATE THE EFFECT OF BREATHING CARBON DIOXIDE DURING CONVULSIONS (DEPARTMENT OF PSYCHIATRY, UNIVERSITY OF ILLINOIS COLLEGE OF MEDICINE, CHICAGO)

This experiment was reported by Vivisector George Howard Pollock, of the department of psychiatry, University of Illinois College of Medicine, Chicago, in the Journal of Neurophysiology, volume 12, No. 5, dated September 1949, pages 315–323.

At the start of his report, Vivisector Pollock points out that back in 1939, McQuarrie and Zeigler reported that dogs breathing a 15 or 20 percent mixture of carbon dioxide were prevented from having convulsions. This was confirmed, says Pollock, by Gellhorn later on in a series of tests on rabbits. Later, Gellhorn and Yesinick proved it all over again on cats, and later still Moussatche proved it yet again on dogs. Still later, Moussatche and Mello again proved the point on guinea pigs.

So, following the method of reasoning common to vivisectors, Pollock decided that he would start out to pile up new figures all over again, giving details concerning the well-known fact that the breathing of carbon dioxide tends to halt convulsions. He wished to show that convulsions may be checked in an animal, no matter whether the animal has been shocked into a convulsive state by electricity ranging up to 100 volts, or whether it has been given massive doses of such convulsive drugs as metrazol, insulin, picrotoxin, coryamyrtin, absinthe, strychnine, or camphor. As it happened, Pollock concentrated in his own series of experiments on electricity and metrazol.

He used a number of cats in his work. This is what he did to them: Under an anesthetic of divinyl ether, he cut into their hind legs and exposed the principal veins to be found at that point. He inserted a breathing tube in each animal's mouth, reaching all the way down to the entrance of the lungs. He cut into the head and exposed the skull. With the animal in this condition, the anesthetic was discontinued. To use Pollock's own words, "the anesthetic was removed and paralysis was induced by dihydro-beta-erythroidine hydrobromide."

Let us visualize this. The cat now finds himself with his anesthetic gone, but he is paralyzed by means of a drug flowing into his system through a tube inserted in one of his hind leg veins. Being paralyzed, he is unable to breathe and artificial respiration, is maintained by means of the tube inserted in his windpipe. He finds electrodes (for shock purposes) placed one in his right foreleg and another in his left hind leg. Into his exposed skull bone are screwed two other electrodes for the purpose of measuring the brain waves which he will experience and which will give a reliable index as to the convulsions he is about to undergo.

Vivisector Pollock gave no indication as to how much time was required for the carrying out of each one of these experiments on paralyzed but perfectly conscious animals.

However, he relates that the animals were tested by being given nonconvulsive doses of metrazol, and thereafter were given convulsive doses. Then each animal was tested with varying concentrations of oxygen and carbon dioxide for various periods of time. Pollock also says, "The interval between attempts to induce convulsions varied from 5 to 30 minutes." Of course, a number of attempts were made in the case of each individual animal from which it probably can be deduced that each animal spent several hours and perhaps an entire day.

Suffice to say that, in the end, Pollock demonstrated precisely what one would have expected him to demonstrate: he showed that an animal which normally would have convulsions either from electric shock or as the result of being given a powerful drug, actually will not suffer a convulsion if he is forced to breathe carbon dioxide. This is, of course, precisely what had been shown previously on half a dozen different occasions.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "A Series of Experiments To Produce Fatal Shock by Means of the 'Blalock Press,' a Flesh-Crushing Machine."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

A SERIES OF EXPERIMENTS TO PRODUCE FATAL SHOCK BY MEANS OF THE "BLALOCK PRESS," A FLESH-CRUSHING MACHINE (DEPARTMENT OF RADIOLOGY, UNIVERSITY OF ROCHESTER SCHOOL OF MEDICINE AND DENTISTRY, ROCHESTER, N. Y.)

In vivisectional circles, there is a standard piece of laboratory equipment called the "Blalock press." It is a machine in the sense that it is a mechanical device. It also is a machine in the sense that it produces more efficiently than could a workman using

hand tools. Its end product, among other things, is torture and slow death.

The Bialock press looks like an implement used in a medieval torture chamber. Indeed, its operation is similar to the operation of the "boot" and the "iron maiden," two of the torture devices used in the ages before men had become intelligent enough to begin working out the modern concepts of ordinary decency.

It is odd that, among vivisectors, the Bialock press is so called in order to honor its inventor—somewhat as if our culture also boasted devices known as the Jones lash or perhaps the Smith eye gouger.

The series of experiments presently under consideration was reported in the Journal of Clinical Investigation, volume 24, No. 2, dated March 1945, starting at page 127 and running all the way to page 151. In these pages, the slow deaths of literally hundreds of animals are described by the Vivisectors Renato A. Ricco, K. Fink, Leonard I. Katzin, and Stafford L. Warren, all of the department of radiology, University of Rochester School of Medicine and Dentistry, Rochester, N. Y.

The reasons these hundreds of flesh-crushing experiments were performed is that the four vivisectors wanted to prove that other vivisectors had not been performing still other flesh-crushing operations with sufficient accuracy and attention to detail. Specifically, they declare that despite the great number of shock reports, there is sufficient lack of standardization to introduce a large element of confusion and controversy.

They then set forth that changes in ordinary room temperature alter the speed at which dogs die under the Bialock press; and they say that these changes in temperature influence or control the outcome.

Throughout the experiments, the vivisectors are intent on this point—that room temperature changes the times at which animals die of torture and shock. The vivisectors seem little interested in making any other point.

They report that at a temperature of 83 degrees Fahrenheit, a 5-hour ordeal in the Bialock press will kill 90 percent of the dogs subjected to it—but at a temperature of only 61 degrees, only a few animals expire. Thus, the vivisectors seem to prove that an animal body in shock is better off in an atmosphere that enables it to keep its own inner temperature as nearly normal as possible. Apparently (from the fact that the experiments were performed) the vivisectors felt unable to arrive at this conclusion by means of the strenuous exercise of common sense.

The Blacklock press is what its name suggests. It is somewhat similar to an ancient printing press in which one opposing face descends upon its mate by means of a screw arrangement. But the faces of the Bialock press are not smooth. Instead they are equipped with two rows of dull steel teeth. This mechanical jaw is scientifically clamped together at measured pressures ranging from 500 to 4,000 pounds. In general, the Vivisectors Ricca, Fink, Katzin, and Warren bit into their dogs' hind legs at a pressure of one ton.

The procedure was to take each dog and give him anesthetic of nembutal in sufficient quantity to render him unconscious during the worst of the experiment. Additional anesthesia was given as required during the first 4 hours under the press.

But in no case was anesthesia given during the last hour—and of course none was given in the later hours when the animal lay dying as a result of his ordeal. Some of the dogs remained alive as long as 24 hours after removal from the press. But the vivisectors state that death usually came in from 5¼ to 12½ hours after release from the press.

In the first experiment reported, 69 dogs were used.

Here is what the vivisectors say about it:

"The surviving dogs were restrained on the table (tied down, that is) for 12 hours following the removal of the press. If the animal still survived after 12 hours it was placed on the floor on a leash * * *." It received water as soon as it was able to drink, usually 3 hours after removal from the press.

In another report (pp. 140–145) the vivisectors crushed the legs of more than 300 dogs to check on room temperatures again and to illuminate often-discussed data concerning changes in body fluid which result from shock.

In yet another report (pp. 146–148) the vivisectors used 85 dogs, remarking on the rather obvious point that the sulfas do not help in shock cases—and commenting again on room temperatures.

On pages 149–151 the vivisectors discuss additional flesh-crushing inflicted upon 97 rabbits, half of which were given no anesthetic whatever. The only point gleaned from this mass adventure into pain was that normal temperature aids survival—an idea which begins to grow tiresome by repetition.

But there is one point which should be borne in mind concerning so much attention paid via so much agony to the above remarks concerning room temperature and shock. It is this: The findings of the Vivisectors Ricca, Fink, Katzin, and Warren disagree absolutely with other findings by other vivisectors working along the same lines and making their reports in the Proceedings of the Society of Experimental Biology and Medicine and in the Journal of the American Medical Association.

It is hard, sometimes, to know what to think.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment for the Purpose of Comparing the Methods of Artificial Respiration in Suffocation Cases."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT FOR THE PURPOSE OF COMPARING THE METHODS OF ARTIFICIAL RESPIRATION IN SUFFOCATION CASES (DEPARTMENT OF CLINICAL SCIENCE, UNIVERSITY OF ILLINOIS MEDICAL SCHOOL, AND OF THE DEPARTMENT OF PHYSIOLOGY, NORTHWESTERN UNIVERSITY MEDICAL SCHOOL)

This experiment was reported in the American Journal of Physiology, volume 156, No. 2, dated February 1949, pages 145 through 148. Its authors were H. Schwerma, Andrew C. Ivy, W. L. Burkhardt, and A. F. Thometz, of the Department of Clinical Science, University of Illinois Medical School, and of the Department of Physiology, Northwestern University Medical School.

The stated purpose of this procedure was to learn whether there is a difference in the efficiency of artificial respiration applied by hand and artificial respiration given by machine.

In connection with the machine type of resuscitation, the vivisectors also showed some interest in which worked better—a machine using pure oxygen, or a machine using some mixture of oxygen and a little bit of some other gas. However, little attention was paid to this latter detail, and according to the authors, the figures on it are of no significance and may be ignored.

Thus, the whole experiment may be considered as a test of artificial respiration—manual versus machine.

In all, there were 103 dogs used in this experiment, divided into 5 groups of 20 to 22 each.

Each dog was treated in the same way: He was strapped down and given local anesthesia at the throat and at one hind leg. This was to make it easier for the vivisectors to prepare for the experiment, not to save pain or discomfort during the experiment itself.

With the local anesthetic administered, the vivisectors inserted a tube in a leg artery so that they could record the dog's blood pressure. Then they cut into his windpipe and inserted there a T-shaped tube. The dog could breathe normally through his windpipe and through the top section of the T. But the vivisectors kept the lower end of the T tube in their own hands.

When all was ready, and with the animal fully conscious, the vivisectors rammed a plunger down the T until it blocked off the dog's breathing altogether by completely shutting off the air passage through the top part of the T.

The dog now found himself with no choice: he could only lie there and slowly suffocate.

The vivisectors used a stopwatch to see how long it took him to do this. They found that the average dog could bear only 4 minutes of total airlessness. Then he collapsed.

To be more precise about it, the average dog stopped struggling to breathe in 230 seconds. The average suffered heart failure in 259 seconds.

In one group of 20 dogs, no treatment at all was given. The dog was simply put aside to die or gasp his way back to life as best he could. In this group, 32 percent actually did struggle back to life, and hence were available for other kinds of vivisectional experiments later on.

In another group, artificial respiration was given to the dogs by hand, and among these animals, 35 percent survived, possibly indicating that manual artificial respiration is better than no treatment at all.

The rest of the dogs were treated by machine. That is, they were given the services of a Pulmotor, or inhalator—and of these animals, split in 3 groups, 75 percent, 71 percent, and 85 percent pulled through as well as to be fit for other experiments after recovering their strength later on.

This experiment proves one thing only. It does not pretend to prove anything else. It proves that a Pulmotor is much more efficient than a boy scout in cases where artificial respiration is indicated.

No practicing physician has gone on record, as yet, stating that this fact comes as any surprise.

In connection with this experiment, one point in particular should be made. One of the four vivisectors involved is Andrew C. Ivy, well known in vivisectional circles the world over. Almost any doctor will swear that Ivy is an important man and that his work as a vivisector is vital.

Without examining the rest of his work at all, we may take note of the fact that the work described in this experiment ranks relatively high in Ivy's own estimation. For otherwise he and his colleagues would not

have bothered to publish an article about it. In other words, most of the vivisectional work done by Ivy from day to day obviously is less important than this experiment rather than more so.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Learn the Fate of Dogs Subjected to a Particular Type of Kidney Surgery."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO LEARN THE FATE OF DOGS SUBJECTED TO A PARTICULAR TYPE OF KIDNEY SURGERY (DEPARTMENT OF PHARMACOLOGY, UNIVERSITY OF LOUISVILLE SCHOOL OF MEDICINE)

This procedure was reported by N. S. R. Maluf, of the department of pharmacology, University of Louisville School of Medicine. He made his report in the American Journal of Physiology, volume 156, dated January 1949, pages 79 through 85.

There is a surgical operation known as omentopexy in which a flap of tissue associated with the big intestine is attached to the liver in such fashion that the liver is able to share its blood supply. The idea is to correct conditions of poor blood supply in the liver.

The same operation also would seem capable of improving blood supply to the kidneys—and while some doctors have reported such improvement, no one has bothered to make adequate measurements, according to Vivisector Maluf.

Instead of troubling to make such measurements—an admittedly annoying, long-drawn, and perhaps costly procedure—Maluf decided to resolve the question the cheap and convenient way.

Using full anaesthesia, he performed an operation in which he wrapped the omentum around the kidneys and kidney arteries of a number of dogs. He allowed healing to give the kidney a chance to borrow from the blood supply of the omentum if it could.

With healing accomplished, he then made a series of new operations. In these, he cut into the normal blood supply to the kidneys, reducing it greatly in some dogs and not so much in others.

In some of the animals he tied off only one artery. In some of the animals he removed a whole kidney and largely destroyed the other. Then he waited.

Anyone who has had a kidney removed knows that such an operation, under anaesthesia, is not painful in itself. But such a person also knows the misery which follows such an operation.

In one 6-month-old puppy, Maluf carried his experiment to the limit. He first removed a kidney and one kidney artery. When the puppy managed to survive and become healthy again, he tried a new operation, leaving the puppy only about one-eighth of normal kidney blood supply.

The puppy no longer was able to urinate. On the third day, poisoning had set in and the puppy lay twitching in his cage. He then was put to death and examined. As had been generally assumed in the first place on the basis of inadequate measurements, it was found that omentopexy had not succeeded in giving the kidney a substitute blood supply.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Study the Hearing Ability of Animals Near Death From Lack of Oxygen."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO STUDY THE HEARING ABILITY OF ANIMALS NEAR DEATH FROM LACK OF OXYGEN (PSYCHOLOGICAL LABORATORY OF PRINCETON UNIVERSITY)

This experiment was reported by four vivisectors, Ernest Glen Wever, Merle Lawrence, Richard W. Hemphill, and Charles B. Straut, of the psychological laboratory of Princeton University. They made their report in the American Journal of Physiology, volume 159, No. 2, dated November 1949, pages 199–208.

This experiment was a study of one of the results of depriving a living creature of oxygen. Specifically, it was a test of the ability of cats to hear when they are near death from lack of oxygen. The vivisectors point out that only a few studies have been made along this line, "and," they add, "their results have been conflicting." The vivisectors make no statement as to why their own present studies should be considered any more valid than studies made in the past.

The animals used in this experiment were cats, 11 of them in all. They were anesthetized with a drug known as dial. But it happens that on page 255 of the Modern Drug Encyclopedia and Therapeutic Index, fourth edition, dated 1949, dial is described as a hypnotic or sedative just as are such mild drugs as allonal and veronal—i. e., sleeping tablets.

Thus the experimental animals were anesthetized with an anesthetic so light that it presumably could not disturb their bodily functions to any great extent (as deep anesthetic is bound to do), nor, presumably, could it do very much to dim their pain.

An interesting slant on this idea is provided in the article by the doctors themselves. They point out that the cochlear potentials (meaning the responses of the inner ear) become impaired when the physiological condition deteriorates for some reason, as perhaps a faulty use of anesthesia. They do not explain what faulty anesthesia is; but, under the circumstances, it would seem likely that they mean too much.

At any rate, the inadequately anesthetized cats then were deprived of the ability to move or struggle by means of the drug curare, which paralyzes a living creature completely but does not check pain in any way whatever.

Under curare, a perfectly conscious creature is unable to move in any manner. It cannot even breathe. Consequently, the cats used in this experiment had to be given continuous artificial respiration with a device similar to a fire-department pulmotor.

Electrical instruments then were connected to each cat's ears so that graphs could be drawn to show how well the ears were working.

The main part of the experiment consisted of cutting down the oxygen being furnished by the artificial respirator so that each experimental cat found himself receiving as little oxygen as one would find in an airplane at 40,000 feet if one were not wearing an oxygen mask.

Briefly, the graphs which were drawn showed that hearing was not impaired until oxygen was almost entirely lacking. This might be interesting save that it is a fact already widely reported by aviators, and hence is well-known to doctors. The vivisectors make note of this fact in their report.

The animals, still helplessly paralyzed, were kept in various stages of oxygen-lack for long peiods of time. In their report, the vivisectors mentioned intervals up to 4 hours.

When oxygen was cut down to the point at which death is likely to occur, the vivisectors found that they were able to revive the cats, sometimes by giving them oxygen, sometimes by injecting adrenalin. Even after a cat appeared to have died, the vivisectors found that they usually could bring him back to life—after which they again began taking his oxygen away, thus bringing him once more to the point of death.

A number of the animals used in the experiment did die. The remainder were able to struggle back to life, presumably to be used in other vivisectional experiments at a later time.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment in the 'Sham Feeding' of Dogs."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT IN THE "SHAM FEEDING" OF DOGS (DEPARTMENT OF CLINICAL SCIENCE, UNIVERSITY OF ILLINOIS)

Vivisectors contend that many vivisectional experiments do not involve cutting up animals and do not cause pain.

Here is an experiment which indeed does not cause pain. It remains to be seen whether its nature is such—or its purpose such—that men should be allowed by law to perform it.

This experiment was reported in the American Journal of Physiology, volume 159, No. 1, dated October 1949, pages 143–148, by its

authors, Henry D. Janowitz and M. I. Grossman, of the department of clinical science, University of Illinois.

The vivisectors, in this case, wanted the answer to a profound point: Why does a creature feel like not eating any more once its stomach becomes full?

Commonsense would indicate an answer (if indeed an answer is considered vital)—namely, that when the stomach becomes full and distended, the jaws tired of chewing, the taste buds temporarily bored with the flavor of food, then the nerves associated with all these functions telegraph a message to the brain: "You've had enough. Quit eating."

In the same fashion, if a fingertip is applied to a hot stove, the nerves associated with that finger telegraph a message to the brain: "Move. Snatch your hand away."

But the Vivisectors Janowitz and Grossman weren't satisfied so easily. Here's what they did:

They took 5 dogs and fed them a little bit 20 minutes before their normal mealtime. Result: the dogs ate somewhat less at meals. The mother of any child could have told the vivisectors that the dogs were spoiling their dinner by thus eating between meals.

Now the vivisectors moved on a step. Instead of letting the dogs take a little food into their stomachs the usual way before supper, the doctors operated (under anesthesia) and permanently installed in each dog a tube through the flanks leading into the stomach. Each tube was equipped with a cork stopper.

By means of this tube, the vivisectors could place in the dog's stomach, whenever they liked, either food or indigestible bulk to give the impression of a full stomach. This tube arrangement led the vivisectors to a notable discovery: If they placed 40 to 46 percent of food or bulk in the dog's stomach shortly before his mealtime, the result was that he ate 33 to 50 percent less (roughly a corresponding amount).

But the experimenters weren't satisfied. They now took a group of dogs and cut their throats (under anesthesia), so that whatever each dog took into his mouth and swallowed fell right out again on the floor through the hole in his throat.

This novel arrangement gave the vivisectors an interesting choice: While the dog was trying to eat—and spilling his food out onto the floor through the hole in his neck—the vivisectors were free either to help him or not help. That is, they could—if they wished—fit a tube into the lower part of his severed food pipe and pump food into his stomach thereby. Or, of course, they could do nothing, allowing the dog to try to eat without satisfying his hunger.

This, too, produced interesting results. The vivisectors proved that whereas the average normal dog will eat for 2.5 minutes, a dog with a severed food pipe will go on gulping down food and trying to obtain nourishment for an average of 14.1 minutes. More amazing still, he still will prove to be hungry an hour later—possibly as a result of the fact that he has had nothing to eat.

But if while the dog "sham feeds," spilling his food on the floor, the vivisectors also fill his stomach through a throat pipe, he will become satisfied with his eating in about 7 minutes.

Don't laugh about this. It is very serious business.

The Vivisectors Janowitz and Grossman decided on the basis of all their observations that there are gastric factors and oral factors that tell us when we've had enough to eat. That is, our stomachs get full and our jaws grow tired. The full stomachs—those are the gastric factors. The tired jaws—those are the oral ones.

Both factors tend to tell us when to quit eating—but we are told better (and stop eating sooner) if both factors tell us at once.

This is one of those contributions to scientific knowledge which vivisectors describe as absolutely vital to human welfare.

True, the dogs in this experiment were not hurt more than any ordinary surgical patient, although it is obvious that they were teased and annoyed relentlessly. The question is: What would the average decent citizen do if he were to catch his neighbor opening up a dog's food pipe and running a series of sham feeding tests? Would he consider it all very scientific and worth while—or would he have his neighbor arrested as a man too cruel to be allowed to own a dog in the first place?

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Demonstrate the Known Fact That Plasma Transfusion Is Valuable in Treating Shock."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO DEMONSTRATE THE KNOWN FACT THAT PLASMA TRANSFUSION IS VALUABLE IN TREATING SHOCK (SURGICAL RESEARCH DEPARTMENT, BETH ISRAEL HOSPITAL, BOSTON, AND THE DEPARTMENT OF SURGERY, HARVARD MEDICAL SCHOOL)

This procedure was reported in the Journal of Clinical Investigation, volume 23, No. 5, dated September 1944, pages 731 through 741. The vivisectors making the report were Jacob Fine, Howard A. Frank, and Arnold M. Seligman, of the Surgical Research Department, Beth Israel Hospital, Boston, and the Department of Surgery, Harvard Medical School.

During the First World War, doctors began to realize that whole blood transfusions, or plasma transfusions, ought to be administered in shock cases. They began giving transfusions more and more, and the success of that therapy was so marked that, by the time World War II came along, all doctors were agreed that transfusions should be given at once in all shock cases. That point was decided. Everybody was in accord on it. The writer of this commentary, for example, learned it—not in medical school—but when he was a boy of 13, attending a Boy Scout first aid class in the early 1920's.

Apparently the vivisectors fine, Frank and Seligman were not satisfied.

They decided to throw a number of dogs into fatal shock in order to study the benefits of plasma transfusions. Their method of throwing dogs into shock was to take heavy walled rubber tubing and twist 5 or 6 turns of it around a dog's thigh, pulling the tubing as tight as a man's strength would allow. In some cases, they gave this treatment to both of the dog's hind legs.

They used no anesthesia. Here is what they say on this point: "A review of the technics hitherto employed reveals that all experiments so far reported were carried out under anesthesia—usually a barbiturate. The notorious effect of anesthetics on the shock state led us to omit all anesthetics or sedatives except intravenous or intramuscular morphine sulphate." They go on to state that this was of effect only while the tight rubber tubing was being applied to the victim's legs.

Once it was applied, the dog was put aside to endure his ordeal. The tourniquets were left on his legs from periods ranging anywhere from 5 to 11 or more hours.

The vivisectors made the discovery that a dog subjected to this treatment for only 5 hours seldom goes into a serious state of shock, no matter how uncomfortable he may be. But animals so treated for periods from 8 to 11 hours almost always suffer shock. As the vivisectors put it, 79 out of 80 developed "profound shock." If they received no treatment, they invariably died within another 12 hours after shock set in. Of the 79 profoundly shocked dogs, 61 were treated. The other 18 received no treatment and all died.

In this experiment, however, the vivisectors explain that "survival" means merely that the dog lived for 24 hours. He then could be said to have recovered from shock—though numerous dogs lingered on for some days, only to die of necrosis and infection in their mutilated hind legs.

As previously stated, this ordeal of so many animals was intended to prove only that blood transfusion is here to stay. Undoubtedly, any vivisector would swear under oath that here is one of the procedures vital to medical progress.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Record Certain Changes in Blood Pressure Resulting From Shocks and Piecemeal Destruction of a Dog's Brain."

There being no objection the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO RECORD CERTAIN CHANGES IN BLOOD PRESSURE RESULTING FROM SHOCKS AND PIECEMEAL DESTRUCTION OF A DOG'S BRAIN (DEPARTMENT OF NEUROLOGY AND NEUROSURGERY, MCGILL UNIVERSITY, MONTREAL)

This experiment was reported by vivisectors B. P. Babkin and W. C. Kite, Jr., department of neurology and neurosurgery, McGill University, Montreal, in the American Journal of Physiology, volume 161, No. 1, dated April 1950, pages 92–100.

Babkin and Kité begin their report by pointing out that there have been many studies concerning changes in blood pressure due to shocks delivered to the brain. But, they point out, no one has paid much attention to the fact that in addition to major changes in blood pressure, brain shocks also set up what the vivisectors call "waves" in blood pressure. That is, under certain

forms of excitation or injury to the brain, the blood pressure not only receives a big jolt, but thereafter it varies in a rhythmic manner—swinging up and down the scale of the blood pressure measuring device in a manner of great interest, at least to the vivisectors Babkin and Kite. In their report, Babkin and Kite fail to mention what bearing these blood pressur. waves" might have on the treatment of any illness likely to confront a medical man.

Briefly, it may be said that the dogs experimented upon by Babkin and Kite were hooked up to machines measuring their blood pressure and their respiration. The vivisectors then proceeded to make exhaustive notes on their blood pressure "waves" in response to electric shocks delivered first to the animal's whole brain, and then to smaller and smaller parts of his brain as the vivisectors systematically proceeded to remove the brain bit by bit.

Now the question of anesthesia in this experiment is a little bit complicaed. At a glance, the reader of the American Journal of Physiology would see that Babkin and Kite go into some detail on the subject of anesthesia. But let's see precisely what they say about it. They point out that in an earlier series of experiments on a different subject, they found that nembutal stopped the very blood pressure waves that they wanted to study, even if it was given in as little a quantity as 30 percent of the anesthetic dose. However, they say, another anesthetic, namely chloralose-urethane, allowed the blood pressure waves to come through no matter whether it was given at the rate of five one-hundredths of a gram for each kilogram of the animal's weight, of five-tenths of a gram for each kilogram of weight.

It will be noted that this little discussion does not provide us with much detail—but from it we may conclude that the vivisectors gathered their information by operating on some dogs under full nembutal anesthesia, on other dogs under only 30 percent of adequate anesthesia, on some dogs at perhaps a sufficient dosage of cloralose-urethane, and upon still other dogs at only one-tenth that amount of chloralose-urethane. In other words, some of the animals experimented upon undoubtedly felt no pain, but it is difficult to conclude anything save that certain other animals were operated upon at either one-third the proper amount of anesthesia, or one-tenth the proper amount of anesthesia.

With a particular dog thus presumably perfectly well able to feel pain, the vivisectors tied him down and literally picked his brain to pieces, meanwhile shocking his brain with electricity at each step of the procedure to see what results would be produced in the blood-pressure chart.

Bewteen electrical shocks, the vivisectors first removed the brain cortex, which is to say the outer layer which covers the brain. The tissue of the cortex, as may be noted, was drawn off by suction. The withdrawal of both the cortex and part of the white matter of the brain itself then was accomplished by suction and by an electric cautery. Finally, the whole brain stem was removed with a surgical knife.

Needless to say, all the animals involved in this experiment died. As an end result of the experiment, the vivisectors found themselves in possession of a great deal of data relating to minute changes in brain waves which may be expected in case a doctor ever meets a patient, part of whose brain has been withdrawn from his skull by suction.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment for the Purpose of Producing Intestinal Peritonitis in Dogs."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT FOR THE PURPOSE OF PRODUCING INTESTINAL PERITONITIS IN DOGS (DIVISION OF EXPERIMENTAL SURGERY OF THE UNIVERSITY OF CALIFORNIA MEDICAL SCHOOL)

This experiment was reported in Surgery, volume 22, dated September 1947, pages 550 through 551. It was carried out at San Francisco by the Drs. Sanford Rothenberg, Henry Silvani, and H. J. McCorkle, all of the division of experimental surgery of the University of California Medical School. The doctors frankly state that their only intention was to make dogs desperately and fatally ill. They were seeking merely to kill dogs with peritonitis, the same horribly painful ailment from which a human being usually suffers as the aftermath of a ruptured appendix.

If the doctors used anesthesia in this experiment, they did not mention it; and it is only fair to point out that, both in the interests of scientific completeness and in protecting themselves from charges of cruelty, doctors make it an almost invariable point to mention the type of anesthesia (if any), the quantity administered, and the method of administration. Therefore, it seems reasonable to infer that no anesthesia was used in this experiment.

In their article, the vivisectors refer to the fact that there already existed a method of producing peritonitis in dogs. This consisted of tying off the base of the appendix (a surgical procedure), and then giving the dog-victim about a quarter glassful (54 centimeters) of castor oil.

But, they explain, they wanted to "improve" this method. They "improved" it by applying a technique far more agonizing.

With the animal strapped down and his belly laid open, they interrupted the blood supply to the appendix, and then tied off the appendix with ¼-inch cotton tape. The appendix itself then was crushed by repeated clamping. Then the omentum (part of the intestinal tract) was cut out, as was the spleen.

With the dog's intestinal system thus mutilated and unable to function in anything like normal fashion, the immense, one-fourth-glass does of castor oil was given.

The authors state their results thus: "A fatal, fulminating, diffuse peritonitis of appendical origin may be uniformly produced in dogs" by means of the procedure already described.

One may wonder what happened to the 56 dogs used in this experiment. They all died—but the doctors state that the average survival time for these obviously suffering animals was 39 hours—more than a day and a half.

The animals, by the way, were not treated. Nothing was done to relieve their slow progress toward death. Any human being who has suffered even a nonfatal peritonitis is in excellent position to estimate the extent and the scope of the horrors visited upon this group of dogs.

As stated previously here, the purpose of this experiment was merely to cause peritonitis. There was no reported effort to cure it, once it was caused, nor was there any apparent desire in the first place to make useful observations concerning it. The Drs. Rothenberg, Silvani, and McCorkle made no observations in their report.

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment Attempting To Show What Causes Fever."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT ATTEMPTING TO SHOW WHAT CAUSES FEVER (DEPARTMENT OF ANATOMY, UNIVERSITY OF PENNSYLVANIA SCHOOL OF MEDICINE)

This experiment was reported in the American Journal of Physiology, volume 159, No. 2, dated November 1949, pages 209–216, by the vivisectors, W. W. Chambers, H. Koenig, R. Koenig, and W. F. Windle, of the department of anatomy, University of Pennsylvania School of Medicine.

They begin their report by stating that the temperature of an animal body is regulated by the hypothalamus, an area of tissue located near the base of the brain. At least, say the vivisectors, numerous investigators have believed that the hypothalamus causes fever or cold; but they point out that other experimenters have been unable to agree to this. So Chambers, Koenig, Koenig, and Windle decided to make a test of their own.

They obtained a new drug called Pyromen, a preparation which is known as a pyrogen. A pyrogen is a drug that causes fever.

The vivisectors wished to know whether Pyromen would produce fever in dogs and cats if the animals' hypothalamuses were disconnected from other parts of their bodies.

Using anesthesia, the vivisectors created such disconnections on a number of dogs and cats. The animals were surgically maimed in a variety of ways. Spinal cords were cut at various points, the brain cortex was scooped away, or other damage was done to the victims' nervous systems.

Some of the animals in this series of tests were experimented upon and killed there and then, so that they never recovered from their anesthesia. These animals undoubtedly were not hurt.

The others, however, were allowed to recover.

In from one to several days after their "operations," the animals were given Pyromen, and then were studied to see whether they exhibited fever.

The doctors "proved," if that word may be used, what they apparently had realized in the first place—that there seems to be an area near the base of the brain which makes it possible for a creature to experience fever. Fever can be caused, the vivisectors found, if most of the brains have been cut out. But they found themselves unable to produce fever symptoms in animals which had suffered spinal injuries of such nature as to disconnect successfully the hypothalamus.

The vivisectors were persistent in their efforts. If a dog or cat failed to develop a fever after one injection, he received another. Tests were made upon the injured animals over and over again for periods up to 2 months.

It should be understood that the animals used in this series of tests were hopeless cripples. Their nervous systems had been ruined beyond repair. In some cases the animals were completely without the ability to maintain normal body temperature and, hence, could be kept alive only by being maintained in a specially heat-regulated room.

In addition, it should be understood that, on top of the fact that their day-to-day lives had been made totally burdensome, the animals suffered greatly upon receiving each dose of Pyromen. According to the vivisectors, the administration of the drug commonly caused "retching, vomiting, defecation, urination, drowsiness, and respiratory changes."

We have no desire to comment at any length on the "scholarliness" or scientific worthwhileness of this report. But let us examine just one sentence, as an example. Under the heading "Discussion," in the body of the vivisectors' report we find the following sentence: "The fever that occurs in a pyrogenic response is the result of increased heat production and reduced heat loss."

First, let us see what a "pyrogenic response" is. "Pyrogenic" means "fever producing." Thus, the sentence can be made to read this way: "The fever that occurs in a fever-producing response is the result of increased heat production and reduced heat loss."

Now, of course, a fever always means "more heat produced and less heat radiated away." That's what a fever is. So a still simpler method of rendering this sentence would be as follows: "The fever that occurs in a fever is the result of a fever."

We have no idea why this seemingly pointless sentence should be included in a published article; indeed, we have no idea why the article should have been published at all.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Observe the Results of Feeding to Dogs a Drug Known To Be Violently Poisonous."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO OBSERVE THE RESULTS OF FEEDING TO DOGS A DRUG KNOWN TO BE VIOLENTLY POISONOUS (DIVISION OF EXPERIMENTAL CHEMOTHERAPY, SLOAN-KETTERING INSTITUTE, NEW YORK)

This experiment was reported in the Proceedings of the Society for Experimental Biology and Medicine, volume 72, No. 2, dated November 1949, pages 401–408. The vivisectors making the report were Frederick S. Phillips, and J. B. Thiersch, of the division of experimental chemotherapy, Sloan-Kettering Institute, New York.

This is a "study" made on a complex drug about which very little is known at present. This drug, being strictly in the laboratory stage, has no popular name as yet. For the time being, the chemists call it by the complex "2, 6-diaminopurine."

To start with, the vivisectors knew perfectly well that this strange commodity, 2, 6-diaminopurine, was highly irritating to the intestinal tract in small doses. That is, they knew that—if in the future this drug should prove to be good for say, rheumatism—it still would be impossible to give it except in very weak doses because of its irritating quality in the intestines. One might suppose that this practical knowledge as to limits of dosage would prove to be sufficient. But the vivisectors in this case weren't satisfied. They wanted to know what would happen if 2, 6-diaminopurine were given in quantities so large as to be completely beyond the upper limits of commonsense.

In other words, they wanted to see what would happen if they gave it in doses which they knew in the first place were of such size as to be nonsensical. To use their own words, they wanted to see what would happen if gross doses were administered.

Of course, chemical analysis of 2, 6-diaminopurine told them the nature of the drug's structure and thus made them sure of their answer in advance—but still they had to see it with their own eyes.

For the sake of brevity, we may as well pass over the fates of groups of mice and rats to which gross doses of 2, 6-diaminopurine were given. This brings us directly to the account of what happened when the drug was given to 8 dogs by injection every day over periods ranging from 2 days to about 3 weeks. Here, in the vivisectors' own words, is a picture of what these dogs endured:

"Vomiting occurred at 3 hours and continued profusely until death. (Note: From this 1 line we undoubtedly may assume that some of the dogs vomited profusely and almost continuously for 2 days, and that some endured this same condition for a full 3 weeks.) Food was refused after the first day. Hemorrhagic diarrhea appeared within 24 hours and increased in severity progressively. During the course of intoxication (poisoning) animals lost weight and developed severe upsets in fluid and electrolyte excretion. * * * Dogs 1 and 2 succumbed after 40 hours; dog 4 after 54 hours; and dog 3 was sacrificed when moribund (obviously near death) after 54 hours."

Some of the other dogs received smaller doses and—naturally—didn't suffer quite so much.

Needless to say, no anesthesia of any sort was used during the lengthy course of this experiment.

This experiment is interesting when considered against an occurrence which took place at a congressional committee hearing in Washington some years ago. At that hearing a vivisector poured out a whole glassful of a new kind of worm poison and suggested to antivivisectionists attending the hearing that, since they opposed the use of dogs in research, perhaps one of them would be willing to step up and drink the glass of poison. Obviously, no antivivisectionist accepted this foolish challenge—and so the vivisector managed to make a kind of dramatic hit before the committee.

Now obviously enough, there would have been no point in the drinking of a whole glassful of that worm poison. The vivisector in question knew in advance that the drinking of so great a quantity would cause death—just as the vivisectors in the present experiment knew that the injection of gross amounts of 2, 6-diaminopurine would cause death.

There is little purpose in the administration of such meaningless, massive doses, since any person equipped with ordinary commonsense is likely to be interested in studying only the minute doses which safely can be presumed to be harmless or at least not unreasonably painful or fatally dangerous.

Serious doctors will wish to test out such minute doses, not so much upon animals as upon themselves, or upon their volunteering students or patients. They know that such tests may prove occasionally unpleasant, though not fatal—and it is such tests as these, made upon man, which undoubtedly are necessary for the gaining of valuable practical knowledge.

But practical commonsense information, likely to be useful in realistic practice, very often is not the sort of information in which vivisectors appear interested. This is the point principally to be gained from the experiment reported herewith.

Cruelty to Animals

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, August 21, 1957

Mr. MORSE. Mr. President, pursuant to my remarks in the Senate today referring to experiments on animals, I ask unanimous consent to have printed in the Appendix of the RECORD a leaflet entitled "An Experiment To Pile Up Statistics on 15,000 Animals Scalded to Death."

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT TO PILE UP STATISTICS ON 15,000 ANIMALS SCALDED TO DEATH (RESEARCH LABORATORY OF CEDARS OF LEBANON HOSPITAL AND THE UNIVERSITY OF SOUTHERN CALIFORNIA MEDICAL SCHOOL)

This experiment, staggering not merely for its brutality but for its amazing scope in terms of the number of animals sacrificed, was reported in two standard medical publications—the Journal of the American Medical Association, volume 122, No. 11, dated July 10, 1943, pages 720 through 723; and the Journal of Clinical Investigation, volume 23, No. 5, dated September 1944, pages 795 through 806.

The two reports were made by Myron Prinzmetal, Oscar Hechter, Clara Margolies, and George Feigen, of the research laboratory of Cedars of Lebanon Hospital and the University of Southern California Medical School.

This group of vivisectors wanted to test a specific substance, a liver extract, to compile figures on its worth in treating shock. It should be noted that they knew, in advance of the experiment, that practicing

physicians had tried and approved the liver extract. What the vivisectors wanted was a staggering array of statistics. They used rats and mice over a period of a year and a half, reaching a grand total of 15,000 animals—and in reporting on the matter, they call this a sufficient number of animals to yield results of statistical significance.

Here is the technique they used. They took each animal (under anesthesia) and dipped it to its neck in scalding water for a standard length of time, a matter of a few seconds. Since this experiment was carried out on so grand a scale, animals received their anesthetic in groups. Hence, none received any individual attention. Hence, some died of the anesthetic. If an animal died within 30 minutes, it was presumed that the anesthetic had been too much for him as an individual and his death therefore was attributed to the anesthetic, not to use the scalding.

The vivisectors make no comment along this line, but it may be fair to wonder how many of the animals found the anesthetic not too much for them as individuals—but too little, so that they found themselves being dipped in scalding water while still conscious. It is to be presumed that, in mass anesthetizing, a normal average amount of anesthetic would be given—and this naturally would be too much for some individuals and too little for others.

In any case, the animals that did not die of the anesthetic were allowed to revive and suffer until death or recovery. If an animal pulled through 48 hours, he was automatically listed as a survivor, even if his burns were serious enough so that he died later on anyhow.

After the scalding, the vivisectors divided the animals into several groups—a group given no treatment at all, a group given normal saline solution, and a group given saline solution plus the preparation of liver extract that was being studied. As had been expected, the liver extract group showed a better survival average than the other groups.

It should be noted here that, by inflicting total scalding on 15,000 different animals, the vivisectors disclose their own ignorance of elementary statistics. To wit:

It is a statistical fact that if you flip a coin 6 times, it may come heads all 6 times. But if you go on flipping, it will start to come tails. If you continue flipping, there soon will be periods in which tails may come up 6 or 8 times in a row, maybe more. And if you still go on flipping to a total of 100 times or so, the law of averages will show definite signs of operating. That is, the law of averages operates in such fashion that if you go on flipping a coin, heads will turn up exactly half the time—within very narrow limits. You will find, at 50 flips, that your half-and-half ratio is off by perhaps only halz a dozen flips. It still will be off by only half-a-dozen or so at 100 flips, at 200, at 300, at 400, at 500, and so on. In other words, the law of averages is a real and definite arithmetical law. It is not merely a theoretical fancy. So by the time you reach, say, 500 flips, you know that your heads-tails average is going to be 50 to 50—and you know that it is not going to be anything else even if you go on flipping to a total of 100,000 or 1 million or 1 billion.

In short, assuming that a point is worth proving statistically it is possible really to prove it in fairly short order. To go beyond that point may be amusing if one has nothing better to do—but from an arithmetical standpoint it is utterly unnecessary and consequently an absolute waste of time. All mathematicians are agreed on this. Any high school boy who has had a few weeks of advanced algebra should know it.

The only question, then, is why the vivisectors insisted upon the torture of not 50, not 150, not 1,500—but 15,000 animals in order to prove a point that already had been proven before they started. This experiment, it should be noted, undoubtedly would be defended by every vivisector in the country as one of the procedures absolutely vital to the progress of medical science.

NATIONAL ANTIVIVISECTION SOCIETY.
CHICAGO, ILL.

Happy Birthday, Mr. Baruch

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. CANFIELD. Mr. Speaker, last Monday Bernard Baruch, adviser to Presidents, park-bench philosopher, and friend of man, observed his 87th birthday.

Mr. Baruch has a host of friends in the Paterson, N. J., area I am privileged to represent and he has been very kind and helpful to me during my congressional tenure. Whenever I have called on him for advice he has given it most willingly, always basing his conclusions on his own experiences in life.

An exceedingly fine likeness of Mr. Baruch bearing a personally autographed message hangs in a beautiful frame in the offices of his lifelong friend, Mr. Harry B. Haines, publisher of the Paterson Evening News which Monday ran the following editorial tribute:

HAPPY BIRTHDAY, MR. BARUCH

This is the birthday of one of the great men of our times—a man whose wise counsel has guided rulers of nations and whose abundant good sense has charted safe courses for the world through enveloping dangerous shoals.

Bernard Baruch, America's No. 1 citizen, is 87 today, and with all the civilized world which is so keenly aware of his benefactions, we of New Jersey join in joyous felicitations to him and the fervent prayer his health will continue unimpaired, his enjoyment of life undiminished, and the keen perceptiveness of his wisdom and vision ever sharper.

The world more than ever needs men like Bernard Baruch because statesmen of genuine stature seem so sadly lacking. Either their viewpoints are narrow and provincial or walled in by restrictive political considerations, so that what is good for the country or for the world is often submerged, wittingly or unconsciously, in a welter of confusion.

Not so with the venerable Mr. Baruch. His thinking cuts through the dense fog of ignorance of selfishness and reduces the most complex problem to a simple ABC wrapped up in a magnificent soundness of judgment.

During and after the Korean War, Mr. Baruch urged the United States Government to institute rigid controls, operative against us all, to avert the calamity of uncontrolled costs and ravaging inflation. Unless we did so, he cautioned, we would be paying fabulous sums beyond what was necessary for the things we needed.

What he favored was price control, ceilings on climbing wages, tightening of our belts to win the war and pay for it in the spirit of gratitude for victory, rather than with bacchanalian rejoicing.

The advice went unheeded, and we're paying dearly today for turning a deaf ear to his counsel. Prices are at an all-time peak and still going up, the clamor for higher wages to meet the rising scale goes on unchecked, and economists divide as to the significance of the inflationary cycle and how to check it.

Now, on his birthday, the esteemed Mr. Baruch offers advice which should fall on receptive ears in Washington, where our statesmen are on a new economy bender.

Economy in Government is most desirable and indeed, essential in the right places.

But when it comes to cutting of our defense lines, let's hearken to Mr. Baruch's counsel:

"The one sure thing in all operations is that the cardinal rule is to protect yourself. In the prize ring and from there, in widening circles, to the protection of a nation.

"Therefore, nothing that we Americans spend for defense is too much. This should be plain enough. If we lose, we are finished.

"I don't think it will happen that way in our great country. Yet why gamble and I'm a gambler at heart—by trying to save today's pittance against posterity and our country's future? There we could be gambling against the perpetuation of civilization itself."

Who but Bernard Baruch could speak out so succinctly and with such simple effectiveness?

We trust Washington will note the significant warning and act accordingly.

America is indeed fortunate in its possession of this precious man whose generosity of heart and soul have matched the greatness of his mind. Many are the benefactions he has worked for countless people in the exemplary spirit handed down to him by the father he so deeply revered, the late Dr. Simon Baruch.

Similarly, through the years, Mr. Baruch has sat in the seats with the mighty—with the late President Woodrow Wilson, with President Herbert Hoover, and with the late Franklin D. Roosevelt. President Eisenhower has looked to him for counsel. One of his dear friends—a buddy with whom he has communed through the darkest days in world history, is Winston Churchill who has leaned so heavily on this magnificent citizen's incomparable wisdom.

On this the anniversary of his natal day, Henry Holt & Co. releases "Baruch—My Own Story," and we recommend it as must reading for young and old, for people as well as for governments, as the fountain of guidance in an era when troubled minds are seeking comfort and a surcease from turbulence.

Prince among men, counselor to world statesmen, benefactor and incomparable citizens, happy birthday, Mr. Bernard Baruch. May your light never grow dim, may it continue to glow with unimpaired brilliance as a beacon for world happiness.

Let Us Stop Fumbling Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. MULTER. Mr. Speaker, the incidents that have been occurring recently in Syria should give all of us more than ample reason to wonder where our foreign policy is leading us.

I hurried home from the Middle East in December 1955 to warn our State Department, and everyone else in the administration who would listen to me, as

to what was happening there, pointing specifically to the danger of the Sovietization and communization of Syria and the threat to world peace that would follow thereon.

I testified at length on the subject before the House Foreign Affairs Committee on May 8, 1956.

I elaborated upon the subject in my testimony before the House Foreign Affairs Committee on January 16, 1957. In my January 1957 testimony I said, among other things:

We must serve notice now that we will not permit the Communists to enslave any of those peoples or subjugate any of those countries, and we must serve notice that, if necessary, we will move our Armed Forces into those countries to prevent the Communists from taking them over. Nothing less than that will stop them. If we do not intend to do that, we should take our 6th Fleet out of the Mediterranean, recall our Marines from that area, and let the world know that we do not intend to act; if we do intend to act and to use those ships and troops, we should let the Communists know in no uncertain words that an infringement upon the liberty of any people anywhere in the world is an infringement upon the liberty of all the free peoples in every part of the world.

When the Eisenhower doctrine was being considered before the House on January 30, 1957, and again on May 7, 1957, I pointed out how meaningless was the so-called Eisenhower doctrine. There, too, I indicated that Syria would not ask for our help against Communist subversion, infiltration, and subjugation. I also said that we could not keep the peace by saying to the Communists anywhere, that if and when someone asks us for help, we will then move in. I indicated that we must do in the Middle East, precisely what we have done in Formosa and Guatemala.

I most sincerely regret that I can say to my colleagues today: I told you so. Syria has fallen to the Communists and we stand idly by and commiserate with the Syrian people whose past miseries will be as nothing when compared with what the future holds for them.

In that connection, permit me to direct the attention of our colleagues to the editorial which appeared in the New York Times of August 20, and an editorial from the New York Herald Tribune of August 21, 1957, as follows:

[From the New York Times of August 20, 1957]

SYRIA VERSUS THE DOCTRINE

In the gravest challenge to the Eisenhower doctrine thus far the Soviets have apparently scored a major success by precipitating a virtual coup d'etat in Syria which has put pro-Soviet and even reputedly Communist officers in control of the army which controls the country. This coup, executed behind the smokescreen of trumped-up charges that American diplomats plotted to overthrow an already leftist Syrian Government, appears to have been the price exacted by the Soviets for lavish promises of both military and economic aid to Syria of the type extended to Egypt, Yemen, and others.

Because of the rigid Syrian censorship the exact nature of the coup and the precise political orientation of the men now on top is still obscure. But irrespective of whether the new rulers are Arab nationalists who have hitched their wagon to the Soviet star or are outright Communists, they threaten to reduce Syria to a new type of Soviet satellite giving Moscow a firm basis in the Middle East for further penetration. That is what the Eisenhower Doctrine is designed to prevent.

Syria, the only Arab country to legalize the Communist Party, has long been a member of the Moscow-Damascus-Cairo axis that gave the Soviets their first foothold in the Middle East. This axis was created by President Nasser when he turned to the Soviet bloc for arms and organized an Egyptian joint command for the Egyptian and Syrian Armies to promote his campaign against the West and for his projected pan-Arabic empire. But Syria remained divided. Now the extreme leftists led by General Bizi and Colonel Serraj have seized control and are crushing all actual or potential opposition.

The challenge to the Eisenhower doctrine is all the more formidable because the coup has been legalized by President Kuwatly's signature, which, under whatever pressure it may have been obtained, makes the upheaval a Syrian domestic affairs. Yet the main aim of the Eisenhower doctrine is to provide military aid, including American forces, to help middle eastern nations asking for such aid to resist armed aggression from any nation controlled by international communism. Thus, unless the new Syrian rulers launch new adventures against either Israel or Jordan, both of which they claim as "southern Syria," that part of the doctrine will be difficult to apply.

The doctrine does provide economic aid against internal subversion, and the Syrian upheaval is an urgent warning to Congress against courting similar developments elsewhere by cutting the mutual defense program. But Syria will now scarcely ask for such aid. That imposes on all the Western Powers, on all the members of the Baghdad Pact and on all still independent Arab nations the grave responsibility of finding the proper measures to deal with a situation threatening all of them.

[From the New York Herald Tribune of August 21, 1957]

TIME FOR THE UNITED STATES TO LEARN HOW TO USE WORLD POWER

The Eisenhower Doctrine was brought forward on the theory that a vacuum of power existed in the Middle East. The British and the French, according to this theory, had progressively been edged out of their positions in the area; it was too late to reestablish them, and the new sovereignties that arose in their place were weak and divided. Consequently, the Soviet Union began to move in. To prevent this, the United States would offer guaranties to the nations of the Middle East against Soviet aggression. That was the theory.

But the power vacuum persists. The Soviet Union has succeeded in placing a Communist at the head of Syria's army, and the civil government in that country is subservient to the army. The Soviet Union has its beachhead in the Middle East. The Eisenhower Doctrine, as such, has no provision against the effects of infiltration and subversion. The policy of the United States has been unsuccessful—if, indeed, any serious effort was made in that direction—in preventing the Syrian Red coup. At best, this country has helped to awaken Syria's neighbors to the danger of overly close association with that Soviet base and has been instrumental in preserving Jordan from a similar fate. But the danger of Communist subversion, trading on nationalism, exists throughout the Middle East and North Africa—indeed, it is critical throughout Asia and Africa and many of the Pacific islands. How does the United States propose to meet those threats?

It must be by the exertion of power—moral, economic, political and military. There has to be a concept and a capability for exerting this power at any threatened point. There must be more than general principles, more than paper alliances, more than broad programs of economic welfare. And above all, the power must be exerted, overtly or covertly as the case may demand, before the crisis. To wage the peace requires action, not ad hoc committees after the fact; preventive medicine, not autopsies.

The United States has to be prepared to resort to massive retaliation against major aggression—and the Soviet Union must know that that purpose and potential exists. One may hope knowledge of such retaliatory power will serve as a deterrent to an open Soviet assault on a grand scale. But there must also be developed within the American military system the ability and the willingness to use force locally, and with discrimination, when the necessity arises and when the great strategic weapons are inappropriate to the case. This too, the Soviets must know. For so long as they feel free to wage minor wars and local insurrections without fear of American intervention they will do so to the detriment of order, peace and freedom.

The Syrian situation, like that of Egypt, was before the Cabinet and the National Security Council for several years. There was indecision, and inaction until matters had reached the point of no return. So Syria slipped within the Soviet orbit. The dangers along the Arabian coast, in the little principalities, are known. Yemen is receiving Communist arms and raiding over the border of British-held Aden. The Oman revolt—a very minor military episode—has not yet been wholly crushed. But the United States has no agreed policy with Britain on this vital area. American power—the complex of all the qualities that this country can bring to bear to keep the free world (including the United States) free—is neither known nor respected in many areas of strategic importance. If there is another failure—as in Syria—there could only be another post mortem.

The techniques of bringing power to bear for the defense of freedom are, of course, varied and intricate. They require adaptation to particular cases. But behind them must be the will, the determination, and the resolute policy to act, to act intelligently and to act first. The United States wants peace. The President stands as a symbol of that desire. But peace cannot be won without risks and the willingness to fight for peace if need be. President Eisenhower and his administration will have to adapt themselves to a climate in which peace cannot be preserved by merely wishing it, or even confining themselves to broad, beneficient, and constructive programs. Syria was given ample opportunity to join in peaceful, useful work for the benefit of its own people and those of the whole Middle East, with the assistance of the United States. But the Soviet Union bored from within, took over the army and subverted the government. There must be no more Syrias, and the United States must learn how to prevent them.

Cotton Treadmill

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted to extend my remarks, I include in the RECORD an editorial from the Arizona Republic dated August 12 entitled "Cotton Treadmill." There follows the editorial:

COTTON TREADMILL

If Secretary of Agriculture Benson isn't careful, he will be the victim of his own energetic attack on farm surpluses. Take cotton, for instance. In the year ended July 31, the United States sold 7.6 million bales of cotton abroad, compared with 2.2 million bales the previous year. To be sure, it was a cut-price deal, with the taxpayer making up the loss actually suffered. But it did help reduce the surplus cotton in this country from a onetime high of 15 million bales to roughly 11.5 million bales.

Last week the Agriculture Department published its first estimate of the current crop, forecasting 11.8 million bales for this year, compared with 13.3 million bales last year. The smaller crop is due to the flexible Government support program, to land withdrawn and put in the soil bank, and to some bad weather. If the estimate is correct, 2 or 3 million bales of the surplus will be required to meet the 1957–58 domestic demand.

It is obvious that the Benson program is getting somewhere. We could probably go a full year without picking another pound of cotton and still supply all our normal needs, but at least the walls of the Government storehouses have stopped bulging. It might even have been hoped that current steps would bring the surplus down to a normal figure and allow the Government to retire gracefully from the entire business of supporting cotton, running soil banks, and dumping surpluses abroad.

But such hopes fail to take notice of the hard facts of life. Any chance of restoring a free market is blocked by a law providing that higher price supports must be put into effect as soon as the supply drops to a certain figure. Like Lewis Carroll's Red Queen, Secretary Benson has to run faster and faster in order to stay in the same place. If he reduces the surplus, the price support will be boosted, and the farmers will raise more cotton, and the big surplus will be back.

Here is something that Congress really should go to work on. Unless it expects to continue agricultural handouts as a permanent way of life, it must restore a situation in which cotton farmers produce for the market, not for the Government warehouses. It won't achieve that goal so long as incentive payments go up automatically whenever the surplus shows signs of becoming manageable.

Murder Case Ends

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of August 20, 1957:

MURDER CASE ENDS

Fortunately for this community, Clarence E. Watson, Jr., is serving a 13 to 40 year sentence for another crime. So this depraved criminal, whose conviction for the murder of Miss Alyce O. Taggart has just been set aside for the second time by the court of appeals, will not be wandering through the streets of Washington any time soon.

This, however, is a coincidence. For the murder case undoubtedly will have to be dropped, and Watson soon would be a free man if he were not already serving a jail sentence for rape.

The court of appeals had no choice in the matter. More than a year ago it reversed Watson's first conviction on the ground that he had been held too long by the police before arraignment. But the court held then that confessions made between 6 o'clock in the evening and 9 o'clock the next morning were legal. These served as the principal basis for the second conviction.

Meanwhile, the Supreme Court decided the Mallory case. This ruling held that Mallory had been detained too long (about 7½ hours) and, although clearly guilty of rape, he had to be released. When last heard from, he was heading south. This ruling was binding on the court of appeals and it clearly had no choice except to set aside Watson's conviction.

Watson is a vicious criminal with a long record. There is not the slightest doubt that he murdered Miss Taggart, and that he should escape punishment for his brutal crime is an affront to justice. But he will not be punished for it, and in fact he would not be punished at all had he not been caught and convicted in the other case.

This is a situation which calls for some second thinking on the question of balancing the rights of an accused against the rights of a community. As things stand under the Mallory ruling, the police cannot conduct any appreciable investigation or questioning of an arrested suspect until after he has been arraigned and charged before a judge. The purpose of this is to insure that the suspect will have access to counsel and will be advised that he need not answer any questions asked by the police. The advantages of this, from the point of view of the accused, are obvious. It seems equally obvious, however, that the police, if they cannot investigate or question a suspect before arraigning him, are going to find it extremely difficult and often impossible to solve such crimes as the murder of Miss Taggart.

This has nothing to do with coercion, duress or third degree tactics of any kind. They have not been sanctioned in the past and they were not involved in the Watson and Mallory cases. If the public is to have the protection from criminals to which it is entitled, however, the police must have reasonable opportunity to question suspects and check out their stories. At the request of the District Council on Law Enforcement, a bill to provide for this is under consideration in Congress. It probably will not be acted on in the adjournment rush of this session. But the ruling in the Watson case argues strongly against needless delay when Congress reconvenes.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. MINSHALL. Mr. Speaker, I should like to call to my colleagues' attention to two excellent editorials. As one who has opposed foreign aid during this session of the Congress, I am in complete accord with the views set forth in the editorials which follow:

[From the Cleveland Plain Dealer of August 16, 1957]

FOREIGN AID CUT

One word from President Eisenhower and the House Appropriations Committee does what it pleases.

Late Wednesday the President signed the bill authorizing foreign aid appropriations totaling $3,367,083,000. This was half a billion less than he wanted, but in a special news conference he said he thought it would be enough, provided Congress appropriated the full amount. If it didn't, he might have to call a special session.

A few hours later a subcommittee of the House Appropriations Committee approved a bill authorizing the expenditure of $2,524,760,000—a cut of more than $800 million.

Yesterday morning President Eisenhower issued a statement calling for a restoration of the cut, "in the conviction that the national interests of this country are deeply involved."

Whereupon the full committee met and promptly voted to uphold the subcommittee's $800 million cut. So who's out of step with whom?

The House committee's action, we believe, simply reflects the sentiment of the people. They're fed up with the idea of perpetual foreign aid. They think it's about time our friends and allies—if such they be—stood on their own feet, economically, and financed their own defense needs to a greater extent than they are now doing. They are skeptical of the results claimed for the foreign-aid program and they are not sold on the merit of foreign aid to Tito and the possibility that it may be extended to other Communist countries. In general, if we interpret the public pulse correctly, the people want Government spending cut and their taxes reduced.

While the Appropriations Committee was defying the President, another House committee—the one on Government Operations—made news. It reported that the State Department had illegally tapped the Secretary's emergency fund for more than a half million dollars in the last 14 years to pay for public opinion polls. Even if this had been done legally, through appropriations made by Congress, it woud seem to be a silly sort of business and a waste of the taxpayers' money. By clipping the Gallup Poll out of any one of the scores of newspapers which use it, the Department could have found out what the public's opinion was on almost every conceivable issue.

It might be useful to know what the Department's poll found out about the public's opinion of foreign aid, but Congress will never know because, in a crowning act of stupidity, the results were labeled "confidential." Oh, well.

We don't think the foreign-aid outlook is as dark as the President pictured it. To begin with, the Senate will probably restore some of the cuts made by the House and there will be a compromise appropriation of possibly $2,800,000,000. And if that isn't enough, the foreign-aid spenders have unexpended balances of more than $6 billion to draw on.

[From the Cleveland Press of August 16, 1957]

THE FACTS ABOUT FOREIGN AID

President Eisenhower has a real fight on his hands in attempting to avoid deeper cuts in the appropriations for foreign aid.

Judging by his extraordinary efforts, he regards this as the biggest issue between him and Congress. He puts is virtually on a life-and-death basis.

The cuts approved by the House in a rousing battle were made in the face of the President's dramatic pleas, which included a threat to call Congress back in special session.

Despite all the fuss, the amount of the House reduction is less than Congress cut from foreign-aid requests in any year of the Eisenhower administration except 1955.

But what the House obviously had in mind was the huge backlog of foreign-aid money

still in the pipelines. As of June 30, more than $6 billion previously appropriated still was unspent—enough in itself as the House Appropriations Committee pointed out, to run the program well into 1959.

Beyond this, another couple of billions will be available for assistance to other countries in foreign currencies accumulated under the surplus crop disposal program abroad.

Both the President and some of his supporters allege that the cuts cannot be justified. But it is not the cuts which need to be justified. It is the spending of taxpayer money, for whatever purpose. The President simply has not made out a case.

Help Block the Drive for More Immigration

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. BROOKS of Louisiaia. Mr. Speaker, under leave to extend my remarks I present herewith a very forceful editorial which appeared in the Sunday, August 18, 1957, issue of the Shreveport Times, Shreveport, La. The editorial is entitled "Help Block the Drive for More Immigration" and is as follows:

HELP BLOCK THE DRIVE FOR MORE IMMIGRATION

During the 12 months ending last June 30, with the much-maligned Walter-McCarran Immigration Act in full effect, 343,738 aliens were permanently admitted to the United States. For most Americans, this total is sufficient, marking a level at which the inflow of aliens should be held.

However, the total is not sufficient in the eyes of powerful propaganda and lobbyist groups now at work in Washington.

Under the terms of a dozen or more amendments now being urged as necessary changes in the Walter-McCarran Act, the number of aliens admitted to the United States would be more than doubled—the proposed annual increase being estimated at 378,200.

One proposed amendment which Congress is considering would change the base year for fixing quotas from 1920 to 1950. Because of the increase in the Nation's population, that would mean boosting quotas by approximately 65,000 annually.

Another proposed amendment would transfer annually about 70,000 in unused quotas from northern and western European countries to the countries of southern and eastern Europe and Asia. There was sound logic in assigning the quotas originally to the northern and western areas of Europe, based upon the origins to which this country's population is traced, and there is no reason to disregard that logic now.

Still another amendment would permit Asiatics born outside of Asian countries to use the non-Asiatic quotas, and if born in nonquota countries to immigrate to the United States without quota limitation. One estimate is that 600,000 Asiatics now in the New World would become eligible for immigration to the United States under this amendment.

The other changes being urged upon Congress are similar in general effect to those above.

In addition to these highly undesirable proposals to relax restraints upon immigration, other proposed amendments to the Walter-McCarran Act would break down such security safeguards as the fingerprinting of aliens. One amendment would require court review of the action of American consuls in issuing or declining to issue visas. Another would provide waiver to travel documents presently required of all aliens seeking admission to this country.

Taking the lead in urging Congress to reject any and all changes in the Walter-McCarran Act is the American Legion, which has throughout its history wielded a strong influence in behalf of sound immigration legislation. The Legion denounces each of the amendments mentioned above, and urges citizens generally to take the same position, and to communicate their views to their Senators and Representatives. The Times unreservedly recommends this course.

While there are no doubt some worthy organizations working for immigration-law changes, it is an undeniable fact that the most vociferous foe of the Walter-McCarran Act is the Communist Party. The aim behind Red opposition to the act is partly to bring about the entrance of alien Communists and partly to destroy unity within the United States by increasing the number of aliens in the population.

Congress should turn a deaf ear to all pleadings for revision of the immigration law. The Walter-McCarran Act was drafted carefully, after long study. It has functioned well. It should be retained intact, no matter how much howling for amendments echoes through Washington.

Objections to H. R. 8002

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. MAGNUSON. Mr. Speaker, I should like to place in the RECORD a telegram which I have received from Mr. William M. Allen, president of the Boeing Airplane Co., analyzing many of the objections to the enactment of H. R. 8002. Mr. Allen speaks from the experience of the Boeing Co. as one of the principal defense contractors. I feel the objections he states to this bill are valid and strongly urge my colleagues to study them carefully before supporting this legislation which would, I am afraid, throw a monkey wrench into our system for defense procurement and in the end result in more—not less—Federal expenditures.

The telegram follows:

SEATTLE, WASH., *August 20, 1957.*

The Honorable DON MAGNUSON,
Member of Congress, House Office Building, Washington, D. C.:

Our study of the proposed change in methods of appropriating funds and authorizing contracts, as contained in H. R. 8002, leads me to believe that this bill, in its present form, contains the following defects which might adversely affect the defense programs of Boeing Airplane Co., and thus the economy of the State of Washington. The defects are principally applicable to programs extending over more than 1 year, and such programs constitute the bulk of the defense business of this company as well as the aircraft industry generally.

1. The change to annual accrued expenditure basis of appropriating funds would require detailed advanced estimating of contract cash expenditures by year. Past experience has shown that actual rates of expenditure by time periods are extremely difficult to accurately determine. This is particularly true when a substantial portion of the end product is purchased and/or subcontracted from thousands of subcontractors and vendors. Furthermore, if the rate of expenditures exceed the estimates, funds might not be available to make payments to the contractor. This could also tend to increase overall costs of programs by requiring a contractor to pace his efforts to stay within estimates of expenditures rather than proceed on most economical total program basis.

2. Any delay by Congress in appropriating funds for a new year would result in invoices not being paid, which could seriously disrupt the financial program of the company, as well as its ability to maintain a stable work force, and, in addition, its ability to make timely payments to its subcontractors and vendors.

3. The bill contains authority to enter into contracts for programs in excess of funds appropriated for the next ensuing year, but statements in committee reports indicate that contract authority would be good for 1 year only. This could result in a year-end rush to place contracts before authority expired, which is an old evil of several years ago, now eliminated from the present method of appropriating funds which are available until expended.

4. In those instances where contracts extending over more than 1 year are terminated, the contractor might have to await an appropriation by Congress before termination costs could be paid.

For the reasons indicated above, I believe this bill should be given further study before it is adopted by Congress. As you may know, a majority of the members of the House Appropriations Committee is opposed to this bill. If you agree with my views and those of the majority of the members of the House Appropriations Committee, I would appreciate whatever action you may take to delay enactment of this bill until its impact upon defense contractors can be better analyzed and considered.

WILLIAM M. ALLEN,
President, Boeing Airplane Co.

Conflict-of-Interest Statutes Conflict With Best Interests of the United States

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. HOSMER. Mr. Speaker, success in private life is at least a good indication that a man will be successful in Government service. It is at least some assurance that qualities which the business world was willing to pay handsomely for will be brought to Government service and thereby the Government and the people will benefit. It is also assurance that the possessor of such qualities is pretty unlikely to be a thief, chiseler, racketeer, grafter, or other slimy-type character because people of that type are so seldom successful in legitimate pursuits.

A look back at the pre-1953 era of scandals in Government discloses few, if any, culprits that could be classified as successful men prior to their entry into Government service. Thus the conflict of interest statutes, based on the assumption that successful people are

crooks and must be stripped of any possible temptation to make their decisions in Government posts on the basis of what is good for themselves and their friends instead of the United States and its people, just do not stand up. The practical effect of such statutes, when combined with the constant abuse these people get from congressional committees and free-wheeling, one step above Confidential magazine type newspaper columnists, is to keep a lot of good talent away from Washington that is badly needed.

A further amplification of the problem is set forth in the following editorial by Lawrence A. Collins, Sr., appearing in the Long Beach Independent:

USELESS SACRIFICE

As Neil H. McElroy takes over the tremendous responsibilities as Secretary of Defense he must dispose of all interests he has in any enterprise that may have contracts with the Government. He will be succeeding Charles Wilson who sacrificed several million dollars when he sold his General Motors stock to accept the Defense post in the Cabinet. In addition, Mr. Wilson gave up a salary of over $600,000 a year. Mr. McElroy is giving up a salary of $285,000 a year.

Each of these men achieved success in industry after years of working up from the bottom. They proved their ability and honesty. Each of them has long records of unselfish public service. The can afford to take over great public responsibility only because they have accumulated enough money and securities to make up for the difference in the Cabinet post salary of $25,000 a year.

Mr. McElroy must sell his 600 shares of General Electric and 200 shares of Chrysler Corp. stock. These are a minute percentage of the stock in these corporations. The income to the holder would be $1,800 a year. It would be difficult for the money to be invested in the stock of any industry that did not do some business with the Government.

In our opinion the rule requiring disposal of all ties with former employment or investments is unrealistic. The type of man who is sought for these high positions is big enough to refuse favoritism to companies in which he holds stock. In fact, it is probable such men would lean over backwards in such affairs. To be sure they are not to be criticized they would make it harder on former associates than they would if they had no financial connections.

There are always a few in Government who play favorites. But men who have been successful in operating big enterprises have to have a lot of commonsense and character. The chiselers are usually men who never operated a legitimate business or who were never successful before taking public employment.

If the "conflict of interests" theory were sound it would have to go much further than the kind of securities owed by the individual. It would be concerned with the man's children and friends. A man might do a favor that would be helpful to a relative when he would scorn doing so because he happened to own stock in a company.

Most Cabinet officers in the President's official family are responsible for more employees and money than is the head of any private enterprise in the Nation. Our only hope for efficiency and sound judgment in handling the people's business is to have men who have proved their ability. Such men are already employed. The only reason they are willing to leave that employment is that they feel they owe it to their country—or they are wealthy enough that they can afford to take on a new challenge.

It is becoming even harder to get such men to accept public office. The pay of $25,000 a year is less than many salesmen or union leaders receive. Young men cannot afford to take such jobs. Mr. McElroy is only 52 years of age. But he has been one of the outstanding successes of the Nation. He has long shown his devotion to public service. His having to dispose of all his interests with any enterprise dealing with the Government is demanding a sacrifice which is unreasonable and actually meaningless from a practical standpoint.

The Spirit of Babe Ruth Lives On

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Harry H. Schlacht for the East Side News, a publication circulated in the 19th Congressional District of New York on the anniversary of the death of the immortal Mr. Baseball—Babe Ruth:

THE SPIRIT OF BABE RUTH LIVES ON
(By Harry H. Schlacht)

Today marks the ninth anniversary of the death of Babe Ruth. He was a great sport. He was a great sportsman. He was a great showman. He was Mr. Baseball.

The story of Babe Ruth will fascinate the children for years to come. He was a great influence for good in the life of American children. He exemplified the truth that only in America can a poor lad rise to fame and riches through his own athletic prowess in the fashion of a Horatio Alger hero. He rose to become the toast of the Nation.

Babe Ruth was a symbol of what can be achieved in the face of handicap. He was an emblem of American sportsmanship. He was a product of American opportunity. His name is written of American opportunity. His name is written large in the annals of the sporting world. His living personality is enshrined in our hearts.

In youth, he was a problem child. In manhood, he was a respected citizen. He was cast in the American mold. He was tough and rough, and yet he was as gentle as a lamb with children whom he loved and who loved him. Babe Ruth loved his fellow man.

The three images which will remain longest in the memory of our people will be the sight of Babe knocking the ball out of the park, will be the sight of Babe sitting beside a kid's bed in a hospital, will be the sight of Babe giving a new lease on life to a sick child.

He was a God-loving man. He was a true American. Babe Ruth loved his church. It was there that he was fired with ambition. It urged him to overcome obstacles. It assured him against all dangers. It sustained him against all fears of failure.

If there is anything on earth that made him dream Heaven, it was what he felt within the sacred walls of St. Mary's Industrial School. It was the joy that he brought to little children. It was the happiness that he brought to his fellow man. His joy of service was the tenderest note on the keyboard of our hearts.

Babe Ruth believed that the gate of Heaven is the door to the church temple; the key to Heaven is the key to His tabernacle; the joy of Heaven is the possession of that God whom first he found within his church's holy precincts.

He was a man who practiced friendship and friendliness to a fault. His life was filled with prayer. His life was aflame with love. His life was winged with faith. His life was vibrant with spiritual force.

Babe Ruth's life has become a legend. His name will linger long after the pages that carried his fame will have yellowed with age. His memory will be measured not in length of years, but in his achievements. His feats on the diamond will be the golden page of baseball.

Babe Ruth is not dead. He will live among the immortals of our national pastime. He will live as long as baseball lives. Men who have achieved do not die.

Address by Gen. Lyman L. Lemnitzer, Vice Chief of Staff, United States Army, at the Annual National Convention of the Jewish War Veterans at Boston, Mass., on August 17, 1957

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. CARRIGG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following address by Gen. Lyman L. Lemnitzer, Vice Chief of Staff, United States Army, at the annual national convention of the Jewish War Veterans at Boston, Mass., on August 17, 1957:

ADDRESS BY GEN. LYMAN L. LEMNITZER, VICE CHIEF OF STAFF, UNITED STATES ARMY, AT THE ANNUAL NATIONAL COMMANDER'S DINNER, 62D ANNUAL NATIONAL CONVENTION OF THE JEWISH WAR VETERANS OF THE U. S. A., STATLER HOTEL, BOSTON, MASS., AUGUST 17, 1957

I deeply appreciate the opportunity to join you tonight on this important occasion. I was very pleased to receive an invitation to talk to this distinguished group of American citizens who, after serving your country in uniform, continue to devote considerable time and effort to the furtherance of our national security.

The combat service of such men as your national executive director, Ben Kaufman, stands as a testimonial to the extent of your wartime contributions. As a fighting infantry sergeant during World War I, his bravery was recognized by awards from nine allied governments and our Nation's highest decoration, the Congressional Medal of Honor. The wartime records of Mr. Kaufman and many other members of your organization—in two World Wars and the recent war in Korea—are those of which you may well be proud.

We in the Army and in the other services also are keenly aware of the achievements of your national legislative director, Bernard Weitzer, which reflect the continuing efforts of the membership of this organization in support of maintaining adequate military forces to preserve the security of the United States and the free world. I assure you that we in the Armed Forces share your desire for military forces which provide, both in quantity and quality, an adequate deterrent to war and the capability of winning a war if deterrence fails. I hope in my comments tonight to provide you with a better

understanding of the situation which confronts us in the world today and the way the United States is designing our military forces to cope with it.

First, in turning to the situation we face, it is hardly necessary to underline to this audience that the aim of international communism is world domination. This aim has been deeply rooted in Communist minds since the October revolution in 1917 and has been repeatedly stated by Communist leaders since that date. It is their aim today as surely as it ever was, and from it stems the real threat to the future of the United States.

This threat to the security of our country and the measures we must take to guard against it fall into four main categories: military, economic, political, and psychological. Since the news media keep you sufficiently informed on the nature of the other threats, I shall confine my remarks to the military threat that confronts us.

Fortunately, the military threat is a tangible one. Thus, it is possible—indeed essential—to take concrete steps to meet it. The simple truth is that the Communist bloc today possesses vast military power in both Europe and in Asia with which it is capable of launching an attack anywhere along the entire frontier of the free world.

What are the specific forces that make up this Communist military threat? First, the powerful, well-trained and modernized armies, supported by a strong tactical air force, provide the foundation of the Communist military strength. These large armies of the Soviet Union, the Chinese Communists, and their many satellites represent far greater strength than that required solely for defense. Second, a serious naval threat is posed by the Soviet Navy with its powerful submarine fleet which is capable of seriously interfering with our sea lines of communication and the ability to supply our allies and to support our own forces overseas. Third, Soviet air power has achieved a strong air bombardment capability against countries in Europe and Asia and an increasing ability to launch a surprise atomic attack on the United States and free world nations.

This does not imply, however, that international communism will not resort to aggressions short of general war. The 40-year history of Communism is far too replete with examples of subversion and deliberate aggressions short of general war for us to harbor false hopes regarding Communist intent and capabilities. Greece, Korea, and Vietnam—3 of the 8 limited-type wars that the Communists have initiated or participated in since World War II—clearly indicate their recent record in this regard.

The possibility of the small war is, therefore, one which we cannot overlook. As atomic capabilities approach parity, it is certainly a likely type of conflict. Should it break out, it must be dealt with quickly and effectively. Otherwise, it could result in the piecemeal erosion of the free world, or it could spread into the general war which we are trying so urgently to avoid.

At this point you may well ask: How do the Armed Forces contribute to preventing war? Since the threat to our country's security is multiple—on the land and sea and in the air—each service has an indispensable role to play. The Army, Navy, and Air Force form a unified team to deal with these threats. I can best illustrate how the deterrent efforts of the three services are meshed together by outlining some of the major forces which contribute to the maintenance of our security.

First, the Air Force-Navy air retaliatory forces—a powerful deterrent with which I know you are familiar—serve as an obvious warning that a surprise attack on the United States will surely bring immediate retaliatory attacks on the enemy.

Related to our air capability are those forces located here in the United States designed to defeat a surprise enemy air attack. The continental air defense of our country is a triservice effort combining the Air Force early-warning radar stations in the Arctic, Navy radar ships at sea, and airborne early warning planes, Air Force interceptors, and Army air-defense missile units.

The forces of our Army, Navy, and Air Force deployed overseas represent another important part of our deterrent structure. In Europe, the United States Sixth Fleet in the Mediterranean is a powerful influence in maintaining stability in the Middle East. Ready units of the Air Force clearly indicate our ability to retaliate promptly and effectively should the Communists attack. Facing the Communist armies, strong Army forces—along with the armies of our allies—visibly block the paths of aggression. These Army forces form the protective shield which covers the bases of the three services, thereby permitting us to deliver the full weight of the free world's military power in the event of war.

On the other side of the world in the Far East we find a very similar situation. The United States Seventh Fleet patrols the waters off the China coast. Army, Navy, Air Force, and Marine units comprise additional, visible deterrent strength. In Korea, two United States Army divisions are an integral part of the United Nations Command. This powerful blocking force—built around the battle-tested divisions of our stalwart ally, the Republic of Korea—assures the so-called Chinese People's Volunteers and North Korean Communists that the initial success of their deliberate attack in 1950 will never again be possible.

Here at home the Armed Forces keep their ready backup strength. The Army, for example, maintains additional divisions, which are the forces the Communists would quickly encounter in increasing numbers if they launched an attack anywhere in the world. In a general war these ready forces would promptly reinforce our troops overseas, which would be heavily engaged from the start of the war by powerful enemy armies.

In addition to our own Armed Forces—deployed overseas and available at home to reinforce our overseas forces in event of attack—we are assisting our free-world friends in developing forces required for our collective security. We are accomplishing this important objective through our mutual-security program—frequently misnamed the foreign-aid program. This program stresses mutual security—the security of both the United States and our free-world friends.

As the first Department of Defense Director of the military aid program—one part of the overall mutual-security program—I have been particularly interested in what the program is accomplishing throughout the free world. I have recently returned from the Far East, where I have been the commander in chief of the Far East and United Nations Commands for more than 2 years. Accordingly, I have had the opportunity to observe at firsthand the tremendous accomplishments of our mutual-security program. As in Europe, where our NATO allies possess much greater military strength today than would ever have been possible without the assistance rendered under this program, our allies in the Far East stand as a strong bulwark against further Communist aggression. They, too, are a strong deterrent against future attacks.

In Korea in 1950 we saw the price of military weakness, and as a result we and the other nations who answered the call of the United Nations Security Council to come to the aid of the Republic of Korea paid a very heavy price in blood and treasure to defeat the Communist aggressor who deliberately planned the attack to eliminate the last free-world foothold on the northeast Asian Continent.

Our mutual-security program is designed to assist in maintaining a common worldwide defense against the constant threat of international communism. It is the program that saved Greece and Turkey in the late 1940's without the necessity of our direct armed support and consequent expenditure of American lives. What feature of the program could more convincingly and effectively recommend it to the American people than its demonstrated service, not only to the security of our friends but to our own security as well?

Now let us sharpen our focus on what our mutual-security program is doing for ourselves and our allies in this battle against international communism. Let us take a look at the Republic of Korea—one of our stanchest allies. I have selected the Republic of Korea because I am most familiar with the situation there where during the last 2 years I commanded the military forces charged with the mission of protecting that Republic from renewed Communist aggression.

The military situation in the Republic of Korea can best be described as that of suspended war. No progress whatsoever has been made in attaining a political settlement of the shooting war which was suspended 4 years ago when the military armistice was signed on July 27, 1953. The Republic of Korea—as the result of Communist actions—still remains a divided nation. Along the 155-mile Korean front strong enemy forces have the capability of striking powerful blows—as they did in 1950—without warning.

That front is held by the forces of the United Nations Command comprising principally the battle-tested Republic of Korea Army, two famous United States divisions—the 7th and 24th—and the forces of our allies in the United Nations Command. The airspace in the vicinity of the front is patrolled by our 5th United States Air Force and the Republic of Korea Air Force. Coastal naval patrol against Communist infiltration and smuggling is provided by the Republic of Korea Navy.

Here in the United States, we devote about one-half of our budgetary expenditures to national defense. The Republic of Korea devotes about 71 percent of its budget for defense purposes. Even with this heavy expenditure, the Republic of Korea with its limited resources cannot meet all defense costs. They can and do provide in large measure the requirements of courage, determination, and devoted service in opposing the Communist threat which faces them. They must, however, look to us—since they have no means of providing their own—for ammunition, guns, planes, ships, equipment of all kinds, gasoline, and the other military supplies essential to maintaining constant readiness against a surprise attack. While I have used the Republic of Korea as an example, many of our other allies being aided under the mutual-security program are equally dependent upon us for support.

I am sure that the members of this audience—who themselves have actively and personally participated in the defense of our country—appreciate fully how important it is to keep these forces of our allies—especially along the frontiers of the free world—equipped and ready to defend themselves and oppose any future Communist aggression. In defending themselves they also defend the United States. These are the objectives of our mutual security program. I am sure that you will agree with me that money spent for these purposes contributes substantially to the security of the United States, as well as to the security of our allies, and makes military, economic, and national security sense.

I would like to say a few words about the disarmament discussions presently taking place in London. How—you may properly ask—do these fit into the situation I have been discussing: namely, military strength and national security?

The meetings in London of the United Nations Disarmament Subcommittee represents a concerted effort upon the part of the United States and its free world allies to reach an agreement with the Soviet Union which will provide a safeguarded—I repeat, safeguarded—first stage agreement.

I would like to make one point crystal clear. In spite of the Communist propaganda to the contrary, the United States has for years consistently taken the lead in seeking a safeguarded agreement on disarmament. To this end, the United States has made positive and constructive proposals that would bring under control the nuclear threat; bring about controls on conventional armaments and armed forces; bring about controls in the development of outer space objects, and the creation of aerial and ground inspection to provide against surprise attacks.

Until first-stage, safeguarded agreements in these regards have been reached, however, it is vital to the security of the United States and our free world allies that we maintain a strong military posture that will insure our individual and collective security.

I hope that my remarks tonight have provided you with a better understanding of the situation we face and the measures your country and its Armed Forces are taking to cope with the current situations.

In conclusion, I would like to emphasize that national security is everybody's business—not the concern of our Armed Forces alone. Our strength—at home and abroad—will accurately reflect your demands—it will be no better than you insist that it be.

I deeply appreciate the opportunity—and it has been a real pleasure—to talk to a group that has shown so much interest and devoted so much time and effort in the interest of our national security as you have.

Why the South Must Prevail

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. BOYKIN. Mr. Speaker, so much has been written in the newspapers and periodicals of sections of our Nation outside of the South concerning the so-called civil-rights bill, definitely slanted to prejudice the minds of the American people against the South, that I was agreeably surprised to note in a magazine published in Orange, Conn., National Review, a weekly journal of opinion, an article entitled "Why the South Must Prevail." Under leave to insert my remarks I include this article:

WHY THE SOUTH MUST PREVAIL

The most important event of the past 3 weeks was the remarkable and unexpected vote by the Senate to guarantee to defendants in a criminal contempt action the privilege of a jury trial. That vote does not necessarily affirm a citizen's intrinsic rights: trial by jury in contempt actions, civil or criminal, is not an American birthright, and it cannot, therefore, be maintained that the Senate's vote upheld, pure and simple, the common law.

What the Senate did was to leave undisturbed the mechanism that spans the abstractions by which a society is guided and the actual, sublunary requirements of the individual community. In that sense, the vote was a conservative victory. For the effect of it is—and let us speak about it bluntly—to permit a jury to modify or waive the law in such circumstances as, in the judgment of the jury, require so grave an interposition between the law and its violator.

What kind of circumstances do we speak about? Again, let us speak frankly. The South does not want to deprive the Negro of a vote for the sake of depriving him of the vote. Political scientists assert that minorities do not vote as a unit. Women do not vote as a bloc, they contend; nor do Jews, or Catholics, or laborers, or nudists—nor do Negroes; nor will the enfranchised Negroes of the South.

If that is true, the South will not hinder the Negro from voting—why should it, if the Negro vote, like the women's, merely swells the volume, but does not affect the ratio, of the vote? In some parts of the South, the white community merely intends to prevail—that is all. It means to prevail on any issue on which there is corporate disagreement between Negro and white. The white community will take whatever measures are necessary to make certain that it has its way.

What are such issues? Is school integration one? The NAACP and others insist that the Negroes as a unit want integrated schools. Others disagree, contending that most Negroes approve the social separation of the races. What if the NAACP is correct, and the matter comes to a vote in a community in which Negroes predominate? The Negroes would, according to democratic processes, win the election; but that is the kind of situation the white community will not permit. The white community will not count the marginal Negro vote. The man who did not count it will be hauled up before a jury, he will plead not guilty, and the jury, upon deliberation, will find him not guilty. A Federal judge, in a similar situation, might find the defendant guilty, a judgment which would affirm the law and conform with the relevant political abstractions, but whose consequences might be violent and anarchistic.

The central question that emerges—and it is not a parliamentary question or a question that is answered by merely consulting a catalogue of the rights of American citizens, born equal—is whether the white community in the South is entitled to take such measures as are necessary to prevail, politically and culturally, in areas in which it does not predominate numerically? The sobering answer is "yes"—the white community is so entitled because, for the time being, it is the advanced race. It is not easy, and it is unpleasant, to adduce statistics evidencing the median cultural superiority of white over Negro; but it is a fact that obtrudes, one that cannot be hidden by ever-so-busy egalitarians and anthropologists. The question, as far as the white community is concerned, is whether the claims of civilization supersede those of universal suffrage. The British believe they do, and acted accordingly, in Kenya, where the choice was dramatically one between civilization and barbarism, and elsewhere; the South, where the conflict is by no means dramatic, as in Kenya, nevertheless perceives important qualitative differences between its culture and the Negroes', and intends to assert 'its own.

National Review believes that the South's premises are correct. If the majority wills what is socially atavistic, then to thwart the majority may be, though undemocratic, enlightened. It is more important for any community, anywhere in the world, to affirm and live by civilized standards, than to bow to the demands of the numerical majority. Sometimes it becomes impossible to assert the will of a minority, in which case it must give way, and the society will regress; sometimes the numerical minority cannot prevail except by violence: Then it must determine whether the prevalence of its will is worth the terrible price of violence.

The axiom on which many of the arguments supporting the original version of the civil-rights bill were based was universal suffrage. Everyone in America is entitled to the vote, period. No right is prior to that, no obligation subordinate to it; from this premise all else proceeds.

That, of course, is demagogy. Twenty-year-olds do not generally have the vote, and it is not seriously argued that the difference between 20- and 21-year-olds is the difference between slavery and freedom. The residents of the District of Columbia do not vote; and the population of the District of Columbia increases by geometric proportion. Millions who have the vote do not care to exercise it; millions who have it do not know how to exercise it and do not care to learn. The great majority of the Negroes of the South who do not vote do not care to vote, and would not know for what to vote if they could. Overwhelming numbers of white people in the South do not vote. Universal suffrage is not the beginning of wisdom or the beginning of freedom. Reasonable limitations upon the vote are not exclusively the recommendation of tyrants or oligarchists (was Jefferson either?). The problem in the South is not how to get the vote for the Negro, but how to equip the Negro—and a great many whites—to cast an enlightened and responsible vote.

The South confronts one grave moral challenge. It must not exploit the fact of Negro backwardness to preserve the Negro as a servile class. It is tempting and convenient to block the progress of a minority whose services, as menials, are economically useful. Let the South never permit itself to do this. So long as it is merely asserting the right to impose superior mores for whatever period it takes to effect a genuine cultural equality between the races, and so long as it does so by humane and charitable means, the South is in step with civilization, as is the Congress that permits it to function.

Foreign Aid Versus Postal Aid

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. SCHWENGEL. Mr. Speaker, I believe it is most pertinent at this time to submit the following editorial entitled "Foreign Aid Versus Postal Aid," which appeared in the Davenport (Iowa) Democrat and Times on Sunday, August 18, 1957:

FOREIGN AID VERSUS POSTAL AID

Postal workers of the Nation are deserving of better salary considerations, as pointed out in another article on this page today.

Deterioration in postal services, already evident, will surely get worse unless the Congress takes its sights off foreign-aid appropriations long enough to face up realistically to the serious problems at our own doorsteps.

When compensation in the postal services is so low that it has to draw on undesirables who can't hold down jobs in the other posts, it would seem that the President and the Congress should take prompt action to remedy the situation.

Patrons of the United States mail services certainly don't want to entrust their precious letters and packages to carriers recruited right off the streets.

While the House of Representatives recognizes the need for postal pay increases, and has passed a bill to accomplish this end, the Senate hasn't even had any hearings on the measure. President Eisenhower has indicated he would veto a pay hike for postal and other Federal employees on the grounds that it would generate more inflation.

The President and the Senate need to be aroused by citizens of the Nation to put first things first. The matter of handing out billions in foreign aid, which is getting all the attention in these closing days of Congress, could well have waited until our own good postal servants were taken care of properly.

The Hungarian Fight for Freedom

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the editorial staff of the newspaper, Nemzetor, which is published by the Free Hungarians in Munich:

GENTLEMEN: We wish to appeal to the intellectual elite and youth of the free world in this, our first, English-language edition.

We, the young writers of Hungary's fight for freedom, are unknown here in the West, even our own country knows little of our existence, for our literature was born in prisons, concentration camps, and the underground movements of our universities. Examples of our work were never published, they were passed on by word of mouth or in manuscript form, keeping awake the spirit of resistance and fostering that ideal which makes us feel part of the free world.

Inspiring our modest efforts was that instinctive need—alive in us all—of giving expression to truth. Our generation grew up in the past 15 years, excluded from the intellectual community of Europe and the free world, whereas in its thoughts and desires considered itself part of that community. Our only means of contact with current free intellectual life were the fragments of information which reached us through the double bars of prison and the Iron Curtain. Among us younger writers the refusal to accept notorious ideologies and theories created an intellectual vacuum, which we eagerly tried to fill with the culture of the real Europe. Our translations and studies were born out of this desire.

The hatred of the well-known existing regime and the deep desire to resume closer relationship with the free world brought about the revolution. Today, our youth at home is once again the victim of terror; out here political and power groups, through their organizations, use it to achieve their own ends. We guard the voice of this youth, and make its aims our own. What these aims are? To tell the world what we experienced behind the Iron Curtain, to say also what we expect, what we ask for in the interest of our future, the future of all nations of the world. To achieve this end, we are prepared to risk causing discomfort to those who consider themselves the world's masters.

The uprising came suddenly, but found us not unprepared. After taking our part in the fighting, we founded, on November 3 in Budapest, the newspaper called Nemzetor. The paper's first edition should have appeared on the following day but for the Soviet attack on the city. Nemzetor was originally founded by Kossuth in the days of the 1848 revolution. In 1956, fighting once again for our national independence, we have carried on Kossuth's tradition.

There is not one professional journalist among us, nor any great authors. The paper is written and edited by students, workers and intellectuals scattered all over the globe. We are independent of all parties, ideologies and groups. To remain independent we had to make sacrifices here in the West, where not arms and ideologies, but money and power politics wage constant war. In the early days of our existence we were strongly advised to attach ourselves to some interested group if we wished to survive. We did not accept this advice and we are still in existence after half a year. It is true, that even our Hungarian edition can only appear fortnightly, and that this is our first attempt at a foreign edition, but, at least, we remained independent to this day. We refused security and the offers of world publicity. All over the world new friends turn toward us, moved perhaps by their conscience or the feeling of impending world catastrophy.

Perhaps our call has found an echo: the sounding of the alarm in a common army of intellect, above all national or power interests, in this hour of fast approaching danger.

We turn to you: students, writers, politicians to those of you who have not yet sold your words or pens, help in this common fight. Show our paper to your friends, use our articles in your publications. Call attention to our problems, problems on which your own bare existence may soon depend.

You have the right to publish all our articles, we only ask you to mention our name, and send us three file copies of the publication. We do not ask for any remuneration, but would accept gratefully any support you may be able to give.

Accept the warning of those who fought in the front line, and who still keep fighting, in the struggle which you will have to face some day.

EDITORIAL STAFF OF NEMZETŐR.

MAY 1957.

Senate's Chance To Aid United States Security

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gould Lincoln appearing in the Washington Star of August 20, entitled "Senate's Chance To Aid United States Security":

SENATE'S CHANCE TO AID UNITED STATES SECURITY

The Senate Appropriations Committee and the Senate, itself, have an opportunity to act strongly in support of the security of the United States. It remains to be seen whether the Senate, like the House, is willing to play political football with that valuable commodity. The mutual security appropriation bill was slashed by the House last week to approximately $2.5 billion—which is $800 million less than the authorization bill passed by both the House and Senate and now law. Further, it is $1.3 billion less than President Eisenhower said originally was needed to bolster the strength of the free world.

A determination on the part of many Democrats to kick the Republican President around, plus the willingness of too many Republican Congressmen, in the name of economy, to play the same kind of game, was responsible for this drastic action. When the bill was before the House, a final effort to have $715 million restored to the mutual-aid funds, made on motion of Representative JUDD, of Minnesota, Republican, was defeated by a vote of 254 to 129. The Democratic vote against this motion was 171, and only 43 Democrats voted for it. The Republicans—on whom the President might have relied for aid—were divided almost equally on this vote—86 for and 83 against.

THE ECONOMY DRIVE

Early this year mutual security appropriations—which go to support armed forces other than American in key spots in the free world, and to give economic aid to nations needing it and which might turn to the Communists—became the prime target of the political minded, including those who think they will gain support from economy-minded voters. The word went out that they had sharpened their knives to cut these appropriations to the bone. They were singled out in the Presidential budget, which was regarded in many quarters as too high in these days of peace. And now the blow is about to fall.

The Senate is in a position to restore some of these funds for mutual security and to fight it out with the House in conference on the appropriation bill.

President Eisenhower has appealed again and again to Congress not to make these drastic cuts in funds which go in major part to help finance the armies of Korea, Greece, Turkey, Vietnam, and Formosa. Without these funds, those countries will have to reduce their armed forces materially. The cut for Korea, for example, will mean a reduction of 5 army divisions—5 out of 22 divisions. Without striking a blow or firing a shot, the Communist armed forces, which have been constantly augmented along the Korean border, will see the potential strength of the Republic of Korea deprived of five divisions. Such a loss in actual war would be considered tremendous and vital. Considering the fact that American Armed Forces and billions of dollars were used only a few short years ago to halt the Communist drive to ake over the Korean Republic, the action of the House seems little short of insane. As President Eisenhower has pointed out, we "invested" 135,000 casualties—Americans boys—in the Korean war, and now it is proposed to endanger, or even to cast down the drain, that priceless investment.

MOSTLY FOR MILITARY AID

Almost all of the mutual security funds go for military aid—a fact the economists in Congress fail to emphasize. They like to speak of the mutual aid appropriations as a giveaway program. They do not, apparently, pay attention to the fact that if we permit large decreases in the armed forces of nations we have as allies in a war against the Communist nations, war becomes more probable. They do not reflect that if our money for these armed forces is withdrawn, our allies cannot maintain their strength, for they have not the resources to do so. And the money we give to these allies of ours puts soldiers under arms and in training which would cost us many times our contributions if we undertook to arm and train a similar number of our own men and keep them in the service.

President Eisenhower was overwhelmingly reelected last year because the American people believe (a) he is dedicated to maintaining peace and (b) he is qualified to perform that task. To that end, the President has given his utmost effort.. We have peace, al-

though it is constantly threatened by the Communist ambition to take over the world. The military and economic strength of the United States remains the great deterrent. This the President is determined to retain. But he has pointed out that without allies and their strength in the free world, the task of assuring peace is a burden that would become enormous and in all probability impossible. He rates the mutual-security program as essential; so essential that he is prepared, if world conditions demand it, to call Congress back into special session if the program is thrown out of the window now.

4–H Story

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. THORNBERRY. Mr. Speaker, those of us familiar with the 4–H Club program throughout the United States are aware of the splendid training offered to the fine boys and girls who are members. Within the 10th Congressional District of Texas, which I am privileged to represent, we have some very outstanding 4–H Clubs, such as the one at Lexington in Lee County, Tex., under the expert guidance of Mr. Brown O. Spivey, Lee County agricultural agent.

One of the members of the Lexington 4-H Club, John Alexander, has written an excellent story about his accomplishments through his 4–H Club work, and because I know it will be of interest to those of us in Congress, especially the Members from agricultural districts, I would like to have it included in the CONGRESSIONAL RECORD. John's story is as follows:

4–H STORY: MY 4–H EXPERIENCES AND ACHIEVEMENTS

(By John Alexander, Lexington, Tex.)

LESSONS LEARNED

What I have learned in 4–H Club work. I have learned to keep good records on my projects, to be submitted in the county agent's office on the right date.

What I have learned to make in 4–H Club work. I have made lamps, brooders, hog sheds, hog wallows, and self-feeders.

JOYS AND SATISFACTIONS EXPERIENCED

What joys and satisfactions I have had in 4–H. Some of the joys and satisfactions I have had in 4–H are as follows. Fairs and Achievement Days.

The most exciting day of my life was the day of the F. F. A. Livestock Show. I was going to show my gilt for the first time. After the judging was over I was very happy because my gilt had taken first place.

The next satisfaction of my life was when the same gilt took second place at the county fair. Another satisfaction of my life was when our county agent asked me if I wanted to go to the district leadership lab. I had a wonderful time there. Because I learned a lot of new games that are a lot of fun. I also learned a lot about county councils and observances, because that was the class I was in. We discussed a lot about county councils. The other group I was in was the singing group. We discussed what you had to have before you could be a good singer.

DIFFICULTIES ENCOUNTERED

When I joined 4–H I didn't know hardly anything about livestock. But, with the help of our county agent I learned how fast. Because he showed me how to keep records on my projects. He showed me how to care for hogs, cattle, turkeys, chickens, sheep, and goats. Our county agent showed me how to take care of our tractor and equipment.

INCREASED RESPONSIBILITY

Before I was in 4–H I didn't have hardly any responsibility. Now since I have been in 4–H I have had increased responsibility, because my parents think that 4–H has taught me something about responsibility.

HELPED OTHERS

I was in 4–H about 3 years and then I told my sister, Vivian, all the fun I was having in 4–H. After talking to her a long time I finally talked her into becoming a 4–H member. She said that she didn't have a project. So I said that was O. K. because she could write an essay to win one of the Sears gilts that were to be given away. So she said that she would write the essay and so a helped her to write the essay. About a month later she found out that she had won a gilt.

HOW 4–H HAS HELPED OUR FAMILY

The 4–H has helped us a whole lot, especially my parents. Because with all the projects that I have I can buy my own clothes and I have all the spending money I need without asking them for any money. The 4–H has taught our family a lot about farming, and many other things that we didn't know about. I am going to save my money from my projects to buy me some cattle. When cattle are cheap this fall I'm going to buy as many as I can so I can sell them this spring, when the cattle market is up.

With that I'm going to build me a fairly large brooder house. Because I am going to write an essay to try winning 300 baby chicks.

WHY I LIKE 4–H

Because it has helped me and my family so much. It has really showed us how to make better crops.

What I believe the most important reason of all is that I really like our county agent. Because he helps us with all our problems that we ask him about, and it doesn't matter on any subject either. Whenever there is a contest he tries to let us know about it. Because he likes to see us get awards, he tries very hard to get each of the 4–H members to enter each and every contest that comes around.

Sportsmen, Dealers Oppose Unwarranted Restrictions on Firearms, Ammunition

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. ANDERSON. Mr. Speaker, we Members in Congress from Montana are deeply concerned about a proposed Internal Revenue Service administrative action to place sharp restrictions on firearms and ammunition. A hearing on this matter has been scheduled by the Revenue Service here in Washington, August 27.

I should like to present the views of our Montana delegation and also the views of our western sportsmen and equipment dealers, which I believe are very well expressed in a letter I have just received from an eminent physician and sportsman, Dr. Alexander C. Johnson, of Great Falls.

The Montana delegation has directed the following letter to Mr. Dwight E. Avis, Director, Alcohol and Tobacco Tax Division, Internal Revenue Service:

DEAR MR. AVIS: In the opinion of the Montana congressional delegation, the proposed regulations pertaining to interstate traffic in firearms and ammunition appearing in the May 3, 1957, Federal Register, represent an invasion of the rights and privileges of the sportsmen in our State as well as those throughout the Nation. Furthermore, the procedures that would be established would work a hardship and an inconvenience upon manufacturers and dealers in sporting arms and ammunition.

The idea of firearms registration by owner is not new. In application, however, it is associated with attempts to suppress crime and amounts to no more than a penalty on the millions of law abiding sportsmen and gun owners in the hopes of frustrating those few individuals who would use firearms for illegal purposes.

It is conjectural whether the authority for the proposed regulations is contained in the Federal Firearms Act. In fact, it appears that the Internal Revenue Service is going beyond the implications of that act with the proposed regulations.

We object to the adoption of the proposed regulations in that they impose unreasonable and unwarranted restrictions on millions of sportsmen and other gun owners, on dealers and the manufacturers and importers of firearms and ammunition.

Sincerely yours,

JAMES E. MURRAY,
United States Senator.
MIKE MANSFIELD,
United States Senator.
LEE METCALF,
Member of Congress.
LEROY ANDERSON,
Member of Congress.

A BUREAUCRATIC EDICT

The letter from Dr. Alexander C. Johnson is as follows:

GREAT FALLS, MONT., *August 13, 1957.*
The Honorable LEROY ANDERSON,
Representative From Montana,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I am taking this opportunity to add my voice to the numerous protests you have undoubtedly already received concerning proposed revisions of the Internal Revenue Service Regulations pertaining to the Federal Firearms Act.

Hearings on this are scheduled for 10 a. m., August 27, Room 3313, Internal Revenue Building, Washington, D. C. These hearings are in reference to proposals on the part of the Alcohol and Tobacco Tax Division of the Internal Revenue Service which would impose a multitude of new regulations concerning the identifications of firearms, firearms records by manufacturers, and to add absurdity to the ridiculous even the requirement that complete and detailed records be kept of over the counter ammunition sales. I venture in regard to this latter item alone it would take a 10-story building of bureaucrats (heaven forbid) to keep the files and records alone during an average hunting season in Montana.

A particular item that is particularly dangerous is the proposal that the Internal Revenue Service would have the authority to examine records, etc., of arms and ammuni-

tion dealers at any time during business hours. This alone would appear to violate the constitutional provisions concerned with search and seizure.

All of these proposals constitute a usurpation of legislative action since various proposals encompassing the matters under consideration have been many times introduced as bills in State legislatures throughout the country and by and large have been rejected through the education and efforts by the honest law abiding sportsman of the country who use and enjoy firearms for hunting and marksmanship competition. There is no need for the proposals of the Internal Revenue Department and the only excuse that I can conceive for these matters even being considered is the desire of the Internal Revenue Department to enhance its own bureaucratic stature.

The history of all restrictive firearms legislation shows that the proponents of such action fall into two categories: The largest group are merely misguided individuals who feel that registration and control of firearms and ammunition will have beneficial effects from the standpoint of law enforcement. This is manifestly not so since some areas of the most rigid statutes and attempted control such as New York City are among the highest in crimes of violence involving firearms. The criminal can always get firearms. Restrictive legislation only disarms the honest sportsman. The second and possibly more dangerous group are the subversive elements who are aware of the value of a disarmed American public should there ever be an invasion or a war in which internal sabotage or turmoil would be much more easily carried out by armed subversive groups in the face of a disarmed public. This was the experience in numerous invaded countries during World War II where the invading army simply confiscated registration books and either collected the weapons or executed those who did not have the weapons listed in their name. The recent disclosures of active espionage networks in the United States suggests that this is not an idle supposition or fear.

I urgently commend to you that you exert all efforts to suppress this reprehensible attempt of the Internal Revenue Department to usurp the legislative prerogatives of the Congress by mere bureaucratic edict.

ALEXANDER C. JOHNSON, M. D.,
Commissioner Great Falls Police Department, Life Member National Rifle Association.

Address by Col. T. S. Ivy, USMC, Director 4th Marine Corps Reserve and Recruitment District, Representing Headquarters United States Marine Corps, Washington, D. C., at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States, Held at Harrisburg, Pa., July 10 Through July 14, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. VAN ZANDT. Mr. Speaker, at the 38th annual encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States held at Harrisburg, Pa., July 10 through July 14, there were several outstanding addresses delivered by prominent officials of the Federal Government in keeping with the theme of the encampment Defense Means Freedom.

On July 11, 1957, the following address titled "Defense Means Freedom: The Role of the Marine Corps," was delivered by Col. T. S. Ivey, USMC, director 4th Marine Corps Reserve and Recruitment District representing Headquarters, United States Marine Corps, Washington, D. C.:

DEFENSE MEANS FREEDOM: THE ROLE OF THE MARINE CORPS

(Address by Col. T. S. Ivey, USMC director, 4th Marine Corps Reserve and Recruitment District, Department of Pennsylvania Veterans of Foreign Wars, 38th Annual Encampment, Harrisburg, Pa.)

It is a very great pleasure to meet with you men and women of the Pennsylvania Department of the Veterans of Foreign Wars here at your 38th annual encampment.

I have the honor to represent the Marine Corps in your encampment program. The Commandant of our Corps, General Pate, has asked me to convey his best personal wishes to all of you and to express his hope that your State encampment will be a most successful and enjoyable affair.

Few citizens have such an investment in the welfare of our country as those who have fought on the field of battle to safeguard our Nation's interests. Nor is there any group which has a greater reason to want a future of peace.

Your keen interest in our national security remains a vital asset to our overall strength. You have every reason to be proud of your continuing efforts to promote and support an adequate Military Establishment for our country. The theme of this encampment, Defense Means Freedom, is in keeping with those efforts. I speak for all marines when I express our gratitude for your achievements in encouraging public support for the national-defense program.

In any discussion of national defense, it seems to me that we should always keep clearly in mind why our Nation is engaged in a defense effort that dwarfs anything we have ever had in time of peace before. We, as a Nation, certainly have no designs on the territory or rights of any of our neighbors in the world community. On the contrary, since World War II, we have contributed generously in men, money, and the material to aid and assist other nations to recover from the effects of that war and to safeguard our freedom and integrity.

I need hardly remind this audience that our defense efforts are rather the direct result of the menace posed by militant national communism. Despite announcements regarding reductions in armed strength, the Communists will still retain armed forces far in excess of anything needed to defend their home territories. This, coupled with the expansionist policy of the Communist world, means that, for our own safety, we must keep our defenses strong.

We must be so strong and so ready, in every department, that it is obvious to the entire world, to friend and foe alike, that we cannot be defeated on any battlefield, in a big war or in a little war, in a global or in a peripheral war, by sneak attack or in the long pull.

This is our task today, and it will be our task for a long time to come. Our aim is to prevent war by our apparent ability to win it.

Today I want to tell you what the Marine Corps is doing as its part in maintaining defense for freedom. I want to give you an up-to-date report on the role of the corps, and how it is organized to play its role.

Our present regular or active strength stands at approximately 200,000 officers and enlisted. Backing up our active-duty marines, and ready to furnish the increased strength we would need in event of a large-scale emergency, we have a Reserve of approximately 265,000 officers and enlisted.

The condition of the corps today is excellent. We attribute this to the high sense of motivation which prevails among our individual marines. We are made up 100 percent of volunteers—vigorous young Americans who share a common desire to serve their country.

The Marine Corps responds to the needs of a country which is primarily a maritime power. Our Nation, by virtue of its geography and the genius of its people, has exploited the value of seapower for almost two centuries. Seapower is the means which enables us to extend our national strength beyond our own borders. Without seapower, our land strength and our air strength might well be confined to bases far removed from those areas of the world where we need them most.

Seapower means more than just ships that move upon the ocean. It means all the elements that make the seas a source of strength for us and, conversely, a source of weakness for our enemies. It means surface strength, air strength, undersea strength, and in the particular area of the Marine Corps, it means amphibious strength also.

It is this principle—dependence upon seapower—which dictates the necessity for the Marine Corps, the Nation's amphibious force in readiness. As such, the corps is constantly available on the shortest possible notice for service beyond the seas in time of emergency.

The corps provides a compact, flexible, mobile air-ground striking force, ready for employment in any sector of the globe on the shortest possible notice. The value of such a force in the light of present world conditions cannot be overestimated.

To meet its responsibilities as America's emergency military force, the corps is organized into two main groups: the operating forces and the supporting establishment. By act of Congress, we are required to maintain 3 marine divisions and 3 aircraft wings.

These forces operate as close-knit air-ground teams. They constitute the bulk of our operating forces. Our lean supporting establishment, consisting of schools, training and supply depots, and posts and stations, exists for the sole purpose of supporting the operating forces.

The hard core of our combat organization, the 3 divisions and 3 aircraft wings, make up the Fleet Marine Forces assigned to the Atlantic and Pacific Fleets. These are strategically disposed to meet the situation which exists in the world today.

The Second Marine Division and its aviation partner, the 2d Marine Aircraft Wing, are based on the east coast in North Carolina. One battalion landing team of this air-ground force is afloat with the 6th Fleet in the Mediterranean. If the need arose, the rest of this division and wing could leave for the Mediterranean, or anywhere else in a matter of days.

In southern California, the 1st Marine Division is based at Camp Pendleton. Its supporting Marine Aircraft Wing, the 3d, is located at nearby El Toro. These units are welded together as taut, highly trained striking forces, needing only the command and the necessary shipping to load out for combat operation.

Overseas, we have the 1st Marine Brigade—an air-ground team in the fullest sense—stationed in Hawaii.

Further west, in Okinawa and Saipan, the 3d Marine Division and 1st Marine Aircraft Wing (less the units forming the

brigade in Hawaii) are poised on the edge of a vast area where the flames of aggression may break out at any time in many localities.

All of these units are prepared to move to any trouble spot in the world as fast as ships or transport aircraft can be made available. And they are ready to go into action upon arrival.

At the moment, the Marine Corps' primary purpose is to help prevent war by deterring aggression against the United States or any of our allies.

As I have already indicated, to be effective in deterring war, our military strength must create in the mind of any potential aggressor the firm conclusion that any attack against the United States or our free world allies, will be contested and the aggressor will be the loser.

To be convincing, our Nation's military program must be based on reality. It cannot be mere talk or threat. It must be supported by flexible evidence of sufficient armed strength in being. To be effective, this armed strength must be balanced so that it is applicable to a variety of possible situations. Balance does not mean equal strength in Army, Navy, Air Force, and Marine Corps. Balance means flexible, mobile, proportioned strength to deter or fight any type of armed conflict, from jungle or arctic warfare to atom or nonatom wars of any size.

The Marine Corps contributes to this balanced strength primarily through its amphibious capability and its readiness in being. To any potential enemy, the Marine Corps represents the immediate striking force he would encounter after the outbreak of war or the initial act of local aggression. To the extent that the Marine Corps is well trained, highly mobile, and always ready for action, it is an important part of our Nation's deterrent strength. We best serve our country and its citizens by preventing war, if by our readiness we can accomplish that end.

In the event deterrence fails, what type of war do we expect to have to fight? In the Marine Corps, we rate the all-out atomic war as only one form, and not necessarily the most likely course which war may take. This evaluation stems from sound reasoning. As atomic capabilities grow, it seems increasingly improbable that an aggressor would intentionally embark on the gamble of all-out atomic world war. So as long as we maintain adequate atomic retaliatory power the danger of a general war diminishes.

At the same time, however, it is becoming increasingly apparent that what may be a deterrent to general war is of much less value as a deterrent to other forms of aggression. The Communists, in their drive for world domination, have turned to another kind of struggle—the limited war. This is the kind of warfare which has confronted us and our allies in Korea, in Indochina, in Malaya, and in the Middle East. It is the war by proxy, the war by satellite, the war by subversion. It can be argued with logic the real war.

The Marine Corps has set itself the task of readiness for any kind of war, the general or the limited war.

If all-out war occurs, we see our fleet marine forces in the role of exploited troops, seizing the initiative and capitalizing upon the air victory which we must win during the first weeks of such a war. It may be, of course, that the enemy would surrender when he found he could no longer contest our mastery of the air. But we think it more likely that the end would not come until we had invaded his homeland, defeated his armies, and seized control of his economic and political centers of gravity.

In the more likely event of limited war, our role is even more immediate and direct. This type of disturbance must be dealt with promptly—before it precipitates the big war which no one can truly win.

I would call your attention to the fact that most of the critical areas where limited wars are about to start have a common characteristic—they are exposed to the sea. Thus sea power can be used effectively in the cessation and control of limited wars. This is a type of operation in which naval power—the Navy and Marine Corps together—has had extensive experience and significant success.

The man on the ground with a rifle and the warship in the harbor are tangible symbols of the power of the United States of America. But the threat of nuclear attack, like the high altitude bomber that backs it up, is impossible to see with the naked eye. It is like the electric chair; not like the policeman on the corner.

It is probably true to say that one H-bomb could kill more people in a millisecond than a marine landing force could kill in a year of combat. However, it is certainly true that a Marine landing force can do a lot of things that an H-bomb cannot do. An H-bomb, or even the threat of an H-bomb, cannot project our national policy ashore on foreign lands. An H-bomb cannot cover the evacuation of American citizens from a troubled area. An H-bomb cannot seize an advanced base, or defend it. An H-bomb cannot restore law and order, or bring about constructive changes in the political arrangements of an area vital to our national security. An H-bomb can only destroy.

So long as this country maintains forces that are capable of fighting—and winning—limited wars, it is much less likely that we will have to fight an all-out, hydrogen war. Our nation has such forces today.

The versatile striking forces of the Navy combining with the strategic mobility of the Fleet Marine Forces give our Nation a tremendous military advantage over any potential enemy. Let us keep it that way.

Finally, as we look toward the future, we do not expect to meet the conditions of tomorrow with the tactics, technique and equipment of yesterday, or even of today.

Marines will not again make landings of the type we made at Guadalcanal, Saipan, Iwo Jima, or Inchon. With the advent of nuclear warfare, time has run out for this type operation, with its large concentrations of vulnerable shipping and its intricate and time-consuming manuevers. Since the end of World War II, the Marines and the Navy have been working together to perfect a new doctrine for amphibious operations, a doctrine built round the helicopters and new weapons of great power.

The amphibious assaults of the future will be made by Marines in transport helicopters, taking off from fast, widely dispersed ship formations under the cover of supporting fires delivered by planes, guns, and missiles.

Besieging difficult beaches and heavily defended areas, the Marines will seize key objectives and then quickly spread out to consolidate a beachhead for further expansion. Such landings will have more speed and flexibility, and a greater shock effect than the amphibious operation we have known before.

And so, ladies and gentlemen, in conclusion, I would like to express the Marine Corps' appreciation to the Veterans of Foreign Wars for your continued interest in all of our affairs. You have our very best wishes for success in your many worthwhile projects in the interest of our country.

As for our part, I assure you we are ready for anything the future may hold. In fulfilling our important military role, we are determined to uphold the high standards established by the Marines of the past. In doing so, I am confident we will always have the strong support of your splendid organization.

Donald J. Russell, Southern Pacific President, To Receive Award

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. PORTER. Mr. Speaker, the able and distinguished president of the Southern Pacific Co., Donald J. Russell, has been selected for this year's National Defense Transportation Association award. He is the first railroad man to be so honored by the organization. The Southern Pacific Co. is of vital importance to the fourth district of Oregon where much lumber, fruit and other commodities rely principally on rail transportation to reach their markets.

The citizens of southwestern Oregon look to the Southern Pacific for improved freight and passenger service and especially to Mr. Russell. The company has made great strides under his leadership and we have every expectation that its performance will continue to improve.

Following is a complete item from the New York Times for Sunday, August 18, and an item which apeared in the Washington Evening Star's column Today in Business, by William A. Millen for Monday, August 19, telling about Mr. Russell's award:

[From the New York Times of August 18, 1957]

Donald J. Russell, president of the Southern Pacific Co., has been selected for this year's National Defense Transportation Association award. Mr. Russell is the first railroad man to be so honored by the organization.

This eighth in the series of annual awards will be formally presented at the association's annual dinner on November 21 during it 12th annual convention. The 4-day meeting opens in Washington on November 18.

The association annually honors the person who has made the most outstanding contribution in the preceding year to the solution of emergency transportation problems affecting national defense. The 1956 award was presented to Donald W. Douglas, chairman and president of the Douglas Aircraft Co., at Salt Lake City.

A spokesman for the association said Mr. Russell last year directed the establishment of a microwave railroad control installation between Dunsmuir and Black Butte, Calif., which will provide 100 percent reliability during all weather conditions in an area subject to 100-mile-an-hour winds and 10 feet of snow in winter.

The Denver-born railroad executive started with Southern Pacific in 1920 as timekeeper of a maintenance-of-way gang, shortly after completing his engineering studies at Stanford University. He now lives in San Francisco.

This year's convention and transportation forum has as its theme, The Shape of Things To Come in Transportation and Logistics. Presentations during the meeting by the Army, Navy, and Air Force will permit a look at equipment, operations and techniques included in the services' transportation and logistical planning for the next few years.

More than 60 prominent Government, military and civilian leaders of transporta-

tion will appear before the convention at various meetings and forums. These include Edmond H. Leavey, president of the International Telephone and Telegraph Corp.; Gordon Gray, director of Defense Mobilization; Carter L. Burgess, president of Trans World Airlines; John M. Franklin, president of United States Lines; James T. Pyle, Civil Aeronautics Administrator, and Clarence G. Morse, chairman of the Federal Maritime Board, along with top officers in the Armed Forces.

Clark Hungerford, president of the St. Louis-San Francisco Railway, is president of the association.

[From the Washington Evening Star of August 19, 1957]

When the National Defense Transportation Association meets here at the Sheraton-Park Hotel, November 21, the president of the Southern Pacific Railroad Co., Donald J. Russell, will be specially honored.

This was announced today by the Defense Department, which said the formal presentation of the eighth annual award will be made to Mr. Russell at the association's annual dinner. It will be bestowed on the person who has made the most outstanding contribution in the preceding year to the solution of emergency transportation problems affecting national defense.

The Joint Transportation Committee of the Joint Chiefs of Staff selected the winner of the award. The Defense Department said Mr. Russell has devoted his entire career to the expansion and improvement of American railroads for commerce and defense. He began work with the railroad as timekeeper for a maintenance-of-way gang in 1920.

Among his contributions, the department cited Mr. Russell's development of a common alternate railroad route around the congested city of Los Angeles; his work in clearing earthquake-damaged railroad tunnels when rail service on the San Joaquin route in California was interrupted and the present building of a rock causeway across Great Salt Lake, scheduled for completion in 1960, to allow full-speed operation of trains across the lake. He is a member of the business advisory council of the Commerce Department and a director of the Association of American Railroads.

The theme of this year's convention and transportation forum of the association to be held here is "The Shape of Things to Come in Transportation and Logistics."

More than 60 distinguished Government, military, and civilian transportation leaders will appear before the convention at various meetings and forums, officials said. These include: Director of Defense Mobilization Gordon Gray, General Services Administrator.

Billboards Are Winning

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waterville Sentinel of August 20, 1957:

BILLBOARDS ARE WINNING

Unless there is greater public pressure than has thus far been brought to bear, there may be no antibillboard legislation come out of the present session of the Congress.

At the present writing the philosophy expressed by the lobbyist for the billboard interests, former Senator Scott Lucas, seems to have the upper hand.

"This country was built on economics, not beauty," said Lucas, seemingly satisfied that this statement should settle the argument for once and for all.

It is a public-be-damned attitude which presumes that the expensive new highways the motorists will pay for through their taxes are being built, not for the motorist, but for any interest that can capitalize on them.

Certainly, economics is a vital factor in the country's growth, but Lucas' implication that his clients should have free rein because of it is a non sequitur.

The motorist is paying for the new highways. He ought to be entitled to an unobstructed view of the country's beauties as he travels over them. Maybe if enough motorists yell loudly enough to their Congressmen they may get some action. Thus far, the billboard lobby seems to have been yelling louder even though it is a small minority.

Address by His Excellency John J. Hearne, Ambassador of Ireland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Ambassador Hearne at College Misericordia, Dallas, Pa., at the commencement exercises of the college:

ADDRESS DELIVERED BY HIS EXCELLENCY JOHN J. HEARNE, S. C., LL.D., AMBASSADOR OF IRELAND, AT THE COMMENCEMENT EXERCISES OF COLLEGE MISERICORDIA, DALLAS, PA., ON MONDAY, MAY 27, 1957

Your excellency my lord bishop, right reverend monsignori, very reverend and reverend fathers, Mother Provincial, Sister Annunciata, my dear graduates, ladies, and gentlemen, I was greatly honored and very happy to receive your gracious and kind invitation many months ago, to be your guest on this occasion. I am honored again by the spontaneity and warmth of the welcome which you have accorded to me this evening at this exquisite academic ceremony in the presence of His Excellency and so distinguished and representative a gathering.

Ever since the time when, as a child, I first heard of, but scarcely understood, the legend of the glory of this land, I learned also of, and realized a little more, the renown of your many famous American colleges and universities. Irish scholars, of whom I was told, whose names were to me of fabulous fame, had come to lecture in these great centers of learning. Irish professors had come to join the faculties. And, ever since their foundation, students of Irish or other birth or forebears had flocked to their hallowed halls. So that, as a young man, I had long associated the story of your educational progress with the unfolding of the Irish phenomenon on this continent, and both with the greatness of America.

You will not marvel, therefore, at the feeling of happiness with which I crossed your portals this afternoon to enter into the inheritance of this place. For me, this is another experience of a great academic occasion which is a mark of the character and in earnest of the continuity of Irish-American friendship. For, the long and intimate friendship between our two countries is more clearly symbolized by our association today in this commencement than by any other circumstances surrounding or inspiring our entirely felicitous and never more fruitful diplomatic relations. Through all the vicissitudes of our separate but converging fortunes we have been bound to each other by many ties, but never more clearly or closely united than in the patrimony of a great intellectual tradition, classically founded and perennially reformed; always assailed, yet always secure; never unthreatened, yet forever enthroned.

Misericordia College has, since its establishment, been a custodian of that tradition in its integrity, and a citadel here in the State of Pennsylvania of the moral supremacy of its code. I am speaking, as you observe, of what has come, somewhat mistakenly, to be called Western civilization.

We are met at a time when that civilization, the greatest the world has known, or will ever know, has come upon its greatest crisis, and already, in one region of the world, its greatest catastrophe. We who are assembled in this commencement are the descendants and, in a special sense, representatives of Western European nations whose destinies meet, again and again, throughout the Christian centuries, and become inseparably interlinked, at crucial junctures in affairs, with the supreme cause of the supernatural destiny of all mankind.

Speaking for my own country, you will let me, in this address, recall to you that she stood sponsor at the birth of that France around which all Europe grew up and grew old. She held a lamp and was herself a light through all that long dark night which covered, yet concealed not, the final horrors of the reeling Roman scene, out of which broke at last upon her weary waiting eyes the splendor of the first bright morning of the Christian Western World. You recall how, in the end, when the cult of Christianity became a continental civilization, and Europe first became one, as she must become one again, it was the legend of Tours and its victor, and of Martin, the kinsman of Patrick, and of Columban of Luxeuil, which encircled the throne of Charlemagne.

That was in the early time. But it was ever likewise as the centuries rolled by, and the epoch was complete, in which Europe became the center of the world and the leader of world order. Irish statesmen stood in the councils, Irish envoys in the chancelleries of the new Europe. Irish prelates ruled in its metropolitan sees. Irish monks and missionaries began the ceaseless pilgrimage of the Irish, then from Calais to the Ukraine, which, one day, would be slung like the sash of a great sodality from shoulder to hip and hip to shoulder around the two hemispheres of the globe. Irish soldiers served in the armies of the Christian continent. Irish scholars studied in its libraries. And Irish doctors lectured or learned in the schools the fame of whose jurists "utriusque juris" made the doctorate of laws the crowning academic distinction in every university in the world today. Out of that gleaming and glorious Christendom has poured for 4 or 5 centuries in a ceaseless flood into the Americas that mighty tide of thoughts, traditions, and memories which now forever laps the shore of all the lands and breaks today about our feet in this commencement, in this storied center of American culture, at the heart of American life.

And, when the West moved west again, see how our people go on meeting the other peoples of the European family of nations, Italians or Spaniards or French at crossroads of destiny. You know the legend of Columbus kneeling at Holy Mass in Galway before the *Santa Maria* put to sea. You recall that

picture of Jacques Cartier walking the quay at St. Malo, arm in arm with the young kinsman of Silken Thomas, Earl of Kildare, before the one set sail on his prodigious voyage and the other returned to his fate in the Tower of London. There is, again, that glimpse of the great Jesuit Pilgrim Father St. Jean de Breboeuf at Rouen when the great O'Neill passed through the city on his way to Rome after the Gaelic Christian civilizations had gone down to seemingly permanent disaster at the Battle of Kinsale. And there is the coincidence of the saint's last journey of all across the sea to his martyrdom up there in Canada, as Michael O'Cleary, chief of the Four Masters, hurried from Louvain across the English Channel to save the Irish manuscripts from the most senseless holocaust of historical records the world had ever known.

Jean de Breboeuf and Isaac Jogues—the first priest in what is now the State of New York—stand at the end of the pagan, and near to the beginning of the Christian era in North America. The great Earl of Tyrone directed at Kinsale the last rearguard action in Western Europe to restore the unity of European society shattered by the 16th century schism. The Four Masters stand between the Jesuit martyrs and the exiled Irish prince at the turning point, rather than the turn—of the 17th century as the rescuers of the chronicle of old Ireland which was to inspire an Ireland one yet distant day to be born again, its spiritual tradition unbroken, its secular civilization inherited as a relic rather than a legacy, but no longer, alas, intact as a framework of national order. The agony of our people is stretched over the period of which I am speaking. But at the end their mission was again secure, and the Irish migrations which followed each other west across the ocean brought to this land the whole glorious inheritance amassed, century after century, by the sacrifice, sanctity, and genius of storied Christian nations, guarded by a noble Christian knighthood in shining armour from the flight of the Roman eagles to the flight of the Irish earls.

Your excellency, I have not woven these fantastic cross-threads that flash through the texture of history as an academic exercise. I have done so so that we may glimpse together the meeting of my people with other European peoples, and with your own, at crossroads of history, where the light catches, and transfigures them a moment before they shuffle down the crowded highroad, on which they mingle with the multitude, and, like the great apostles, seem to disappear. And I have done so secondly, and chiefly, because our meeting today takes place at another crossroad which is a milestone on the road of Irish-American destiny, and takes place, at the same time, at a crucial point in human affairs.

As you all know, the chief tragedy of modern political history has been the failure of free nations to make the framework of the state the shield of civil society. European nation after European nation had imperiled its freedom by forsaking the path of truth, honor, and virtue. It is the truth which makes us free. European nation after European nation had given up the practice of the faith upon which it was historically founded. They had deprived their public law of its final sanction, and the morality of their people of its final motive. It is the faith which makes us whole. But the code itself was not destroyed. The whole intellectual tradition survived, the tradition of objective truth, of objective beauty, and objective virtue or goodness, a sense of the issues of right and wrong, of justice and injustice, and a sense of standards in private and public behavior. Let me put it to the graduates of this great college in this way: The pattern of life which survived the vicissitudes I have been describing was the same as that which had united Europe for a thousand years, the Europe which had defeated the last depotisms of the Roman Empire, which had hurled back Hun and Goth and Vandal, and had contained the tide of Islam. It is the pattern of life which, woven into the fabric of new communities and new political systems, became the design for the two great democracies of North America. I must not presume, Your Excellency, to speak in the commencement on what that patrimony means at the present juncture to this country and to the world at large. This institution is, as I said at the beginning, a chief custodian of all that noble estate and domain.

But may I say one thing to the young graduates who are in the thoughts of us all at this Commencement, before whom, in this early summer, their lives are opening upon prospects of golden harvests brimming far horizons. May I remind them that the formation secured for them in this great centre of the highest education America or any other country today can offer was purchased at too heavy a price for any one who has received to lightly regard, or ever disregard it. The whole effect of that formation upon your career you will not understand or appreciate for years and years to come. It may be that, before you do so, the most terrible avalanche ever unleashed upon the civilization of which you are now graduates and citizens will break upon this hemisphere which is now the keeper of the conscience of the West and the guardian of the peace of the world. It will depend on you whether or not this country can weather the maelstrom. Be not believers merely but doers also. Let the excellence of your lives shine for all to see in the community in which you live, in your professional relations and your social surroundings. Be intellectually honest and intellectually humble. Teach your friends and neighbors, aye, and your enemies how to distinguish money from wealth, interference from influence, notoriety from fame, pride from self-respect, speed from progress, luxury from elegance, glamour from distinction, fashion from good taste, respectability from worthiness, I mean the spurious from the genuine, and the temporal from the eternal.

And this brings me, in a final word, to what seems to me to be the circumstance of your graduation today which has for your beloved country its greatest significance of all at this tremendous juncture in its affairs. The world solidarity of the internationalists can be achieved without removing or impairing national distinctions which have existed for so long, or the separate cultures which have enriched so many countries. I am deeply convinced of this, and of the mission to which in that connection this great land of yours is called. Can anyone doubt the providence which is shaping the destinies of your country today? For, out beyond the rough and ruthless interregnum through which we are now passing there stretches away into the future the gleaming prospect of the refulfillment of the American dream in farflung fields of your influence. Was there ever, my fathers and my sisters, in all history a mission field so vast? Was there ever a missionary people of past centuries so well prepared and so manifestly predestined as yours to sow the crop or reap the harvest? You do not, as did Portugal and Spain and France and Britain seek the conquest of other lands or the subjugation of other peoples to build or embellish an empire or to enrich or embroider a throne. You seek not political control or commercial supremacy or military domination. Your history shows no such colonial ambition. On the contrary, your armies have brought liberty to millions in bondage. Your ships of the sea and the air have brought life to the millions you have freed. Your statesmen stand for justice and freedom and peace in the council of the world. Freemen everywhere and men struggling to be free gaze upon you in admiration and speak your name in reverence and gratitude. I say this because you must never make any mistake as to the real attitude to this country of free peoples whom your charity has aided and uplifted and saved. Show to all the nations, slave if you can, and free if you will, the mighty Commonwealth you have made here in which men of all races and conditions and creeds can live together and work together in a brotherhood of men under the fatherhood of our Father who is in heaven. And wherever your destiny leads you never forget that the story of which I have been speaking today is woven forever into the legend on your shield. And should you also, in the providence which has led you thus far, be called upon—like so many of those nations whose protector and leader you have become—to endure for justice's sake, oh, never forget that there is not malice enough in the hand of evil in high places to destroy the image of our Creator in His masterwork or energy enough in the entire universe to blast the sign of our salvation, and of the salvation of all mankind out of American skies.

"Castles are sacked in war
And chieftains are scattered far—
But truth is a fixed star."

A Thoughtful Suggestion for Increasing Consumption of Surplus Farm Commodities

---

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mrs. KNUTSON. Mr. Speaker, a constituent, Mr. Helmer Linder, of Oklee, Minn., has written me a very interesting suggestion for increased consumption of farm commodities. Under leave to extend my remarks I request permission to insert in the RECORD this thoughtful and provocative idea.

The letter follows:

OKLEE, MINN.,
August 18, 1957.

Congresswoman COYA KNUTSON.

DEAR COYA: This letter is inspired by an article I read in the May 1957 issue of Capper's Farmer. It was written by a woman correspondent who had traveled with her husband all over the country and ate in restaurants.

She told about the small portions being served to customers such as 2 small pats of butter, small servings of meat, not enough for a normal well-balanced diet, and small 6-ounce glasses of milk instead of 8 ounces. She told of one eating place who did it differently and really gave liberal portions, and how she and her husband enjoyed it. She also told of the general dissatisfaction of the restaurant eaters with these small portions and how she wouldn't dare to give such small portions to her family or guests in her home.

Now she said there are 200,000 eating places in the country serving 50 million meals a day conservatively, she cited the impact it would have on our farm-surplus problem if all restaurants could be induced to serve larger portions.

Now, how could this be brought about? Well, here's my 2-cent idea. You know how

certain eating places claim they are recommended by Duncan Hines. They lived up to a certain standard of cleanliness and when Duncan Hines came around he gave them permission to use his recommendation in their advertising.

I believe a similar idea could be used for getting restaurants to serve larger portions, for instance, a Commission under the Department of Agriculture could issue permits to an eating place who agreed to serve portions up to the Commission's standards subject to regular inspection by proper authorities, and these permits could be used in their advertising as long as they lived up to the standards set by the Commission, the idea being that such restaurants would get so much extra trade to compensate them for the extra costs.

Now this scheme shouldn't cost much in tax money, every farm organization ought to be for it, labor, who are the eaters should be for it. These products are the ones we produce in surplus at depressed prices, so, why not dish it out to hungry people, freely received, freely give.

If you think this idea has any merit, you had better read it in the May 1957 issue of Cappers Farmer, which I'm sure you can obtain a copy of. It's called "Who is chiseling?"

If you think it's all rot, don't hesitate to throw this in the waste basket, I know there are many angles which aren't apparent to us guys out in the sticks.

I get and enjoy your news letter, Capitol Chats, regularly. Thank you.

Your friend and supporter,

HELMER LINDER.

Freedom of Choice and the Consent of the Governed

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by Dr. James A. Chandler, 32d degree Knights Templar, which appeared in the July 1957 issue of the Masonic Monthly, published in Mobile, Ala., entitled "Freedom of Choice and the Consent of the Governed":

FREEDOM OF CHOICE AND THE CONSENT OF THE GOVERNED

(By Dr. James A. Chandler, 32d Degree Knights Templar)

"To secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government." (The Declaration of Independence.)

God is the author of freedom. He created man in His own imagine and likeness. Man was made, as the Psalmist said, "a little less than God."

God gave freedom of choice to our first parents. It is that which differentiates man from the brute creation. God could not have made man, if He had made man less than a sovereign endowed with the awful powers of choice and its responsibilities.

Man deprived of freedom is like a caged eagle that looks with longing eyes to the heights of his native element. Pitifully, with utter defiance, he beats his wings against the bars of his imprisonment until they are all bleeding and sore.

In McGuffey's Reader, as we believe the best ever published, a story is told of a man who, while walking down the street, found a lad who had a caged bird for sale. The good man paid the price, and, to the utter amazement of the lad, opened the door of the cage and gave to the bird its freedom. That but feebly illustrates what Jesus came to do—to restore to man his freedom.

The freedom of man was proclaimed by patriarchs and prophets, and Jesus, the Son of God, was the embodiment of democratic principles. Said He, "You shall know the truth, and the truth shall make you free." He definitely claimed that the Spirit of the Lord had anointed Him "to proclaim liberty to the captives, and the opening of the prison to them that are bound."

The mother of James and John was very ambitious for her sons. Believing that the Christ had come to establish some form of a politico-religious organization among men, she asked that her two sons be given very prominent offices in His kingdom, the one upon His right and the other upon His left. When the other disciples heard of it, they were very angry. Jesus called them unto Himself and said, "You know that the rulers of the gentiles lord it over them and their great men lord it over them. But it shall not be so among you, but whoever would be great among you must be your servant * * *" servants of the people, not lords over them. That teaching is the foundation of our Republic. Our democracy derives its just powers from the consent of the governed through the exercise of their freedom of choice. That freedom was given to man in his creation. The Declaration of Independence recognizes man's liberty as an endowment from God and a self-evident truth. Being so, no power on earth, no tyrant, no government, no oligarchy, no decree can take that right away from man. It may be denied him, or he may be robbed of it, but it remains his inalienable right.

A lawyer once dreamed that all the democratic ideas of Jesus were stricken from his lawbooks, only to find them utterly meaningless. So we would find it today, if the teachings of Jesus, relative to those powers of government derived from the consent of the governed through the exercise of their freedom of choice, were expunged from our courts of law and jurisprudence.

Moreover, such eminent jurists as Blackstone and Storey, such masters of the rules of evidence as Starkey and Greenleaf, such legal geniuses as Chief Justice Marshall and Daniel Webster likely could not have attained the eminence that graced their profession but for their faith in the Christ and His democratic principles. And certainly there would have been no Washington, no Jefferson, no Franklin, no Madison, no Jackson, no Lincoln, nor the long line of notables that have made our country great but for their faith in those democratic principles that grew out of the teachings of Jesus.

We now have a Supreme Court that would strike down a way of life built upon freedom of choice, "a way of life that has been developed over a period of 160 years." If the integration decision of the Court is enforced, it will destroy our great public-school system.

That decision of the Supreme Court is a blow against the greatest democracy this world has ever known, because it is a blow against the basic law of God and all just government, freedom of choice.

Emerson says in his essay on Politics. "The form of government which prevails is the expression of what civilization exists in the population which permits it," and Plato says in his Republic, "Like man, like state; * * * states are made out of the human natures which are in them." There hangs the tale of this hour. We have a rule of men, not of laws. Our Constitution has not changed, but men have decayed, "while freedom weeps, wrong rules the land, and waiting justice sleeps."

The Honorable Thomas Marshall, of Corpus Christi, Tex., a constitutional authority, very pertinently observes that "an uncontrolled Supreme Court is the road to tyranny." It seems that upon that road we have traveled far during the past 20 years. It is the plain duty of the Congress to give it a roadblock.

It should be increasingly apparent that the rights of the States and the people are being usurped by the Federal Government. Restrictions to the authority of the Federal Government, as set forth in the Constitution are being brazenly violated by those whose sworn duty it is to uphold and defend them.

Washington, Jefferson, Franklin, Jackson, and a long line of national leaders have repeatedly warned the people against the consolidation of the functions of Government in Washington, D. C., particularly those rights reserved by the Constitution to the sovereign States and the people to govern their own internal affairs.

Interpretations of the Constitution by the greatest judicial minds this country has ever produced, such as John Marshall, Joseph D. Story, Samuel P. Chase, Roger Taney, Melvin W. Fuller, Edward Douglas White, William Howard Taft, Oliver Wendell Holmes, Louis D. Brandeis, Charles Evans Hughes, Harland Fiske Stone, whose decisions became legal precedents respected and lauded by all men, have been ruthlessly violated by a Court that esteemed more highly the opinions of a few Communist-tainted sociologists, if not soaked with communism, than they did the legal opinions of the greatest Justices that ever sat upon the bench of the Supreme Court.

It is a matter of record that "when the Court included such great Justices as Taft, Holmes, Brandeis, and Stone, it declared in *Gong Lum* v. *Rice* (275 U. S. 78), in an unanimous opinion, written by Chief Justice Taft, that segregation in public schools had been many times decided to be within the constitutional power of the State legislatures to settle without interference of the Federal courts under the Federal Constitution. The Court, speaking through Chief Justice Hughes, said in another case that the question could 'no longer be considered an open one' (235 U. S. 151)." (The Honorable James F. Byrnes, formerly Justice of the Supreme Court.) Can it be that the present Supreme Court has all the wisdom that all our former great Justices have lacked?

Yet, there are those who say that the integration decision of the Supreme Court is the law of the land, but our greatest constitutional lawyers, such as Dean Clarence Manion, Charles Wallace Collins, and others say in effect that that decision of the Court has not the slightest vestige of legal authority for its existence, that it is a plain violation of the law of the land. It is not the States that flout the law of the land, but the Court itself. And it does not require a legal mind to understand that fact, but only enough common sense to understand plain English. Certainly no decision that is based upon error, the perversion and antithesis of law, can be law that is worthy of the name.

Freedom of choice is the whole meaning of this moral universe. God made man like that. Freedom of choice being basic, such as the right to choose one's own company, the integration decision of the Supreme Court was and is the violation of the basic law of God and of human rights.

That law is basic in all government whose just powers are derived from the consent of the governed. Those who rebel against that law, or would force themselves, or be

forced by a court decree, into a society where they are not wanted, should feel free to migrate to some other land more in keeping with their desires. We cannot recommend Russia, because they would find that the Kremlin preaches social equality, nondiscrimination, integration, and brotherhood to all the world, but does not practice it among her own people, as these columns have previously shown and verified by the highest type of documentary evidence.

Freedom of choice, the basic law of God, is a two-way street. Common decency, respect for the feelings of others, the Christ-taught virtue of humility and deference, forbid intrusions. Fellowship and fellow feeling can exist only by mutual consent. Any court, civil or ecclesiastical, that ignores those primary truths, has no defense or justification in either religion or law, because a forced integration of Negroes upon white people, or of white people upon Negroes, in school relations, or other circles of society, violates the basic law of God and all just government.

In all the annals of history and its long line of cruelty and injustice, no such evil has ever been forced upon any people until May 17, 1954, by the Supreme Court. For long years, the Communists have been infiltrating various spheres of American life, and it seems that they have outsmarted many of our national leaders when they can be led to deliver tirades against communism while they at the same time do the works of communism. It seems that the Communists have done a magnificent job under the guise of religion and law.

If freedom of choice is the basic law of God and concomitant with all just government, could it be that we should obey God rather than the decisions of men, whose decisions are based not upon law or legal precedent but upon the opinions of Karl Marx, Karl Gunnar Myrdal, and a few other modern sociologists, better named Socialists, Marxists, or fellow travelers?

Our best legal minds declare that the Congress has no authority to intermeddle with the social customs or preferences of the people; that there is no law that gives to the Supreme Court, or to any Federal judge, the power to nullify the basic law given of God to man in his creation, or the laws of the States, conformable thereto, giving to the people freedom of choice in their social relations, without the intrusion of one upon the other.

But the present Supreme Court ignores the rights of white people and their children to choose their associates of the same color and kind, and the right of Negroes to choose their associates of the same color and kind. This is an evil under the sun, particularly so, when the vast majority of every race naturally prefer to associate with their own kind in both school and church, for the simple reason that their teachers and their ministers better understand their problems and their needs.

The integration decision of the Supreme Court was based on a strange thesis when it decided that the best way to promote what it considers the rights of one race is to rob another race of rights equally precious to it; namely, the right of the individual to freedom of choice, or the right to be let alone. That strange thesis is insulting to the intelligence of the southern people and an insupportable indictment of a whole people.

We predict that the time will come when, in this world or some other, the members of the Supreme Court will be repentant for their betrayal of the American people, together with all who have supported them in the rape of the Constitution of the United States. We predict that in time the decree of the Court on May 17, 1954, will be reversed by the popular demand of the people in all sections of the country, because that decision has no foundation in law, reason, nature, or God, and that for that reason the said decree of the Court will become blacker and more despised with the coming years.

A Great Injustice Will Be Done

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. CORBETT. Mr. Speaker, on August 15 the House Committee on Post Office and Civil Service favorably reported the bill S. 1740. Just how necessary and desirable this bill is was outlined most clearly in a column by John Cramer appearing in the Washington Daily News of August 20, 1957. Every Member of the House and Senate should read this statement which is here included and then proper action should follow promptly:

A GREAT INJUSTICE WILL BE DONE
(By John Cramer)

This is an open letter to Members of the House.

Before Congress adjourns, you probably will be given a chance to vote on a bill directing Civil Service Commission to take over and protect the life insurance of 90,000 Federal employees and former employees who are insured by nine big Federal worker beneficial associations.

Similar but not identical legislation has been before the House in the past.

There has been much misunderstanding about it.

Here are facts about it:

Fact No. 1: Unless the legislation wins House approval, a great injustice will be done to the 90,000. They will lose insurance policies on which they have paid premiums for years.

Fact No. 2: Many of the 90,000—certainly no less than 25 percent—are elderly retired people, who will have no possible way of replacing the insurance they lose.

Fact No. 3: This injustice will be solely and entirely the fault of the United States Government.

Why?

Because when the Government set up its own group life insurance program for Federal workers, it made it impossible for the beneficial association to continue in business. They can't sell insurance in competition with the Government program—because Government pays a third of the cost of the Government insurance.

Fact No. 4: The administration, when it first recommended the Government program, explicitely assured Congress that no injustice to beneficial association policyholders would result. As it turned out, this assurance was 100 percent wrong.

Fact No. 5: Government failure to take over association insurance not only would bring injustice—but also would constitute a very large breach of faith on the part of the Government.

Here is why:

For years, Government went out of its way to encourage the beneficial associations. It made Government office space in scores of cities available to them. It encouraged top career employees to become association officers. It permitted solicitation of new business and collection of premiums on Government time.

All this caused many employees to think the associations had Government endorsement. In a very real sense they did—even though it wasn't a matter of law or contract.

And now Government itself is destroying the associations.

Fact No. 6: Some 16 associations with 55,000 members, already have had their insurance taken over and guaranteed by the Government. Failure to take over the remaining 9 associations, with their 90,000 members, would be rankest discrimination.

Fact No. 7: The potential injustice to elderly retired Federal employees who are association policyholders clearly is greater than the potential injustice to those who are not retired.

But the potential injustice to those not retired is very large, too.

They stand to lose association insurance whose face value remains unchanged, regardless of their age. Their Government insurance in no way replaces it—because the face value of the Government insurance drops 75 percent in the first 3 years after the individual reaches 65.

Fact No. 8: There's no possible formula whereby Government could protect the insurance of elderly retired people—while declining to protect those not retired. Civil Service Commission once thought this was possible—and so informed Congress. Later it discovered there is absolutely no legal way to do it.

Fact No. 9: A Government guaranty of association insurance doesn't, in any sense, constitute a gift or bonanza. It merely protects the policyholder against loss which would not be threatened had the Government not set up its own program.

Fact No. 10: Association policyholders will pay the full, going premium if Government guarantees their insurance. Rates will be frozen at present levels. Government will not pay a third of the premium—as it does with its own insurance.

Fact No. 11: Not a single penny of appropriation would be required. The entire amount would come from the Government group insurance fund.

Fact No. 12: The total cost to the fund, till the last association policyholder died, would be $22 million by Civil Service Commission estimate.

Fact No. 13: Less than $7.5 million of this could be considered a charge against the Government or the taxpayers—because only a third of the money in the insurance fund is contributed by the Government. The remaining two-thirds comes from employee premiums.

The Big Change in Richard Nixon

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. HILLINGS. Mr. Speaker, the September 3 issue of Look magazine carries an interesting article by Mr. Richard L. Wilson concerning Vice President RICHARD NIXON. The article points up the excellent leadership the Vice President is giving our country and describes how he has made the vice presidency a more important position than ever before.

The article follows:

THE BIG CHANGE IN RICHARD NIXON
(By Richard L. Wilson)

It is a good while now since Vice President RICHARD M. NIXON has been called "tricky Dicky." Cartoonists no longer picture him

poking his head out of the manhole of the sewers of politics. Few Washington observers, in fact belittle him any more.

NIXON has changed, and there has been a big change in the public and political attitude toward him. The changes are reflected in the public-opinion polls, in the attitude of reporters toward the Vice President, in the public reception he receives on his travels, in the respect generally accorded him by most of his fellow Republicans and even by some Democrats.

The image of NIXON that people now hold carries only the faintest shadow of his Red-hunting days. A prolonged attack on him in a recent book by Alger Hiss aroused virtually no response from circles which, a couple of years ago, would have been quick to strike.

NIXON's 1957 image in the Washington and national political communities is this:

He is regarded as the smartest politician in the Republican Party.

He is the prevailing favorite for the Republican presidential nomination in 1960, and any Democrat will find him hard to beat. (An Elmo Roper poll shows that as many as one-fourth of the people who say they actively disliked NIXON in 1952 have either softened toward him or have been won over completely.)

He is developing political principles and convictions as he grows in experience.

He applies these principles and convictions so that they serve him well. No Republican in this century, for instance, has made more progress with the Negro voter.

He has become a leading advocate of cooperation with, and aid for, foreign nations.

He has made a distinct turn to the left. When the choice has been between the Republican right and the Republican left, NIXON has sided with the Republican left.

Finally, he has matured as a man. He is more certain, less eager. He emerges as a candidate uncommonly wise in politics and statecraft.

NIXON's progress with the Negro voter shows his keen appreciation for the details of politics.

When most other Republicans wanted to avoid sharpening the issue in the South, NIXON made it razoredged. First, he selected Houston, Tex., as the place to recall that he was an honorary member of the NAACP. Then he decided not to shun the Reverend Martin Luther King, leader of the Montgomery, Ala., bus boycott, as so many other Republicans were doing. He arranged to appear with the controversial preacher in the South. His purpose: to let all Republicans there see that the Vice President of the United States stands without political fear for the constitutional rights of Negroes.

NEGROES IN THE NEW HOUSE

The first social event at NIXON's new $70,000 home in the sheltered Wesley Heights district of Washington brought Negroes through his front door as guests. They were Negro editors, reporters, and officials who had accompanied him on his trip in March to Africa, where he represented the United States at the birth of the new Negro state of Ghana, formerly the British Gold Coast. He demonstrated a genuine interest in basic Negro problems. His unsolicited reward was page after page of pictures in Ebony, the widely read Negro magazine, showing him in sympathetic company with African and American Negroes.

The public record of NIXON's career as Vice President is largely confined to his trips abroad, to ceremonial activities and to his renomination and campaign for reelection. Inside the administration, his record involves conflict with influential members of the Eisenhower team and conservatives on the Republican National Committee.

He has been a lonely, harassed and sometimes heartsick man. He has been ready to quit and seek the riches and personal security his abilities could earn in private life. Instead, he is taking the big chance for the Presidency, and doing so openly and frankly as a trained political careerist and politician.

President Eisenhower, who has trained NIXON for greater responsibilities, thinks highly of him. The President's closest associates maintain that his fondness for NIXON has grown since the 1956 election and that the President now looks upon him as a favorite nephew who is living up to his early promise.

NIXON now is rising on his own momentum, but the President's blessing to his ambitions, while not essential to his success, certainly will not harm him. Eisenhower often talks with intimates about his successor, mentioning Harold E. Stassen, Gen. Alfred M. Gruenther, and Robert Anderson, the new Treasury Secretary, as well as Nixon. But the more the President talks, the more his listeners tend to conclude that the man most likely to carry forward the Eisenhower program is NIXON.

Something new in NIXON's career is a more tolerant attitude toward him by many of the 1,000 Washington reporters, columnists and commentators. Among them have been the severest critics of his methods. It is too much to say that he is overwhelmingly popular with the press corps, but their respect for him has vastly increased.

Several other things have happened to Nixon. But the more the President talks, gratiated himself with the regular Republican organization in an impressive way. He has calmed the anxieties and doubts of not all, but many, Eisenhower Republicans. His views on world problems have broadened.

The Vice President also has developed a very tough political philosophy which he applies to himself as well as to others. He brought it to bear when the late Harold E. Talbott, an old-time regular Republican fund-raiser, was found careless of relationships between his business enterprises and his position as Secretary of the Air Force.

NIXON came down hard on Talbott personally after having advised the President to act promptly and conclusively in the case. The Vice President told Talbott that unless he or any other high official could hold public opinion on his side, he was expendable. Talbott later resigned, although not solely on NIXON's advice, of course.

Without support of public opinion NIXON also considers himself expendable, and thus he has been doing everything he properly can to win and hold a more favorable public judgment.

Since the 1952 flareback on the private fund to promote his own political fortunes, Nixon has developed puritanical sensitivity to the faintest hint of private gain from public office. He refuses fees for public speeches, though the late Alben Barkley, his predecessor, pocketed as high as $5,000 for a single appearance. And NIXON instantly dropped his old campaign manager, lawyer Murray Chotiner, after Chotiner took the cases of clients in difficulty over questionable dealings with the Federal Government.

Events at the San Francisco national convention, where NIXON displayed colossal political strength, have had a lasting impact on the Republican Party. But the Vice President is not without opposition—some of it quite determined.

The shadowy opposition from the Republican left, centering around Harold E. Stassen, still persists and can be found lingering among some elements of the White House staff. Concrete opposition also threatens from the right in the person of Senator WILLIAM F. KNOWLAND. KNOWLAND shortly will decide on running for Governor of California in 1958. If NIXON and KNOWLAND should be pitted against each other in an open California primary in 1960, a split might result in the big California delegation. NIXON needs that delegation solid.

FLAWLESS EFFICIENCY IN ALL THINGS

If there is anything wrong with NIXON's present political position, it is that he gives the same impression of flawless efficiency as the twice-defeated Republican nominee, Thomas E. Dewey. His tours abroad have been so universally perfectionist and constructive as to be commonplace. His behavior in very trying situations as Vice President during the President's illness has been totally discreet.

He does not play games of any kind except for golf. (His scores are in the 80's.) He does not smoke, nor does he drink or eat much. (He hates to feel stuffed.) Neither does he dance, a Quaker attitude carried to such a point that he avoided dancing with the Duchess of Kent at Ghana independence ceremonies.

NIXON works endlessly from early morning until late at night. In Ghana, he honored a call for an uncomfortably early appointment with the Prime Minister by skipping breakfast.

It is this Dewey-like quality of apparently heartless efficiency that plagues NIXON. The most devastating criticism of him is that he lacks real heartfelt convictions and adjusts his views to political expediency.

NIXON's devotion to perfection, though, often pays off. This came through in Tunisia, after an allnight celebration by the populace preceding the first anniversary of Tunisian independence. A parade was called for 8 a. m., and NIXON accepted the Government's urgings literally—appearing in his seat exactly on the hour of 8. Most reviewing-stand seats were vacant; other diplomatic representatives knew that nothing ever happens on time in Tunis.

So NIXON and his wife, Pat, sat alone for nearly an hour in the early morning chill. They attracted an admiring crowd. "See how he respects us," said one impressed Tunisian. "He doesn't even offend Tunisia's climate by shivering."

NIXON cannot be taken separately from Pat as a political entity. This has been his choice, and she has gone along with it happily, though it strains her endurance and diminishes her life with their two daughters, Patricia, 11, and Julie, 9.

FIVE TIMES AROUND THE WORLD

No wife of a public official since Eleanor Roosevelt has worked so hard as she, but Pat is merely on view in politics and is mainly a companion, an official hostess, and an adornment. She has traveled the equivalent of five times around the world with him and has engaged in some of the most charmingly artless diplomatic conversations on record.

NIXON ignores illnesses in his work; Pat does not get sick at all, though she has grown thinner. NIXON traveled 20,000 miles on his African tour and barely missed a day running a fever from a cold, which he did not permit to interfere with a single appointment, dinner, or reception. The plain fact is that among the things NIXON has not yet learned is the art of relaxation.

The public image of NIXON as a goodwill traveler, as a stand-in for the President and as the busiest Vice President in history has obscured the dramatic development of his political character.

His movement away from the conservative wing of his party came slowly, but it preceded his election as Vice President. His parting with late Senator Joseph R. McCarthy is an important part of this story.

NIXON has kept this quiet until now, but he lectured McCarthy several times. One occasion was in 1950, when the Senator charged the Acheson State Department with keeping 80 or more known Communists on its payroll. Lacking proof for his charges, the Senator asked NIXON for advice. "Your mistake," NIXON told him, "is in calling these people Communists. You'd have been on sounder ground to say they are sympa-

thetic toward Communist points of view, are fellow travelers, or have Communist-front ties. Never make a charge unless you can back it up. Always understate your case."

NIXON, as Vice President, was later to try to guide McCarthy away from the Communist issue, telling him: "For your own good, you should devote yourself to other fields. You should not be known as a one-shot Senator."

Again NIXON devoted a long lunch to trying to reason with McCarthy at the time the Senator's feud with the Army had brought him to the point of self-destruction. "I urge you," NIXON told him, "to be more gracious toward (Army Secretary) Bob Stevens. * * * Don't let this thing force the President to break with you." The plea did not work, and McCarthy subsequently was condemned by the Senate.

On a question of principle, NIXON underwent one severe test that required him to oppose powerful forces in the Eisenhower administration. Congress opened in 1957 with two paramount issues. One was a proposal to change Senate rules to curb filibusters, a first step toward opening the way for civil-rights legislation. The other was the President's request for approval of his authority to use American troops to protect nations of the Middle East from Communist attack. The President wanted this voted quickly, for utmost peace-keeping effect. Administration leaders feared that a Senate fight over rules might unduly delay action on the Eisenhower doctrine.

NIXON was the key. Senate procedures required him to rule first on the proposed rules change. The fight then would center on his ruling. Senators KNOWLAND, STYLES BRIDGES of New Hampshire, and LEVERETT SALTONSTALL of Massachusetts, the GOP hierarchy, talked with NIXON and urged him not to rule at that time in favor of the filibuster curb. Secretary of State John Foster Dulles called to remind him of the urgency of the Middle East resolution. Everyone feared that a prolonged fight over NIXON's ruling would indirectly hamstring foreign policy at a critical time.

When NIXON asked the President for advice, he was told that he was on his own.

So the Vice President decided to rule, regardless of consequences, on the basis of his own conviction, that filibusters were wrong. The ruling did not stick. The Senate defeated the rules change, 55 to 38. The issue, however, was settled without undue delay in approving the Eisenhower doctrine.

NIXON had argued for years in high Republican circles in favor of full speed ahead on civil-rights legislation. Influential members of the Republican National Committee wished to soft-pedal the issue in 1956, hoping to avoid offending Eisenhower voters in the South.

NIXON insisted that such an attitude ran against the grain of Republican tradition and would not be acceptable to the voters. His views prevailed in the party platform, and he talked about it—in the South—during the campaign.

Recently, the Vice President told associates that he thought the biggest distinction between him and the President was that he, NIXON, would more often take emergency action on domestic matters. On most administrative questions, NIXON is less patient than the President.

He visited Central America in 1955 and decided that the Inter-American Highway was the biggest boondoggle of the last 20 years. At its snail's pace, construction would not be completed for 15 years. He came back and pushed through Congress $25 million a year for the next 3 years, aiming to finish the 50-year-old dream during the Eisenhower administration.

Sometimes NIXON gets ahead of himself. He urged Agriculture Secretary Ezra Taft Benson in 1954 quickly to support hog prices. Benson, sure of the soundness of his do-it-yourself economy, would not budge, even though low hog prices were politically bad for the administration.

Hog prices have risen since then, and NIXON grudgingly has admitted that he was probably wrong in pressuring Benson. But he still thinks it is in the national interest somehow to convince the Midwest farmers that they should regain their lost confidence in the GOP, even if the economics aren't 100 percent Benson-proof.

NIXON favors Federal aid for school construction, expansion of the Federal health program as a hedge against socialized medicine, and income-tax credits for parents to offset the costs of higher education. His biggest break with old Republican tradition, however, has been on foreign aid.

With congressional demands for economy at a peak, a high-level administration strategy meeting was consoled by the idea that foreign-aid costs probably were headed downward—once past the current period. NIXON nailed this as a glib assumption. He maintained the total of Government and private funds going into underdeveloped areas was surely going up.

Many millions of people in these countries, NIXON said, are determined that they will join the world's economic progress. If they can't get financial support from the United States they will get it from Russia, he said. They need funds from private investment, from grant aid, and from loans, he pointed out, and the country ought to be prepared for the prospect.

NIXON thus lined up with the most advanced thinkers among Republicans, leaving behind such stanch oldtime supporters as Senators WILLIAM E. JENNER of Indiana, GEORGE W. MALONE of Nevada, and JOHN W. BRICKER of Ohio. But he leaves the Republican left on China. He is dead set, under present conditions, against changes in policy looking toward admitting the Chinese Communist regime to the United Nations or extending diplomatic recognition to Peiping.

His experience in Government has led him to the conclusion that most administrators are empire builders. He recalls that when he sought a raise from his $3,600-a-year salary for writing OPA tire-rationing regulations (prior to his own naval service) during World War II, a superior told him he would have to build up a little staff before he could earn more money.

NIXON has told Government administrators that the whole system of promotions is haywire, and that officials who reduce their staffs ought to get promotions and merit awards. His world travels have convinced him that headquarters staffs can be cut to the bone, and thereby improved.

The years, then, are building up in NIXON a set of convictions he did not have 4 years ago. As he grows with these convictions, and becomes better known, voters will find a basis to judge his political readiness to go beyond his training stage—and into the White House.

Brownell Stand Called Ironical

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 21, 1957

Mr. MULTER. Mr. Speaker, the following article by Drew Pearson, which appeared in the Washington Post and Times Herald of August 21, 1957, makes most interesting reading:

BROWNELL STAND CALLED IRONICAL
(By Drew Pearson)

Here aresome ironies about the breast beating of the Justice Department for a tough civil-rights bill, a bill even tougher than that now urged by the National Association for the Advancement of Colored People:

Irony No. 1: Attorney General Brownell and the Justice Department have played ball for 4 years with Senator JAMES EASTLAND of Mississippi, bitterest opponent of civil rights. No judges, United States attorneys or United States marshals have been appointed in Mississippi without his O. K.

Irony No. 2: Attorney General Brownell gave private backstage encouragement last year to the move to oust the one Negro who is a member of the Republican National Committee, Perry Howard of Mississippi. Howard has been a national committeeman longer than anyone in history—33 years—a matter of pride to Negroes. Brownell encouraged the drive to oust him.

Irony No. 3. Brownell has been working to build up the Republican Party in the South through E. O. Spencer, owner of the Walthall Hotel in Jackson, Miss., in which the Mississippi White Citizens Council was first organized. The council has had an office in Room 203 of the hotel. Brownell usually entertains Spencer in his home when the Mississippian comes to Washington.

KEEPING ISSUE ALIVE

Irony No. 4. For four years the Justice Department dragged its feet on civil rights, thereby making it an issue in the 1956 presidential election. Today the Department is opposing the Senate bill, thereby keeping civil rights an issue in the 1958 congressional election.

Senator TOM HENNINGS, Missouri Democrat, whose great-grandfather was one of the biggest slave-holders in Georgia, developed some of the facts regarding this stalling in a withering cross-examination of Brownell last year.

"You have come up with no program during your 4 years, until April 1, I believe," HENNINGS challenged.

Brownell replied that he had worked on such civil rights as restaurant segregation, discrimination in the Armed Forces, and kindred measures.

"You know these were initiated in the preceding administration," HENNINGS was quick to point out.

"A great many of them, yes," Brownell admitted.

"We welcome your suggestion that there be a Commission on Civil Rights in the Department of Justice," HENNINGS continued. "At my request on March 22, 1955, this letter was addressed to you."

He then read Brownell a letter one year old asking for his views on legislation proposing a civil rights commission.

"There was no reply from you whatsoever over a year ago relating to the establishment of a commission or a division," HENNINGS pressed.

The Attorney General squirmed and sparred. He could give no adequate explanation. Real fact is that while civil rights was being pushed for 4 years by HENNINGS and Congressman CELLER in the House, they got no help from Brownell or from his department or from the Eisenhower administration.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Scott, Symington, Talmadge, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Lausche, Clark, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, Morse, Frear, Clark, Beall, Morton, Javits, ———.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Yarborough, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Neely, Ervin, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Kennedy, McNamara, Morse, Thurmond, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Scott, Neuberger, Church, Clark, Yarborough, Carlson, Jenner, Langer, Martin of Iowa, Morton, and Martin of Pennsylvania.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, Carroll, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Development of Foreign Manufacturing Units by Wisconsin Companies

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 22, 1957

Mr. WILEY. Mr. President, the other day in commenting on a related subject I stated that a man cannot live unto himself alone and that nations cannot live unto themselves alone. This statement is emphasized by the matter which I shall place in the RECORD today, showing how Wisconsin business is going abroad and businessmen are building industries, and so forth.

Mr. President, very shortly the mutual security appropriation bill will be coming up for action on the Senate floor.

Inevitably, at that time, we will be considering the subject, not only what the Federal Government can and cannot do abroad, but what private enterprise can do and should do in helping to increase the economic health of the free nations.

We of the Congress have long emphasized that it is far preferable to have American business invest private dollars abroad than it is to have Uncle Sam give out public dollars.

More and more American companies are setting up manufacturing operations throughout the world. More and more companies are licensing foreign companies to produce American products.

As a background to this trend, I send to the desk an article which appeared in an issue of the Milwaukee Journal earlier this year. It describes the experience of some of the leading companies of my State in developing foreign subsidiaries.

It is a frank statement of the reason for this trend and of how it has developed.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of March 24, 1957]

FOREIGN MANUFACTURING UNITS GAIN FAVOR WITH UNITED STATES FIRMS—DOLLAR SHORTAGE, IMPORT CURBS, LOWER COSTS ARE FACTORS IN INDUSTRY TREND—SUBSIDIARIES OR LICENSE DEALS FOUND BETTER THAN EXPORTS ALONE BY STATE COMPANIES

(By Emil Schneider)

"The company that fails to get into foreign manufacturing operations is going to be a dead duck so far as its overseas sales are concerned."

This statement of a Milwaukee industrialist points up a growing trend in American industry to set up manufacturing operations in other countries.

In the dozen years since the end of World War II, a substantial number of companies in an equally substantial variety of industries has gone into Canada, Mexico, and overseas with subsidiaries and licensing arrangements to supplement export operations.

The trek has reached many far away spots throughout the free world. American designed products are being manufactured in almost every European country, in Africa, the Middle East, India, Japan, Australia, and an increasing number of Latin American countries.

CANADA IS FIRST

Canada, largely because of its close proximity and its stability of government and economy, continues to be the No. 1 foreign location for United States firms.

Reasons behind the trend are several:

Shortage of American dollars to pay for imports from this country and other currency exchange problems.

Protectionist restrictions barring imports.

Raw material restrictions.

Cost differentials that price American made products out of competition with domestic products in foreign markets.

The importance of these factors differs between industries and different areas of the world. But the net result, according to foreign trade officials, boils down to the same thing: It has become increasingly difficult to open new foreign markets—and maintain existing ones—by export operations alone.

JOHNSON IS SCATTERED

The most extensive foreign manufacturing operations of a Wisconsin company are those of S. C. Johnson & Son, Inc., Racine, maker of waxes and cleaners for the home and factory.

The company has eight subsidiaries in Canada, Mexico, South America, Europe and Australia and currently is organizing a ninth in the Philippines. It also has 10 manufacturing distributors under licensing agreements. In addition, a good many of its 50 other distributors around the world perform partial manufacturing operations.

These operations form the bulk of the company's foreign business, a spokesman for the firm said. About half of the overseas production operations have been organized since the war. The first subsidiary was formed in 1920.

Another firm with widespread operations abroad is Parker Pen Co., Janesville. It has seven subsidiaries and seven licensees, most of them set up in the postwar period.

HEAVY INDUSTRIES PARTICIPATE

George Parker, assistant to the vice president in charge of foreign sales, said that overseas sales—exports and foreign operations combined—had grown from 40 percent of total sales in 1947 to about 50 percent today. The foreign operations, he added, have contributed significantly to this growth.

In the heavy industry field, the importance of foreign manufacturing operations is less pronounced, but it has been growing.

Allis-Chalmers Manufacturing Co. has subsidiaries in Canada and England and more than a dozen licenses in Europe and the Far East. Koehring Co. has a Canadian subsidiary, eight licensees in Europe and Australia, and a combination license-part ownership arrangement in Japan. Harnischfeger Corp. has 8 licenses in 7 foreign countries around the world.

EXPLAINS THE REASON

Almost all of these are postwar operations. An official at Harnischfeger explained:

"It was a case of necessity if we wanted to hold our foreign markets. In Europe it was a severe dollar shortage and import restrictions that initially hurt our exports. Now the price differential is coming into more importance. The higher cost of manufacturing in this country, plus transportation and duty costs, make it difficult for exports to compete with European products. Produced over there, the products are more competitive.

"In the case of Brazil, import restrictions closed that market completely to exports, but a licensee operation within the country has reopened it. In the Far East we figured those markets also would eventually be closed to us unless we got in there on the ground floor."

HELPS LIFT RESISTANCE

Foreign manufacturing operations can help boost a company's export sales as well as supplement them, according to an official of Cutler-Hammer.

"We used to meet a certain amount of resistance in trying to sell our products in Australia before we went in there about 18 months ago with a licensing arrangement," this spokesman said. "Now, because we've given new work to a local manufacturer, we're finding there's a lot more interest in our products down there."

This problem of resistance to exports because of a philosophy of "buy locally manufactured products" is another reason, in addition to tariff barriers and dollar shortages, for setting up manufacturing operations abroad. Sometimes, the Cutler-Hammer official added, it is the basic reason.

Various factors, such as potential of the market, stability of the country involved, availability of a suitable manufacturer for a license agreement, determine the kind of foreign manufacturing operation to adopt. Sometimes it is a matter of personal preference.

LICENSING IS COMMON

"Generally speaking," one company official explained, "a subsidiary operation involves greater risk of capital. But if it's successful, it also offers a greater return on investment."

Several Wisconsin firms have only licensing arrangements in their foreign operations.

Milprint, Inc, Milwaukee packaging firm, has 22 licensees in Europe, Latin America, Japan, Australia, New Zealand, Egypt, Lebanon, and India. One of them, La Cellophane of Paris, is the inventor of cellophane, a product that Milprint uses extensively in production of printed packaging.

Lakeside Laboratories, Milwaukee ethical pharmaceutical firm, has more than 10 licensing arrangements, all set up within the last 2 years. The firm started in Europe, now has gone into South America and Japan. In looking for licensees, the company tries to find foreign drug producers that have products which could be marketed profitably in this country under a reciprocal agreement.

STICKS WITH SUBSIDIARIES

Cooper's, Inc., Kenosha, men's underwear manufacturer, has licensees in 15 foreign countries.

An example of a "subsidiary only" company is Square D Co., which has its big industrial controller division in Milwaukee. The firm has manufacturing subsidiaries in Canada and Mexico and a sales subsidiary in England.

A large number of Wisconsin firms have subsidiaries in Canada. Among the larger operations there are those of the State's two largest papermakers, Kimberly-Clark Corp., Neenah, and Marathon Corp., Menasha. Kimberly-Clark, stepping up its foreign operations, also has several facilities elsewhere around the world and is planning more.

American Motors, like the other auto producers, has a Canadian subsidiary for cars and an affiliation in England. Its Kelvinator division has manufacturing operations in 12 foreign countries.

Among other Milwaukee companies with subsidiaries or licensing arrangements for manufacture abroad are Allen-Bredley Co., Bucyrus-Erie Co., Johnson Service Co., Globe-Union, Inc., Chain Belt Co., and Evinrude Motors division.

Appointment of A. R. Jones as Member of TVA Board

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Sheridan (Wyo.) Press of Saturday, August 10, 1957, entitled "TVA Has Only the Truth To Fear."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TVA HAS ONLY TRUTH TO FEAR

The Nashville Tennessean it seems is carrying on an intensive campaign to block the confirmation of A. R. Jones, Deputy Director of the Budget, as a member of the Tennessee Valley Authority Board to which he was appointed by President Eisenhower.

Having personally known Mr. Jones for 25 years, during which time he served the State of Kansas in various capacities, and as a CPA, we're astounded by the one-sided nature of the evidence used by the Tennessean in its efforts to condemn the appointee. Not merely in is editorial, which was included in the CONGRESSIONAL RECORD as an attack on the said Mr. Jones, but in its series of articles which were republished in the Washington Post, it presented one-sided versions of what it describes as Jones' standpat conservatism and his alleged dislike of cooperatives and public power.

In our intimate knowledge of the Jones record since he first entered public like in Kansas as State accountant, it has been one of solid, sound business sense, absolute integrity on his own part and expected of his associates, assistants, and clients, and a perseverance for finding the facts and evidence that is matched only by his own ability for uncovering the truth.

A full study of Mr. Jones' biography as a public servant and as a certified public accountant, and a full report of his career will show that he is neither a conservative nor a liberal, but a middle-roader as far removed from prejudice as an honest man with convictions can be. The examples of outstanding public service deliberately omitted from the Tennessean's accounts are the jobs done by Mr. Jones in serving as the State's examiner in the prosecution of the Kansas bond scandal in 1933–34, the State tax and budget legislation which he helped to write in the same years, again in 1939 and the governmental reorganization plan which he worked out for the State in the past decade.

The Jones record as Deputy Director of the Budget, we know without the intimate personal knowledge we have of his other work, will inevitably fit into the same pattern of efficient, loyal, and able service, for he can give no other. And as for his performance on redtape, it has been directed toward simplification with good sense—the minimum possible while maintaining sufficient records.

Not only will this full investigation show that Mr. Jones is a man of rare integrity, courage, and thoroughness in public and in private, but also of remarkable ability as an accountant and businessman. His courage and integrity prevail in his dealings with those above him as well as in those under him. He is absolutely impartial and just with foe as well as friend.

It is astounding that the one most important authority used to condemn Mr. Jones by the Tennessean is one whose ability and integrity are so inferior to the appointee as to be unworthy to tie his shoe. Actually, that same authority is one who not too long ago was discredited as a public servant. Yet the Tennessean has used him as their foremost authority to launch their smear attack on A. R. Jones.

We can see no reason why friends of TVA should in any way fear or oppose Mr. Jones unless the facts about it are something to be feared or distrusted for those facts will be examined and uncovered honestly, faithfully, and the Authority expected to operate as efficiently and as well as is humanly possible. Mr. Jones will expect only the best of TVA as he has of himself and of all utilities, public and private.

Termination of Federal Supervision Over Klamath Indian Reservation

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. NEUBERGER. Mr. President, since passage of Public Law 587 in the 83d Congress to terminate Federal supervision of the Klamath Indian Tribe, much thought has been given to the social and economic problems involved in such action. Both in and out of Government, there is great concern over the potential dangers of hasty termination.

Many proposals have been advanced to overcome the probable difficulties. Since passage of legislation to extend to August 1960 the effective termination date, time is now available to work out revisions which have become obviously necessary. During the coming congressional recess, the Indian Affairs Subcommittee of the Senate plans to hold hearings in the vicinity of the Klamath Reservation so that the needed changes can be fully explored.

The need for changes in Public Law 587 was recently documented in a thoughtful series of articles by Mr. William Dean which appeared in the Eugene Register-Guard. Mr. Dean's articles emphasized that the difference in status of various members of the tribe made difficult the application of a termination plan which applied equally to individual tribal members. This phase of the termination problem deserves and requires further study. Some of the conclusions that could be drawn from Mr. Dean's study of the Klamath termination problem have been outlined in a recent editorial in the Eugene newspaper. I ask unanimous consent to have printed with my remarks in the Appendix the editorial entitled "Termination, an Individual Problem," which appeared in the Eugene Register-Guard, of Eugene, Oreg., on August 15, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TERMINATION, AN INDIVIDUAL PROBLEM

A different approach to the termination of Federal supervision over the Klamath Indian Reservation is needed. Termination was started 3 years ago with the idea that all 2,000 of the men, women and children who have a degree of blood relationship with the Klamath tribe are fully prepared to accept a position of personal responsibility in a non-Indian society.

This is not so.

Some of the Klamaths are ready. But certainly the majority, because of their limited experience in the outside world, are no more prepared than a high school freshman who is given $50,000 and told to go to England where he must make out on his own, far from everything to which he is accustomed.

These are the people who, like the high school freshman, are unprepared for the arbitrary termination contemplated in Public Law 587. That law sets August 1960, as the termination date for the Klamaths. It assumes that they are all at the same stage of social and economic development. It makes termination an irrevocable fact as of that date.

True, the law gives the Klamaths a choice of withdrawing from the tribe or remaining under a corporate entity or trust program. As a practical matter, however, this is thin frosting on the cake and no real choice.

The only actual choice available is the one that must be made by the non-Indians of this country who have set themselves up as supervisors, guardians and trustees of the Indian. And that choice is whether the Klamaths and the many thousands of other Indians under Federal supervision are to be dumped wholesale into a strange new life, or whether we will take the time and have the patience to work them into our world as each individual becomes prepared.

Such a choice must be made now. In fairness to the Indians and to the rest of us it can only be a decision to revamp the termination act completely.

Such a revision should cover many points of which these seem the most vital:

1. The resource—some 4¼ billion board feet of ponderosa pine timber and a limitless flow of water—must be converted into cash. As it is now planned by Public Law 587 this would lead to destruction. So far, the only alternative which would give the Indians a fair value on their property is Federal purchase at the appraised price. The lands then would be turned over to the Forest Service for administration. Such legislation already has been proposed by Senator RICHARD L. NEUBERGER.

2. The right of one-third of the tribe to its share of the tribal estate should be honored. There are the Klamath descendants

who already have terminated themselves by moving from the reservation. Individually, these persons are as well prepared to care for themselves as any of your other neighbors.

3. A test must be established to determine the competency of the remaining members of the tirbe. This must be a positive, definable—albeit arbitrary test. It could be based on a number of factors, but foremost among them should be the individual Indian's proved ability to support himself outside his income from the tribal estate. Such a test will be no more complicated nor subject to lawsuits than the procedure outlined in Public Law 587.

4. Finally, provision must be made to encourage the one-half to two-thirds of the tribe who cannot (or at least should not) pass the competency test to make themselves ready for the day when they will be allowed to withdraw. This is the most difficult problem. It would take a generation, or maybe two. But some progress along this line has been started in the program sponsored by the State Department of Education. Numerically, the effect has been slight but for some individuals the progress has been termendous. And termination is an individual, Indian by Indian, problem.

Another Unfair Report on Southern Voting

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Another Unfair Report on Southern Voting," from the Williston (S. C.) Way of August 15, 1957. This excellent editorial refutes figures placed in the CONGRESSIONAL RECORD from the Southern Regional Council which indicated discrimination against Negroes registering to vote in Calhoun and McCormick Counties in South Carolina.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER UNFAIR REPORT ON SOUTHERN VOTING

During recent years when the Communists have been trying to wreck this great Nation by developing a rift between the two races, one of the most unfair advantages taken of the South was the one-sidedness of news and supposedly factual articles appearing in the northern press and the national magazines.

Somehow, we weren't too surprised about these false and unfair reports and kind of took it in our stride, feeling that eventually we could crack this paper curtain and bring our side of the segregation issue out in the open and before the people of the Nation. And all during this time we never expected to see a southern organization being unfair to us.

However, last week the Southern Regional Council, an organization composed of members of both races and with headquarters in Atlanta, Ga., published reports of a 1956 survey of Negro voter registration in 11 Southern States. In this report they charged that the prevalence of discriminatory tactics in some South Carolina counties is quite evident.

It reported that in Calhoun County no Negroes are registered. "Any Negro who tries to get a registration certificate is called a smart Negro and sooner or later leaves the community."

The quote used by the council was attributed to an unnamed "field consultant."

J. B. Morris, of the Calhoun County Voter Registration Board, said about 50 Negroes are registered in the county. He said, "Nothing is done to discourage them from registering as long as they meet the requirements."

Another county charged in the survey with discriminations against Negro voters was McCormick. This brought a prompt denial from a board member of that county.

What we dislike is the publicity that has been given the survey and the fact that little, if any, publicity will be given the rebuttals by the board members so in many parts of the Nation the report will be considered as correct and another black mark will be made against the South—another black mark which is not deserved.

Soviet Penetration Into Syrian Affairs

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Syrian Pawn," published in the New York Times of August 22, 1957.

This editorial points up the great danger to the free world of the Communist base of operations in the Eastern Mediterranean, and concludes by saying:

The Russians appear to have made a clever move Syria, but the game is far from over.

What we do about the foreign-aid appropriations and our Middle East policy in the executive department will determine whether we win the game, even though we may have suffered a reverse in one inning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SYRIAN PAWN

It is important to note that the deep Soviet penetration into Syrian affairs, now dramatically revealed, is not surprising. As Secretary of State Dulles put it on Tuesday, it "is not a wholly unexpected development." It fits smoothly into the whole pattern of events that began in September 1955, when President Nasser of Egypt made an arms deal with Czechoslovakia. From that day on, and for the first time in history, Russia became a power in the Middle East and Mediterranean. From that day the No. 1 problem for the United States in Middle Eastern affairs was not Colonel Nasser, nor even the Suez Canal; it was Moscow and its expanding power politics.

In this general framework Syria can only become a detail, although an important and dangerous one. If the Russians get an effective political and economic hold over Syria, with the Syrian forces armed and directed by Soviet technicians, they will have a base of operations on the Mediterranean itself.

However, they will not and could not have the same sort of control they exercise over a satellite whose boundaries are contiguous and whom they can overawe, as they did Czechoslovakia, or conquer, as they did Hungary, with force. Syria would have to be a willing satellite. Moreover, a hostile Turkey would lie between Syria and Russia. Syria's four neighbors—Iraq, Jordan, Israel, and Lebanon—are at present all anti-Communist and more or less prowestern. The possession of vast quantities of Soviet arms did not save Egypt from a humiliating defeat at the hands of Israel last year nor is a similar situation likely to save Syria if another conflict occurred.

Even Nasser's Egypt has shown signs in recent days of being disturbed by the extent to which Syria has moved into the Soviet orbit. Colonel Nasser likes to play with Russian fire but believes and hopes that he will not be burned. We may feel sure that this is a false hope, and in any event we know that Nasser is playing a dangerous and pernicious game from his own Egyptian viewpoint. However, he does not think so, and he has tried in clumsy and devious ways to avoid being caught in a Communist stranglehold. Therefore, it is presumed that he does not like to see Syria enmeshed to an extent he must consider unwise.

To complete the Arab picture, Saudi Arabia is anti-Communist. Yemen is now accepting arms and technicians from Russia, but is too insignificant to make them more than a nuisance against the British in Aden.

Finally, there is the picture within Syria itself. Politcally, Syria is notoriously unstable, and what the pro-Communists have done this week could be undone by the anti-Communists next week or next month. The conservative and rightist officers and their civilian supporters are not all in jail nor all crushed. Some are lying low and some are out of the country.

We have by no means heard the end of the Syrian story. Power in that country, which only achieved independence in 1945, has rested on military cliques and personalities. Assassinations and attempted assassinations dot the history of these last 12 years. Maj. Gen. Afif Bizri, the new army chief of staff, has reason to fear sudden death even though his apparent belief that the Americans are out to orphan his children is silly. The group that has now assumed power will have its troubles consolidating its position.

All things considered, there is ample reason for the Washington administration to play a cautious game. The situation does not yet warrant drastic action. It may take care of itself. It is legitimate diplomacy for the United States to encourage all the anti-Communist countries in the Middle East to use what pressure they can to restrain Syria. We are entitled to express our opinions. If any kind of action has to be taken it will be risky, and the longer it can be avoided the better.

Middle Eastern problems are deep, wide, complex, and delicate and we shall be struggling with them for a long time to come. They are bound to be complicated by what Secretary Dulles called the malicious and mischievous activities of the Soviet Union which, in reality, are natural and obvious moves in the game of power politics. The Russians appear to have made a clever move in Syria, but the game is far from over.

Jury Trials

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very clear and forceful editorial appearing in the August 2 issue of the Baltimore Sun, Baltimore, Md., of just how the jury trial

amendment adopted by the Senate gives the judges in the courts complete authority in enforcing voting rights under the civil-rights bill without the intervention of a jury. The Sun, in this editorial, makes a clear distinction between civil and criminal contempt, and is a good answer to those who seek to confuse the issue by saying that under the Senate amendment voting rights could not be enforced.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JURY TRIALS

The House rejected a jury trial amendment to the civil-rights bill in June by 190 to 167. The Senate has now adopted an amendment on this subject by a vote of 51 to 42. Senator KNOWLAND says that this Senate vote probably means the civil-rights bill is dead for this session; his theory is that the House won't accept the Senate amendment and that the bill will remain in conference when the Senate adjourns.

True, the big industrial States such as New York, Michigan, and Illinois have big delegations in the House and these States oppose the jury trial amendment. Whether their opposition is insuperable is another question. In any event, the amendment represents an acceptable and even a desirable improvement in the bill. It does not deprive the bill of its teeth, as many Senators have claimed. On the contrary, there is in this measure an abundance of legal weapons with which to protect the right of Negroes in the South to vote.

This point becomes clear in any detailed consideration of what the jury trial amendment is. In the first place it modifies the provisions of the bill authorizing the Attorney General to go into court and ask for injunctions to forestall and forbid any interference with voting rights. The amendment says that in all cases of criminal contempt arising out of violations of such injunctions, the defendant may ask a jury trial.

The pivotal point in this business is the difference between civil and criminal contempt. This is a legal question to be discussed by laymen with some hesitation, but since it has been so extensively explained in the Senate debate a brief outline may be given here. It is based on an example offered by Senator KEFAUVER, coauthor of the jury trial amendment. Mr. KEFAUVER started with the hypothetical case of a registrar refusing to enroll a Negro citizen as a voter. The Attorney General asks an injunction from the proper Federal court. The judge brings the registrar into court with the complaining witness or witnesses. An injunction against the registrar is granted. He still does not register the Negro. His noncompliance causes him to be brought before the court on a contempt charge.

This is a civil-contempt matter, because the aim at this stage is not to punish the registrar but to get the citizen on the voting lists. The judge hears the evidence without a jury, and if it is convincing, he sends the registrar to jail. But, as the United States Supreme Court said in an important case, the registrar still has the key to his cell in his own pocket. He can unlock the prison door and obtain his freedom at any time by agreeing to do what the court ordered.

If he does so agree, he is free and the case is at an end. Suppose, however, he persists in his refusal until after the date on which the registration books close for the election. It is then too late to register the citizen, and the court must punish the registrar for flouting the injunction. He is haled before the judge on a new contempt charge and this time it is a criminal-contempt matter. A jury can be demanded under the amendment just adopted in the Senate.

As this example suggests, the general distinction is that where the purpose of a contempt hearing is to secure action or compliance with the injunction it is a civil matter. When it is too late for compliance to do any good, and the purpose is to punish a violation of the injunction, it is a criminal contempt. In the former case there is no right to a jury trial under the amendment. In the latter case such a right would be available.

This does not interpose any obstacle in the path of a court seeking to secure compliance with an injunction designed to prevent interference with voting rights. It only provides for jury trials after the right has been stubbornly and willfully denied in defiance of the injunction. Leaving aside all question as to whether southern juries will convict in cases of discrimination against Negro voters, this amendment leaves the Department of Justice and the courts ample power to enforce voting rights.

The Coup in Syria

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in this morning's Washington Post and Times Herald under the byline of Walter Lippmann. I think it is a very important article, because it ties in with the speech made by the distinguished Senator from Arkansas [Mr. FULBRIGHT] on the Aswan Dam some days ago and the speech made yesterday by the distinguished minority leader in rebuttal to the Senator's speech.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COUP IN SYRIA
(By Walter Lippmann)

Washington has been reacting calmly to the events in Syria, almost certainly because they have long been foreseeable, and are not a surprise. The events stem from the basic situation among the Arab nations in the Middle East: first that the great powers are rivals competing for their favor; and second, that there is rivalry among the Arab ruling classes, who are competing for the support of the great powers.

For these reasons, there has never been any chance that all the Arab countries would line up with us under some sort of pan-Arab Eisenhower doctrine. As we have been making our deals with one group of Arab countries, another group—as it happens Syria, Egypt, Yemen—have been making tentative deals with the Soviet Union.

We are involved in a complicated and tricky game of power politics, and we must expect to have losses as well as gains. We have had gains in Saudi Arabia, Jordan, and Lebanon. Now we have had a loss in Syria. The one thing that we can be fairly sure of is that the whole region is in flux, and that neither the gains, as in Jordan, nor the losses, as in Syria, can be counted on as permanent.

For while it may turn out to be the fact that the new military dictatorship in Syria is firmly under Soviet control, there is, I venture to think, bound to be a radical difference between a contiguous and a noncontiguous satellite—between one that can be reached over land by the Red army and one that can be reached only by sea and air. It was possible for the Red army to march into Hungary, to occupy it and to crush the rebellion. That would not be nearly so easy to do—what with the Baghdad allies being interposed—if there were a rebellion in Syria. For the Soviet Union it can be said that Egypt as well as Syria are rather in the nature of outposts than true satellites.

It is generally agreed, as the President said at his press conference Wednesday, that the coup in Syria does not call for any reaction under the Eisenhower doctrine. The Syrian coup is a successful intrigue in which the legal Government of Syria has acquiesced, at which it has probably connived. The basic principle of the Eisenhower doctrine is that we will intervene only at the request of a legitimate government, and in the case of Syria the legtitimate government is stridently hostile to the Eisenhower doctrine and to the United States.

The right course is the one that the administration appears to be taking—to leave the initiative to Syria's neighbors, allowing them to decide on the only action which is possible—whether the new Syrian Government should be put in quarantine. That is the limit of action. There can be no intrigue under the Eisenhower doctrine unles Syria first openly makes war on one or more of her neighbors, on Iraq, Jordan, Lebanon, or Israel. Insofar as Syria is under Soviet influence, it will probably not be encouraged, in fact it will probably not be permitted, to do anything which could precipitate a general war.

In retrospect, it looks more and more as if Senator FULBRIGHT is right, and that our crucial mistake in the Middle East has been the abrupt rejection of the Aswan Dam. Not only did this touch off the calamitous series of events which began with Nasser's seizure of the Suez Canal Co., but it also deprived the Western World of the chance to cooperate with Egypt in a great project which is of vital interest to the Egyptian people. The fact of our withdrawal, combined with the rude manner in which we withdrew, has excluded us from the chance to exercise a friendly influence. It has left the field open to the Soviet Union, and made it certain that Nasser's demogogy would be turned against us all over the Arab world.

Yet it is probably true that Nasser does not want, and will try his best to avoid, a complete entanglement with the Soviet orbit. The central idea of his foreign policy seems to be that he can profit most by keeping the Soviet Union and the West bidding against each other. To do that he must be independent enough to keep both sides guessing, which, we may suppose, is what he means when he talks about a positive neutrality.

Publisher of Chicago Defender Opposes Jury-Trial Amendment

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a telegram received from John H. Sengstacke, publisher and editor of the Chicago Defender, one of the largest Negro newspapers in the country, stating his strong opposition to the jury-trial amendment in the civil-rights bill:

CHICAGO, ILL.

JOSEPH W. MARTIN, JR.,
Representative, Washington, D. C.:

Present civil-rights bill makes mockery of American citizenship at a time when the whole world is focusing attention on congressional disposition of a basic issue. The jury-trial amendment is incompatible with the intent and application of President Eisenhower's original legislative proposal. As a matter of simple justice the measure should be so strengthened as to restrain violations of its provisions. We believe you wield enough influence to press successfully for such a revision. We urge you to do so. There should be no compromise on that point. We will not be satisfied with half a loaf.

JOHN H. SENGSTACKE,
Publisher and Editor, the Chicago Defender.

Address by the Honorable James C. Davis, of Georgia

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the Appendix of the RECORD, I am glad to include a most able and timely address delivered by our distinguished colleague from Georgia, Representative JAMES C. DAVIS, before the Tennessee Federation of Constitutional Government, at Nashville, Tenn., on August 16, 1957. The addres is as follows:

SPEECH OF REPRESENTATIVE JAMES C. DAVIS TO THE TENNESSEE FEDERATION OF CONSTITUTIONAL GOVERNMENT, NASHVILLE, TENN., AUGUST 16, 1957

It is a privilege for me to accept the invitation to speak to this group of Tennesseans. You are striving to preserve a right which belongs to us, a possession which is precious to us, which is at this moment in great danger of destruction—namely, constitutional government. The Government in Washington is stretching its long arm into your State and community, through the Federal courts, to strike down State sovereignty, to destroy local self-government, to deprive you and your legally chosen school authorities of the power to operate your public schools as you have been operating them and as you want to continue to operate them. It proposes to substitute instead control by court orders and edicts fashioned upon a new philosophy which stalks through our land, and which we are told we must accept whether we like it or not.

It is demanded of us that we cast aside our beliefs, that we surrender our convictions, that we give up customs under which we were reared and to which we subscribe. Meek obedience is demanded. Resistance is threatened with dire consequences and penalties.

The situation, indeed, is critical; the times are perilous.

Why have we come suddenly face to face with this unbelievable situation? It stems from a wrongful and fraudulent usurpation of authority and power by the United States Supreme Court, a usurpation of power which amounts to tyranny.

In every section of America today earnest protests are being voiced against the arbitrary, dictatorial action of the Federal Supreme Court, and its wrongful usurpation of powers it does not possess. Americans have always been quick to recognize and to protest injustice in the courts. It is significant that when the Colonies revolted against the injustice and tyranny of George III, the Declaration of Independence complained of judges who were dependent on the will of the King alone for the tenure of their offices, the amount and payment of their salaries, and that the administration of justice was obstructed by the sovereign power. These acts of tyranny and oppression were intolerable then to a free and liberty-loving people just as similar acts are intolerable now.

We are facing today, I believe, the most critical period which America has faced since 1776, when that small group of men met in Philadelphia to choose between security and peace on the one hand, which could be purchased at the price of continued submission to tyrannical oppression, or revolution and war with the world's greatest power on the other hand. With the certain knowledge that years of misery and suffering lay ahead, that they would fight against heavy odds, and that defeat and death might be the portion of everyone who participated, they believed in their hearts that free government was worth the price they had to pay. They threw their all into the balance as they fought for it. Our Government of liberty, freedom, and opportunity today is the result of that choice and of the fight which they made.

Freedom was not just a topic of idle conversation with them. Integrity was more than a word in the dictionary. Benjamin Franklin, Thomas Jefferson, their associates, and their followers preached the doctrine that resistance to tyranny is obedience to God. They had the courage to practice what they preached.

When victory finally came to our forefathers they set up not a centralized government with unlimited powers, but a republic of sovereign States. And this was done for the purpose of guaranteeing local self-government to the citizen. They provided that the Federal Government should function as 3 coequal departments, each of the 3 to be separate from and independent of the others. The foundation of this free Government was a written Constitution. It was put in writing so that its lasting principles would not be subject to passing whims or fancies. They provided a specific way to amend the document, if changing times and conditions ever required it. All of us are familiar with that method of amending. Nothing less than a vote of two-thirds of the Congress to be ratified by three-fourths of the States will serve to change it. Without such concurrent action by those overwhelming majorities not a sentence or a word of the Constitution can legally be changed. Both those who wrote it and those who adopted that Constitution knew the need for reciprocal checks and balances in maintaining free government. George Washington, the Father of our Country, the greatest general, patriot, and statesman, knew that freedom and liberty would be preserved if these reciprocal checks and balances were maintained. He knew these checks and balances would be maintained if the Constitution were respected and followed, and if it were amended only in the manner provided by the instrument itself. Warning against any other method of change, he said in his farewell address on September 17, 1796:

"If, in the opinion of the people, the distribution or modification of the constitutional powers be, in any particular wrong, let it be corrected by an amendment, in the way which the Constitution designates. But let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

Thomas Jefferson feared, as George Washington did, wrongful usurpation of power by the Supreme Court. Jefferson expressed himself far more vigorously on the subject than did Washington. On this subject Jefferson said:

"The judiciary of the United States is a subtle corps of sappers and miners constantly working underground to undermine the foundations of our confederated fabric. They are construing our Constitution from a coordination of general and special governments to a general and supreme one alone. * * *. Having found from experience that impeachment is an impractical thing, a mere scarecrow, they consider themselves secure for life; they skulk from responsibility to public opinion * * * an opinion is huddled up in a conclave, perhaps by a majority of one, delivered as if unanimous, and with the silent acquiescence of lazy or timid associates, by a crafty Chief Judge, who sophisticates the law to his mind, by the turn of his own reasoning."

Jefferson, that stanch believer in individual liberty, that fine advocate of States rights and local self-government said this about the provisions in the 10th amendment:

"I consider the foundation of the Constitution as laid on this ground: that 'all powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States or to the people.' To take a single step beyond the boundaries thus specially drawn around the powers of Congress is to take possession of a boundless field of power, no longer susceptible of any definition."

Today our free Government is face to face with the danger of destruction which George Washington and Thomas Jefferson feared, and against which they warned us in the words I have just repeated. That Court, with a brazeness and boldness almost unbelievable is undertaking to amend the Constitution and make statutory law through so-called judicial decisions and court opinions. In the school segregation cases the Court has arrogated unto itself, first, the functions of Congress and the States to change the Constitution; second, the function of Congress to make enforcement law, and third, the functions of the Executive Department to carry out such enforcement. This is rank usurpation of authority the Court does not possess.

In the structure of our Government there is no fact more certain than this; the nine Justices of the Supreme Court cannot change our Constitution.

The Congress with its 531 Members of the House and Senate cannot change it.

The President of the United States, with all his power, cannot change it.

Neither one of these alone can amend the Constitution. All three together cannot amend it.

It can be changed only by an amendment voted for by two-thirds of the House and Senate, and by three-fourths of the sovereign States of the Union.

Any attempt to change our Constitution in any other manner is a fraud—a gross fraud which it is the duty of all patriotic citizens to expose and to prevent. Again I am reminded of the philosophy of Jefferson and Franklin, that resistance to tyranny is obedience to God.

The principle involved here goes far beyond our right to operate our schools, although that in itself is a valued right, and a right we are not called upon to surrender merely because the Supreme Court undertakes to usurp power it does not possess.

The real issue is: Shall we permit the Supreme Court, one Department of Government, whose powers are defined and limited by the Constitution, to successfully assert the power to change that precious document,

by reading into it language it does not contain, and which those who wrote the Constitution and its amendments, never intended it should contain?

The question is, if changing conditions require a change in the Constitution, shall it be changed as the Constitution says, by drawing an amendment with definite and specific language which shall receive the people's overwhelming stamp of approval through a vote of two-thirds of the Congress, plus three-fourths of the States? This is the legal way.

Or, shall it be amended by the arbitrary act of nine men, to whom this authority has not been given, who are not elected, and who can in no sense of the word be said to represent the will and wishes of the people regarding amendments to the Constitution?

We have amended the Constitution 22 times in the past by following legal and regular procedure. The 22d amendment was proposed in 1947 and certified in 1951. What has happened that we no longer must submit amendments to the Congress for a two-thirds vote and to the States for a three-fourths vote?

We have not yet lost this right to have a voice in adopting amendments to the Constitution, or in rejecting them. But this Supreme Court decision of May 17, 1954, is a brazen effort to destroy this right.

Can the Court today strike down the accepted and declared meaning of the Constitution? Can it nullify a construction on the exact point involved, which has been followed and approved in dozens of instances, by the Supreme Court itself and courts of many other jurisdictions, and in doing so rely upon nothing but its own arbitrary will, to support the decision, and read into the Constitution language which is not there? If it can do this today, then it can tomorrow or next month strike down any other provision which does not conform to its sociological beliefs. While it may be Georgia or Tennessee which suffers today from such wrongful usurpation of authority, next year it may be Oregon, Maine, or Illinois.

While the subject today is schools, its next usurpation may involve taxes, or criminal law, or the right to own property. Once the precedent is established—once we have acknowledged the right of the Supreme Court to trifle with the Constitution, there is no limit to its possibilities.

Those of us who support local self-government and States rights have been slow to believe that we could lose these precious rights. We know now that we can lose them. We know now that if we are going to keep them we must arouse ourselves. We must throw off apathy and indifference.

The right to be segregated goes back for thousands of years before our Government was established. That right never was challenged until this present Supreme Court decided to make new law on the subject. Yet the Court is not a lawmaking body. Congress alone has the right to legislate and introduce new matter into the body of our law. Congress, in the proper exercise of its function, has time and time again refused to make new law on this subject. There is no question about the fact that Congress alone can change the law and that the Court cannot.

For the nine men who sit upon the Supreme Court to usurp these powers which do not belong to them, but which belong exclusively to Congress and to the States, is a monumental fraud which is shocking, outrageous, and reprehensible.

Such fraudulent conduct imposes no obligation upon the States to acquiesce, or upon the people to bow the neck to this new form of tyranny.

Let me say to you, as we counsel together, do not be concerned about what is said by the Communists, the pinkos, the radicals, the NAACP, the ADA, the one-worlders, and all that motley group of crackpots who are clamoring for desegregation and mongrelization. These groups of organized minorities are chanting a chorus that opposition to the fraudulent order of the Supreme Court is defiance of law. Of course that is not true. The decision of May 17, 1954, is not law. It is an attempt to make law where none existed before, by a nonlawmaking body. The defiance of law comes from the other side of this dispute. It is an arrogant defiance of law for the Supreme Court to usurp authority which it does not possess.

This claim that opposition to, and criticism of, the fraudulent Supreme Court decision is defiance of law is a sham. It is intended to draw attention away from the truth in this matter. That truth is that the Supreme Court is boldly and brazenly attempting to change the form of our Government.

A stock contention of the integrationists and mongrelizers is that a Court decision is the last word in the law, and must be accepted; that the Court's function is to expound the law.

As long as the Court sticks to the law its decisions will be accepted. When it flies in the face of the law, as the Court has done in this instance, it commits a wrong. It perpetrates a fraud upon the people. It commits as grievous a wrong as a tax collector commits when he demands more than just taxes from a taxpayer. It commits a wrong as grievous as a warden of a penitentiary commits who would seek to imprison a convict beyond the limits of his legal term. It commits as grievous a wrong as any other public official commits who seeks to assert authority which he does not possess, or to exceed the authority which he does possess. No right-thinking citizen can acquiesce in brazen usurpation of authority by any public official.

Free Americans are under no obligation whatever to permit any public official to take from them that which is theirs merely because that public official occupies a seat of authority, if he attempts either through ignorance or malfeasance to go beyond the bounds of that authority.

We owe allegiance to the Constitution of the United States. That instrument is the bedrock upon which our structure of government is built. It is our guaranty of liberty. But the allegiance we owe is to the Constitution itself, which was drafted by the Constitutional Convention and ratified by the sovereign States, and to such amendments thereto as have been legally proposed by two-thirds of the Congress and ratified by three-fourths of the States, and no one can dispute that solemn truth.

There are some who say that the Constitution means what the judges say it means. But that is not true. The Constitution itself proclaims its meaning. No court or judge possesses any authority to change the language or meaning of any phrase or word of the Constitution in the slightest degree. It is only when the wording of the Constitution is ambiguous or needs interpretation that the judicial department of the Government has authority to go into the question of what it means. And the judicial department never has had—it does not have now—authority to add anything new or take anything old from the instrument. That can only be done by amendment.

So the Constitution is not, as some would have us believe, what the judges say it is. It has no such unstable or uncertain meaning. The Constitution, and all of its amendments, is the compact of the sovereign States who consented to its operation. It is the document under which we live—which we understand, and which the courts have understood for years and generations. Its meaning has been proclaimed again and again. It is the document which every public official is sworn to uphold, and to which the loyalty of every public official is due. And let us never lose sight of this fact—that our loyalty is to the Constitution itself—not to a perverted opinion of nine men who happen for the moment to be occupying seats in the Supreme Court, and who seek because of that fact to change that true meaning, the established and accepted meaning, of our Constitution. That authority does not belong to these nine men. It belongs to two-thirds of the membership of Congress and to three-fourths of the States, joining in concurrent action.

The members of the Supreme Court have also sworn to uphold the Constitution. They owe the same loyalty to the Constitution that every other citizen does. The Constitution does not mean one thing yesterday, another thing today and something else tomorrow, and they have no right to so hold.

If the logic or reasoning employed by the Supreme Court in order to reach this decision is allowed to become standard practice; if the Constitution means one thing today and something entirely different tomorrow, then actually we have no Constitution at all.

And when anyone, whether he be President, legislator, or judge, deals with the Constitution unlawfully, it is the part of patriotism and in keeping with loyalty to the Constitution, to protest and oppose such unwarranted action. The preservation of our Government depends upon it. Our Government cannot survive in any different climate.

Now it is not only on the segregation issue that the Court is following this pattern of usurpation. In other fields also it is following a pattern of consistent and continuous usurpation of legislative functions—a pattern of stealthy erosion of the Constitution without resort to legal amendment as provided for in that document.

The segregation question is only a part of this pattern of usurpation.

In such recent decisions as the Steve Nelson and Slochower cases, the Court has rendered the States and our cities powerless to protect themselves against communism. On April 2, 1956, in the Steve Nelson case,[1] the Supreme Court said that the State of Pennsylvania cannot punish Communists for knowingly advocating the overthrow of the Government of the United States. The flimsy excuse given by the Court was that Congress had passed a law on the subject and when the Federal Government occupies the field on this vital subject, no room is left for the States to act.

One week later on April 9, 1956, the same Court in the Slochower case[2] declared a section of the charter of the city of New York unconstitutional because it permitted the city to dismiss a teacher in a college operated by the city when the teacher refused to state whether or not he was a Communist.

In the Yates[3] case, the Smith Act was rendered useless. In this case, decided on June 17 of this year, the Supreme Court reversed 14 convictions of conspiracy (a) for advocating and teaching the duty and necessity of overthrowing the Government of the United States by force and violence, and (b) for organizing a society of persons who so advocated and taught—all with the intent of causing the overthrow of the Government by force and violence. In this decision, the Court was actually legislating by writing into the Smith Act the intent of Congress—an intent undreamed of by the Congress when passing the act.

Earlier, on April 30, 1956, in *Communist Party v. Subversive Activities Control Board*,[4] the Supreme Court had rendered useless the Subversive Activities Control Act and nullified the action of the Subversive Activities Control Board in its efforts to require known Communists to register.

Footnotes at end of speech.

In the Jencks case,[5] the Court put shackles and handcuffs on the Federal Bureau of Investigation. In the Mallory case,[6] by turning a self-confessed convicted rapist scot-free, the Court tied the hands of police, sheriffs, and law-enforcement agencies. In the cases of *Konigsberg* v. *the State Bar of California*[7] and *Schware* v. *the Board of Bar Examiners of New Mexico*,[8] the Court told State courts and bar associations that they cannot make their own regulations on admission to the bar; that they had no power to protect themselves against Communists; and that it is un-Constitutional to deny a Communist admission to the bar.

The Watkins[9] decision struck a mortal blow at effective machinery for exposing Communists through congressional inquiry. Under this newly declared philosophy, Communists may now thumb their noses at congressional and senatorial investigating committees. There are other similar decisions which time does not permit me to take up.

But I do not come tonight to discuss in detail these shocking and outrageous decisions which amount to the making of new laws to free Communists and criminals, to tie the hands of State legislatures, State courts, police officers, and congressional investigating committees. I shall talk about these in other times and at other places and in due time I shall join with what I believe will be a great majority of my colleagues in Congress to enact laws to correct the evils of this pattern of usurpation, and to reestablish the security of our people and of this country, both nationally and locally. I want to give you tonight, from firsthand knowledge, some of the evils which follow this philosophy of integrated schools; this Court-made law which is being pushed and promoted so vigorously by the power-usurping Supreme Court of the United States and the radicals of this country.

On May 17, 1954, the Supreme Court made public its opinion in the school segregation cases. On June 18, 1953, in the case of *District of Columbia* v. *Thompson's Restaurant*, the Court had already made some more new laws to the effect that it was illegal in the District of Columbia for the owner of a restaurant to operate it on a segregated basis.

Although the Court in its May 17, 1954 opinion deferred any further action on the school cases until the October term, so as to give the legal representatives of the States an opportunity to present further argument, the radicals and the social equality advocates were champing at the bit and straining at the leash. They could not wait. Following a statement by the President of the United States that the Washington schools should serve as a model of integrated schools to be copied by the rest of the country, they proceeded full speed ahead to transform an orderly, effective school system into what later proved to be a veritable nightmare by ordering the schools to be integrated at the September term that year. On May 25, 1954, just 8 days after the Supreme Court ruling, the District of Columbia Board of Education, by a 6-to-3 vote, ordered the schools opened on an integrated basis in September.

Boundaries for each school were established with compulsory attendance of each pupil required at such school. A rule was made that records should not be kept or information given out on the basis of race.

If there is any place in the United States where integration could be expected to succeed, that place is Washington, D. C. For many years Washington has had no segregation in transportation or residence. For many years it has had Negro policemen on an unsegregated basis. For many years it has had Negro firemen and by official order the Fire Department was placed on an unsegregated basis in 1954. Since 1953, segregation has been unlawful in restaurants and hotels. Long before that, segregation was abolished in theaters, ball parks, motion pictures, and so forth. For many years there have been Negro judges, prosecutors, and court officials there.

Thousands of Negroes work on an unsegregated basis in all of the Government agencies in Washington. The Negro per capita income in the District of Columbia is higher than the white income in some areas of the Nation. All publicly owned swimming pools have been open to Negroes for years, as well as tennis courts, playgrounds, and parks.

All the public facilities of the Nation's Capital are, and have been, available to them for years, such as libraries and auditoriums. Here is the Nation's Capital, the people of the District of Columbia enjoy more cultural advantages than the people of any other city of America. The District of Columbia Negroes have had school facilities superior to most other school districts in the Nation. Washington has been spending $307.80 per child per year in its public-school system, as compared with $269.70 in Baltimore, $260.80 in Montgomery County, Md., adjoining Washington, $240.73 in Prince Georges County, Md., and as compared with $138.60 per pupil per year in Memphis, Tenn.

In June 1956, after 2 years' experience with integrated schools in the District of Columbia, the Legislative Committee on the District of Columbia in the House of Representatives created a subcommittee and ordered it to make an investigation of the public-school system in the District of Columbia. The subcommittee was strictly nonpartisan. It was composed of 6 members, 3 Democrats and 3 Republicans. I was named chairman of that subcommittee. For its counsel, the subcommittee selected, by unanimous vote, an able lawyer from your own State, Mr. William Gerber, of Memphis.

Those who had promoted the mixing of white and Negro children in schools uttered loud protests against this investigation. The radical organization, the National Association for the Advancement of Colored People, held a mass meeting in Washington to protest it. They sent telegrams to President Eisenhower, to Presidential Candidate Adlai Stevenson, to Chairman Leonard Hall of the Republican National Committee, to Chairman Paul Butler of the Democratic National Committee, to Speaker of the House Sam Rayburn, to Democratic Floor Leader John McCormack, to Republican Floor Leader Joe Martin, to Chairman John McMillan of the House District of Columbia Committee, and to each member of that committee, urging them to prevent the subcommittee from carrying out the function it was created to perform. The Washington Post, one of the most ardent advocates of mixing the races, began to carry editorials charging that the committee was stacked, that it was biased and prejudiced, and that its investigation would not result in a true picture of the school system. Frantic efforts were made to prevent the committee from beginning its work, and to prevent a continuance of the investigation after it began. In the 11 years I have served in Congress, I have never seen as much effort put forth to prevent a duly constituted committee of Congress from performing its work. When witnesses began to testify regarding the sordid facts and deplorable conditions of the schools, one of the Negro school board members issued a public statement containing a veiled threat to the effect that the school superintendent, Dr. Corning, "should reexamine the competency of some of the principals" who had testified at the hearings, and who, he said, had "made severe admissions of inadequacy." Our counsel and staff interviewed hundreds of teachers, principals, and school officials. Some of them were afraid to testify and told the staff they could not because they "had to live and eat."

Be it said to their credit, however, a majority of the witnesses, who were teachers, principals, or school officials, came voluntarily and testified. Not a subpena was issued by the committee to compel a single witness to appear, and witnesses consisted of both white and Negro teachers, and those who favored integration as well as those who did not.

In spite of all the roadblocks thrown in its path, the subcommittee made a thorough investigation and the hearings consisted of 512 printed pages of testimony.

We learned in this investigation that Negroes are moving into Washington in increasing numbers, and the white people are moving out. This exodus of white people from the District of Columbia began when the first steps of race mixing began in public housing and other fields. It increased as the agitation for integration increased. When the Supreme Court decision was rendered resulting in the integration of the schools, there was a marked and noticeable increase in the number of white people moving from Washington into Maryland and Virginia. This movement continues. Many formerly all-white areas have changed into all-colored areas. Many all-white schools have changed almost completely.

Twelve of the elementary schools which were all white in 1953 now have 92 percent Negro and 8 percent white pupils. Typical of the change is Wheatley Elementary School which was all white in 1953. In 1954, it had 589 white pupils and 139 Negro pupils. By 1956, the whites had dwindled to 24 and the colored had increased to 576.

Just a few years ago the school population in Washington was two-thirds white and one-third Negro, but the school census showed that in October 1956 white students were 32 percent of the school population and Negro students 68 percent. The rate of decline of white pupils is rapidly increasing year by year. In 1953 this rate of decline was 2.7 percent; in 1954, 7.8 percent; in 1955, 6.3, and in 1956, 10.4 percent. The percentage decline of white pupils from 1949 to 1956 was 28.6 percent. This trend of whites moving out of Washington and Negroes moving in, and the rate of changeover, justifies the prediction that in just a few years the District of Columbia will be a predominately Negro community.

Before integration white and Negro pupils had equal opportunity in the schools. The same amount of money was spent per pupil. A white teachers college and a colored teachers college were provided. Although there were about twice as many white pupils as Negro pupils, there were 60 white elementary schools and 61 colored elementary schools. There were 6 white senior high schools and 4 colored. The same equipment was provided for each and the same amount per pupil was spent.

Prior to integration, the integrationists claimed that the maintenance of 1 school system instead of 2 would mean substantial economy in operating expenses. Yet no economy has resulted. On the contrary operating costs have increased greatly. Information furnished me on August 12 this year by the District of Columbia school department, shows that operating expenses jumped from $26,700,000 in 1953 to $35,600,000 in 1957, with an estimate of $37½ million for 1958.

The committee had testimony that so much extra time is required for coaching Negro pupils that the teachers are unable to devote proper attention to the white pupils, who consequently suffer under this new system.

The Supreme Court and the NAACP have created strife and turmoil where no strife and turmoil existed before. Their joint action has increased tension between the races, and has caused hatred and hostility where before there was good will and harmony. This strife is chargeable to, and responsibil-

Footnotes at end of speech.

ity for it must rest with, the Court and the radical NAACP, which has been encouraged by the Court's action to stir up hostility between the races.

I have been talking to you about the Constitution and the legal phase of this question. I want to say something now about the human side, and the moral justification we have for insisting upon segregation.

Much false propaganda has been spread within recent years, and much effort has been made to brainwash the public with the utterly false doctrine that there is no difference between whites and blacks. It is time to look behind this brainwashing propaganda, and have a straight look at the facts.

There are obvious and well-known differences between whites and blacks which no amount of glossing over and covering up by subversive so-called anthopologists and pseudoscientists can hide.

Let's look at some facts from the record which have a direct bearing on the question of desirability or undesirability of integrated schools, aside from the legal aspect of the problem.

Among the many other reasons why the white people object to their children having this close association with Negro children are health, the Negroes' high crime rate, and disrespect for law, the lower mentality level, and the high rate of illegitimacy among Negroes.

It is well-known that the crime rate among Negroes far exceeds that of whites. This is true in Washington, D. C., although Negroes have every advantage they could ask for. The schools and colleges are open to them; also hotels, restaurants, theaters, parks, swimming pools, tennis courts. They buy property and live in any section they choose. The President and his appointed city commissioners apparently want to make a second Harlem out of Washington, and they boast that Washington is a model example of a nonsegregated city.

But Washington is noted for the great number of serious crimes committed in its limits. Its crimes of violence are more than twice those committed in Boston, a city of comparable size, more than twice those of Milwaukee, and nearly twice as many as New Orleans, La.

Negroes are responsible for this high crime rate. Crime statistics show that throughout the years the Negroes in Washington have committed the bulk of the crimes of violence, although until recently they have constituted about one-third of the population. In 1955, out of 11,072 crimes of violence, 9,056 were by Negroes. This is 82 percent of the total, and the percentage for the last 3 months of 1955 was 88 percent of the total.

Let's look at the District of Columbia health records. A report for the year 1955 made by the District of Columbia Department of Public Health of venereal diseases in children of school age and under, showed 834 Negro children, 17 years and under, treated for gonorrhea, as compared with 20 white children. Of the 834 Negro children, 10 were under 6 years of age. The total cases of gonorrhea of all ages, children and adults, for 1955 were Negro, 10,243, or 97.5 percent of the total; white, 271, or 2.5 percent.

These are repulsive statistics, but they show some of the impelling reasons for segregated schools, and what a tragedy it is for white children to have integration forced upon them.

From the standpoint of mentality, the Negroes have not been able to keep pace with the white children of the District of Columbia. This has resulted in lowering of educational standards.

The tragic consequences of throwing white and Negro children together in the public schools of Washington, D. C., were brought to light by the subcommittee investigation conducted by us of the integrated school system in the Nation's Capital which was supposed to be a model for the entire Nation to follow in setting up integrated schools.

One of the first steps taken when white and Negro children were thrown together in the Washington schools was the adoption of the rule which prohibits the keeping of records according to race. Failure to keep records by race prevents comparison of scholastic achievements, and mental capacity between white and Negro pupils.

The subcommittee was able, however, by careful and detailed investigation of the school records, to gather sufficient information to make comparisons in a number of schools of the scholastic achievements, mental capacity and intelligence quotient between the white and Negro students.

At the time of the hearings, there were still some schools in Washington which were nearly 100 percent colored; some still 100 percent white, and some nearly 100 percent white.

Accurate comparisons based upon recognized achievement tests, known as the Iowa achievement test, Stanford achievement tests, and I. Q. tests, showed that there was a very wide difference in scholastic achievement and mental ability between white and Negro pupils.

To illustrate, we found that in Cardoza High School, which had only 6 white pupils and 1,694 colored pupils, there were 512 pupils in the 10th grade; of the 512, 230 were able to read only from 4th grade to 7th grade level; more than 300 were able to work arithmetic only at 7th grade level or below, and 283 of the 512, which is 55 percent, were classified as being in a category which would never be able to achieve beyond the 6th grade level.

One teacher in Roosevelt High School, with a class about 75 percent colored, said she had more failures in 1 year on integrated teaching than she had in 10 years of teaching in a segregated school.

The assistant superintendent in charge of all senior high schools testified that in 4 high schools, having a total of 8 white students and 5,011 colored students, these 4 colored high schools, tested under the Iowa achievement test, rated or scored in the lowest 5 percent in the Nation of schools taking this test. He testified that in 3 high schools having a total of 3,030 white students and 99 colored, these 3 predominantly white schools, under the same test, rated or scored in the top 5 percent of the Nation.

In a group of 11 junior high schools with a total of 10,304 Negro students and only 205 whites, 2,991 were given a test on "reading and paragraph meaning"; 2,161 achieved at the level of sixth grade or lower. Of these, 676 were at fourth grade level and 385 at third grade level.

Testimony of many of the teachers showed that the Negro pupils, because of low achievement and mental ability, required so much time and attention that the white pupils had to be neglected, and failed to receive the time and attention they would have had otherwise.

All of these facts had been concealed behind an iron curtain in Washington. The NAACP and the other sponsors of integrated schools wanted desperately to keep the facts concealed, and they were concealed until our investigation brought them to light.

I have given you a few examples of testimony concerning scholastic achievement and mental ability of Negro pupils in the Washington schools. This testimony is typical of the bulk of testimony we took for 9 days from school officials, principals, and teachers.

We asked about personal relations between white and colored pupils both as to pupils of the same sex and pupils of the opposite sex.

Practically without exception, the testimony was that dances, plays, senior proms, picnics, and similar social functions were discontinued when the schools were integrated.

At Roosevelt High School, where white and colored were about equally divided, it was necessary to discounting girl cheerleaders and use only male cheerleaders because of remarks and incidents which occurred at the basketball games.

Negro girls were antagonistic to white girls, and did such things as stepping on their heels in the halls, sticking pins in them; a Negro girl will stand in the aisle and dare a white girl to pass her. A group of Negro girls will attack a white girl on the way home from school and inflict personal injuries upon her.

Similar personal antagonism exists between Negro boys and white boys. At McKinley High School a group of Negro boys attacked two white boys who had been circulating a petition opposing an integrated prom. They beat them and left one of the boys unconscious on the sidewalk. Fourteen stitches were required to sew the wounds inflicted inside this boy's mouth. His father brought him to the Capitol so that I could see the serious injuries he received.

There were numerous fights, beatings, stabbings, and so forth. The principal of McFarland Junior High School testified that, although it was never necessary to call for police assistance when operating segregated schools in the last year in his integrated school, he had to call for police assistance approximately 50 times to prevent fights and keep order.

Many of the witnesses testified as to obscene remarks, obscene literature, indecent proposals, indecent handling and indecent approaches of Negro boys to white girls.

The principal of Roosevelt High School testified that she had two cases of Negro boys approaching white girls in her school the same week she was testifying as a witness. She said she had this trouble last year and the year before, which was the entire period of integrated schools.

The former principal of Eastern High School swore that he retired last year because of ill health brought on by conditions resulting from integrating the schools. He stated it was necessary to require last year that all teachers leave their desks when the bells rang to keep order in the corridors.

He said he heard colored girls at times use language that was far worse than any he had ever heard, even in the Marine Corps.

He said that fighting, including several knifings, went on continuously—that such incidents became more or less commonplace following integration; that there were more thefts in his school in 2 years of integration than he had known in all his 30-odd years of experience before; that there were many sex problems following integration; that colored boys wrote notes to white girls giving their telephone numbers and asking for the girls' telephone numbers; that colored boys touched white girls in a suggestive manner when passing them in the halls, and made obscene remarks about them.

He stated that one white girl was surrounded by a group of colored students after leaving school one afternoon; that a colored boy put a knife to her back, forcing her down an alley and against a wall, and while they were debating making her take her clothes off, she broke away and ran home.

This principal stated that a dozen or more colored girl students became pregnant at his school during his last school year.

The principal of Jefferson Junior High School testified to 27 pregnancies in his school during last year, 2 white and 25 colored.

The number of pregnancies among the Negro girl pupils has created a serious problem in the high schools and junior high schools.

Mr. Howard West of the District of Columbia Department of Public Health testified thart in 1955 there were 996 illegitimate babies born to girls of school age in Washington—that is, ages 18 and under. Of these 926 were colored and 70 whites; 86 of them were born to girls under 15 years of age, 5 white and 81 colored.

There were 3,533 illegitimate births of all ages in Washington in 1955, of which 382 were white and 3,151 colored.

All white births in Washington in 1955 totaled 8,556, of which 382 were illegitimate. The illegitimate white births were approximately 4.4 percent. All colored births in Washington in 1955 totaled 11,404, of which 3,151 or 27 perecent were illegitimate.

He testified that it is a close estimate to say that 1 out of every 4 colored school children in the District of Columbia public schools is an illegitimate child, and this statement is based on the birth records in his department.

So, if you were the parent of a school-age daughter in Washington, D. C., and sent her to one of the model integrated schools, these are the surroundings and this is the atmosphere in which she would be educated and trained, and in which her life's philosophy would be formed.

We thought the testimony regarding illegitimate children before our committee was shocking almost beyond comprehension. However, it has grown much worse since this testimony was given. Illegitimate pregnancies have increased to such an alarming degree in the junior high schools of Washington that on June 21 Dr. John R. Pate, of the Southwest Health Cetner, made public a report on this disgraceful condition. In his report Dr. Pate said that Washington faces an "enormous moral and economic catastrophe," and that the District could no longer ignore the problem. His report was based on detailed records of children from 13 of the city's 23 junior high schools, who reported to the Southwest Health Center for confirmation of their pregnancies, in order to be excused from school. I have with me Dr. Pate's report, which consists of 25 mimeographed pages. I cannot begin to give you in the time allotted to me tonight but a small part of the shocking facts contained in this report, which for want of a better name was entitled "Junior Mothers."

Dr. Pate reported that a rise of over 1,000 percent in the number of pregnancies among this early teen-age group had occurred in comparison wtih the 1948–49 school year. He stated that in 1948–49 there were only seven illegitimate pregnancies in this junior high school group that came to the attention of the health center clinic.

In the first paragraph of his report he states that during the current school year there has been an alarming increase in the number of pregnant girls in the seventh, eighth, and ninth grades of the junior high schools of Washington coming to the Southwest Health Center to have completed and properly signed physician's certificates of pupils inability to attend school. It gives the details of a number of these cases in his report. It is full of such cases as that of a girl 14 years of age, herself one of 6 illegitimate children, having the second child by the same 17-year-old boy. A typical case is that of a 14-year-old girl, 1 of 8 illegitimate children whose twin sister is also pregnant, both of them being on public assistance.

Dr. Pate says in the same paragraph that this problem has been increasing over the last 2 to 3 years (which is the period of integrated schools) more than was noted in several years prior to 1954. His report says:

"The fact is that during the current school year our records show an increase of approximately 1,000 percent in the number of illegitimate pregnancies as compared to the 1948–49 school year in this age group."

He also says that:

"In practically every school the report is not completely accurate, falling short of the total number of pregnancies for several reasons."

He also says:

"Further, many of these children being born out of wedlock are dependent solely upon public assistance funds for their support. This economic burden merely adds another complication to the emotional and moral one in the community."

He also says:

"On the question of public assistance to these children, it might be assumed that it will be the responsibility of the taxpayer for many years."

A shocking feature of this report is that the age of these school girls range from 11 to 15 years, one of them having become pregnant when she was 10 years old.

This report shows that in the elementary schools of a total of 8 such cases all were colored, in the junior high schools of a total of 129, 119 were colored, 10 white. In the high schools of a total of 44, 43 were colored and 1 white. In a total of 190 such cases throughout the school system 178 were colored and 12 white.

Dr. Pate says in his report regarding one of these mothers of illegitimates, that their support and hers is from funds provided by the Department of Welfare. He says, "she readily admits the more children she has, the more income she expects to receive from this course and does not anticipate changing her pattern of living." He says that this pattern is repeated time and time again.

Dr. Pate's report compares conditions in Washington with those in Baltimore, a city which integrated its public schools at the same time Washington did. He states that in Baltimore of the total illegitimate babies, 50 percent occur among girls 18 years of age and lower, and that in 1954, the first year of integration, 36 percent of the total number of live births among the nonwhite were illegitimate, which was an increase of 6 percent over 1953 figures. He said that there was no noticeable increase in illegitimacy among white teenagers in Baltimore during that same period.

One of the Washington cases was an eighth grade girl who was a close personal friend of another girl who had a baby. The "junior mother" kept showing pictures of her offspring to the eighth grade student, which created "a strong desire in the eighth grader to duplicate the feat of her friend. After having intercourse with a number of young males and not getting pregnant, she has developed a definite psychosis."

Another portion of the report states that in the early part of the 1956–57 school year one southwest Washington school reported that more than one-half of the children enrolled were illegitimate.

Getting back to our investigation, Mr. Howard West, of the District of Columbia Department of Health told the committee that in 1955 the total number of cases of venereal disease reported to the Department age 17 and under was 854. Of that number, 20 were whites, 7 male and 13 female; 834 were colored, 263 male and 571 female. There were 11 cases under 6 years of age, 1 white and 10 colored.

In the short time I have to talk to you tonight, I can only give you a few of the specific facts which our investigation has uncovered and brought out into the light. We held hearings for 9 days, and the testimony fills 512 printed pages.

The hearings show that instead of being a model integrated school system, the District of Columbia schools have been turned into a nightmare of chaos, indecency, lack of discipline, and inability to learn. It is causing white people to move out of Washington so rapidly that the school population which before integration was approximately two-thirds white and one-third colored, is now, according to the latest estimate, approximately 68 percent colored and 32 percent white, with the percentage of colored pupils constantly increasing and white pupils decreasing in a corresponding degree.

These are some of the many valid reasons why white people are justified in the position taken regarding segregation.

I have given you these facts about the situation in Washington because in the wake of the Supreme Court decision to integrate schools, the President declared that Washington would be an example of how good integration would be. The present sickening conditions of the Washington schools are mute testimony to this example.

Not only have mixed schools been a scholastic failure but as an experiment in human relations it has been a nightmare.

In December 1955, principals in high schools and junior high schools found it necessary to hold "shake-down" inspections of their students in compliance with numerous complaints that students were carrying knives.

Two cases of attempted assault by Negro boys on white girls were reported in 1 day at 1 junior high school. These cases involved language and action so vile and so sordid that it staggers the imagination.

We cannot afford to subject our children to such a malignant experiment. The same integrationists and mongrelizers have stated that they only want equal rights and opportunities for the Negro. Yet the radical NAACP has repeatedly declared that their ultimate goal is intermarriage and complete mongrelization of the American people. The fact that this is also the identical aim of the Communist Party of the United States is more than just coincidental. If they are successful in cramming this school decision down our throats, they will follow it with a decision invalidating our marriage laws, and that will be the end.

The time to end this judicial usurpation is now. The time to restore the Constitution to the people is now.

I have given you tonight, in brief, a picture of the deplorable situation in Washington. I have seen there the tragic results which come from the breakdown of segregation and substitution of an integrated public-school system.

This same thing can happen here and will happen to you if the people meekly accept wrongful usurpation of power, and a Supreme Court dictatorship, as they did in Washington.

It is not inevitable. It does not have to happen. The attitude that we cannot prevent it and that we must accept it is unworthy of a people with our heritage. There are many legal ways in which we can prevent such a catastrophe. The one thing which is needed is a determined attitude and a willingness to do whatever may be found necessary to preserve these precious rights.

I can say to you that we in Georgia are determined, and will not accept these fraudulent efforts to take from us our constitutional rights.

It need not happen here or elsewhere, and it will not happen, if we as free, liberty-loving Americans band together to retain our constitutional rights.

By organization at home, you can give inspiration to your public officials who must lead in this fight—to your governor, legislators, public-school officials, all those who must lead in this fight here at home, and to your Senators and Representatives in Washington. We must signify our determination to fight this battle to a successful conclusion. You have a most important

part to play. It is your individual struggle, and your neighbor's individual struggle. Let me urge you to accept your responsibility, and to do your part. Urge your neighbor to do his part. This is a time when it is true, as never before, that "united we stand, divided we fall." This is a fight which can be won, and I pray that it is the will of Almighty God that it will be won. But it will not be won by default.

Shakespeare said, "He is thrice armed who hath his quarrel just." Never was there any people with more just reason to prevail than we in this struggle.

Let us not lose sight of this truth in these critical times. Let us remember that the fight is ahead of us—not behind us.

Europe Can Dream, Can't It?

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. SIEMINSKI. Mr. Speaker, some call Europe old, a cradle that nourished a grown America.

Others call it a parched battlefield that slakes its thirst on American blood.

So it has been. Europe, in this century, restive, incapable of solving its problems short of war.

Now, Europe dreams. It seems to turn to thinkers, doers, and to engineers outside of government for a more prosperous future.

Europe plans a verdant island in the Sahara, a seaway to the oilfields in south Algeria, a motor that will fly, a tunnel under the English Channel, and a sausage skin to haul oil hitched to an underwater vessel.

The New York Times tiptoes this Europe through a midsummer night's dream as follows:

MIDSUMMER NIGHT'S DREAMS IN EUROPE

(By C. L. Sulzberger)

PARIS, August 18.—Every now and then we are likely to forget that Europe, despite political agonies and economic worries, remains one of the most imaginative population centers in the world. Right now, beneath a surface of international problems beclouded by the A-bomb and Algeria, Europe is bubbling with ideas of how to make for itself a better life.

For example, a French group called Artemis is now investigating a scheme to create an artificial inland sea in northern Africa. The purpose would be to irrigate the desert, changing its climate, and to open a direct waterway to Tunisian iron and phosphate deposits and the new petroleum fields in south Algeria.

This, its sponsors calculate, could be accomplished for something like a quarter of a billion dollars. It would require a 91-mile-long maritime canal involving the removal of 6 times as much earth as was once taken from the Suez excavation.

Another consortium of French and British financiers and experts has begun study of a tunnel to connect France and the United Kingdom by road beneath the English Channel. This is an old idea; today it breathes new life.

Back in 1802 an audacious Frenchman, Camille Nathieu, first dreamed of such a submarine highway for carts and horses. For more than a century the insular British opposed it for strategic reasons. They didn't fancy the thought that enemy divisions might some day pop up beneath Dover's white cliffs.

But 5 years ago SHAPE headquarters, NATO's command post, blessed the project. And since the Suez Canal Co. was put out of business by Nasser it is looking around for ventures in which to invest its capital. Together with the Channel Tunnel Co., Ltd. of London and the French state railways it is surveying the advisability of an underwater route from Folkestone to Gris-Nez.

AN UNDERWATER TANKER

These are massive thoughts. On a smaller scale is a long roster of inventions being concocted in European laboratories. A Frenchman named Camille Rougeron has compiled a study of the practicability of transporting oil by submarine tankers. These would be streamlined to avoid frictional wave resistance, increasing speed, and reducing operational costs.

Two engineers at England's Cambridge University are developing a still more novel way of moving liquid fuel. This envisions construction of huge sausage skins of nylon or artificial rubber. These could be folded up and easily transported empty. Or they could be pumped full of petroleum and towed.

Similar calculations concerning what he calls plastic barges have been made by Ernst H. Doerpinghaus, of Hamburg, in West Germany. He estimates it would cost only $714,000 to construct 3 such envelopes and another $580,000 to build a 3,000-ton tug to pull them. They could carry as much oil as a 30,000-ton tanker costing $5 million—and at one-eighth the operating expenses. Or so says Herr Doerpinghaus.

France's aviation industry has again begun to demonstrate the vital originality that marked it for so long before the war. During the past 10 years it has developed 28 new types of military and 7 of civilian aircraft. The latter include the famous Caravelle twin-jet, soon to become Europe's most popular middle-range plane.

A FLYING ENGINE

The strangest device turned out by French aeronautical engineers is a thing—that is the only applicable word—called the flying atar. Atar is a powerful gas turbine engine with a 13,000-pound thrust. But a flying atar is nothing but that same motor, its fuel supply, plus an adventurous pilot who sits on it and simply takes off. It goes up, down, and sideways without visible means of support conceivable to the ordinary mind. A diplomat saw it at the last French aviation show. He remarked: "I have seen it, but I don't believe it."

Some of these projects sound like midsummer night's dreams and some of these devices sound like plain midsummer madness. But perhaps a few of them may help to change the nature of this century's second half and the world's way of living.

Europe has experienced revolutionary changes in power status and political organization. From Oman to Algeria its bigger nations desperately seek to hang on to the remaining imperial appanages that once sustained a greatness which has gone.

European statesmen are trying valiantly to begin a continental federation which would shed restrictive bonds of nationality. European politicians are attempting to build viable democracy from the wreckage left behind by Hitler. Grave difficulties—perhaps insuperable ones—remain in these administrative fields. But European thinkers, uninhibited by the trials of those who govern them, proceed once more along original and experimental paths. It is this persistent quest that has made of this continent so long a civilizing force.

Address by Maj. Gen. William Childs Westmoreland

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. WHITENER. Mr. Speaker, the annual textile festival held at Mount Holly, N. C., each year is one of the outstanding occasions in our section of North Carolina. The junior chamber of commerce of that city always strives to get an outstanding speaker to deliver the principal address for the week of festivities.

On Saturday, August 17, 1957, Maj. Gen. William Childs Westmoreland, secretary of the General Staff, United States Army, delivered a magnificent address before a crowd of over 2,000 people assembled at Costner Field.

This brilliant and outstanding Army officer captivated the entire audience with the eloquence of his presentation and with his wonderful personality. He carried to our people the Army story in a manner which reflected credit upon the Army.

His address is of such excellence that, under unanimous consent, I ask it be printed in the Appendix of the CONGRESSIONAL RECORD.

The address follows:

ADDRESS BY MAJ. GEN. WILLIAM CHILDS WESTMORELAND, SECRETARY OF THE GENERAL STAFF, UNITED STATES ARMY, AT THE ANNUAL TEXTILE FESTIVAL, MOUNT HOLLY, N. C., AUGUST 17, 1957

It is my pleasure to be back in this section of the country where I was born and raised, but where I unfortunately have not had the pleasure of living since I graduated from Spartanburg High School in 1931 and proceeded on a military career. I frequently look with pride on my early upbringing in our textile communities which have made such a great contribution to the economic life and strength of America, and which have played an essential role in providing for the needs of the armed services.

In the era in which we are living today, the leadership of the free world is, in large measure, the responsibility of our good country, the United States of America. To fulfill successfully this worldwide responsibility

requires the contributions of all segments of our way of life—the farms, factories, schools, churches, and our military services—each playing a vital role in weaving together the strong fabric of our national makeup. As you so well appreciate, one cannot make a bolt of cloth without a warp and a woof, nor can our democratic society prepare itself to meet the challenges of today and the future without the essential tying and blending together of all of its strongly constructed elements.

You here in Gaston County have a greater number of looms for the production of textile goods than any other county in the United States. This is, indeed, the heartland of the textile industry. It may be of interest to you to know that the organization which I represent, the Army, spent about $250 million last year for the purchase of textile goods. No doubt much of this material was manufactured in this area, in fact, some right here in Mount Holly. Your community can be justly proud of your contributions to the Armed Forces, just as you can be proud of our democratic form of government, the freedom that it provides us as citizens, and the great material benefits that our vast industrial complex provides for our comfort and well-being.

The many benefits of American citizenship which we look upon with great pride and satisfaction have not been developed overnight. Rather, they are the results of foresight, imagination, wisdom, and great industry on the part of our Founding Fathers who lived generations before us. Also, we cannot overlook the strong spiritual guidance that we inherited from them.

The plain truth is that for almost two centuries, Americans have been carrying forward the cherished traditions and ideals of those first settlers of our country who felt the whip of oppression. The Revolutionary War battlefield at nearby Kings Mountain stands as a symbol that our forefathers would give anything, even their lives, to protect the principles for which they stood. Since that time, it has been characteristic of Carolinians that, in war and in peace, they willingly share the burdens of meeting any threat that faces our country.

Today, our country is threatened by a great industrial power in the form of the Soviet Union. Since the October revolution in 1917, the Communists have had but one aim, world domination. Today, this is just as true as it ever was. They are trying to bring about the downfall of our free system of government and to superimpose their system, based upon the rule of the many by a chosen few. History has shown us that such a system results in less productivity and little or no freedom for the individual. They want to replace freedom with the harshest form of government in the world today, and they will use any of their devious means, all repulsive to Americans, to do it.

To insure that the Communists do not succeed in achieving their goal, we have found it necessary to create strong military defenses on the land, in the air, and on and under the sea. We have found it to our advantage to maintain military alliances in order to provide in advance adequate measures for our own security and to assist in strengthening the forces of our free world allies. This formidable military power is a costly one, but it is an essential price to pay if we are to maintain our freedom.

Frequently in peacetime, after the ravages of war have been forgotten, we Americans have looked upon our Armed Forces as an area in which great economies can be made. There has been a tendency to view a strong military posture as nonessential and let our Armed Forces suffer from neglect.

We have seen the unhappy results of unpreparedness in World Wars I and II and in Korea. In all of those wars, the necessary rapid build-up in strength was costly and extravagant—in dollars, in national resources, and by far the most important, in the unnecessary loss of the lives of our soldiers, sailors, and airmen. Nevertheless, thanks to the initiative and resourcefulness of the people of our country, we have successfully maintained the security of the United States and contributed greatly to the defense of the free world.

The question that I pose to you today is: Do we want to let this happen again? To ask the question in another way: In the light of tremendous advances in communications, transportation, and great increases in the destructive power of modern weapons, can we afford to follow our practices of the past?

My answer is an emphatic "No." Time and space factors have shrunk the oceans. The day of deliberate mobilization and unhurried training is past. We must have military forces ready on any day that the Communists should decide to force a war upon us.

In addition, we must have military forces that will provide us with security against any type of Communist threat. We cannot assume that any future war will conform to a particular form or pattern. In other words, we must design our military insurance so that it will protect us against all types of weapons and any form of aggression that the Communists are capable of using. We cannot assume that Communist aggression would have to begin with a surprise atomic attack upon the United States. Certainly we must have, and do have, a strong air atomic capability to insure the Communists that such an attack would bring immediate destruction to their homeland. But we must remember that since World War II the trend in warfare has been toward local aggressions, such as happened in Korea. Since 1945 there have been 15 limited wars, in 8 of which the Communists have been involved.

If our military preparations are not designed to resist limited aggression immediately, the Communists no doubt will take advantage of the situation and broaden their aggressive activities by making quick land grabs around the frontier of the free world. In such a way they could further their aim of world domination by biting off the free countries one by one and slowly nibble away the democratic nations of the world.

Since the Army has the conclusive capability of resisting aggression on the ground and physically controlling land areas, it is the Army which has been designed to move to any part of the earth in order to halt aggression and to defend and secure land areas. I think that you will be interested to know that the Army trains continually in order to perform this important role, and by so doing provides the military means to control effectively all types of aggression.

Now, what are the military means that the Army provides to control all types of aggression?

First, the Army has some 40 percent of its strength deployed overseas. I know that many of you have sons, relatives, or friends serving overseas with these forces; therefore, I would like to outline the important role that our soldiers in foreign countries play in preventing aggression.

In strategic areas overseas, as in Germany and Korea, our soldiers serve alongside our allies, physically blocking the enemy routes of aggression. These troops, United States and allied, provide visible evidence to the Communists that an attack will bring down immediately the armed might of our country and that of the rest of the free world. In addition, the presence of American soldiers, facing the Communists along the Iron and Bamboo Curtains, demonstrates to friend and foe alike our determination to keep the peace.

A second means that the Army provides to control aggression is the assistance it gives our allies in helping to develop their own military strength. I often feel that the benefits we are receiving from the military aid program are not fully understood. The Army, for example, is helping train some 200 allied divisions. These divisions provide military strength for internal stability and the means to check in varying degrees Communist subversion and local aggression.

Our troops in the United States, such as the 18th Airborne Corps, at nearby Fort Bragg, whose splendid band has been here with you today—provide another vital element of our Army designed to prevent aggression. These units in the United States can reinforce our troops overseas or our allies in an emergency as quickly as transport can be provided.

I do not want to leave you with the mistaken idea that the Army is not concerned with the possibility of Communist thermonuclear weapons being launched against our country by aircraft or missiles. The Army, with its air-defense units manning guided missiles is looking far into the future to provide the United States with the capability to shoot down anything that flies.

Many of our large cities and industrial complexes are now protected around the clock—24 hours each day—by Army missile units. The Army's Nike is one of the great products of American technology. Its capabilities are continuously increasing to provide more and more security against a thermonuclear attack. The citizens of this area may well be proud that one of our Nike manufacturing plants is located at Charlotte and contributes directly to the growing effectiveness of our air defense.

The soldiers of our active Army, at home and abroad, serve notice that our country will resist all types of Communist aggression. However, we in the Army are the first to realize that our country cannot afford to have in peacetime sufficient military strength to bring a war to a successful conclusion. Consequently, there is another vital element in our military forces—the National Guard and the Army Reserve.

We can be certain that before the Communists would embark on any military venture, they would weigh the strength and preparedness of our Reserve forces and the time it would take them to physically enter the battle. To insure that our Reserve forces are in fact ready for immediate action in the event of a national crisis, we must provide them with realistic and sufficient training in times of peace.

As a native son of this part of the country and as a professional soldier, I have always been proud of the contributions of our citizen soldiers. I know that my own pride in our guardsmen and reservists is characteristic of the feelings of all Carolinians. Our citizen soldiers today, in carrying forward the traditions established on the field of battle, must continue to receive all-out support and encouragement from every one of us so that they will successfully meet the challenges of the future.

I have outlined briefly the military means that the Army provides to help prevent aggression. However, our active Army, the National Guard, and the United States Army Reserve will never be any better than the quality of the men who compose them. Our country requires a continual flow of young men who measure up to increasingly higher standards and who willingly accept the challenging requirements of modern military forces.

To the young men and their fathers and mothers here today, I can speak of Army life based upon 21 years of service. I can assure you that service in the Army is a privilege. It is a clean and wholesome life that offers many advantages such as travel, education, and skilled technical training. Your Army of today is modernizing as rapidly as possible and provides unlimited opportunities to the quality young men of America. Most of all,

the soldier finds satisfaction in serving Uncle Sam.

Our Armed Forces, active and reserve, provide our great country with a type of insurance similar to that of your fire department here in Mount Holly. The fire department, an essential part of the community, strives to avoid fires by taking every possible measure within its means to prevent their outbreak. In addition, your firemen are alert and ready, 24 hours a day, 7 days a week, to extinguish any fire that might break out and threaten your homes and your plants.

The Armed Forces I am representing here today provide the same type of insurance for our country. Our first efforts are designed to prevent war by deterring our enemies from launching an attack on our country or any other country in the free world by making it clear to them that aggression will not pay and will be promptly and thoroughly crushed. In so doing, we must be alert around the clock. Just as the fire department, your Armed Forces must be prepared to quell any conflict which does occur in spite of our best efforts to prevent war of any type.

We hope and pray that our efforts to deter war will be successful. This, you can be assured, is the primary aim of those of us in uniform.

Maurice H. Kirby, of Henderson, Ky.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article pertaining to Maurice H. Kirby, which was written by Francele H. Armstrong, and appeared in the August 18, 1957, issue of the Gleaner and Journal, of Henderson, Ky.

Maurice H. Kirby was born in Warren County, Ky., his forebears being outstanding citizens of hardy stock who were responsible, in large part, for carving the history of our county and paving the way for its future development. This leadership and ability has been handed down to Mr. Kirby. While attaining personal success, he has, at the same time, given unstintingly of his time and energy to civic projects affecting the welfare of his community. Any city would be the richer by virtue of having such a gentleman residing within its environs. His good judgment, character, and high levels of endeavor proclaim him to be a person whom all citizens would be proud to call friend.

The article is as follows:

NOW THAT MAURICE H. KIRBY'S G–J DIRECTOR, THE TRUTH CAN BE TOLD

Some months ago I was asked to do an article about Banker Maurice Helm Kirby which was subsequently used to introduce Editor Kirby to the members of his family who received copies of the genealogy which he prepared. During the interviews which preceded my writing of the article, I attempted to secure a promise from Maurice that I might have permission to write of him and his book when it was published.

But Maurice is the tricky one, and when the book came out he found one after another excuse to put me off.

However, I have finally backed him into a corner and extracted permission to do this article—the reason for his change of heart being my present claim upon him. Since July 1, 1957, Banker, Editor, Photographer Kirby has been Director Kirby—a new member of the Gleaner & Journal Publishing Co.'s board. Though Maurice claims to know nothing about newspapering, he knows enough about public relations to fill a Sunday paper. So we gained his consent to the directorship and at the same time I found a way to get the story of his life and book into print.

In reading over the materials of the article which is contained in the introductory pages of the genealogy, I've decided to run my original story as is. Unfortunately for the general public, the genealogy is not available at libraries, having been a limited edition publication copies of which went directly to members of the family.

FACTS ABOUT THE EDITOR

When Maurice Helm Kirby returned to his native State of Kentucky after some years away, a friend in Bowling Green said to him:

"Maurice, you are kin to almost everyone in Warren County."

Kirby, then 32, reflected on the statement. For the 16 previous years he had pursued the profession of banking. Now, he was at that point in life when a statement that pushed back the veils of the past aroused him to examine the facts that prompted it, and he began to ask questions. What he learned led him to interesting conclusions.

Throughout the early years of his life, his home at Smith Grove, a prosperous farming community between Bowling Green and Glasgow, had been a rendezvous, a veritable rallying point, for his immediate family, for relatives, neighbors, friends, and many strangers. Always, whether occasioned by his parents' hospitality or by their pleasure in ancestral reminiscence alone around the hearthstone at "Smoky Row," the names, lives, and experiences of his forebears had enlivened the subjects themselves in memory, and many a casual conversation. But his mind in those years had been too occupied with school work and subjects in text books.

When he had finished school at Smiths Grove, he started to work in his father's bank, at the very bottom. He had worked his way upward to the position of cashier and director in the Farmer's Bank, before going to Florida during boom times. At St. Petersburg he had assisted in the organization of one bank, then organized another which later became a branch of the First National Bank of St. Petersburg. He had served this institution, the First Security, as cashier, vice president and director.

A NEW GOAL

With his return to his home State, he became secretary and treasurer of the Bowling Green Trust Co., and assistant cashier of its parent institution, the Citizens National Bank. It was then that Robert Rodes, the bank's president, made the remark that was to set the young man on the road to a new and challenging goal.

"You are kin to almost everyone in Warren County," set Maurice Kirby to the task of assembling data on members of his family, present and past. The Kirby genealogy, now in print, is the culmination of 25 intervening years of devoted labor.

The task of assembling the story of eight generations of Kirbys has been monumental. It was complicated by the roving existence necessitated by Mr. Kirby's appointment as examiner for the Federal Deposit Insurance Corporation. He and his wife, the former Martha Louise Richardson, of Smiths Grove, lived in 27 homes during the years of his service as a Federal bank examiner. It was a trail which led southward into Florida, then to Atlanta, and finally to New York City.

Each transfer meant moving the historical treasures to a new and different bank vault. As they accumulated through the years Kirby became more and more convinced that the inspiring and challenging facts about the Kirby ancestors must be made available to posterity.

It is not unusual to find that the demanding duties of banking, either as an examiner or as an executive, bring the four walls of the institution close about a person, shutting off the freshness of outside interests and activities. Such was not the case with Maurice Kirby. With the aid of a cousin, J. Quince Kirby, Sr., the materials began to take shape as deeds, wills, letters, and other recorded data added to the sum total of family knowledge.

Meanwhile Mr. Kirby's advancement in his vocation continued. He was at one time in charge of all bank examinations in Florida under the jurisdiction of the Federal Deposit Insurance Corporation. Later he was assistant supervising examiner of the fifth Federal Deposit Insurance district involving 722 insured banks of Louisiana, Mississippi, Alabama, Florida, and Georgia. The success of these assignments finally led to headquarters in New York City, with the position of principal examiner.

The Kirbys were unhappy in their life on the eastern seaboard. One day there came a query from Louisville: "Will you take a position as executive vice president of a bank in one of Kentucky's finest cities?"

Mr. Kirby answered an unequivocal and enthusiastic "Yes."

That was 9 years ago. Those 9 years of his service, first as vice president of the fast-growing First National Bank, of Henderson, and then as president, have found the resourceful and nonconforming Banker Kirby moving into various types of pioneering activities. As if inspired by the godfather for whom he was named, he has made the name of Maurice Kirby synonymous with progress and enlightenment.

FOREBEAR A FOUNDER

The original Maurice Kirby, who came to this Ohio River town following the War Between the States, is credited with having founded the public school system of Henderson. His namesake will be credited by future generations not only with the editorship of the Kirby family history, but also with having introduced a new form of public relationship into local banking.

Mr. Kirby has extended his interests into the community through many local organizations. He is a member of the Henderson Rotary Club, has been its president, and is now a veep and a director, the Loyal Order of Moose, the First Presbyterian Church, the Henderson (Ky.) Lodge No. 206 BPO Elks, member of Henderson chapter of Jerusalem Lodge No. 9 Free and Accepted Masons, Henderson chapter No. 88 Royal Arch Masons, Henderson Commandery No. 14 Knights Templar, is also a Shriner, being a member of Rizpah Temple of Madisonville. He is a member of the Henderson Audubon Society, and is a Kentucky colonel.

Another organization in which he has been an ardent member for a number of years is a British society known as the Newcomen Society of England in North America. Broadly, this British society has as its purposes: to increase an appreciation of American-British traditions and ideals in the arts and sciences, especially in that bond of sympathy for the cultural and spiritual forces which are common to both countries;

and, secondly, to serve as another link in the intimately friendly relations existing between Great Britain and the United States of America.

His hobbies have brought him personal as well as business acquaintanceships. He is an avid camera fan, working with several types of equipment including a Bolex movie camera, a Rolleiflex, a Bell & Howell Turret camera, a Retina 2A, a Leica, 3F, a Polaroid, an Ikonta B, an Eastman 16mm Royal and a Revere Stereo. He has his own darkroom at his home, an interest which has coincided with his collection of photographs to illustrate the Kirby family genealogy.

He has other absorbing hobbies. He is a beekeeper who handles his own bees, eats his own homemade honey. He shares a hobby with his son in the model railway which they have built at the 12th and Elm Street residence. He assists his wife in collecting priceless antiques for the 100-year-old brick home, another hobby which ties into his genealogical interests.

He takes an active role in bankers' organizations, both State and national. He is now serving his fourth term as member of the Country Bank Operations Commission appointed by the American Bankers Association to improve operations in its 15,000 member country banks. Answering this challenge he prepared a booklet: Do's and Dont's for Bank Tellers which has already sold 50,000 copies. He is a director of the Kentucky Bankers Association, and was commended for a highly original ad in that group's trade magazine which emphasized Henderson's rich heritage in history. He is responsible for the founding of the Henderson County Savings Bank at Corydon, and is a director and its president.

The bank employees have found a new atmosphere in the First National Building, now remodeled, expanded and aid conditioned. There is a pleasant lounge in which they may relax, and music is piped to the three floors on which banking activities are carried on.

Although Mr. Kirby's brothers and sisters had splendid educational opportunities, he himself did not go to college. In later years, this has enhanced his appreciation of things educational. He takes great pride in the degrees held by his son, Maurice Helm Kirby, Jr., who graduated with honors in naval tactics, mechanical engineering and business administration, and is now assistant to the manager of the Bucyrus Erie companies in Evansville. The junior Kirbys have two children, Karen Kathleen and Maurice Helm III.

AN IDEAL

"I want these children, my nieces and nephews, and generations succeeding them, some of whom I have never seen, some whom I shall never see, to feel my interest in them through this genealogy which I am making available to them," he said as he discussed the history of the family.

"I feel that our ancestors have given up something upon which to build that is fundamentally American. I feel that reading of what our forebears endured, what they endeavored to do, to make this country free and prosperous, will make the present and coming generations better appreciate what they have inherited. It should inspire them to work, diligently and faithfully, as others have done, to preserve our democracy.

"I hope," continued this dedicated man, "that this work will be the marble shaft that will mark my resting place, and that through it future generations of Kirbys will read my epitaph as that of a man who loved his country and his family, and endeavored in his own way to preserve the priceless traditions of both."

Report of Airline Pilots Association on Problems Created by Liquor Consumption Aboard Aircraft

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting letter including further testimony presented by the Airline Pilots Association addressed to the Honorable A. S. MIKE MONRONEY, chairman of the Senate Committee on Interstate and Foreign Commerce, in support of Senate bills 4 and 593, which would prohibit the serving of alcoholic beverages to passengers on aircraft in flight.

The letter follows:

AIR LINE PILOTS ASSOCIATION,
Chicago, Ill., August 21, 1957.

Hon. A. S. MIKE MONRONEY,
United States Senate,
Washington, D. C.

DEAR SENATOR MONRONEY: We indicated to your committee during testimony in support of S. 4 and S. 593 that we would supply them with a report of incidents illustrative of the type of problem created by the consumption of intoxicating liquor by passengers aboard aircraft. Such a report is contained in this correspondence.

However, before listing such incidents, I would like to briefly reiterate a statement made in our testimony as to our viewpoint on such matters. We stated that there are some hazards that are so obvious that incidents, or worse, serious accidents are not necessary to establish them. We feel that the problems created by the consumption of intoxicating alcohol on aircraft fall in this category.

It should not be necessary for an intoxicated passenger to create a problem resulting in the destruction of an aircraft with the loss of scores of lives in the aircraft or on the ground to establish that a hazard exists.

As an example of the foregoing, we invite your attention to an accident which occurred to a Varig Constellation aircraft ditched at sea, Friday, August 16, 1957, during a three-engine ferry flight. The airline pilots have condemned the practice of taking off and ferrying 4-engine aircraft on 3 engines for many years and the airline pilots will not accept such flights.

Despite this, the Civil Aeronautics Administration and the Civil Aeronautics Board have refused to rescind the authority granted to air carriers to perform such flights and continues to permit them when the air carriers are able to find someone who will operate such trips. The pilots have contended that this is an obvious hazard and that it is only a matter of time before such an aircraft plunges into the ground killing the crew and, possibly, people on the ground.

The Varig accident of last Friday, if press reports are accurate, confirmed the pilots' view and justification for their refusal for many years to engage in what they considered an obviously hazardous practice. In out opinion, the service of alcohol to passengers under as inappropriate conditions as aboard an aircraft in flight under low oxygen pressure falls in the obvious hazard category requiring only common sense to recognize the hazard.

In our testimony, we referred to a number of situations where we felt that an intoxicated passenger created a hazard. We shall list incidents under each condition.

1. ATTEMPTS TO ENTER THE FLIGHT DECK AND INTERFERE WITH THE OPERATION OF THE AIRCRAFT BY THE CREW

(a) Northwest Airlines, Tokyo to Shemya, Alaska; received, Air Line Pilots Association, April 23, 1957: My flight, No. 10 of April 22, 1957, en route from Tokyo to Shemya, Alaska passenger boarded at Tokyo by the name of ———. Passenger ——— became very drunk and belligerent on the free whisky provided by Northwest Airlines on overseas flights. Kept trying to force his way into the cockpit. I was particularly busy at the time copying reanalysis and keeping track of other traffic. Copilot and purser attempted to quiet passenger ——— down and get him to return to his seat. He refused. I went aft shortly thereafter and attempted to get him seated diplomatically and without offending him. He wouldn't listen to reason and the situation was getting out of hand so I advised him if he didn't sit down, fasten his seat belt, and quit making a ——— out of himself and bothering other passengers that I would ———. Inasmuch as the top of his head was about level with my chin he sat down. I strapped him in. No further word heard from passenger ———.

(b) National; received, Air Line Pilots Association, March 8, 1956: I remember when a large man under the influence of liquor started to come up to the cockpit yelling that he was going to kill the captain because he was going to make an emergency landing in an open field instead of an airport. The only emergency was with him. We happened to have a sixth crew member on board who, with other male passengers, stopped him at the cockpit door. He put up such a struggle that they had to take his belt off and wrap it around his neck and tie him down. The captain got out of his seat and took his large flashlight, to use as a weapon I suppose and went back to help.

(c) Delta, New Orleans to Dallas; received, Air Line Pilots Association, September 30, 1955: On a Convair trip from New Orleans to Dallas one night and while on final approach to Alexandria Air Base, a short, well-inebriated man wandered into the cockpit and began to berate me for being "mandatorily angry with him and just what did I have against him anyhow?" A circle of the field was necessary while a hammerlock was applied to convince him that the captain was not mad at him and that he should return to his seat.

(d) London; received, Air Line Pilots Association, September 27, 1955: About 15 minutes after reaching cruising altitude, the cockpit door swung open and a lady rushed in and wanted to talk to me. She pushed by the engineer and sat down on the floor. The steward had seen her rush up to the cockpit and followed her to inform me of her inebriated condition. I returned her to the cabin and she sat down in a seat in the tourist compartment. I went back to the galley to find out where she belonged. In that length of time the tourist passengers were objecting to her presence. Hence, I removed her to her assigned first-class seat. The lady's seat mate was an unaccompanied child. I later found she had been offering him beer.

2. CREATION OF DISTURBANCES IN PASSENGER CABIN REQUIRING PILOTS TO LEAVE FLIGHT DECK

(a) American Airlines, Dallas to Idlewild; received, Airline Pilots Association April 11, 1957: A passenger, who had been drinking prior to boarding the flight became very obnoxious before and after being served cocktails, plus other sources: his own and taking

drinks from other passengers, insulting stewardesses, causing one to cry, and in general profanely disturbing the other passengers. Captain ——— had to talk to the drunken passenger three times, the last time he was actually put bodily back to his seat, because he refused to cooperate. Landing would have been made at Nashville if we were not overweight and the inconvenience so great. Police met the plane in New York and hauled the passenger, who had passed out, or faked it, away on a stretcher.

(b) American Airlines, Los Angeles; received, Airline Pilots Association March 26, 1957: Approximately 1½ years ago (1955) while being based in Los Angeles ——— were returning to Los Angeles via El Paso and San Diego; when just before reaching 20,000 feet out of Dallas, one of our stewardesses came to the cockpit and almost hysterically told us she had just been struck (slapped) by a big drunken man (passenger). ——— that I go back and check. I did, and before reaching the buffet area I noticed an obviously very drunk man approximately 50 years of age, 220 pounds, 6 feet 2 inches. He was so incoherently drunk I advised the stewardesses to stay completely clear of him and proceeded to coax him into a double empty seat in the rear of the ship. On the way back to the cockpit I was stopped by passenger and asked if I got his gun—they had observed he had a shoulder holster and also heard him boast of killing a man by the same name of ——— our stewardess and he told these passengers if anything happened to the crew not to worry, he could and would fly—with this additional information I returned to the cockpit and advised ——— there was a big drunk ——— back there and was reported armed and if he (captain) wanted any more checking done he would have to do it himself. After the captain checked further he sent the F/E back to sit in the empty seat by the drunk. It took three Texas troopers to remove him at El Paso—put him in jail overnight. (Later I was informed) he came out next day and returned by another flight to Dallas (sober).

(c) United Air Lines, Chicago-Los Angeles; received, Air Line Pilots Association, February 20, 1956: Approximately 2 hours after departure from Chicago, the flight engineer returned from a routine cabin inspection to report abnormal behavior on the part of a female passenger. He stated that she was screaming, babbling and otherwise creating a general annoyance. He relayed a request from the stewardess that I return to the cabin and speak to the passenger. I proceeded to the buffet area where the stewardess briefed me on the situation. The stewardess had spoken briefly with the passenger at boarding, at which time there was no suspicion of irrationality. Shortly after drinking a 4-ounce cocktail however, unusual behavior became evident. I walked back to the longe area which was occupied by 4 men and a female passenger 55 to 60 years of age. The woman was engaged in an incoherent rambling increasingly loud, which was distressing to all within ear shot. When she became conscious of my presence I was given to understand this much that she was ——— "going to show me how to fly this airplane." Consideration was given to an attempt to isolate this person, but with our passenger load this was impossible. With this survey of the situation I satisfied myself that there was no immediate safety problem, but spent some thought in determining my course of action should this passenger become completely unmanageable. I instructed the stewardess to give her a dramaine tablet in a cup of coffee, while I raised the cabin altitude to 8,000 feet. The possibility and impact of an unscheduled landing to deplane this passenger caused me considerable concern, concern which more logically should have been directed to the conduct of the flight rather than the conduct of the passenger. We were 10,000 pounds overweight for a landing and 400 miles from a terminal or familiar airport. This unpredictable passenger was more than a match for the two little coeds who were playing barmaid. At this point I was heartily damning the governmental agency which permitted a flying bar but did not require a 250 pound bartender to keep order.

(d) Colonial to LaGuardia Field; received, Air Line Pilot Association, November 3, 1955: After causing the stewardess considerable trouble I, as captain, was forced to leave my seat several times to control this character who had been drinking to excess before and after boarding the aircraft. Each time I would talk to him he would reply to my threats and instructions, "Yes, officer, I will behave" which lead me to believe he did not know he was talking to the captain. Probably thought I was a policeman. The man was accompanied by his wife who sat next to him but was unable to control him. Despite the fact that I had in mind freezing his eyeballs with CO_2 from a fire extinguisher he continued to walk up and down the aisles and I found out later was restrained by the stewardesses from entering the cockpit which could easily be done as the galley in our ships is forward and the door is seldom used. This was a night flight so I did not see him try to come into the cockpit or else I would have had to forceably eject him. To conclude, this character fell through a plate glass door in the immigration room at LaGuardia.

(e) American Airlines, LaGuardia to Dallas; received, Air Line Pilots Association, January 20, 1956: A party of 4 (2 couples) boarded in Washington. I took their coats and it was obvious that they had been drinking. During the flight they became increasingly noisy and used vulgar and indecent language much to the embarrassment of the other passengers. They could be heard throughout the plane which by then smelled like a brewery. One of the men in particular kept grabbing at us as we went by and propositioning us. We warned them to be quiet. While opening a champagne bottle it splashed on one of the men. I took his coat to hang up to dry and noticed he was carrying a gun under his belt. I said nothing to him but reported it to the captain who came back to the cabin and spoke to him. During the beverage service the gun was pointed at the other stewardess as the man asked for his coffee. We fed them lunch and they settled down. As these people deplaned at Dallas one of the women collapsed at the bottom of the ramp. We administered icepacks and ammonia. We notified the lead agent that one of the men had a gun. A wheelchair was ordered for the lady.

(f) National Airlines; received, Air Line Pilots Association, July 18, 1956; At Salisbury the stewardess called for assistance. She complained of a male passenger being drunk and unruly. I went back and he was standing in the center aisle, next to the buffet. He was having trouble standing and walking without falling on other passengers. I helped him back to his seat, and fastened his safety belt. I heard other passengers complaining about his activities.

(g) Delta; received, Air Line Pilots Association, September 17, 1955: Trip departed Dallas 1817, central standard time, and when out approximately 2 hours the stewardess advised me that one of our passengers wanted to see me. I was greeted by 5 people in the lounge that insisted on having more than 2 drinks served to them, at that time there were no dinners served to any of the passengers and some of them were very hungry and angry too. One of the passengers who did all the talking for the other 4 was a ——— and insisted that I go get the bottle and pour all of them a few drinks, in fact he said that ——— told him that he could have all the cocktails he wanted at any time. During the flight a passenger became argumentative with his seat mate who was a young sailor. During the course of this argument the man pulled a switch-blade knife and put it under the sailor's chin. I became alarmed and rushed up to the cockpit to inform the crew as to what was transpiring. The crew instructed me to lock the cockpit door and go back and engage the irate passenger in conversation. However, by the time I got back into the cabin someone had gotten the knife away from the passenger involved.

3. IN-FLIGHT EMERGENCIES REQUIRING UNSCHEDULED LANDINGS TO REMOVE INEBRIATED PASSENGERS WHO ARE HAZARDOUS OR CREATING DISTURBANCES

(a) Eastern Airlines, Salisbury to Norfolk; received, Air Line Pilots Association, April 20, 1957: Midway between Salisbury and Norfolk at 2:43 the stewardess came forward to advise me that she had a drunken passenger who was getting out of hand. He was using obscene, vile, and vulgar language, and was trying to pick a fight with the rest of the passengers. I advised this character in person that if he didn't sit down and behave that I would land at the nearest airport and have him put off. In a few minutes the stewardess came forward again and advised that our drunk was going to hit her because she had told me about him. We immediately reversed course with the aid of Norfolk radar and control and proceeded to Washington to have this drunk removed because I had no intention of going any further with him aboard. The weather at Washington was 600 overcast, 2½ miles with fog and rain. About 10 minutes out of Washington the stewardness rang again and called for help. This time I asked the engineer to go back and give her a hand as we were then making our instrument approach. I told him to stay back there with her but to make him sit down even if he had to sit on him to do it.

(b) American Airlines, Dallas to Idlewild; receiver, Air Line Pilots Association, April 11, 1957: A passenger, who had been drinking prior to boarding the flight, became very obnoxious before and after being served cocktails, plus other sources: his own and taking drinks from other passengers, insulting stewardesses, causing one to cry, and in general profanely disturbing the other passengers. Captain ——— had to talk to the drunken passenger three times, the last time he was actually put bodily back to his seat, because he refused to cooperate. Landing would have been made at Nashville if we were not overweight and the inconvenience so great. Police met the plane in New York and hauled the passenger who had passed out, or faked it, away on a stretcher.

(c) January 1956: While the other stewardess was attempting to open a bottle in the galley, the bottle exploded and flying glass cut her in the temple and about the arms. It was necessary to make an unscheduled stop in order to secure medical attention since the crew was unable to control the bleeding.

4. INEBRIATED PASSENGERS INADVERTENTLY ACTUATING OR DAMAGING EXITS OR PRESSURIZATION DEVICES IN FLIGHT

(a) St. Louis–Washington and Washington-St. Louis; received, Air Line Pilots Association, March 21, 1957: One day I heard one hostess ask the other if she thought "that passenger might sue the company." I inquired about the reason and was told that the night before on our flight into Washington, there was a group of passengers in the front compartment buying drinks and drinking from their own bottles (the hostesses provide set-ups). One of this group of jolly boys threw a partially filled bottle (a fifth, not a miniature) to or at one of his companions and the bottle hit another passenger (not one of the revelers). The hit passenger was naturally considerably annoyed. This could have been the start of a real brawl. Or the bottle (which is a con-

siderable missile) could have hit one of the windows.

(b) CAL Council No. 49; received, Air Line Pilots Association, March 26, 1957: On CAL trip 175 of March 16, 1957, we had an intoxicated passenger on board who was obnoxious to the hostess on several occasions and who in a mistaken attempt to get a drink of water, mistook the main cabin door handle of the DC–3 for a water tap and had grasped the handle of the door before he could be stopped by the hostess. Had he been successful in moving the handle, we would have lost him and the hostess.

(c) United Air Line; received, Air Line Pilots Association, February 22, 1956; Aboard United Air Lines trip 326 on May 29, 1953, we had a passenger who was drinking as some will on the sly. He was a large man and had too much (probably had a fairly good buzz on when he boarded). On final approach into Youngstown, Pa., he left his seat, came into the companion way and grabbed the main door lever and attempted to open the door which of course work in conjunction with the main steps. The hydraulic system is so designed to prevent this, but had his intentions been directed toward the cockpit we would have been placed in a most undesirable position. As it was we had a mechanical on landing and the left engine feathered coming out of reverse, due to wiring problems.

5. FIRE HAZARD FROM INEBRIATED PASSENGERS AND REFUSAL TO COMPLY WITH SAFETY REGULATIONS

(a) Delta, received September 30, 1955: A male passenger became extremely uncooperative as a result of overindulging in flight. He refused to fasten his seat belt and observe the no-smoking sign when approaching for a landing. I told him several times to extinguish his cigarette which he did, except that he relit another one as soon as I turned my back. Upon telling him to extinguish cigarettes for the third time, he did so by putting it out in the palm of my hand.

(b) American Airlines, Los Angeles to District of Columbia nonstop, received Air Line Pilots Association, August 15, 1957: As we taxied away from the Los Angeles ramp, the stewardess advised me that one intoxicated passenger refused to fasten his seat belt or to refrain from smoking. The flight engineer was sent back and received the same refusal, punctuated by obscene and abusive language. We returned to the ramp and had police officers remove the offending drunk. Departed 30 minutes later—forecast, thunderstorm—danger to passengers as well as nuisance to others and resulting cost of delay.

(c) Trans-World Airlines, Chicago to Los Angeles, received Air Line Pilots Association, November 2, 1955: There were 3 stewardesses aboard this plane. Early en route, there were 2 male passengers who were drinking heavily in the lounge, 1 of whom according to his drinking acquaintance, returned to his seat and "passed out." Approximately 2 hours later, the 2 men returned to the lounge, together with other men and again began drinking, this time standing in the passageway which blocked the passageway for all passengers attempting to get to the rest rooms. They continued to drink again until quite intoxicated, one of whom became boisterous, vulgar, and so forth. It became necessary for him to be placed in a seat secured with a seat belt. For the last 45 minutes to an hour of the trip the most intoxicated of the two had to be restrained, which made for a most unpleasant experience for other passengers.

(d) United Air Lines, received Air Line Pilots Association, February 23, 1956: Engines had just been started and the all clear salute received when the stewardess came forward to advise she could not get one of the passengers to sit down and fasten his seat belt. He insisted on going to the blue room. She had advised him that he could go as soon as the seat belt sign was turned off but not before then. The captain shut down the engines and went back to talk to the passenger. He found him barricaded in the blue room. When the captain told him to come out, he refused. Only after starting to take off the blue room hinges and summoning the airport policemen, could the drunken passenger be removed. Result: the flight was delayed 1 hour because of one drunken passenger.

(e) American Airlines, Los Angeles to Dallas received, Air Line Pilots Association, January 20, 1956: A party of 4 (2 couples) boarded in Washington. I took their coats and it was obvious that they had been drinking. During the flight they became increasingly noisy and used vulgar and indecent language much to the embarrassment of the other passengers. They could be heard throughout the plane which by then smelled like a brewery. One of the men in particular kept grabbing at us as we went by and propositioning us. We warned them to be quite. While opening a champagne bottle it splashed on one of the men. I took his coat to hang up to dry and noticed he was carrying a gun under his belt. I said nothing to him but reported it to the captain who same back to the cabin and spoke to him. During the beverage service the gun was pointed at the other stewardess as the man asked for his coffee. We fed them lunch and they settled down. As these people deplaned at Dallas one of the women collapsed at the bottom of the ramp. We administered ice packs and ammonia. We notified the lead agent that one of the men had a gun. A wheel chair was ordered for the lady.

6. SOCIAL AND MORAL PROBLEMS

(a) American Airlines, Chicago to San Francisco; received, Air Line Pilots Association, March 25, 1957: On American Airlines flight 41 which departed Chicago at 0158, March 20, one of the passengers who boarded the plane was under the influence of alcohol at the time he boarded the airplane. 'During the flight—nonstop Chicago to San Francisco, this passenger began abusing his wife physically to such an extent the stewardesses felt it was necessary to separate him from his wife and make them sit in different sections of the airplane. Some little time thereafter, this passenger slipped up to the front of the cabin to where he thought his wife was seated to give her a goodnight kiss. In his inebriated condition he leaned over and kissed the wife of another man. (The cabin was darkened as it was early morning.) The man whose wife he kissed happened to be awake and became very angry and almost started swinging at the offender but was dissuaded by the stewardess who had quickly followed to the front of the cabin. The woman who had been wrongly kissed was awakened from her sleep abruptly by this drunken stranger bending over her after having been thus kissed, and naturally was considerably offended and somewhat distraught. Only a very alert stewardess' action prevented this from becoming a more serious incident.

(b) American Airlines, Los Angeles to Dallas; received Air Line Pilots Association, January 20, 1956: A party of 4 (2 couples) boarded in Washington. I took their coats and it was obvious that they had been drinking. During the flight they became increasingly noisy and used vulgar and indecent language much to the embarrassment of the other passengers. They could be heard throughout the plane which by then smelled like a brewery. One of the men in particular kept grabbing at us as we went by and propositioning us. We warned them to be quiet. While opening a champagne bottle it splashed on one of the men. I took his coat to hang up to dry and noticed he was carrying a gun under his belt. I said nothing to him but reported it to the captain who came back to the cabin and spoke to him. During the beverage service the gun was pointed at the other stewardess as the man asked for his coffee. We fed them lunch and they settled down. As these people deplaned at Dallas one of the women collapsed at the bottom of the ramp. We administered ice packs and ammonia. We notified the lead agent that one of the men had a gun. A wheelchair was ordered for the lady.

(c) United Airlines, received, Air Line Pilots Association, February 22, 1956: I was riding as a passenger on a DC–6 flight. An Air Force lieutenant who was somewhat inebriated but holding up well at takeoff, started for the blue room at about 18,000 feet altitude. As he walked toward the blue room he suddenly fell flat on his face unconscious. It took oxygen to revive him. This fact illustrates that increased altitude, with its decreased oxygen content will cause slightly drunk people to become very drunk.

(d) Trans-World Airlines, Chicago to Los Angeles; received, Air Line Pilots Association, November 2, 1955: There were three stewardesses aboard this plane. Early en route, there were two male passengers who were drinking heavily in the lounge, one of whom, according to his drinking acquaintance, returned to his seat and passed out. Approximately 2 hours later, the 2 men returned to the lounge, together with 2 other men and again began drinking, this time standing in the passageway which blocked the passageway for all passengers attempting to get to the rest rooms. They continued to drink again until quite intoxicated, one of whom became boisterous, vulgar, and so forth. It became necessary for him to be placed in a seat secured with a seat belt. For the last 45 minutes to an hour of the trip the most intoxicated of the two had to be restrained, which made for a most unpleasant experience for other passengers.

(e) Pan American Airways, Honolulu-Los Angeles; received, Air Line Pilots Association, February 29, 1956: Female passenger, having too many drinks in the lounge of Boeing 377, after driving all other passengers from downstairs with vulgar and suggestive language, proceeded to disrobe and shout demands that purser satisfy her sexual desires.

(f) August 1, 1956: On a trip from Columbus, Ohio, to Los Angeles, I left early in the morning and was told that lunch would be served soon after leaving Chicago on the TWA's finest plane, the Super G. We were late in leaving Chicago and as soon as we were airborne, the two hostesses started to serve free liquor. It was amazing how juvenile many of the adults were in clamoring to get one drink after another. I have never seen two hostesses have to work so hard except for one other flight during a very violent storm. Several times I rang for a hostess for some service but found that they were not answering any calls. They continued to serve for approximately 2 hours which meant that it was 3:30 before we were served our luncheon. I was seated in the tail position of the plane where the seats are narrower than forward. The individual sitting next to me was taking full advantage of the free drinks and it was very unpleasant to have liquor spilled on me. Several men were constantly standing around the hostesses from where they were serving and becoming obnoxious. One of the hostesses who saw that I was not drinking told me that she thought she was going to quit because she was hired as an airline hostess and not as a barmaid. I now find myself avoiding, as much as possible, flights on which liquor is served as I do not care to go through this ordeal again.

(g) American Airlines; received, Air Line Pilots Association, July 18, 1955: A recent incident, where our flight was conducted under rather difficult conditions, a man who rides our flight often and is always a proper gentleman, proceeded to "hang one on" en-

drinks from other passengers, insulting stewardesses, causing one to cry, and in general profanely disturbing the other passengers. Captain ——— had to talk to the drunken passenger three times, the last time he was actually put bodily back to his seat, because he refused to cooperate. Landing would have been made at Nashville if we were not overweight and the inconvenience so great. Police met the plane in New York and hauled the passenger, who had passed out, or faked it, away on a stretcher.

(b) American Airlines, Los Angeles; received, Airline Pilots Association March 26, 1957: Approximately 1½ years ago (1955) while being based in Los Angeles ——— were returning to Los Angeles via El Paso and San Diego; when just before reaching 20,000 feet out of Dallas, one of our stewardesses came to the cockpit and almost hysterically told us she had just been struck (slapped) by a big drunken man (passenger). ——— that I go back and check. I did, and before reaching the buffet area I noticed an obviously very drunk man approximately 50 years of age, 220 pounds, 6 feet 2 inches. He was so incoherently drunk I advised the stewardesses to stay completely clear of him and proceeded to coax him into a double empty seat in the rear of the ship. On the way back to the cockpit I was stopped by passenger and asked if I got his gun—they had observed he had a shoulder holster and also heard him boast of killing a man by the same name of ——— our stewardess and he told these passengers if anything happened to the crew not to worry, he could and would fly—with this additional information I returned to the cockpit and advised ——— there was a big drunk ——— back there and was reported armed and if he (captain) wanted any more checking done he would have to do it himself. After the captain checked further he sent the F/E back to sit in the empty seat by the drunk. It took three Texas troopers to remove him at El Paso—put him in jail overnight. (Later I was informed) he came out next day and returned by another flight to Dallas (sober).

(c) United Air Lines, Chicago-Los Angeles; received, Air Line Pilots Association, February 20, 1956: Approximately 2 hours after departure from Chicago, the flight engineer returned from a routine cabin inspection to report abnormal behavior on the part of a female passenger. He stated that she was screaming, babbling and otherwise creating a general annoyance. He relayed a request from the stewardess that I return to the cabin and speak to the passenger. I proceeded to the buffet area where the stewardess briefed me on the situation. The stewardess had spoken briefly with the passenger at boarding, at which time there was no suspicion of irrationality. Shortly after drinking a 4-ounce cocktail however, unusual behavior became evident. I walked back to the longe area which was occupied by 4 men and a female passenger 55 to 60 years of age. The woman was engaged in an incoherent rambling increasingly loud, which was distressing to all within ear shot. When she became conscious of my presence I was given to understand this much that she was ——— "going to show me how to fly this airplane." Consideration was given to an attempt to isolate this person, but with our passenger load this was impossible. With this survey of the situation I satisfied myself that there was no immediate safety problem, but spent some thought in determining my course of action should this passenger become completely unmanageable. I instructed the stewardess to give her a dramaine tablet in a cup of coffee, while I raised the cabin altitude to 8,000 feet. The possibility and impact of an unscheduled landing to deplane this passenger caused me considerable concern, concern which more logically should have been directed to the conduct of the flight rather than the conduct of the passenger. We were 10,000 pounds overweight for a landing and 400 miles from a terminal or familiar airport. This unpredictable passenger was more than a match for the two little coeds who were playing barmaid. At this point I was heartily damning the governmental agency which permitted a flying bar but did not require a 250 pound bartender to keep order.

(d) Colonial to LaGuardia Field; received, Air Line Pilot Association, November 3, 1955: After causing the stewardess considerable trouble I, as captain, was forced to leave my seat several times to control this character who had been drinking to excess before and after boarding the aircraft. Each time I would talk to him he would reply to my threats and instructions, "Yes, officer, I will behave" which lead me to believe he did not know he was talking to the captain. Probably thought I was a policeman. The man was accompanied by his wife who sat next to him but was unable to control him. Despite the fact that I had in mind freezing his eyeballs with CO_2 from a fire extinguisher he continued to walk up and down the aisles and I found out later was restrained by the stewardesses from entering the cockpit which could easily be done as the galley in our ships is forward and the door is seldom used. This was a night flight so I did not see him try to come into the cockpit or else I would have had to forceably eject him. To conclude, this character fell through a plate glass door in the immigration room at LaGuardia.

(e) American Airlines, LaGuardia to Dallas; received, Air Line Pilots Association, January 20, 1956: A party of 4 (2 couples) boarded in Washington. I took their coats and it was obvious that they had been drinking. During the flight they became increasingly noisy and used vulgar and indecent language much to the embarrassment of the other passengers. They could be heard throughout the plane which by then smelled like a brewery. One of the men in particular kept grabbing at us as we went by and propositioning us. We warned them to be quiet. While opening a champagne bottle it splashed on one of the men. I took his coat to hang up to dry and noticed he was carrying a gun under his belt. I said nothing to him but reported it to the captain who came back to the cabin and spoke to him. During the beverage service the gun was pointed at the other stewardess as the man asked for his coffee. We fed them lunch and they settled down. As these people deplaned at Dallas one of the women collapsed at the bottom of the ramp. We administered icepacks and ammonia. We notified the lead agent that one of the men had a gun. A wheelchair was ordered for the lady.

(f) National Airlines; received, Air Line Pilots Association, July 18, 1956: At Salisbury the stewardess called for assistance. She complained of a male passenger being drunk and unruly. I went back and he was standing in the center aisle, next to the buffet. He was having trouble standing and walking without falling on other passengers. I helped him back to his seat, and fastened his safety belt. I heard other passengers complaining about his activities.

(g) Delta; received, Air Line Pilots Association, September 17, 1955: Trip departed Dallas 1817, central standard time, and when out approximately 2 hours the stewardess advised me that one of our passengers wanted to see me. I was greeted by 5 people in the lounge that insisted on having more than 2 drinks served to them, at that time there were no dinners served to any of the passengers and some of them were very hungry and angry too. One of the passengers who did all the talking for the other 4 was a ——— and insisted that I go get the bottle and pour all of them a few drinks, in fact he said that ——— told him that he could have all the cocktails he wanted at any time. During the flight a passenger became argumentative with his seat mate who was a young sailor. During the course of this argument the man pulled a switch-blade knife and put it under the sailor's chin. I became alarmed and rushed up to the cockpit to inform the crew as to what was transpiring. The crew instructed me to lock the cockpit door and go back and engage the irate passenger in conversation. However, by the time I got back into the cabin someone had gotten the knife away from the passenger involved.

3. IN-FLIGHT EMERGENCIES REQUIRING UNSCHEDULED LANDINGS TO REMOVE INEBRIATED PASSENGERS WHO ARE HAZARDOUS OR CREATING DISTURBANCES

(a) Eastern Airlines, Salisbury to Norfolk; received, Air Line Pilots Association, April 20, 1957: Midway between Salisbury and Norfolk at 2:43 the stewardess came forward to advise me that she had a drunken passenger who was getting out of hand. He was using obscene, vile, and vulgar language, and was trying to pick a fight with the rest of the passengers. I advised this character in person that if he didn't sit down and behave that I would land at the nearest airport and have him put off. In a few minutes the stewardess came forward again and advised that our drunk was going to hit her because she had told me about him. We immediately reversed course with the aid of Norfolk radar and control and proceeded to Washington to have this drunk removed because I had no intention of going any further with him aboard. The weather at Washington was 600 overcast, 2½ miles with fog and rain. About 10 minutes out of Washington the stewardness rang again and called for help. This time I asked the engineer to go back and give her a hand as we were then making our instrument approach. I told him to stay back there with her but to make him sit down even if he had to sit on him to do it.

(b) American Airlines, Dallas to Idlewild; receiver, Air Line Pilots Association, April 11, 1957: A passenger, who had been drinking prior to boarding the flight, became very obnoxious before and after being served cocktails, plus other sources: his own and taking drinks from other passengers, insulting stewardesses, causing one to cry, and in general profanely disturbing the other passengers. Captain ——— had to talk to the drunken passenger three times, the last time he was actually put bodily back to his seat, because he refused to cooperate. Landing would have been made at Nashville if we were not overweight and the inconvenience so great. Police met the plane in New York and hauled the passenger who had passed out, or faked it, away on a stretcher.

(c) January 1956: While the other stewardess was attempting to open a bottle in the galley, the bottle exploded and flying glass cut her in the temple and about the arms. It was necessary to make an unscheduled stop in order to secure medical attention since the crew was unable to control the bleeding.

4. INEBRIATED PASSENGERS INADVERTENTLY ACTUATING OR DAMAGING EXITS OR PRESSURIZATION DEVICES IN FLIGHT

(a) St. Louis–Washington and Washington-St. Louis; received, Air Line Pilots Association, March 21, 1957: One day I heard one hostess ask the other if she thought "that passenger might sue the company." I inquired about the reason and was told that the night before on our flight into Washington, there was a group of passengers in the front compartment buying drinks and drinking from their own bottles (the hostesses provide set-ups). One of this group of jolly boys threw a partially filled bottle (a fifth, not a miniature) to or at one of his companions and the bottle hit another passenger (not one of the revelers). The hit passenger was naturally considerably annoyed. This could have been the start of a real brawl. Or the bottle (which is a con-

siderable missile) could have hit one of the windows.

(b) CAL Council No. 49; received, Air Line Pilots Association, March 26, 1957: On CAL trip 175 of March 16, 1957, we had an intoxicated passenger on board who was obnoxious to the hostess on several occasions and who in a mistaken attempt to get a drink of water, mistook the main cabin door handle of the DC-3 for a water tap and had grasped the handle of the door before he could be stopped by the hostess. Had he been successful in moving the handle, we would have lost him and the hostess.

(c) United Air Line; received, Air Line Pilots Association, February 22, 1956; Aboard United Air Lines trip 326 on May 29, 1953, we had a passenger who was drinking as some will on the sly. He was a large man and had too much (probably had a fairly good buzz on when he boarded). On final approach into Youngstown, Pa., he left his seat, came into the companion way and grabbed the main door lever and attempted to open the door which of course work in conjunction with the main steps. The hydraulic system is so designed to prevent this, but had his intentions been directed toward the cockpit we would have been placed in a most undesirable position. As it was we had a mechanical on landing and the left engine feathered coming out of reverse, due to wiring problems.

5. FIRE HAZARD FROM INEBRIATED PASSENGERS AND REFUSAL TO COMPLY WITH SAFETY REGULATIONS

(a) Delta, received September 30, 1955: A male passenger became extremely uncooperative as a result of overindulging in flight. He refused to fasten his seat belt and observe the no-smoking sign when approaching for a landing. I told him several times to extinguish his cigarette which he did, except that he relit another one as soon as I turned my back. Upon telling him to extinguish cigarettes for the third time, he did so by putting it out in the palm of my hand.

(b) American Airlines, Los Angeles to District of Columbia nonstop, received Air Line Pilots Association, August 15, 1957: As we taxied away from the Los Angeles ramp, the stewardess advised me that one intoxicated passenger refused to fasten his seat belt or to refrain from smoking. The flight engineer was sent back and received the same refusal, punctuated by obscene and abusive language. We returned to the ramp and had police officers remove the offending drunk. Departed 30 minutes later—forecast, thunderstorm—danger to passengers as well as nuisance to others and resulting cost of delay.

(c) Trans-World Airlines, Chicago to Los Angeles, received Air Line Pilots Association, November 2, 1955: There were 3 stewardesses aboard this plane. Early en route, there were 2 male passengers who were drinking heavily in the lounge, 1 of whom according to his drinking acquaintance, returned to his seat and "passed out." Approximately 2 hours later, the 2 men returned to the lounge, together with other men and again began drinking, this time standing in the passageway which blocked the passageway for all passengers attempting to get to the rest rooms. They continued to drink again until quite intoxicated, one of whom became boisterous, vulgar, and so forth. It became necessary for him to be placed in a seat secured with a seat belt. For the last 45 minutes to an hour of the trip the most intoxicated of the two had to be restrained, which made for a most unpleasant experience for other passengers.

(d) United Air Lines, received Air Line Pilots Association, February 22, 1956: Engines had just been started and the all clear salute received when the stewardess came forward to advise she could not get one of the passengers to sit down and fasten his seat belt. He insisted on going to the blue room. She had advised him that he could go as soon as the seat belt sign was turned off but not before then. The captain shut down the engines and went back to talk to the passenger. He found him barricaded in the blue room. When the captain told him to come out, he refused. Only after starting to take off the blue room hinges and summoning the airport policemen, could the drunken passenger be removed. Result: the flight was delayed 1 hour because of one drunken passenger.

(e) American Airlines, Los Angeles to Dallas received, Air Line Pilots Association, January 20, 1956: A party of 4 (2 couples) boarded in Washington. I took their coats and it was obvious that they had been drinking. During the flight they became increasingly noisy and used vulgar and indecent language much to the embarrassment of the other passengers. They could be heard throughout the plane which by then smelled like a brewery. One of the men in particular kept grabbing at us as we went by and propositioning us. We warned them to be quite. While opening a champagne bottle it splashed on one of the men. I took his coat to hang up to dry and noticed he was carrying a gun under his belt. I said nothing to him but reported it to the captain who came back to the cabin and spoke to him. During the beverage service the gun was pointed at the other stewardess as the man asked for his coffee. We fed them lunch and they settled down. As these people deplaned at Dallas one of the women collapsed at the bottom of the ramp. We administered ice packs and ammonia. We notified the lead agent that one of the men had a gun. A wheel chair was ordered for the lady.

6. SOCIAL AND MORAL PROBLEMS

(a) American Airlines, Chicago to San Francisco; received, Air Line Pilots Association, March 25, 1957: On American Airlines flight 41 which departed Chicago at 0158, March 20, one of the passengers who boarded the plane was under the influence of alcohol at the time he boarded the airplane. During the flight—nonstop Chicago to San Francisco, this passenger began abusing his wife physically to such an extent the stewardesses felt it was necessary to separate him from his wife and make them sit in different sections of the airplane. Some little time thereafter, this passenger slipped up to the front of the cabin to where he thought his wife was seated to give her a goodnight kiss. In his inebriated condition he leaned over and kissed the wife of another man. (The cabin was darkened as it was early morning.) The man whose wife he kissed happened to be awake and became very angry and almost started swinging at the offender but was dissuaded by the stewardess who had quickly followed to the front of the cabin. The woman who had been wrongly kissed was awakened from her sleep abruptly by this drunken stranger bending over her after having been thus kissed, and naturally was considerably offended and somewhat distraught. Only a very alert stewardess' action prevented this from becoming a more serious incident.

(b) American Airlines, Los Angeles to Dallas; received Air Line Pilots Association, January 20, 1956: A party of 4 (2 couples) boarded in Washington. I took their coats and it was obvious that they had been drinking. During the flight they became increasingly noisy and used vulgar and indecent language much to the embarrassment of the other passengers. They could be heard throughout the plane which by then smelled like a brewery. One of the men in particular kept grabbing at us as we went by and propositioning us. We warned them to be quiet. While opening a champagne bottle it splashed on one of the men. I took his coat to hang up to dry and noticed he was carrying a gun under his belt. As these people deplaned at Dallas one of the women collapsed at the bottom of the ramp. We administered ice packs and ammonia. We notified the lead agent that one of the men had a gun. A wheelchair was ordered for the lady.

(c) United Airlines, received, Air Line Pilots Association, February 22, 1956: I was riding as a passenger on a DC-6 flight. An Air Force lieutenant who was somewhat inebriated but holding up well at takeoff, started for the blue room at about 18,000 feet altitude. As he walked toward the blue room he suddenly fell flat on his face unconscious. It took oxygen to revive him. This fact illustrates that increased altitude, with its decreased oxygen content will cause slightly drunk people to become very drunk.

(d) Trans-World Airlines, Chicago to Los Angeles; received, Air Line Pilots Association, November 2, 1955: There were three stewardesses aboard this plane. Early en route, there were two male passengers who were drinking heavily in the lounge, one of whom, according to his drinking acquaintance, returned to his seat and passed out. Approximately 2 hours later, the 2 men returned to the lounge, together with 2 other men and again began drinking, this time standing in the passageway which blocked the passageway for all passengers attempting to get to the rest rooms. They continued to drink again until quite intoxicated, one of whom became boisterous, vulgar, and so forth. It became necessary for him to be placed in a seat secured with a seat belt. For the last 45 minutes to an hour of the trip the most intoxicated of the two had to be restrained, which made for a most unpleasant experience for other passengers.

(e) Pan American Airways, Honolulu-Los Angeles; received, Air Line Pilots Association, February 29, 1956: Female passenger, having too many drinks in the lounge of Boeing 377, after driving all other passengers from downstairs with vulgar and suggestive language, proceeded to disrobe and shout demands that purser satisfy her sexual desires.

(f) August 1, 1956: On a trip from Columbus, Ohio, to Los Angeles, I left early in the morning and was told that lunch would be served soon after leaving Chicago on the TWA's finest plane, the Super G. We were late in leaving Chicago and as soon as we were airborne, the two hostesses started to serve free liquor. It was amazing how juvenile many of the adults were in clamoring to get one drink after another. I have never seen two hostesses have to work so hard except for one other flight during a very violent storm. Several times I rang for a hostess for some service but found that they were not answering any calls. They continued to serve for approximately 2 hours which meant that it was 3:30 before we were served our luncheon. I was seated in the tail position of the plane where the seats are narrower than forward. The individual sitting next to me was taking full advantage of the free drinks and it was very unpleasant to have liquor spilled on me. Several men were constantly standing around the hostesses from where they were serving and becoming obnoxious. One of the hostesses who saw that I was not drinking told me that she thought she was going to quit because she was hired as an airline hostess and not as a barmaid. I now find myself avoiding, as much as possible, flights on which liquor is served as I do not care to go through this ordeal again.

(g) American Airlines; received, Air Line Pilots Association, July 18, 1955: A recent incident, where our flight was conducted under rather difficult conditions, a man who rides our flight often and is always a proper gentleman, proceeded to "hang one on" en-

route. The stewardesses gave him water "chasers" as, at the time, he was not bothering anyone. A few hours at 8,500 feet and a few drinks later we had a drunk who behaved as many do. Mean, belligerent, and unmanageable, grabbing the stewardesses and yanking on their clothing. I asked him to refrain from drinking, but to no avail. This sort of thing has happened to me several times and I even had one passenger taken off the airplane, but this is not always possible.

(h) Trans World Airline; received, Air Line Pilots Association February 24, 1956: Last night, February 26, 1956, my flight arrived at Kansas City with a passenger who was very obviously drunk. The incoming hostesses reported him as being "obnoxious." During the ground period he was observed and was indeed obnoxious. A fist fight was narrowly averted and much uncalled for conversation emanated from the person in question. Aside from the fact that he was making the flight unpleasant for the rest of the passengers I adjudged him as a potential danger to have aboard in his condition. I requested that he be removed. This was done.

(i) Trans World Airline, Phoenix and Los Angeles; received, Air Lines Pilots Association March 24, 1956: Unbeknown to me a small dog in a box was placed in the forward cabin to accompany a passenger. Another passenger boarded who apparently was under the influence of alcohol and also occupied the forward section of the airplane. After the flight became airborne the dog began a long, loud, and continuous spell of barking which disturbed the passengers and crew, and particularly the drunken passenger, who became obnoxious and belligerent toward the hostesses and later the others of the crew. During the course of events the said passenger entered the galley and demanded a soft drink, which was given to him by one of the hostesses. This he immediately spilled on another passenger. Because of the loud barking of the dog the engineer opened the door between the flight deck and front pasesnger compartment and moved the dog pen to the doorway. By placing his hand on the dog pen he was able to quiet the loud barking for a short time. The intoxicated passenger took this opportunity to come to the cockpit door and proceded to lambast and disturb the engineer, as he had previously done to the hostesses and demanded the engineer open a window so he could throw the dog out of the airplane. One of the hostesses came forward and took the dog to the galley and the cockpit door was closed. A routine landing was made in Los Angeles. After the touchdown the engineer opened the door between the cockpit and cabin, whereupon I heard one of the hostesses plead for the passengers to keep their seats. A glance in the cabin and I discovered the intoxicated passenger standing in the galley disturbing the hostess, amid the loud barking of the dog. Since the passenger refused to be seated the aircraft was brought to a complete stop on the taxiway. The first officer dispatched to the cabin to seat the passenger. After the passenger was seated the airplane was taxied to the gate.

(j) National Airlines; received, Air Line Pilots Association, July 18, 1956: After landing at Idlewild, another passenger, a woman, was so drunk she had to be helped down from the airplane. It was necessary to have an agent help her down the steps or, otherwise, she would have fallen all the way down.

(k) Delta; received, Air Line Pilots Association, September 17, 1955: Trip departed Dallas 1817 central standard time, and when out approximately 2 hours the stewardess advised me that one of our passengers wanted to see me. I was greeted by 5 people in the lounge that insisted on having more than 2 drinks served to them. At that time there were no dinners served to any of the other passengers and some of them were very hungry and angry too. One of the passengers who did all the talking for the other four was a Mr. ——— and insisted that I go get the bottle and pour all of them a few drinks, in fact he said that ——— told him that he could have all the cocktails he wanted at any time.

During testimony on this subject, discussion was had on the question of whether certain incidents resulted from consumption of alcohol before or after boarding the aircraft. We believe that it is practically impossible to distinguish the source of intoxication when consumption is permitted on board the aircraft. The drinks served in flight when added to a reduced oxygen pressure and strange environment may be the final step in causing a normal, well-adjusted individual to become an uncontrollable hazard. Also, we believe that the condoning of alcohol consumption in flight has caused a deterioration in the enforcement of present regulations against boarding passengers under the influence of alcohol since it is hypocritical to deny transportation to an individual who has had a drink and promptly serve drinks to all passengers who are permitted on the flight.

Just as we believe that it should be unnecessary to permit serious accidents to occur before a readily recognized hazard is eliminated, we believe that it is impractical to refuse passage to people under the influence of alcohol and then promptly bring them under the influence in flight. It is impossible to determine when the last drink will turn a well-adjusted person into a menace and social problem, as pointed out in my testimony.

The practice of serving intoxicating beverages on domestic airlines is relatively new and still confined to a limited number of flights on eight airlines. However, the practice is spreading and competitive pressures are being created on carriers still refusing to adopt the practice. As the practice spreads, it is only reasonable to assume that the number of incidents will increase with the resultant increase in the potential hazard.

We appreciate the opportunity to submit this additional information.

Very truly yours,

C. N. Sayen.

A Word of Appreciation to Army Legislative Liaison

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. HOLLAND. Mr. Speaker, as this first session of the 85th Congress draws to a close, it is only fitting and proper that we look about and thank those agencies and persons in the Government who have helped us discharge our obligations and responsibilities, as Members of Congress, to our individual constituents, to our districts, and to the Nation.

In the forefront of these alert and responsive people are the personnel of the Army legislation liaison, under the able leadership of Maj. Gen. J. H. "Mike" Michaelis and Col. Donald "Sandy" MacGrain. They have with them as fine a staff of intelligent and cooperative young men, as, I am sure, the Army can assemble. The results are self-evident. We, the Members of Congress, can call for Army liaison no matter what the situation and be assured of a correct, prompt, and courteous response. If we need an officer by our side to meet with visitors to our office, we can be sure they will be there and tide us over smoothly and smartly.

Many of my colleagues have expressed these same sentiments on many occasions.. I feel that they should be officially and properly reflected in the Record before we adjourn so that there will be some tangible evidence of our appreciation for Army liaison's fine work in behalf of us all.

AFL–CIO Steelworkers Hit Bigotry in Levittown, Disproving "Goon" Stereotype Which Senate Rackets Committee Is Developing

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, district 7 of the United Steelworkers of America, AFL–CIO, has called on its membership in the Levittown area to conduct themselves like true Americans and not participate in any acts of bigotry in relation with the William A. Myers, Jr., family at the giant housing project.

The steelworkers are to be congratulated for their stand on this matter of basic Americanism.

I do not suppose the Nation's newspapers will take the trouble to tell this stirring story. They are too intent on creating the stereotype of labor "goons" and racketeers which the Senate Rackets Committee is contributing to by its presentation of one small fraction of the important story of organized labor in the United States.

Included herewith are articles from the Trentonian, and the Trenton Evening Times, Trenton, N. J., and the New York Times.

The articles follow:

[From the Trenton Evening Times of August 21, 1957]

STEELWORKERS HIT BIGOTRY IN LEVITTOWN

District 7 of the United Steelworkers of America called on its membership in the Levittown area to conduct themselves like true Americans and not participate in any acts of bigotry in relations to arrival of a Negro family in the community.

District 7 director, Hugh Carcella, of Philadelphia, issued a statement as a reminder and guidance for the many union members in and around the area. He said they should aid law-enforcement authorities in helping stop acts of bigotry and un-American demonstrations.

Principal parts of this statement follow:

"The policy of the United Steelworkers of America in respect to equal housing as well as equal job opportunity is well known. We, therefore, call upon our many members in the Levittown area not to participate in any un-American acts of bigotry, but to aid

and assist in stopping such actions against a family because they happen not to be white.

"The desire for a better home and a better way of life is truly American and the right of every American to seek to better himself and his family is a fundamental principle of our union.

"The continual efforts of the steelworkers union for better housing, better and more schools, higher wages, and better working conditions are predicated upon the principle of equal opportunity for all regardless of race, creed, color, or national origin.

"INHERENT RIGHT

"This veteran, William Myers, Jr., and his family, have an inherent right to a better home, a right he has fought to protect, and a home he has worked and saved to buy, and as an American citizen he and his family are entitled to the full protection of the law.

"In this respect the steelworkers union commends Governor Leader on his quick and forthright position—likewise, the local authorities who acted promptly to forestall more serious violence."

[From the Trentonian of August 21, 1957]

NEW VIOLENCE FLARES IN LEVITTOWN

LEVITTOWN, August 20.—Police using nightsticks charged into a crowd of 250 to 350 persons tonight to break up an anti-Negro demonstration after a police sergeant was knocked unconscious by a large stone hurled from the crowd.

Sgt. Thomas R. Stewart was struck above the right ear by a piece of gravel the size of a baseball as he talked to a group of reporters near the home of Negro William Myers, Jr., whose purchase of the house in the previously all-white community brought on the week-long series of demonstrations.

Stewart was placed in an ambulance and taken to Lower Bucks County Hospital for treatment of a head cut and injuries to the ear. He was unconscious for 5 minutes.

About 50 other policemen on guard outside the home of the Negro family immediately swung into action. Wielding their nightsticks, the patrolmen charged into the crowds and sent the demonstrators scurrying for several blocks.

After dispersing the crowd, police began arresting anyone acting suspiciously or shouting remarks at the patrolmen. Two persons were arrested within a half hour on disorderly conduct charges.

Three persons were injured last night as club swinging State policemen dispersed the crowd of more than 350 persons, the seventh demonstration since last Tuesday when the Myers home was placed under police guard.

A token guard of 10 to 12 policemen was around the Myers ranch-type home today and reported things were quiet with no crowd. The force was reinforced to some 50 men tonight as the expected crowds began gathering.

Meanwhile, the United Steelworkers of America officially condemned the nightly demonstrations at the Myers home. In a statement to the union membership, Hugh Carcella, director of the USW's District 7, called on union members to "unite with the law enforcing bodies and the many good people in Levittown to help stop these acts of bigotry and un-American demonstrations against an American family."

He said the Myers family has "an inherent right to a better home, a right he (Myers) fought to protect, and a home he has worked and saved to buy."

[From the New York Times of August 22, 1957]

EMBATTLED HOMEOWNER WILLIAM A. MYERS, JR.

LEVITTOWN, PA., August 21.—William A. Myers, Jr., looked tired today, but insisted he was not discouraged. He is sure the nightly eruptions of violence will soon subside and he will be able to "sit down and talk this thing over with the neighbors." Mr. Myers, his wife Daisy, and their 3 small children are the first Negro family to move into this postwar development of 15,500 ranch-type dwellings. Their reception has consisted of mob violence—stone throwing and name calling. State troopers are assisting local police only in dispersing crowds of 200 to 400 that have been demonstrating every night near the Myers' home at the corner of Deepgreen and Daffodil Lanes.

The tumult took Mr. Myers by surprise. Before buying the $12,150, 3-bedroom house, he had talked with several of his neighbors-to-be in the Dogwood Hollow section. They were cordial, even warm.

"I knew all the reaction wouldn't be favorable," he said. "I expected some trouble, but I never thought it would be so bad."

Then he added: "I don't believe these demonstrations represent the true feelings of the people of Levittown."

DEVELOPED FRIENDSHIPS

The Myerses had outgrown a two-bedroom house in adjacent Bloomsdale Gardens. In that community, which is racially integrated, they lived 2½ years and developed warm attachments with their neighbors, white and Negro.

The Myerses are churchgoing people. In their former community, they were members of the Bristol Township Democratic organization and the Bloomsdale Gardens Civic Association. Mrs. Myers was active in the League of Women Voters.

Mr. Myers was born fifty-four years ago in York, Pa., where his parents still reside. He had completed a year at the Hampton Institute in Virgina when he was drafted in 1943. He served two and a half years in the Army Quartemaster Corps, including fifteen months overseas, and was discharged with the rank of staff sergeant.

He returned to Hampton where he was graduated in 1949. There he met his wife, who was doing advanced study. She is a graduate of Virginia Union College in Richmond and has done graduate work at New York University.

STUDIES ENGINEERING

Mr. Myers studied briefly at the New York Technical Institute in Washington. He needs two more semesters to get a degree in electrical engineering, and hopes to enroll soon at the Drexel Institute in Philadelphia.

Meanwhile, he is earning "just under $5,000 a year" as a laboratory technician for the C. V. Hill Co. in nearby Trenton, N. J. The company manufactures large refrigerating units. Occasionally Mr. Myers supplements his income with part-time jobs. Not long ago he worked as a dish washer in a Howard Johnson's restaurant.

An athletically built 6-footer weighing 192 pounds, Mr. Myers played on the Hampton varsity basketball teams.

His daughter, Linda, is 1 month old. The boys, William 3d, 4, and Stephen, 3, are staying with their grandparents in York.

Editor's Letters by F. F. McNaughton

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. MICHEL. Mr. Speaker, today I should like to insert the 25th, 26th, 27th, and 28th—the final—in the series of editorial letters written by my good friend, Mr. F. F. McNaughton, of the Pekin Daily Times, concerning Mr. and Mrs. McNaughton's recent trip to Russia. These last four editorial letters are in a general sense a summary of their objective excursion.

In concluding the series, Mr. McNaughton makes several timely observations on what might be done to increase our prestige and strengthen our position in the world. He suggests that the breaking down of Russia's Iron Curtain restrictions on the foreign travel of their own citizens would go a long way in removing those people from secrecy and terror and enable them to also compare objectively their system with democracy. I am sure we would all agree that this would undoubtedly be an excellent prescription for curing those minds now infected with communism.

It has been a privilege for me to introduce these remarks into the RECORD, and I, as well as Mr. McNaughton, have received numerous compliments, orally and written, both from my colleagues and individuals throughout the United States:

[From the Pekin Daily Times of August 19, 1957]

THE EDITOR'S LETTER

(By McNaughton)

We come now to our conclusions about Russia.

Today we'll write about secrecy and terror; tomorrow about Peace or War?; Wednesday about What the Russians Have; and Thursday about what we should do.

It's to bad that after Intourist tries so hard to make guests happy, certain Russian officials have to act so "police state."

Not at the border.

They were fine to us—never opened a bag.

But the Russians seem to have a craving to hold one's passport. I wrote you from Finland about the American citizen who was lured to Russia during our depression. They lifted his passport and refused to return it for 9 years.

To have your passport taken (to be checked by police) is common in any country. Usually you get it right back.

Not so in Russia.

I kept pestering them for mine.

Answer: "Later today."

Then: "Tomorrow."

And my tickets.

It is standard practice to phone the airport and "confirm" your intention to be there for flying. It takes a minute. But with no phonebooks in Russia, I asked the woman at the "service desk" to phone the Russian airline.

She reached for my tickets.

I handed them to her.

She kept them.

"Well," I said, "please give me a receipt."

"We do not," she said.

So I called our guide into the room and showed her the tickets and made her a witness that this woman had taken my tickets, worth $1,000.

The woman was furious.

We finally got our passport and tickets back just in time to catch our plane.

We were leaving at midnight, and I cancelled a show so I could sit and wait for our tickets to be returned to me between 9 and 10 p. m.

And our mail.

I know there is mail here in Moscow for us—probably a dozen letters.

But they won't give it to us.

But this is true: The terror that we saw (and felt) here before is not here now. No longer do wives wonder if their husbands will return when they leave for work. No longer are a few shot now and then just to

keep everybody in terror. I think this is because the men at the top got tired of it and wanted some relief from terror for themselves.

[From the Pekin Daily Times of August 20, 1957]

THE EDITOR'S LETTER

(By McNaughton)

PEACE OR WAR?

Last time we visited Russia we were greeted by the huge sign (written in four languages): Workers of the world, unite.

This time the word printed in huge letters and many languages is "Peace."

I imagine that most of you readers think Russian peace talk is all bluff.

Let me make a point.

In one of our Illinois papers on page 1 in black type was the headline: "Peace is parade theme."

People whom I know and who are friends of mine had chosen "peace" as the theme for every float and every unit in that Illinois town's parade. Future Farmers, Future Homemakers, 4–H groups, Boy Scouts, Girl Scouts, Rural Youth, Little Leaguers—all were to march with banners and displays that called for peace.

Suppose every home in Russia had been permitted for that one day to do the forbidden thing, namely, read a newspaper from the outside. Suppose they had read that the youth of America were parading for peace.

What would they have thought?

They would have thought it was a big bluff. They think capitalists want war. They know that we have them surrounded with land airbases and floating airbases. I myself have seen this: Have seen our fleets and bombers that are ready to pounce upon Russia from all sides (and I'm thankful for it); but the Russians believe that that means we want war, and that someday we will start a war to destroy their way of life.

So they don't believe that our parade for peace is in earnest.

They think it is a lie.

And most of us think their talk of peace is a hoax.

But here is what I believe:

I believe that 99½ percent of Americans want peace. (The other one-half percent might be a few munition makers and some soulless workers who get big overtime in war.)

And I believe that 99 percent of Russians want peace with all their hearts. (The other 1 percent may be the party's hard core that want to see capitalism totally destroyed while they are still alive.)

Don't misunderstand me:

Russia's goal still is for the workingmen of the world to unite and rule the world—from Moscow. They are smart enough, however, to know that they are not ready for war yet. Now war would ruin them. Meanwhile (until the Hungary massacre) they were making vast steps toward winning all the world without war. Their brutal massacre of students and workingmen in Hungary set them back severely; so now they are trying to appease Communists everywhere, including in Russia.

But be sure of this: The Russian people want peace.

[From the Pekin Daily Times of August 21, 1957]

THE EDITOR'S LETTER

(By McNaughton)

WHAT HAS RUSSIA GOT?

1. A vast, rich country dominating Europe and Asia. It is one-sixth of the earth's land, reaching from the Arctic to sunny Georgia.

2. Two hundred million patriotic people, much like Americans and immensely proud of the fact that under communism, in a brief time, they have jumped from a backward nation of ineffective and illiterate people to one of the two great and powerful nations of the earth. (However, speaking of population, I think Ceil's observation was accurate: Few babies, few pregnant women. Millions of men were killed in World War II. Nearly all women want to work. They have no church to tell them not to prevent the birth of children. The United States may be gaining on the U. S. S. R. in population.)

3. Dictatorship. 'Tis generally admitted that democracy is a most inefficient form of government because people vote, not for good of country but for their selfish selves. But a dictatorship (of one or a dozen) can plan only for the good of the country; can make decisions in an hour; can kill all good farmers in a week; can forbid its people to buy automobiles or lipstick; can half (or totally) starve its people while putting energy into making guns.

4. The lie. A people without religion and (shall we say) conscience, has no hesitation to tell any lie, or pull any trick to gain advantage.

5. The might of the world's second industrial power.

6. Skill in taking advantage of our boneheads. If we had pulled the boner they did in Hungary, they would have turned the hatred of the world against us in a devastating manner. But our side goofed the chance because Israel, France, and England pulled a bonehead of their own simultaneously, and Russia yelled 10 times more loudly about that than we did about Hungary. Among the uncommitted billion, the Soviet really takes us for a cleaning in the propaganda contest.

7. Vastly better understanding of the uncommitted billion. Poor people from the lands where that billion lives come to Russia in droves as visitors and they rejoice to see a people, so recently like them, climbing from far down the ladder to next to the top run—and reaching for the top rung. Russia has that billion cheering for the U. S. S. R.

8. Education.

9. The bomb.

[From the Pekin Daily Times of August 22, 1957]

THE EDITOR'S LETTER

(By McNaughton)

As we leave Russia, I ask: "What can America do to make American free enterprise more attractive to the uncommitted billion than Russian communism?" (For if they join the billion already under communism, we are lost.)

Let's suppose some bright students from countries where the uncommitted billion live, visit the United States.

1. They would be dismayed to find that bright young persons cannot get an education in America because they do not have money. I'm thinking of two in-laws of our children. One was meant to be a physician. The other would have made a brilliant scientist. Neither could afford schooling; so both are living dull lives, unhappy, and depriving America of their talents.

2. They would be aghast at the fact that color (most of the billion are colored) could keep millions of Americans in a second-class citizen status. "If that is America," they say, "we want nothing like it."

3. They would be frightened by the heartaches and poverty into which thousands—tens of thousands—of American families are thrown because of illness. I'm thinking of our "chicken lady." She and her husband have a few acres and made a meager living raising fowl and garden truck. Then he had a stroke. Now she is having to try to do all the work alone in addition to taking care of him, and paying his heavy doctor bills. Too, I'm thinking of Clara Bell. A proud Kentucky girl, she wed a good man and they were getting on fine. Then he got cancer—the slow kind. It involves constant trips to a city 56 miles away, and repeated operations. To keep the wolf away from the door, Clara Bell, a goodlooking and proud woman, scrubs and cleans for us. Small ailments? Sure, a family can take care of them. But the cost of devastating illness should be shared by us all.

4. We need more honest and especially more intelligent religion. Never will I forget what a brilliant monk told Ceil and me one Sunday on the banks of the Ganges. "Worship of the cow," he admitted, "is what we call priestcraft. Because, way back when, it was good for Indians to keep their cows no matter how near the owner seemed to starvation, the priests told the illiterate Indians that the cow was sacred. Thus the cows, which furnished the family's milk and furnished the power to tread the Persian wells and to plow the fields, were saved." But the day has now come when the Indians need to take a more intelligent look at their religion, and learn that cow manure is not for plastering walls and polishing floors—instead it is for putting on wheatfields. Young students visiting America would not be satisfied with some phases of our religion.

5. We need to show more respect to teachers; and to give more room and time for culture; and (above all in this paragraph) to put far less emphasis on money—and the furs and finery that money will buy. Nearly all the world joins the Communists in the criticism that Americans, as a breed, think nearly 99 percent of material things.

6. Most of the world that is not Communist is Socialist. Under communism the state owns nearly everything and no man may hire (exploit) another. Under socialism, the state owns postoffice, express company, telephone and telegraph, rail, ship, and airlines in varying degrees. Individuals own stores, farms, factories, clinics, etc. Our visiting guests from the uncommitted billion could not understand an America that would let individuals own coal, zinc, iron, copper mines; deep oil and gas pools; waterfalls; and other vastly rich natural resources that the Creator put there a million years ago for "all God's chillun."

And now, in my last sentence written from Russia, I do not want to lull us into any failure to solve the six shortcomings mentioned above; but I do wish a million of the Russians and Chinese and "the uncommitted billion" would come see America for themselves.

A Visit to the Dominican Republic, the Land Columbus Loved

EXTENSION OF REMARKS

OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. LONG. Mr. Speaker, I have just returned from a week's visit to the Dominican Republic on the island of Hispaniola, in the Caribbean Sea.

Mrs. Long and I had a delightful visit to the Dominican Republic, where we attended the festivities in celebration of the inauguration of Gen. Hector Trujillo Molina as President. We returned from 6 days in the island Republic, filled with pleasant impressions of the graciousness of the people and the beauty of the country.

We were welcomed at the General Andrews Airport by Dr. Alvaro Logroño Batlle, Minister and Assistant Chief of

the Protocol Division; United States Ambassador Joseph S. Farland, Otto Vega, official in the President's chancery, and by Deputies Marino Caceres, Wenceslao Troncoso Sanchez, and Arturo Caventy, accompanied by their wives Isabel Troncoso de Caceras, Rosa de Troncoso, and Marisa Thomen de Calventy. We enjoyed our reservations at the Ambassador Hotel, and have only praise for its comforts and superb service.

At the inaugural parade, we were privileged to have a seat along with delegates from 42 other countries. The parade itself was colorful and entertaining. The generalissimo wore a cream-colored uniform with a dark blue cap and neckband, braided with gold. Major units in the parade were drawn from the army, navy, air force, and national guard. For 3 hours we watched the well-trained and equipped units display their precision marching, and the air force put on an outstanding performance with Vampire jets.

Ciudad Trujillo is a lovely place. It is extremely clean and is dotted with magnificently landscaped parks. Avenida George Washington, named for our own first President, extends for miles along the seacoast and is lined with tall graceful palms, making it one of the most beautiful drives in the world. The obelisk in its path is reminiscent of our own Washington Monument.

Mrs. Long and I visited stores and found that they were well stocked and people were shopping much as they do here in the United States. We also visited many offices and businesses.

Outside the city, it was our pleasure to view several of the nicely kept sugar plantations and fruit farms. We saw the people industriously at work in their fields and around the sugar refineries, which were preparing to be opened for the new season.

The climax of our visit came on Friday night at a dance at the national palace, honoring the generalissimo and his brother, the President. It was most inspiring to see how the people who assembled there loved their officers, and to see the high regard these officers have for the people.

Both the generalissimo and President Hector Trujillo remained until the dance was over—in fact, I am sure the generalissimo remained until 1:30 in the morning. It was really admirable to see the way in which he remained as friendly and gracious at the end of the dance as he had been at the beginning of the ceremonies, although he had had more than 6 days' strenuous activity, attending dances, receptions, reviewing the Army, Navy, and Air Force.

Everyone with whom we had contact voted the officials of the Dominican Republic most gracious hosts. I would like to add my own and Mrs. Long's vote of thanks for the many Dominican kindnesses that made our visit to the land Columbus loved so memorable an occasion, and to extend our best wishes for the continued well-being and prosperity of the Dominican people under the skillful administration of President Trujillo.

I felt that my friends will be glad to have this report of my visit to the Dominican Republic.

Henceforth when I have occasion to speak about our great friend and ally, the Christian Dominican Republic, I can assure my colleagues that I will be able to speak with the authority gained from first-hand investigation—not from facts gained by hearsay, or even upon the advice of the experts on the Caribbean who are always available to me.

Surplus Disposal Program

EXTENSION OF REMARKS
OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. HILL. Mr. Speaker, in the surplus-disposal program by the United States Department of Agriculture, the Marketing Service Food Distribution Division has been doing a first-rate job.

I have always felt that in the disposition of surplus agricultural commodities to our friends in foreign countries we should at all times be definitely certain that the surpluses reach the people in desperate need of food and wherever possible it should be distributed in such a way so those who receive it are informed in a positive way who is supplying or donating the food.

Of course the ideal way to distribute food to areas of the world suffering seriously for want of food supplies should be through charitable organizations with a properly developed method of distributing the food.

In these remarks I am placing in the RECORD I find a most encouraging sign of following out the ideas I have expressed for many years and I include the list of the agencies approved for participation in the foreign distribution of surplus commodities under the Agricultural Act of 1949, as amended.

It is a wonderful thing to know we have these religious and semireligious organizations that are in a position to distribute food directly to the families in want throughout the world. Surplus farm commodities distributed in this manner, in my personal opinion, contributes greatly to the proper attitude that we wish the rank and file of the population in every area of the world to have toward our Republic. This is a positive way to "win friends and influence people." When friends are made through this source of distributing our farm surpluses they are friends indeed. The list is as follows:

AGENCIES APPROVED FOR PARTICIPATION IN THE FOREIGN DISTRIBUTION OF SURPLUS COMMODITIES UNDER SECTION 416 OF THE AGRICULTURAL ACT OF 1949, AS AMENDED

American Friends of Austrian Children, Inc., 202 East 19th Street, ninth floor, New York, N. Y.[1]

American Friends Service Committee, Inc., 20 South 12th Street, Philadelphia, Pa.[1]

American Fund for Czechoslovak Refugees, Inc., 1775 Broadway, New York, N. Y.

American Jewish Joint Distribution Committee, Inc., 3 East 54th Street, New York, N. Y.[1]

American Korean Foundation, 345 East 46th Street, New York, N. Y.[1]

American Middle East Relief, Inc., 350 Fifth Avenue, New York, N. Y.[1]

American Mission to Greeks, Inc., 233 West 42d Street, Post Office Box 423, New York, N. Y.[1]

American National Red Cross, Washington, D. C.[1]

Assemblies of God—Foreign Service Committee, 160 Fifth Avenue, New York, N. Y.[1]

Catholic Relief Services—NCWC, 451 Madison Avenue, New York, N. Y.[1]

Christian Children's Fund, China Building, Richmond, Va.

Church World Service, Inc., 215 Fourth Avenue, New York, N. Y.[1]

Congregational Christian Service Committee, 110 East 29th Street, New York, N. Y.

Cooperative for American Remittances to Everywhere, Inc. (CARE), 660 First Avenue, New York, N. Y.[1]

First Aid for Hungary, Inc., 6 East 65th Street, New York, N. Y.

Foster Parents' Plan, Inc., 352 Fourth Avenue, New York, N. Y.[1]

Hadassah, Inc., 3 Thomas Circle, Washington, D. C.; 65 East 52d Street, New York, N. Y.[1]

International Rescue Committee, Inc., 62 West 45th Street, New York, N. Y.[1]

Iran Foundation, Inc., 6807 Empire State Building, 350 Fifth Avenue, New York, N. Y.[1]

Lutheran World Relief, Inc., 50 Madison Avenue, New York, N. Y.[1]

Mennonite Central Committee, Inc., Akron, Pa.[1]

National Council of Young Israel, 3 West 16th Street, New York, N. Y.

Pestalozzi Foundation of America, Inc., 41 East 57th Street, New York, N. Y.

Romanian Welfare, Inc., 22 East 60th Street, New York, N. Y.[1]

Save the Children Federation, Inc., 345 East 46th Street, New York, N. Y.[1]

Tolstoy Foundation, Inc., 989 8th Avenue, New York, N. Y.[1]

Unitarian Service Committee, Inc., 345 East 46th Street, New York, N. Y.[1]

United Lithuanian Relief Fund of America, Inc., 105 Grand Street, Brooklyn, N. Y.[1]

United Nations International Children's Emergency Fund (UNICEF), United Nations Plaza, New York, N. Y.[1]

United Ukranian American Relief Committee, Inc., 866 North Seventh Street, Philadelphia, Pa.[1]

Volunteer Border Relief, Inc., Post Office Box 981, Harlingen, Tex.[1]

World Relief Commission of the National Association of Evangelicals, 12–19 Jackson Avenue, Long Island City, N. Y.[1]

Mr. Speaker, in addition to this very substantial list of organizations participating in our distribution of surplus products abroad, I include other information on the disposal of our surplus commodities at home:

DISTRIBUTION OF SURPLUS COMMODITIES

Food donations by the United States Department of Agriculture reached a record high in the fiscal year ended June 30, under an active Department effort to dispose of surpluses. A total of 2,818,400,000 pounds of food was donated during the year to recipients here and abroad through the direct distribution program conducted by USDA's Agricultural Marketing Service.

Distribution domestically was increased to 1,043 million pounds, up 32 percent over the total for fiscal year 1956. Foreign distribution rose to 1,775,400,000 pounds, an increase of 45 percent over the same period a year ago.

Footnote at end of speech.

Footnote at end of speech.

In this country, the biggest increases were made in distribution of surplus commodities for use in school lunch programs. A total of 426,300,000 pounds of food was distributed for this purpose during the year, an increase of 61 percent over the previous year. Distribution to institutions totaled 148,600,000 pounds, a gain of 14 percent. Distribution to needy persons in family units accounted for the largest quantity of food distributed domestically, with the total of 468,100,000 pounds up 18 percent over a year ago.

In addition to these uses, large quantities of surplus foods were used during the fiscal year in the relief of victims of natural disasters. Top priority on foods available for distribution is given to such use. For example, nearly 24 million pounds of food was distributed for immediate relief of last August's hurricane victims in Puerto Rico. Subsequently, Puerto Rico entered the continuing program of distribution to needy persons, to aid in long-term rehabilitation after completion of the emergency feeding. Large quantities of foods were also used in emergency feeding when spring floods, tornadoes, and hurricane struck Louisiana, Kentucky, and Virginia, driving persons from their homes and forcing them temporarily to rely on community feeding.

In addition, surplus foods were rushed to the aid of refugees from Hungary, following the October revolution. Thirty million pounds of food was made available to aid refugees in camps established in Austria. In addition, some 175,000 pounds of food was used to aid Hungarian refugees after they arrived in this country, in centers such as Camp Kilmer in New Jersey.

Foods donated under the direct distribution program are currently being used by over 12 million school children taking part in school-lunch programs, and about 1.4 million persons in charitable institutions. In addition, about 3 million needy persons in family units are currently receiving donated commodities.

Distribution of surplus commodities to schools and institutions is made in all 48 States, the District of Columbia and 5 Territories. A total of 39 States and Puerto Rico are currently taking part in distribution of surplus foods to needy persons, with 949 counties and 80 additional cities participating in those States.

The number of agencies taking part in the foreign donations program increased to 24 during the year, and the number of countries in which food was distributed to needy persons increased to 88. Distribution of surplus foods in these foreign countries is made by voluntary United States agencies, with commodities donated to them after provision has been made for the needs of all eligible recipients in this country.

In view of these statistics, it is clear that the Department of Agriculture has moved a tremendous quantity of surplus foods into consumption, foreign and domestic. In fact, the reduction of inventories through donations and other disposal programs has been so substantial for most items that eligible outlets could readily absorb larger quantities than are available on a continuing basis. For example, at one time the Commodity Credit Corporation held sufficient quantities of butter to permit donation to the school-lunch program, welfare and institutional distribution programs and to foreign outlets as well. Since January, stocks and acquisitions of butter by CCC have permitted distribution only to the school-lunch-program. Similarly in the case of salad oil and shortening, donation to foreign outlets had to be eliminated during the past fiscal year for lack of availability.

Donation of dry beans to foreign outlets also had to be stopped in the third and fourth quarters of fiscal 1957 and the quantities of nonfat dry milk for donation abroad had to be reduced for lack of adequate supplies in Government hands. At the present time, donations of rice for foreign relief are limited to broken kernal or brewer's rice.

Two-Term Limitation on Presidents Called Basic to Eisenhower's Troubles

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. DINGELL. Mr. Speaker, a most thoughtful and thorough analysis of the problems which are besetting the present Eisenhower administration are set forth in an editorial by Mr. Thomas L. Stokes, which appeared in the Washington Evening Star of yesterday, August 21 1957.

Pursuant to permission granted, I am inserting this excellent article into the CONGRESSIONAL RECORD so that all who read the RECORD may have the benefit of it:

THINGS GENERALLY GOING AWRY: TWO-TERM LIMITATION ON PRESIDENTS CALLED BASIC TO EISENHOWER'S TROUBLES

(By Thomas L. Stokes)

President Eisenhower's disillusionment as he finds his influence with Congress dwindling and his authority in his party diminishing and things generally going awry has a simpler explanation than some of the analyses now being made.

It goes back to his own party before he joined it, back to the 80th Republican Congress, and to something his party put over out of spleen over the long reign of that man, Franklin D. Roosevelt. At that time voices were raised to point out how the Presidency would be weakened by a specific limitation to two terms. But Republicans, under the leadership of Representative JOE MARTIN of Massachusetts, then Speaker, now party House leader, jammed through that first Republican Congress in 16 years, and in less than 3 months, the 22d amendment to the Constitution fixing that limitation. Ratification was completed in less than 4 years—February 26, 1951.

It did not apply to Harry Truman who was President when it was submitted, but he stepped down anyhow.

It was left to President Eisenhower, to whom it first became applicable, to feel authority begin to slip away when he started his second term last January as members of his own party, as well as Democrats who had feared his hero standing with the people, stiffened their resistance. No longer need Democrats fear him, and from now on Republicans could concentrate on their own futures and ambitions. Politically he was through.

This was exemplified dramatically when his party leader in the Senate—Senator WILLIAM F. KNOWLAND, of California—took the first step in his own campaign for the 1960 Republican presidential nomination without even waiting for President Eisenhower to take the oath of office for his own second term. Senator KNOWLAND announced his retirement from the Senate at the end of his term, which was generally interpreted to mean that he would run for Governor of his State next year as a means of getting control of California's delegation to the 1960 Republican convention. This was a head start to try to beat out other aspirants for the 1960 nomination, including his fellow Californian, Vice President NIXON.

Before our eyes now, we can see the evidence of the disintegration of the President's power under the pressure of political interests of his party leaders. We need take only two examples much in the newspapers now.

Something, first, in which the President is vitally interested, an adequate foreign-aid appropriation. What happens? He finally had to call in the Democratic Speaker of the House, SAM RAYBURN, to make a personal plea to try to hold enough Democratic votes to make up for Republican defections.

Second, civil rights. The President, it is true, is interested in an adequate bill, though his interest was not deep enough to entice him to read the bill carefully until weeks after it started through Congress. But it is very obvious that it is because of their own personal political interests and the interest of the party that Republican leaders in the House and Senate made their stand for a better bill than the badly mutilated measure that came from the Senate, and not because of the President. It is clear that it is Attorney General Brownell, an experienced and skillful politician, and party leaders at the Capitol, including Vice President NIXON, who have been pushing the President to a more firm stand, rather than the other way around.

But the President's present dilemma is due to other influences beyond the debilitating effect of the two-term limitation.

His vacillation on major issues facing him since his second term began—budget, civil rights, school construction, among others—again spotlights that his unfamiliarity with domestic problems when he assumed the presidency, and his consequent lack of interest and of strong convictions about them, has persisted in its influence. There was, of course, no reason why in his entirely different career as a soldier he should be curious about them.

It is very apparent that he never has come to like his job as President to the point where he would buckle down to it with the joy and devotion of one who has grown up in politics and statecraft and loves it—and he had, of course, so much more to learn than have men who make it a life career and have an understanding that it is impossible to get in any other way. This shortcoming of the President is manifest to anyone who has watched, firsthand, other Presidents, and could have been forecast from the beginning.

In a way he is a victim. Shrewd leaders of the Republican Party, which had been out of power for 20 years, and powerful economic interests which support the party, saw that something new was needed to attract the public. The party could not go over with the people on its own. The ideal solution was at hand in a war hero, a household name, not previously identified with politics, if he only could be persuaded to lend himself to their plans. He could—few ever have been able to withstand such an invitation.

He became a front—and has remained that for many purposes. The big interests which sponsored him were unable to get everything they wanted in his first administration. They must win again. So, despite two illnesses that had incapacitated him for some time, they were able to persuade him to run again.

Now he has served his purpose.

We are witnessing a major tragedy in American politics.

The Give and Take of Federal Aid

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following article and the tables it contains are of very special interest to all New Yorkers, but they should be of interest to many other States, as well. This information is furnished to us by the Citizens Public Expenditure Survey, Inc., of Albany, N. Y.

While we sit here in the House of Representatives, merrily appropriating money, we are apt to forget that this money comes out of the pockets of our constituents. Fortunately, they do not seem to appreciate this fact either.

It is time that we, and they, realize that many of our States are giving far more than they ever receive from the Federal Government and that it is now a severe tax handicap to be a citizen of some of the large and prosperous States:

THE LOSING GAME ON THE EVER-WIDENING GAP, FEDERAL GRANT-IN-AID PAYMENTS

New York State is losing more than $200 million a year in the "give and take" of Federal aid. Moreover, the trend is toward a still greater widening of the gap between what this State receives in Federal aid and what New Yorkers pay to support the Federal aid programs.

Every increase in Federal payments to the States and every new Federal grant-in-aid leaves New York financially worse off than it was before. Just in the period from 1950 to 1956, the addition of new aid programs and the growth of old ones increased the annual loss by more than $52 million.

Here's the story in a nutshell:

[In millions of dollars]

	Programs in effect, 1950	Expansions and additions, 1950-56	Programs in effect, 1956
Federal aid cost, New York	303.9	143.5	447.4
Federal aid given, New York	154.2	91.3	245.5
Loss	149.7	52.2	201.9

Tax foundation has estimated that New Yorkers had to shoulder 13.68 percent of the total Federal tax burden in 1950 and 13.33 percent in 1956. Our State, therefore, had to pay those percentages of the total cost of Federa-aid programs. During 1950, total Federal grant-in-aid payments for the continental United States amounted to $2,189.3 million, of which $303.9 million was paid in Federal taxes by New Yorkers. By 1956 the total had increased to $3,356.4 million and the cost to New York was $447.4 million.

BIGGER BUT NOT BETTER FOR NEW YORK

Federal grant-in-aid programs are being expanded all the time, both in dollar amount and in number of new undertakings.

The growth in existing programs and the addition of new programs gave New York State $91.3 million more in Federal aid in 1956 than in 1950. But New Yorkers had to pay $143.5 million more in Federal taxes to support those programs. The difference of $52.2 million further widened the gap between what Federal aid programs cost New Yorkers and what this State gets back in Federal aid.

The gap increased from $149.7 million in 1950 to the 1956 annual rate of loss of $201.9 million.

LESS AID, MORE MONEY

Now let's see what we could do with our savings if we did not have Federal-aid programs and the Federal taxes to support them.

First of all, New York could collect additional State taxes equal to all the Federal aid the State now receives and the total tax burden on the people of this State would still be reduced by more than $200 million a year.

Or that $200 million if collected by the State, would finance the State's capital construction program on a pay-as-you-go basis. Over the period of the next 6 years, that $200 million a year would total $1.2 billion. That sum would make it unnecessary for the State to borrow the authorized debt of $500 million for highways, $350 million for mental institutions, $30 million for grade crossing eliminations and the proposed $250 million for the State university.

FEDERAL AID FOR EDUCATION

When the House of Representatives turned down this year's bill to provide Federal aid for school construction, they saved New York taxpayers $107 million. Under that bill New York would have received $93 million for school-building aid but the people of this State would have had to pay $200 million in Federal taxes for the program.

SUMMARY TABLE

The following table summarizes Federal aid to New York State and its local units of government in 1950 and 1956 as reported by the Joint Committee on Reduction of Nonessential Federal Expenditures, Report No. 442, United States Congress, June 1957:

Purpose	Fiscal year ended June 30— 1950	1956	Amount of increase or decrease	Percentage increase or decrease
Agricultural	$1,449,290	$2,167,913	$718,623	49.6
Surplus commodities	4,608,160	14,320,763	9,622,603	204.8
School lunch and school milk	4,445,541	9,198,106	4,752,565	106.9
Other school emergency grants	6,884	3,429,469	3,422,585	49,718.0
Vocational education	1,848,740	2,070,072	221,332	12.0
Colleges	223,837	217,934	−5,903	−2.6
Maritime school	45,045	74,770	29,725	66.0
Airports	2,470,758	933,959	−1,536,799	−62.2
Highways	31,631,185	51,478,275	19,847,090	62.7
Public health	6,061,652	7,595,282	1,533,630	25.3
Welfare	70,591,516	112,257,846	41,666,330	59.0
Wildlife	266,580	573,087	306,507	115.0
Unemployment Compensation and Employment Service Administration	27,826,009	31,751,422	3,925,413	14.1
Civil defense		2,021,745	2,021,745	
Housing	1,243,454	7,403,609	6,160,155	495.4
Veterans	1,854,181	37,061	−1,817,120	−97.3
Total	154,162,832	245,531,313	91,368,481	59.3

Although this aid may seem attractive, the fact is that the full amount and more, too, was taken out of New York State in the first place by Federal taxes. A joint Federal-State action committee of State governors and Federal officials this month announced a plan for reduction of Federal aid. The States would take over full responsibility for certain programs now costing the Federal Government about $500 million a year, and the Federal Government would relinquish certain taxes to the States. This is a proposal deserving the support of New York State taxpayers.

Widespread Support for Egg Crusade

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mrs. KNUTSON. Mr. Speaker, the letters are still coming in to my office on the campaign for higher egg prices for farm women. One correspondent from Iowa says:

I could use a good number of items that I am neglecting—not luxuries, but necessities.

Another says:

I think the lack of egg funds has damaged the purchasing power of farm families more than anyone realizes but the farm people.

Under leave to extend my remarks, I have requested permission to insert these two letters together with an excellent coverage of the egg and poultry situation by the secretary of the Minnesota Poultry Hatchery Association, Mr. L. L. Bamgartner:

OSKALOOSA, IOWA, *August 12, 1957.*

MY DEAR MRS. KNUTSON: Congratulations on your fine article on the farm-egg situation which I read in the Des Moines Sunday Register.

We live on a farm about 60 miles east of Des Moines. The egg price here has been so terrible that many, many farm wives did not buy chicks this year.

You are so right when you say that when there is no egg money many household items are not purchased. I could use a good number of items that I am neglecting—not luxuries—but necessities.

Oftentimes I am asked why I don't go back to teaching as many of the girls are doing who had taught. But because of my three children I feel my place is in the home with them.

Two years ago when our Iowa Legislature passed the egg-grading law we were told that that would help the egg price, but it has been worse. I have sold many cases of lovely eggs the past months that scarcely averaged 20 cents per dozen while in the stores they were selling for almost 40 cents and in the larger cities on up to fifty-some cents.

We farm wives have a busy hard life. Not only do I have my family to cook for but many farmhands during the year, especially at harvesttime. With the cost of clothing for children so high it would sure be wonderful to have some profit from the eggs to help get some things they could really use.

I'm sure hoping your article is a step in the right direction.

Very sincerely,
Mrs. CARROLL L. BROWN.

WAVERLY, ILL., *August 15, 1957.*

DEAR MRS. KNUTSON: I have read with much interest your crusade to do something about the egg prices for the farm women. My thanks to you for I think the lack of egg funds has damaged the purchasing power of farm families more than anyone realizes but the farm people. I hope you have success and you are in a position to be heard where we simply have to take what the poultry man gives us.

Very truly yours,

MRS. GEO. A. BROWN.

MINNESOTA POULTRY HATCHERY ASSOCIATION,
August 14, 1957.

MRS. COYA KNUTSON,
House of Representatives,
Washington, D. C.

DEAR MRS. KNUTSON: I want to commend you most highly for the interest which you express in our Minnesota egg producers.

I am currently secretary of the Minnesota Poultry Hatchery Association and a director in the American Poultry and Hatchery Federation. I have been secretary of the Minnesota association for 21 years and have been in this business for 30 years and I am fully ware of the importance of poultry on our Minnesota family and diversified farms. I might add that I have devoted much time to doing everything possible to keep this poultry here on these farms.

I have done some writing and have expressed my views wherever and whenever possible when such matters were being considered. I originated the idea of prime hens in attempting to force the processors to grade these castoff hens from our egg production flocks, in view of the fact that most of them are of the highest quality poultry meat. My writings have appeared in quite a number of poultry magazines and papers throughout the United States and I believe it is beginning to bear some fruit.

We have many problems here and one of them is that the South, East and West commercial areas would like to produce all of the eggs and poultry and they are not very backward in pushing us out of the picture, if possible. It is regretable to learn that the loaning agencies right in the Department of Agriculture loan large sums of money to new poultrymen going into the business at a time when there is an overproduction.

Another problem is that our grain is going to the seaboard or Eastern and Southern States at a much lower rate than our processed poultry. Yesterday I called our depot agent and asked him what the tariff would be on shipping a carload of corn to New York City. He gave me a figure of 96½ cents per hundredweight, minimum car of 40,000 pounds.

Then, on a car of processed turkeys, 30,000 pounds minimum, the price would be $1.97 per pound. If it were less than 20,000 pounds, the rate would be $2,153 a hundredweight.

So you can see that they have quite an advantage on us from that standpoint. In other words, they can feed turkeys and chickens outside of New York City for just a fraction over what our feed and grain costs us right here in the Grain Belt.

As I understand it, the railroads claim they cannot raise that tariff in view of the fact that they are in competition with the boats on the Great Lakes.

I doesn't seem just right to me and I don't know what the answer is. I am not in a position to say whether or not it is a good thing for our farmers or not. However, it does not appeal to me as being in balance when grain gets to our competitive markets for about half of what it costs to ship the processed turkeys, eggs, or poultry products.

Again, I want to say that the efforts you are expending in the welfare of our poultry industry here in Minnesota is of tremendous importance to the economics of this State.

Very sincerely yours,

MINNESOTA POULTRY HATCHERY ASSOCIATION.
L. L. BAUMGARTNER,
Secretary-Treasurer.

Webb Publishing Co. Marks 75th Year

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the St. Paul Pioneer Press on Sunday, August 18, 1957, which relates to one of the oldest companies, and one of the most outstanding and distinguished companies, in St. Paul, Minn.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM PRIVATE HOME TO CITY BLOCK—WEBB PUBLISHING MARKS 75TH YEAR

(By Carl Hennemann)

Good printing firms always seem to get bigger with the years.

Webb Publishing Co. was started on a dining room table in Fargo 75 years ago this month and now covers a full city block in St. Paul.

More than 300 power-driven presses and machines and 500 employees are able to turn out almost every kind of printed advertising wanted by American firms. Few printing plants turn out the printed word in so many different colors and sizes.

Webb publishes the time-honored rural magazine of the Midwest, The Farmer. Many persons think the company's biggest job has been to console, advise, entertain and encourage farmers through drought, depression, grasshopper plagues, wheat rust, and floods.

The Farmer has done that, but Webb also has built up a printing plant which can swiftly run off the Minneapolis telephone directory, which adds up to 25,000 manhours of work, 16 tons of ink, 55 carloads of paper. If piled in one heap, the directory would soar 14 miles into the sky.

Into the acres of whirring machines pour advertising jobs gathered up over the Nation by Webb's sales staff. Along with these jobs, the really big routines of every month include, by the most rigid schedule, the setting, proofreading, printing and mailing of Modern Medicine (cir. 160,000); The Catholic Digest (950,000 copies); and The Farmer (264,000). Formerly there was the Farmer's Wife, but it got so big (1,200,000) that Farm Journal in Philadelphia coveted its mailing list and bought it in 1939.

Edward A. Webb, born in India, son of a medical missionary dedicated himself to giving farmers in a new land the best information on methods which would make their farms pay.

His dining room table was his editorial sanctum. On it he and his wife addressed the magazine's labels. She stitched the first issues together on her sewing machine.

Circulation grew to 2,500. Mr. Webb decided he should get his message to a larger world. He moved to St. Paul in 1890. He was almost bogged out of business by the depression of 1893, but he worked so hard, day and night, that he weathered it. In that struggle he decided to put his equipment to use between issues of the Northwest Farmer, as his journal was first called. The Farmer and the firm's printing division have developed alongside each other.

Mr. Webb nursed his magazine's slowly growing circulation, first in 2 third-floor rooms on East Third, then in 5 second-floor rooms on Sibley. He finally took over half the ground floor of a building on the Athletic Club site. There he installed the first self-feeder press in the northwest.

In 1907, Webb Publishing Co. moved to its address at East 10th and now it fills a block bounded by that street, East 11th, Cedar, and Minnesota. The Farmer's Wife, published in Winona, was bought in 1903, when its circulation was 2,000. In 1929 Webb's bought the Farm, Stock, and Home, published in Minneapolis, and merged it with the Farmer.

Take a look into Webb's pressrooms today. There are 34 presses, 4 large rotaries to produce the magazines. The Hoe supermagazine 32-page, 2-colored rotary press is 63 feet long. There are two color machines, large single color equipment, offset presses, and many smaller units. In keeping modern, Webb's acquired plastic moulding equipment, a hydrocasting system, folding machines, gatherers and binders, a plate-curving machine, typing machine, and many other facilities.

In the last 5 years Webb's purchased a new square-back binder for Modern Medicine and the phone directories, and a new stitcher-trimmer for the Catholic Digest and the Farmer. The same department also acquired a new wrapping and mailing machine and a small sealing machine. The bindery installed a new six-station inserting and mailing machine, used principally by the Digest. The acquisition of new machines for the old is a continuous routine in printing firms that try to keep abreast of the American promotion field. At Webb's, there is always a machine going into the discard and a better one to take its place.

Aside from its machines, the ownership usually has building troubles. The firm was always planning ahead to take care of expansions when they came, but after plant expansions were carried out, the business expansion was always too big for the plant expansion.

Eight years ago, an 86- by 126-foot addition was constructed on East 11th for more presses and storage. Then came a face-lifting at the front along Cedar. After that the interior of the offices was redecorated. But the offices had multiplied by then. They had to be rearranged more efficiently and conveniently. Then a pressroom had to be relocated, the presses shifted and, finally, all pressrooms were converted into complete and compact units, each designed for certain types of production.

Up to a year ago, Webb's had a third section in its business setup, the Itasca Press, which published books. Mr. Webb had his heart set on farmers reading better books about farming. He also wanted farm schools and colleges to have these books. Later, Itasca added the books of Minnesota and Midwest authors, some of them fine literary products. A decline in Itasca's activities brought its end in July of 1956.

Webb's staff members have served as officers of many national organizations in the fields of agriculture, advertising and publishing. They also have gone on trade missions for the Federal Government and most of them have served in community and civic capacities.

Mr. Webb died in 1915. He had been a successful editor, businessman and leader. His advice to farmers over the years was sensible and sound and usually prophetic.

In the Farmer of September 1884, he wrote: "The main thing that the shrewd farmer in the Northwest will not be slow to discover is the important truth that they should promptly place themselves in a position not to depend entirely on one article of agriculture; not to pin their faith entirely on the wheat crop, but to add to their industries; to add stock, to pay attention to dairying, to poultry, and to all departments of farming."

But the shrewd farmer proved to be not so shrewd. Thousands of them went on as one-crop farmers until shifting markets, debts and bankruptcy proved the Farmer's advice was right. Diversified farming proved, after many years, to be the base of security for the Midwest, but it took most farming families more than one generation to take on the dairy cow, beef cattle, purebred swine and poultry, and to diversify crops.

The Webb operation passed into the hands of Mr. Webb's lieutenants when he died. Albert H. Harmon, an expert in the commercial printing field, and Horace C. Klein, Sr., advertising executive, headed the concern. Their sons, Reuel D. Harmon, now president, and Horace D. Klein, Jr., a vice president, secretary and board member, have been associated with them in a foursome for several decades. The elder Mr. Harmon died in 1949. The elder Mr. Klein, now 81, remains one of the active members of the staff and goes to work daily. He is chairman of the board. The 3 survivors of the foursome carry on with 2 other board members—Walfred E. Boberg, vice president, and Floyd C. Rupp, treasurer.

Opposition to Termination of Operations in Israel by Shell Oil Co.

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution sent to me by Mr. Aaron Riche, secretary, Los Angeles Jewish Community Council, Los Angeles, Calif., with regard to the termination of operations by the Shell Oil Co. in Israel. This is a matter of immediate importance and I believe my colleagues will find it of interest:

LOS ANGELES
JEWISH COMMUNITY COUNCIL,
Los Angeles, Calif., August 19, 1957.

Hon. JAMES ROOSEVELT,
United States House of Representatives, House Office Building, Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: I have the honor to transmit for your information a copy of a resolution adopted by the board of directors of the Los Angeles Jewish Community Council at its regular meeting on Tuesday, August 13, 1957.

The Jewish Community Council is the coordinating body and spokesman for the Jewish community of the Los Angeles area, comprising nearly 500 Jewish organizations as institutional members of the council and representing a Jewish population of more than 400,000 in the Los Angeles area.

Sincerely,

AARON RICHE,
Secretary.

Whereas the Shell Oil Co. announced on July 23, 1957, that it would terminate its operations in Israel; and

Whereas this termination constitutes an economic blow to the State of Israel and was induced by pressure from governments of neighboring Arab countries; and

Whereas this demonstration of yielding to Arab demands for economic boycott of Israel has been deplored by leaders of all British political parties; and

Whereas this act by the Shell Oil Co. will merely increase Arab intransigence, strengthen the hand of Arab leaders who believe Israel can be destroyed through economic means, and may ultimately lead to a renewed conflagration in the Middle East with its disastrous results to the peace of the world: Now, therefore, be it

Resolved, That the Los Angeles Jewish Community Council officially deplores the action of the Shell Oil Co. and urges it to reconsider its policy of yielding to the Arab economic boycott; and be it further

Resolved, That the Los Angeles Jewish Community Council express its deep concern to the officials of the Shell Oil Co., to the British Embassy, to the Secretary General of the United Nations, to the Secretary of State, to our Senators and Representatives in Congress, and that this action be called to the attention of the more than 400 constituent member organizations of the Jewish Community Council representing over 400,000 members of the Jewish faith in the Los Angeles area.

AUGUST 13, 1957.

Is Industrial Use of Agricultural Products the Answer to Farm Surpluses?

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. CARLSON. Mr. President, I invite the attention of Senators to an article entitled "Is Industrial Use of Agricultural Products the Answer to Farm Surpluses?" written by former Representative Clifford R. Hope, who served for 30 years with great distinction and honor in the House of Representatives.

This article appeared in the High Plains Journal, issue of August 15, which is published at Dodge City, Kans., and is a farm publication for the Great Plains area.

Mr. Hope is a leading authority in the field of agriculture and is so recognized by all who are interested in this field.

In this article he stresses the need for a greatly expanded program of research for the processing of agricultural products for industrial use. Congress has for many years voted substantial sums of money for the control of our surplus farm products and I heartily endorse Mr. Hope's views as expressed in the article, that we should be spending many more millions for research for new fields of uses of farm products.

I commend this article to the attention of the Senate and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS INDUSTRIAL USE OF AGRICULTURAL PRODUCTS THE ANSWER TO SURPLUSES?

(By Clifford R. Hope)

The above is certainly not a new question. It has been asked many times since we became concerned about agricultural surpluses back in the 1920's. It has been the subject of much discussion. Over the years enthusiastic articles and speeches have been written about it. Congress has passed legislation on the subject; but in spite of all the talk and some activity, the net results have been discouraging.

The truth is, we have been going in the other direction. That is, in recent years industrial products have supplanted many agricultural products as raw materials in industry, and this has directly contributed to our present surpluses.

INDUSTRY OUTRESEARCHES AGRICULTURE

It looks as if industry has outresearched us. To illustrate: in recent years the natural fibers—cotton, wool, flax, and silk—have lost almost half of their former markets to synthetics like rayon, nylon, orlon, and a host of others. Detergents have replaced soap, made from tallow and grease, to the extent of two-thirds of our total household consumption. And in just the last 5 years, we have changed from a deficit in cattle hides to a surplus. The reason is easy to see when we learn that almost two-thirds of our shoes are made wholly or partly out of leather substitutes.

Congress has long been cognizant of this problem and has made efforts to deal with it. In the Agricultural Adjustment Act of 1938 provision was made for the establishing of four regional research laboratories to work specifically on industrial uses for agricultural products. These laboratories have long since been established and are doing good work to the extent of their resources.

In 1946 Congress passed the Research and Marketing Act, and one of its important provisions authorized increased research in the utilization—including industrial utilization—of agricultural commodities, as well as research to develop new crops. Some work has been done on this program.

AGRICULTURAL RESEARCH COMMISSION

Last year Congress dealt with the matter again. In the Agricultural Act of 1956 there was a provision to set up a bipartisan commission on the increased industrial use of agricultural products, to consist of five members appointed by the President.

Ample funds were provided for the work of the Commission, and the President appointed five well qualified men, with J. Leroy Welch, of Omaha, as Chairman.

The Commission set up an able staff and brought together a group of consultants, together with 16 task force groups dealing with various aspects of the subject. The membership of these groups reads like a Who's Who in agriculture, science, and industry. The Commission worked diligently. On April 19 it filed an interim report, and a final report on June 5.

In this report the Commission takes a discouraging view of the idea that needs of an increasing population will absorb surpluses in the next few years. On that point it states: "While the anticipated continuing rise in population will present an impressive number of new mouths to feed each year, the momentum of improved agricultural techniques appears certain to outpace the population increase until at least 1965 and probably for a much longer period, again assuming that current relative prices prevail."

PROFITABLE INDUSTRIAL MARKETS

The Commission summed up the principal question before it as follows: Can the economy develop profitable industrial markets capable of absorbing enough of the existing farm production to minimize, possibly even to eliminate, the need for costly restrictions, supports, and surplus disposing operations?

The answer which the Commission came up with was "Yes, if—," and it went on to point out what must be done if such a program was to be successful. The summation on this point reads as follows:

"The first is a sufficiently sharp sense—lacking so far—of the importance, the possibilities, and the urgency of the industrial utilization approach to farm surplus problems.

"The second need is a greatly expanded program of fundamental and applied research—physical, chemical, biological, economic—to learn far more about the nature of agricultural raw materials and to determine what existing or new industrial products and processes might profitably use them. This work would not end in the laboratory; in promising cases it would go through the development stages of pilot-plant experiment and trial commercialization, which must precede full commercial use. The research and development program would mobilize the efforts of many scientific institutions—private, public, State, Federal, and perhaps even some in other countries; and in some cases the Government would share the cost of the research with private industries.

"The third need is to insure, through fellowships, scholarships, grants, and other means, that much more scientific talent is trained for and channeled into this neglected field of farm product research and development than it has engaged so far.

"The fourth need is to provide in certain cases, suitable financial incentives during a temporary trial or development period—for example, new products or processes that are expensive to launch or that seem less promising than alternative uses of risk capital, or that might lead to especially rapid disposal of surpluses

"The initial step in launching such a program is sound legislative action by Congress."

The Commission's final report embraces 135 pages, in addition to a 4-page summary. In the field of financing and administration, the Commission recommended that the amount now available for industrial utilization research in the Department of Agriculture be increased at least threefold. It also recommended that 15 percent of the annual gross receipts from the Customs revenues be alloted for the industrial utilization program. This would amount to bebetween seventy-five and one hundred million dollars per year.

The Commission made two alternative recommendations for the administration of the program. The first is the establishment of a five-member nonpartisan Agricultural Research and Industrial Board to be appointed by the President and confirmed by the Senate. This Board would allocate funds, make contracts with research institutions, and direct and coordinate the program, but would not itself engage in research.

The second alternative is to place the responsibility for the program in the Department of Agriculture under a director with the title of Assistant Secretary of Agriculture, appointed by the President, who would be in charge of research and education within the Department and would coordinate all agricultural research in the Federal Government.

Since the filing of the report, several bills have been introduced in Congress to carry out the first alternative. With adjournment so near, no action can be taken on the legislation at this session, but the bills will be before the Congress and the country for discussion during the congressional recess, and undoubtedly will be considered in the next session.

On May 10, 1957, the Research Subcommittee of the House Committee on Agriculture held a hearing on the interim report of the Commission. The Department of Agriculture was represented at that hearing by Assistant Secretary Peterson and Dr. Shaw, Administrator of the Agricultural Research Service.

At this hearing it developed that the Department was not in entire accord with the recommendations of the Commission as to how the research should be handled. Its representatives indicated that while they felt there should be increased research in industrial uses, this should be handled as a part of the Department's present research activity.

AGRICULTURE SPENDS LESS FOR RESEARCH

It was brought out at this hearing and also in the Commission's report that industry was regularly expending $3 billion or 3 percent of its gross sales for intensive, systematic and continued research; and that in some industries, particularly in the petrochemical field, research expenditures were sometimes as much as 7 percent of the gross income.

In the case of agricultural commodities, total annual expenditures for research are approximately $375 million or about 1 percent of gross sales, $190 million of this is expended by State and Federal Government, of which only $18 million goes for research in the field of new uses.

Of course industry is spending additional sums on utilization, and very successfully. We have an example of that right in our own midst in the case of the Grain Products Company of Dodge City, where local businessmen took the initiative and the risk and spent their own money in working with scientists at Kansas State College in successfully developing new uses and markets for milo.

Certainly we should continue to welcome all possible cooperation of private industry in this type of research. However, I think everyone agrees that overall coordinated agricultural research must be carried on by the Government, or at least with Government supervision and funds, as recommended by the Commission. And it must be remembered that the Commission's plan calls for making full use of the resources of private industry.

Well, what does it all add up to? It is apparent, I think, that we would be overly optimistic if we accept the idea that miracles are likely to be performed or any great accomplishments take place soon. Research does not operate that way.

But for the long pull, I think there is much merit in the report. The most controversial thing about it is the plan of putting all agricultural research in the hands of a nonpartisan board or in the alternative—setting up a new administrative office in the Department to deal solely with research and education. The Department has raised questions which indicate its probable opposition to either of these plans in their entirety.

While recognizing the great achievements of the Department in production research, I have been disappointed in what it has accomplished in utilization research. Congress has been attempting to get more done along this line for 20 years, but Department officials dealing with research during this period have either lacked the imagination or inclination to take the bold steps or the leadership that is necessary if we are to make real progress in industrial uses.

What we need now is a new, fresh agency headed by men who believe there is pay dirt in utilization research and who can put vigor, enthusiasm and new ideas into such a program. There is much value also in having an agency to deal across the board with anyone who can help in such a program, whether a governmental or nongovernmental agency.

There will be plenty for the Department of Agriculture to do in such a program, but why not be able to go out and get the best that private, research can offer also.

I do not say that even this approach will get all the results we want. It may be that because of the cheapness of coal and petroleum and other sources of industrial alcohol and synthetic fibers, we can never use farm commodities in competition with them for industrial uses and still pay the farmer a decent price. But there are many other fields ready for exploration.

I shall not be satisfied, nor do I believe you will be, until we have made more diligent and effective efforts in this matter than in the past. The amount of money called for may be large, but all of our experience in the past has shown that in the overall, money spent for research is returned manyfold.

Reduction in Military Reserve Units

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 22, 1957

Mr. THURMOND. Mr. President, I believe it would be a grave mistake for our country to reduce the size of our military Reserve units during this critical period of world affairs. The situation today demands that we keep not only a reasonable-sized Regular Establishment but also a large and strong combat-ready Reserve force. I ask unanimous consent to have printed in the Appendix of the RECORD an article from the August 21, 1957, issue of the Evening Star which deals with this subject. I hope that the Members of the House and the Senate will give most serious consideration to this matter and provide ample funds to the Defense Department for the purpose of meeting all the needs of maintaining a reasonable-sized Regular Establishment backed up by a large and strong combat-ready Reserve force.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESERVES TO GET PENTAGON AX—PROTESTS RISE

(By John A. Giles)

Military reserve units are next on the list scheduled to feel the Pentagon's economy ax.

Plans for streamlining the units are being considered along with the proposal that the Regular Forces, already trimmed by 100,000, be reduced by more than 200,000 additionally, it was learned today.

W. H. Francis, Jr., Assistant Defense Secretary for Manpower, has written the Reserve Officers' Association that advances and improvements make it possible to effect reductions in manpower while still providing increased combat potential and that those concepts * * * will be applied to the reserve components as rapidly as possible.

However, he indicated that at least a part of the reason for trimming the Reserves was financial when he added:

"At the same time, the attendant savings dollars will contribute to the security of ur Nation's financial condition."

SAME OLD STORY RECALLED

Even though a final decision is not ex-ected before November, the proposal today rought angry blasts from two quarters.

Brig. Gen. deLesseps S. Morrison, ROA resident, asserted it was the same old tory of the Pentagon's treatment of Re-erves.

He said his outfit was concerned about he loss of millions of dollars of investment hich will occur when those returning from ctive duty go into inactive status. He said small appropriation would preserve this sset.

He proposed that 100,000 be added to the trength of the Reserves to soften the effect f the 100,000-man reduction ordered in he Regulars.

Mr. Francis said, however, that numeri-al strength * * * is not alone a satisfactory ndicator of military potential.

SCUTTLING OF 1955 PLAN FEARED

Chairman BROOKS of the House Armed ervices Reserves Subcommittee said he was pprehensive that the Defense Department ow proposed to scuttle the Reserve program aid down by Congress in 1955 and promised is group would hold hearings.

The Louisiana Democrat said it appears to im the Reserve program, which was coming long fine, had been deliberately slowed own and said he intended to write a letter f protest to Defense Secretary Wilson.

However, an authoritative source said Mr. Wilson and associates already are at work n a new Reserve program and that the goals robably will be modified downward in 1959 nd 1960, in keeping with the trend.

He also said it now appears likely the egular forces will be reduced by much more han the 200,000 Mr. Wilson mentioned as inimum planning figure.

CORRESPONDENCE RELEASED

The ROA also released correspondence be-ween General Morrison and Sherman dams, assistant to President Eisenhower.

Mr. Adams said Mr. Eisenhower has re-uested me to express his appreciation of our recent letter concerning the strength atio between standing and Reserve forces nd to assure you that he believes deeply in aintaining strong and Ready Reserve com-onents.

However, he added, that sheer numbers re important, but the degree of readiness, tate of training and such material factors s equipment and buildings likewise deter-ine reserve strength.

As a result of screening programs already arried out the Armed Forces have reduced he strength of their Ready Reserves to 2.9 illion, the maximum authorized by Con-ress.

Within this ceiling the goal is to attain a rill-pay strength of 1,050,000, which is 9,000 more than this year.

Youth Speaks on Foreign Aid

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a young friend whose views on foreign aid are so refreshing that I would like to give my colleagues the pleasure that reading her letter gave me. Carolyn has the ability so wonderfully peculiar to youth to go to the heart of a problem, without the distractions of extenuating and modifying considerations that we see as we grow older. Her appreciation of the essence of economic aid has particular value to us when we consider that it will indeed be the Carolyns who will be the leaders of the next century:

DEAR CONGRESS: I may be only 13 years old and a little ignorant, but at least I'm not all fouled up in politics. At least I can make a good decision without thinking that election day is coming up. I know I don't know all the facts about "Ike's foreign aid policy" but all I can think of is people who need our help and all we can give them. I know that all the Congressmen wouldn't stop to think of politics if they saw a sick person in need of help. I know that they would help that person. Well then why not help the countries that need our support? Giving aid to other countries would benefit the United States and all free countries as well. Your argument is probably that the people of the United States don't want to spend their tax money on the helpless and poor. I really don't see how you can tell. There are about 160 million people in the United States and I don't think all those people can be selfish enough to keep the money they don't need one-fourth as much as the people in foreign countries. What happens in the 20th century will affect the 21st century very much. Since I am going to be a future leader in that century please just think awhile about Ike's plan.

Thanks a lot.

CAROLYN REESE,
Age 13, Future Leader of the 21st Century.

Are We Bleeding Ourselves White?

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from Eugene W. Castle and the article which was written by him that appeared in the American Legion magazine:

NEW YORK, *July 1, 1957.*

Hon. MORGAN M. MOULDER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MOULDER: There is enclosed copy of my article Are We Bleeding Ourselves White? which appeared in a recent issue of the American Legion magazine. The time has arrived for all Americans, both in and out of Government, to reappraise critically our foreign aid spending as a matter of our own self-interest.

The White House demands for foreign aid, recently endorsed by the Senate would, if adopted, hide foreign military aid from the Congress by incorporating it in the defense budget; provide for American duplicate economic aid by nearly a billion dollars under a system of so-called defense support; provide through our $750 million annual foreign food giveaway for American interference in the internal banking affairs of other countries; authorize the blank check for the President that the last Congress rejected—this time for $2 billion to be spent at the will of the Executive and his appointed global givers, without strings, and within a 3-year period.

From the year 1792 to 1950, our Government collected $406 billion in taxes.

From 1950 through 1956, our Government collected $433 billion in taxes.

For $406 billion in 158 years, we fought and won 6 wars.

For $433 billion in 7 years we fought 1 war in Korea without victory; we fought and are still fighting a cold war that we seem to be losing even in Formosa and, more recently, with our allies in Great Britain.

We cannot continue to support those who, if the chips were down, would not support us. We cannot buy allies and friends, but we could spend ourselves into bankruptcy and war. In that tragic event, there would be no foreign aid for Americans.

Sincerely,

EUGENE W. CASTLE.

ARE WE BLEEDING OURSELVES WHITE?

(By Eugene W. Castle)

Early in the century the United States established a policy which came to be known as dollar diplomacy. This meant the use of American diplomatic power to promote and safeguard our financial interests abroad, so Americans could invest in overseas enterprises without too much risk of having their money confiscated by foreign governments or politicos in need of funds.

Usually those foreign investments meant profits to the investors, sometimes handsome profits. However, the policy did not sit well with the liberals of that time. They decried the use of diplomatic and military pressure to insure investments, and dollar diplomacy was roundly denounced as a wicked form of meddling in the affairs of other countries.

Today we have a new kind of dollar diplomacy. It too involves the use of American money abroad, but nowadays we are dealing in billions, rather than millions. And, since the billions are public funds provided by American taxpayers, there is an amazing nonchalance in the way our bureaucrats ladle out our money to foreign potentates. Of course profit is not our motive. The fact that we have gained little or nothing from our giveaways is quite evident from the record.

In the past 10 years we have given $60 billion to foreign nations which is euphemistically referred to as foreign aid. The avowed purpose, of course, is to win their friendship, but the age-old truth that you can't buy friends is again demonstrated by results in this instance. Our billions have bought us mighty few friends, but they've built up a tremendous reservoir of resentment and even hatred against us. Further, our mammoth handouts have involved us in explosive situations around the world, hopelessly trapping us in the foreign entanglements that President Washington warned of many years ago.

Curiously, unlike the liberals of an earlier day, our current crop of heavy thinkers do not deplore this international kibitzing but want it stepped up. They demand even more billions for foreign governments and a greater use of American resources and technical assistance everywhere on earth. Further, they see nothing improper in employing American GI's to police these grandiose global projects, and in having American fighting men on hand to settle any big or little wars that might erupt because of our meddling in matters that are none of our business.

If these advocates of lavish foreign aid were down-at-the-heel crackpots the situation would not be so serious. Unfortunately, the advocates of greater financial intervention abroad are quite often people who

occupy prominent positions where they can and do exert tremendous influence. Among them are Nelson Rockefeller, Walter Reuther, Chester Bowles, Paul Hoffman, Harold Stassen, Milton Eisenhower, and Senator Jacob K. Javits. A brother of the Senator, Benjamin A. Javits, has set what is probably the loftiest aim for global spending. This Javits heads an outfit called World Development Corp., Inc. Appearing before a Senate committee in the spring of 1956, he startled the Senators with the following:

"We have to pick up the globe and ask ourselves how much capital investment it would take to develop the whole world to our own level. I estimate it will take $2 trillion to begin the job. It may take 10 to 15 years.

Mr. Javits didn't say that his estimated two trillions of dollars for global elevation would have to come from the American taxpayer, but you may be sure it wouldn't come from the French, the British, the Saudi Arabians, or the Russians.

The guiding principle of our foreign aid is that it is to frustrate the ambitions of the Soviet to take over the world. Now and then the Russians do show impatience at certain aspects of our lavish handouts, but probably no more than is shown by beneficiaries. By now the Politburo probably feels that the more of our substance we give away indiscriminately, the better off the Soviet will be.

Certainly the U. S. S. R. hasn't made out too badly to date. During World War II we gave the Soviet $12,000,000,000 of the $42,000,000,000 total. Following the war we invested $2,700,000,000 in a global relief project called UNRRA. Unfortunately, ex-Senator Herbert H. Lehman, the first administrator of UNRRA, allowed himself to be persuaded to distribute relief through the de facto Soviet-controlled governments in the conquered countries of Eastern Europe. This was a strategic victory for the Soviets, who were thus able to appear before their subject peoples as humanitarians while American taxpayers footed the bill.

Even today this sort of thing continues. Three years ago Congress passed a resolution requiring aid shipments to be so marked that those receiving them would know they came from the United States. This mark American campaign, as it was called, was to make it difficult for Communists to obliterate or change the marks to credit Soviet Russia as the donor. An Army packaging expert, John J. Shaughnessy, who tried to enforce this congressional ruling, was dismissed from his job. After his dismissal the New York Journal-American investigated shipments on the New York waterfront and found only a single instance where goods we were giving to Europeans were properly marked Made in the United States of America, as recommended by Congress.

Thus we continue to provide material which the Soviets can use to their benefit and to our detriment. But there are other reasons why the wily Russians have no serious objection to our foreign aid, and would probably be happy to see it continued on an even bigger scale. One reason was stated by Charles Sawyer, who served as Secretary of Commerce in President Truman's Cabinet. Mr. Sawyer had an important part in setting up the Marshall Plan and was at first an enthusiastic advocate of foreign aid. But a close second look changed his mind. He explains this as follows:

"Neither individuals nor nations are made friendly or even grateful by handouts. Those who are given money soon think it is owed to them. This assumption that the more money we give away the more good we accomplish is also wrong. It is wrong because the emotions which really influence people—pride, face-saving, age and customs, racial, religious and national enthusiasms or prejudices—are ignored."

The Soviets are also well aware that a vast giveaway program never satisfies everyone, and they exploit to the fullest the resulting dissatisfaction. For example, President Eisenhower has asked for a $200 million bank check to be spent in the Middle East. Does the President think he can spread this around in a way that will gain us good will in both Israel and the Arab countries? There's bound to be resentment, probably in both camps, and you may be sure the Russians will be around to take advantage of it.

Indeed, the Russians have us over a barrel. Our present foreign policy is based on foreign aid. We meet crises with only one remedy, money. Knowing this, the Red rulers can drain off our resources by the simple procedure of stirring up trouble in one place after another. From past experience they know that our handouts will do the Soviet Union little harm. As proof, consider just a few of the things that have been done so far in the name of foreign aid.

We gave more than a billion dollars to the shaky Government of Indochina before that country capitulated to the Reds. We gave Norway $300 million which was promptly applied to the reduction of Norway's internal debt. We gave Denmark $100 million which the Danes used in the same way. We are providing free airplane excursions for thousands of Arabs visiting their religious shrine at Mecca. We are paying all living expenses and tuition costs for the sons of hundreds of wealthy Persians attending American universities. In Portugal we have paid for a 6-lane highway 15 miles long connecting Lisbon with the gambling resort of Estoril. Our tax dollars have provided dress suits for Grecian undertakers, public baths for Egyptian camel-drivers, and even iceboxes for Eskimos.

I could go on for many pages listing the many silly things being bought by your tax dollars, but that will give you the general idea and will explain why our own debt remains higher per capita than the debt of any nation on earth.

The Russians do things differently. Being shrewd businessmen and employing the most advanced capitalistic methods, they gain the respect of their prospects by driving hard bargains. They give absolutely nothing away, and if the prospective buyer is a bit hard up for cash they advance it at a profitable interest rate. Using these tactics, their star salesmen Khrushchev and Bulganin have conducted whirlwind sales drives in India, Burma, China, Poland, and elsewhere. They've sold vast quantities of Russian goods, and they've sold themselves and the Soviet system in the process.

Everything has been done on a firm capitalistic basis. Nothing has been promised without a demand for a full price to be paid for future values to be received when, and if, the Soviet delivers the goods. For example in India, which has received a billion dollars' worth of free goods from the United States, the Russians agreed to furnish that country with ore-mining machinery only on condition that India would purchase, not get for nothing, a million tons of rolled ferrous metals. Even the widely heralded gift of a Soviet steel mill to Nehru was no handout. It was to be repaid by 12-year credits at 2½ percent interest. In Burma Khrushchev and Bulganin made a deal whereby the Soviet and its satellites were to get half the Burmese rice crop, and in return would help Burma expand its agriculture and industry. No free goods. In Afghanistan the Soviet's traveling salesmen offered $100 million to be used for the purchase of goods in the Soviet Union. However, unlike the openhanded Americans, the Russkys weren't giving the money, they were just lending it, at interest.

If you think the hard economic facts of life have a sobering effect on our great givers, you are greatly mistaken. Senator JACOB K. JAVITS, when he was attorney general of New York State, informed a group at Colgate University that the Eisenhower administration should invest $100 billion in a program of peaceful economic competition with the Communists. Paul Hoffman told a Pennsylvania audience that no less than $200 billion would be needed for foreign aid in the next 5 years. Labor Baron Walter Reuther has proposed that we give 2 percent of our gross product to foreign aid for the next 25 years. In round figures, Reuther's generosity would cost the American taxpayer, including the members of Reuther's union, $8 billion a year.

One of the foremost advocates of bigger and better handouts to foreign nations is a professor at Massachusetts Institute of Technology, W. W. Rostow. This professor wants us to spend between two and three billions a year. His liberality with American tax money is set forth in a book written in collaboration with one Max F. Millikan. The tome tries to sell the idea that Americans should contribute between $2 billion and $3 billion a year for foreign aid. Showing how the claque operates to promote global spending, this book was reviewed in the New York Times by J. K. Galbraith. Professor Galbraith, who has held a number of Government jobs and is now teaching at Harvard, made this interesting observation in his laudatory review of the Rostow-Millikan book:

"All the while economic aid, for which our capacity is inherently vast, has been parceled out with great and seemingly increased reluctance."

Possibly the taxpayers who foot the bill for our global giveaways are reluctant, as the professor says, but certainly there has been no discernible reluctance on the part of our present administration or the two which preceded it. Witness the way this evil has grown.

The leftwing Americans for Democratic Action are of course all-out for bigger and better handouts to foreigners. This outfit, which exerts a strange influence in certain political quarters, has come up with a new yardstick for foreign aid. It maintains that American money should be given away on the basis of the ability of the recipient nations to use the money. No consideration should be given to United States budgetary considerations.

The United Nations, which gets so much money from the United States at present, is trying for more by means of a project called SUNFED. This means Special U. N. Fund for Economic Development, and to implement it an estimated $50 billion would be needed during the next decade. If we fall for this, it will mean that the United States will, as usual, be the biggest contributor, but the American people will have nothing to say about the spending of all these billions.

The worst of it is, these people have a pretty good chance of maintaining and increasing this irresponsible spending. As Senator JOHNSTON of South Carolina, put it: "The one-world theorists are firmly entrenched. It is now easier for a foreign government to contact and get assistance from Washington than it is for an American citizen."

Meanwhile, we are hard pressed at home to provide our own 170 million Americans with the things needed here. We are chronically short of hospitals, schools, roads, and modern housing. Our municipal services are in many cases run down. Research projects to improve health and lengthen life are forced to operate at a snail's pace.

The reason, of course, is because we don't have enough money for all these things. By the time the Federal Government takes its lion's share of the available tax money, the States and the municipal governments have little for improvements that are crying for attention. New and ingenious ways of taxing an already overtaxed public are constantly being studied and tried out. And to provide some of the necessary services, the American people are constantly being called on for voluntary contributions of time and money.

Only $5 billion, the cost of 1 year's foreign aid, would give an extra hundred dollars a year to every parent for every child in this country, and still leave a billion dollars over. It would set up a fund which would give $50 a week to every person over 65. It would build enough schools and hospitals and provide enough money for scientific research to win the war on the worst diseases ravaging mankind. It would provide 500,000 homes worth $10,000 apiece. Or it would make possible a tax cut which would mean real money to tens of millions of people in the moderate-income bracket.

The latter possibily is one that seems to frighten some of our politicians. Some of the politicos, eminently practical, want no tax cuts because such action would run counter to the axiom: "Tax and tax, spend and spend, elect and elect." Other politicians oppose tax cuts since they have been sold the idea that if taxes are cut inflation will result. Their theory is that if the money is not taken by Uncle Sam, people will spend it on things for themselves, and this will cause prices to rise. This in turn will force wages up, we will have inflation, and everything will go bust.

This view is as superficial and erroneous as it is pessimistic. At the present time labor is starting a new round of demands for higher wages. If the demands are granted, which is likely, prices will again be forced up. Thus we will have another upward movement of the inflationary cycle.

A most important reason for demands for higher wages is the fact that almost a third of every dollar that the wage earner gets is taken away from him in taxes. At the same time everything he buys costs a lot more than it should because of all the open and hidden taxes that are loaded on it. If politicians honestly want to combat inflation they can make a start by permitting the workingman to keep more of the dollar he earns, and by allowing him to get better value for his money by eliminating some of the taxes that are built into the things he has to buy. A start can be made toward an honest dollar and honest value for that dollar by cracking down at once on the activities of the people who seem to be intent on bleeding this Nation and its taxpayers white.

Unfortunately, this is not going to happen if we just sit and hope for it. That is perfectly obvious from the fact that it hasn't happened in spite of solemn campaign pledges to reduce spending and taxes. The next move, then, is up to you. Many Congressmen and Senators are committed to the reckless giveaway program described here. Most are either opposed to it or have not made up their minds. But all of them have one thing in common—a certain sensitivity to the wishes and demands of their constituents. If the wishes of the American people are made known to them in unmistakable fashion, not even all the concentrated pressure of the global givers will be able to pry additional billions out of the United States Treasury.

Indian Termination Program

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. HALEY. Mr. Speaker, from time to time we as Members of Congress receive correspondence relative to the American Indians and perhaps we may find it difficult to answer some of the questions posed to us. Perhaps this information will help in answering our correspondents. Many of us remember that in the 83d Congress we passed House Concurrent Resolution 108, which declared that:

Whereas it is the policy of Congress, as rapidly as possible, to make the Indians within the territorial limits of the United States subject to the same laws and entitled to the same privileges and responsibilities as are applicable to other citizens of the United States, to end their status as wards of the United States, and to grant them all of the rights and prerogatives pertaining to American citizenship; and

Whereas the Indians within the territorial limits of the United States should assume their full responsibilities as American citizens: Now, therefore be it

Resolved by the House of Representatives (the Senate concurring), That it is declared to be the sense of Congress that, at the earliest possible time, all of the Indian tribes and the individual members thereof located within the States of California, Florida, New York, and Texas, and all of the following-named Indian tribes and individual members thereof, should be freed from Federal supervision and control and from the disabilities and limitations specially applicable to Indians: The Flathead Tribe of Montana, the Klamath Tribe of Oregon, the Menominee Tribe of Wisconsin, the Potawatomi Tribe of Kansas and Nebraska, and those members of the Chippewa Tribe who are on the Turtle Mount Reservation, N. Dak. It is further declared to be the sense of Congress that, upon the release of such tribes and individual members thereof from such disabilities and limitations, all offices of the Bureau of Indian Affairs in the States of California, Florida, New York, and Texas, and all other offices of the Bureau of Indian Affairs whose primary purpose was to serve any Indian tribe or individual Indian freed from Federal supervision should be abolished. It is further declared to be the sense of Congress that the Secretary of the Interior should examine all existing legislation dealing with such Indians and treaties between the Government of the United States and each such tribe, and report to Congress at the earliest practicable date, but not later than January 1, 1954, his recommendations for such legislation as, in his judgment, may be necessary to accomplish the purposes of this resolution.

During the 83d Congress a program of termination of Federal supervision over services especially provided for American Indians was undertaken and legislation was enacted which terminated this supervision over the following tribes: Menominee Tribe of Wisconsin; Klamath Tribe of Oregon, 60 small tribes, bands, groups or communities of western Oregon, Alabama-Coushatta Tribes of Texas, Unitah-Ouray Tribes of Utah, and four bands of Paiute of Utah. During the 84th Congress termination programs were authorized for three Oklahoma tribes—Ottawa, Peoria, and Wyandotte Tribes. A few days ago the House of Representatives passed a bill providing for the termination of Federal supervision of 14 California rancherias, bands, or groups. This bill, H. R. 2824, is pending in the Senate at the moment. In each of the above instances the legislation was introduced upon the request and with the consent of the respective tribal councils or organizations.

In keeping with our responsibility for American Indian legislation, I, as chairman of the House Subcommittee on Indian Affairs, addressed a letter to the Secretary of the Interior on August 1, 1957, asking for a report on the steps the Bureau of Indian Affairs is taking to implement House Concurrent Resolution 108, 83d Congress. I have received the following letter and synopses from the Assistant Secretary of the Interior, and I ask unanimous consent to have them inserted in the RECORD at this point.

It should be noted that no synopses are included with respect to the Menominee or Klamath Tribes inasmuch as legislation regarding these tribes has already been passed this session or is pending.

UNITED STATES DEPARTMENT
OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., August 19, 1957.

Hon. JAMES A. HALEY,
Chairman, Subcommittee on Indian Affairs, Committee on Interior and Insular Affairs, House of Representatives, Washington, D. C.

DEAR MR. HALEY: On August 7 we acknowledged your letter of August 1, in which you requested a report on the steps the Bureau of Indian Affairs is taking to implement House Concurrent Resolution 108, 83d Congress.

The 83d and 84th Congresses enacted 9 laws to terminate the special Federal trusteeship over the affairs of certain tribes, either directly as a mandate of House Concurrent Resolution 108 or upon recommendation of this Department as feasible and desirable in keeping with the intent of the resolution. We are enclosing synopses of the accomplishment of termination of the trusts in certain instances, and of the administrative activities to terminate the trusts where the action is still transitional pursuant to the terms of the laws.

With regard to the additional Indian jurisdictions listed in House Concurrent Resolution 108 for which the Department submitted legislative proposals to the Congress to terminate the trusteeship, but which the Congress has not enacted, we believe that in order to give your subcommittee a detailed up-to-date status report we will have to correspond with the tribes affected and our field agencies. We will report to you as soon as possible, but we frankly doubt that it can be accomplished prior to the adjournment of the current congressional session.

May we say that we feel that a summing-up will be beneficial to the Department, even as we hope it will aid the Congress. We hope to have available for the next session a report that will be mutually helpful.

Sincerely yours,

ROGER ERNST,
Assistant Secretary of the Interior.

WESTERN OREGON INDIANS OF OREGON, PUBLIC LAW 588, 83D CONGRESS (68 STAT. 724)

The act of August 13, 1954, supra, provides for the termination of Federal supervision over certain tribes and bands of Indians located in western Oregon, and their individual members.

This act applies to 60 tribes, bands, groups or communities of Indians. Final rolls were required only for the Confederated Tribes of the Grand Ronde Community and the Confederated Tribes of Siletz Indians. The Siletz Tribes, with tribal holdings totaling 2,561 acres elected to have all the land sold and received proceeds of about $500,000. Of the 597 acres owned by the Grand Ronde Tribes, 253 acres were sold with the remaining 344 acres transferred to Harold Fuller, a Sheridan, Oregon attorney, who was designated as the trustee. A 37-acre tract of the so-called administrative reserve land formerly used by the Indian Bureau on the

Siletz Reservation was transferred at the request of the Indians to the City of Siletz and will be used as a park. Another tract of 6 acres located at Empire, Oregon was turned over to that community for use as a community center for both the Indians and non-Indians.

A proclamation announcing the removal of Federal supervision under the terms of this act was published in the Federal Register on August 18, 1956. However, it has been necessary for the Bureau of Indian Affairs to issue certain title documents for land sales transacted under the provisions of this act. The Bureau is likewise preparing a special roll involving a number of tribes terminated under this act for the distribution of a judgment awarded under the Act of August 30, 1954 (68 Stat. 979).

ALABAMA AND COUSHATTA TRIBES OF TEXAS, PUBLIC LAW 627, 83D CONGRESS (68 STAT. 768)

The act of August 23, 1954, supra, authorized the Secretary of the Interior to convey the lands (some 3,200 acres of forest and assigned homesites) held in trust by the United States for the Alabama and Coushatta Indians (approximately 450 members) to the State of Texas, to be held in trust by the State for the tribes and subject to the concurrence of a majority of the Indians to any proposal for disposition. The Secretary was also required to proclaim the cancellation of the indebtedness of the tribes to the United States (approximately $40,000), and to revoke the Federal corporate charter granted to the tribes pursuant to the Act of June 18, 1934 (48 Stat. 984). This termination of Federal trust legislation differed from the other five laws enacted by the 83d Congress in that the Alabama and Coushatta Indians continue to be eligible for admission to schools and hospitals maintained by the United States on the same terms that apply to Indians who are still beneficiaries of a Federal trust.

The Secretary, on June 23, 1955, proclaimed the land conveyance, debt cancellation, I. R. A. charter revocation, and all statutes of the United States which restrict Indians because of their status as Indians are no longer applicable to the Alabama and Coushatta Tribes of Texas. The proclamation had been held in abeyance for several months due to the fact that the Department had entered into a Johnson-O'Malley contract with the State for educational assistance for the fiscal year 1955 prior to the passage of the Termination Act in August 1954. In order to maintain faith in the contract, it was necessary to defer the transfer of the land trust until July 1, 1955. The Federal trust termination was made effective that day.

Since the Federal trust termination, Alabama and Coushatta Indians have continued courses in Federal Indian schools. In the first year after termination, only seven members found it necessary to call upon Indian hospitals for medical services, thus indicating self-reliance in all instances other than major illnesses, mostly of indigents. In a recent (March 5, 1957) summation of the Alabama and Coushatta status in Texas by the Office of the Attorney General in Austin, no untoward situation was revealed in the transition from Federal to State auspices.

THE UTE INDIANS OF THE UINTAH AND OURAY RESERVATION OF UTAH, PUBLIC LAW 671, 83D CONGRESS (68 STAT. 868)

The act of August 27, 1954 supra, provides for the partition and distribution of the assets of the Ute Indian Tribe, of the Uintah and Ouray Reservation in Utah, between the mixed-blood and full-blood members thereof, and for the termination of Federal supervision over the property of the mixed-blood members of that tribe; provides for a development program for the full-blood members of the tribe; and for other purposes.

A final membership roll published April 5, 1956, shows a mixed-blood membership of 490 and a full-blood membership of 1,314. On this basis, the ratio for the division of assets was established as .728314 for the full-blood group and .2716186 for the mixed-blood group.

The mixed-blood group organized as the Affiliated Ute citizens of the State of Utah, and the plan to carry out the handling and distribution of their assets was approved November 2, 1956. The full-blood development plan involving a family plan and the development of reservation resources was approved December 14, 1956.

The division of assets is progressing satisfactorily, and to date the two groups have agreed to the division of tribal buildings, equipment, materials, supplies, credit activities, funds. Final approval action is in process on the division of range land. Only the timber lands and agricultural lands will then remain to be divided.

The act requires that the division be completed within 12 months unless an extension of time is granted administratively. Since it was not possible for the two groups to complete the division within the 12-month period, an extension was granted whereby such division is to be completed by December 4, 1957.

The handling and distribution plan of the mixed-bloods is being carried out very satisfactorily, and the development plan for the full-bloods is getting under way promisingly. The division of assets is being accomplished by mutual agreement between the two groups and their business-like efforts to accomplish the requirements of the act are very commendable.

The removal of Federal supervision over the property of the mixed-blood group and individual members thereof is to be accomplished by August 27, 1961.

THE PAIUTE INDIANS OF UTAH, PUBLIC LAW 762, 83D CONGRESS (68 STAT. 1099)

The act of September 1, 1954, supra, provides for the termination of Federal supervision over the property of certain tribes, bands, and colonies of Indians, in the State of Utah and individual members thereof. This act specifically refers to four small bands of Paiute Indians, namely, Indian Peaks with an enrollment of 26 members and tribal land holdings of 8,960 acres; Kanosh with an enrollment of 42 members and tribal land holdings of 5,919 acres; Koosharem with an enrollment of 34 members and tribal land holdings of 440 acres; and Shivwits with an enrollment of 130 members and tribal land holdings of 27,520 acres.

All tribal assets have been transferred to the Walker Bank & Trust Co., of Salt Lake City, Utah, which has been designated as the trustee. The trust agreement requires the trustee to sell all tribal holdings of the Indian Peaks Band, 400 acres of the Koosharem Band, and 26,688 acres of the Shivwits Band. The Kanosh Band divided its tribal lands among its members. Forty acres of the Koosharem tribal lands were deeded to two of its members as their share of tribal assets. Eight hundred and forty acres of the Shivwits tribal lands are being retained by the band as homesites for its members. All subsurface rights to all lands owned by the Indians of these four bands have been transferred to the trustee to be held for a period of 10 years.

A proclamation announcing the removal of Federal supervision over these four bands was published in the Federal Register by the Department of the Interior on March 1, 1957.

OTTAWA TRIBE OF OKLAHOMA, PUBLIC LAW 943, 84TH CONGRESS (70 STAT. 963)

The act of August 3, 1956, supra, provides for the termination of Federal supervision over the property of the Ottawa Tribe and of individual members thereof. By a resolution of February 18, 1956, the tribe had approved the bill subject to the addition of two provisions concerning final rolls and taxes.

The Ottawa Tribe originally lived in the Georgian Bay area of Canada. The Ottawa Reservation in Ottawa County, Okla., was established by treaty in 1867. In December 1954, its estimated enrollment was 600, of whom 290 lived on or near the reservation. Virtually all members could speak and read and write English. Land under administration of the Bureau consisted of 518 acres of allotted land. There was no tribal land.

The principal requirements of the act are: Transfer to each member unrestricted title to personal and real property held in trust, partition or sale of fractionated land at request of an owner, a special program of education and training for members who desire it, publication of final roll, and formal ending of Federal trust relationship within 3 years of date of act.

Because the proposed final roll prepared by the tribe was not acceptable, the Bureau will request the area director at Muskogee to prepare one. The tribal membership will then be determined through challenges and appeals based on that roll.

PEORIA TRIBE OF OKLAHOMA, PUBLIC LAW 921, 84TH CONGRESS (70 STAT. 937)

The act of August 2, 1956, supra, provided for termination of Federal supervision over the property of the Peoria Tribe and of the individual members thereof. By resolution of February 18, 1956, the tribe had approved the bill.

The Peorias, who lived originally in Illinois, were settled with four other tribes on the Peoria and Miami Reserve in the Indian Territory (Oklahoma) in 1867–68. In December 1954 their estimated enrollment was 466, of whom 180 lived on or near the reservation. All could speak and read and write English. There was no land under the administration of the Bureau as the trust period expired on the Peorias in 1915. With the exception of two Peoria-Quapaw children attending a Bureau-operated boarding school, the Bureau was in 1956 rendering no special services to the tribe.

The principal requirements of the act are: Preparation of a final roll, removal of all restrictions on land owned by members regardless of where the land is located, provision of a vocational training program for those members who may desire it, and a formal termination of Federal trusteeship of the tribe and its members within 3 years of the date of the act.

A proposed final roll of the Peoria Tribe was published in the Federal Register on May 9, 1957. Appeals are currently being received and decided upon by the Secretary.

WYANDOTTE TRIBE OF OKLAHOMA, PUBLIC LAW 887, 84TH CONGRESS (70 STAT. 893)

The act of August 1, 1956, supra, provided for the termination of Federal supervision over the property of the Wyandotte Tribe of Oklahoma and of individual members thereof. The tribe had approved the bill by resolution February 17, 1956.

The Wyandottes (known by the French as Hurons) moved from southern Canada, through Michigan and Ohio, to Kansas in the first half of the 19th century. They were declared United States citizens by treaty in 1855. However, their tribal organization was restored in 1867 and the Wyandotte Reservation was established in what is now Ottawa County, Okla. In 1956 the tribe had 984 members, of whom only 100 lived on

or near the reservation. They all could speak and read and write English. Reservation land totaled 2,050 acres of which 94 acres were tribal and the rest allotted.

The act's principal requirements are: preparation of a final roll of all persons claiming membership rights in the tribe or interests in its assets, division of pro rata shares of tribal property to such enrollees, and the removal of Federal restrictions on individually owned property. These are to be accomplished within 3 years of the date of this act.

A proposed final roll of the tribe was published in the Federal Register on April 5, 1957. Appeals are currently being received and decided by the Secretary.

The only major difficulty has arisen in connection with the act's provision that a public burying ground in Kansas City, Kans., which was reserved for the tribe by the 1855 treaty, may be sold for the benefit of the tribe. This occasioned much opposition in Kansas City where the cemetery is now used as a park. Legislation has been introduced in the 85th Congress which would direct the Secretary to investigate and report to the Congress on the merits of Federal establishment of the cemetery as a national monument. The Wyandotte Tribe of Oklahoma has indicated that it has no objection to such a project if the tribe is fairly compensated and the acquisition is accomplished within the time elements provided in the termination act.

National Communism Is Deceitful and Destructive—United States Playing a Dangerous Game With Tito

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, Constantine Brown, writing in the Evening Star for August 21, states that communism, in whatever form, cannot be trusted and there should be no compromise with its adherents. Mr. Brown stated that the Turkish Premier warned that Communists cannot be trusted and there should be no compromise with them. He expressed skepticism of the line Washington is drawing between national and international communism as evidenced by Titoism.

Mr. Brown's article follows:

TURKEY LOOKS AT REDS ON CYPRUS—PREMIER SAYS HE'LL INSIST ON PARTITION IF COMMUNISTS FORCE A CHANGE

ISTANBUL, TURKEY.—Premier Adnan Menderes is perfectly content for Cyprus to remain in British hands but will insist on partition of the island if pressures, which he regards as Soviet-inspired, force a change in its status.

Menderes feels that communism in whatever form cannot be trusted and no compromise with its adherents is possible. He is skeptical of the line Washington is drawing between national and international communism. He declares it is a deceitful, destructive force, whatever it is called.

As he spoke to this reporter about Cyprus, Menderes' broad smile faded away. "As you may have noticed during your stay here," he said, "we don't talk much about Cyprus, either in the press or in our present campaign speeches, because we have definitely made up our minds on this matter. We are not interested in Cyprus becoming a part of our Republic so long as it remains in British hands. But should international appeasement yield to the pressures of the extremists on the island, and also from the Greek Government which feels that it must play to their tune and force Britain to leave, we shall demand and insist on partition.

"We shall assemble the 120,000 Turks in the northern portion of the island and make it into a part and parcel of Turkey. The Greeks and other nations can do whatever they like with the rest, which contains some 800,000 Cypriotes."

Menderes left no doubt to this reporter that he meant every word he said.

Adnan Menderes is a jovial, dynamic politician who is pushing 60 but looks less than 40. His political opponents describe him as having dictatorial tendencies because he has managed to maintain himself in office for two terms and is now ready to "steal" a third. He is unquestionably astute. Having felt the pulse of the country he has decided to call a general election in October (and by law he has this privilege) instead of waiting for next May when it would normally be held.

Menderes' enormous capacity for work keeps him hopping from one end of Turkey to the other making speeches, and especially laying cornerstones for the numerous new factories and industries he has initiated in this country where inflation is rampant.

In his international relations he has been unflinchingly on the side of the United States in its tortuous struggle with international communism. But he is skeptical over the line Washington is drawing between national and international communism. "Communism is a deceitful, destructive force, whether you call it national or international," he declared. "We are against compromises with either. If you support and strengthen what you describe as 'national communism,' the day will come when it will become 'international' by siding with the U. S. S. R. at a critical moment for the free world."

This belief is more than understandable from the leader of a country which is directly under the Communist guns. Turkey has the U. S. S. R. on its eastern borders, Bulgaria on its western border, and now even its Mediterranean flank is in danger from the delicate Cyprus problem.

"It is only very recently that the Greeks have become Cyprus minded," he said. "At no time throughout the centuries has that island been a part of Greece. It was Turkish for some 400 years. We handed it over to British sovereignty nearly 80 years ago. We don't claim it. So long as the British flag is flying over it we are perfectly satisfied. But the extremists—a combination of Communist dupes and ultranationalists—have listened to the advice of those who want to keep the world in a turmoil and insist on making Cyprus a major international issue in the belief that Turkey cannot help but accept the dictates of its major allies. In this they are sadly mistaken. We proved our faith in the United Nations when a Turkish brigade was sent to the Korean battlefield. We still maintain that full contingent there.

"We have shown our full loyalty to the NATO and are its most important and useful advanced post at the U. S. S. R.'s underbelly. But we also are security minded and will not permit the security of our country eventually to become threatened by allowing the northern portion of Cyprus—a former Turkish island 60 miles off our coast—to fall into what someday may become enemy hands."

Tax-Reform Plan

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I wish to list a number of organizations that have indicated their support of my tax-reform plan, H. R. 6452. This list, Mr. Speaker, is not confined to organizations in my home State of Connecticut which I have the honor to represent as the Congressman at Large, and in that capacity, represent the largest constituency on the Republican side of this House, but the organizations, which have volunteered their endorsement to H. R. 6452 as their basis for individual and corporate relief from our present confiscatory taxes, are nationwide.

May I once again stress the fact, Mr. Speaker, that the largest beneficial effect of the provisions of my bill will fall to those taxpayers in the $6,000 bracket and under. The total relief to individuals will approximate $10.6 billion over the 5-year forward scheduling and approximately $4.2 billion relief to businesses.

The list is as follows:

Optimist Club, Springfield, Ill.

Michigan Manufacturers' Association, Detroit, Mich.

Associated Industries of Rhode Island, Inc., Providence, R. I.

Chamber of Commerce, Bowling Green, Ohio.

Connecticut Farmers' Cooperative Association, East Hartford, Conn.

Associated Industries of Kentucky, Louisville, Ky.

Manufacturers' Association of Lackawanna County, Scranton, Pa.

Manufacturers Association, Inc., Syracuse, N. Y.

Economic Club of Southwestern Michigan, St. Joseph, Mich.

Connecticut Petroleum Association, New Britain, Conn.

Scientific Apparatus Makers Association, Chicago, Ill.

Jersey City Chamber of Commerce, Jersey City, N. J.

Automotive Electric Association, Detroit, Mich.

Associated Industries of Oshkosh, Inc., Oshkosh, Wis.

Connecticut Motor Club, New Haven, Conn.

The Valve Manufacturers Association, New York, N. Y.

The Connecticut Chamber of Commerce, Inc., Hartford, Conn.

Coated and Processed Paper Association, Providence, R. I.

Chicago Association of Commerce and Industry, Chicago, Ill.

Manufacturers' Association of Lancaster, Pa., Lancaster, Pa.

Connecticut Public Expenditure Council, Inc., Hartford, Conn.

Furniture Manufacturers Association, Grand Rapids, Mich.

Bangor Executives Club, Bangor, Maine.

National Tool and Die Manufacturers Association, Cleveland, Ohio.

Manufacturerers Association of Connecticut, Inc., West Hartford, Conn.

Manufacturers Association of Racine, Racine, Wis.
Americans for Tax Reduction, Rockford, Ill.
Screen Actors Guild (AFL–CIO), Hollywood, Calif.
Metal Treating Institute, New Rochelle, N. Y.
"99" Luncheon Club of Los Angeles, Los Angeles, Calif.
The Cotton Trade Journal, Memphis, Tenn.
Florida Taxpayers Association, Inc., Tampa, Fla.
Executives' Association, Long Beach, Calif.
Phoenix Association of Home Builders, Phoenix, Ariz.
Lumbermen's Industrial Relations Committee, Inc., Portland, Oreg.
Wyoming Taxpayers Association, Cheyenne, Wyo.
Investors League, Inc., New York, N. Y.
Chamber of Commerce of the Attleboros, Attleboro, Mass.
Pennsylvania Manufacturers' Association, Philadelphia, Pa.
Greater Tampa Chamber of Commerce, Tampa, Fla.
Idaho State Chamber of Commerce, Boise, Idaho.
The Printing Industry of Connecticut, Inc., New Haven, Conn.
Westlake Lions Club, Los Angeles, Calif.
Lorain County Industrial Association, Elyria, Ohio.
Associated Industries of Alabama, Birmingham, Ala.
Texas Manufacturers Association, Houston, Tex.
Alton District Manufacturers' Association, Alton, Ill.
Kern County Property Owners Association, Bakersfield, Calif.
Manufacturers' Association of Berks County, Reading, Pa.
Defiance Chamber of Commerce, Defiance, Ohio.
Brookline Kiwanis Club of Pittsburgh, Pittsburgh, Pa.
Citizens Public Expenditure Survey, Inc., Albany, N. Y.
Connecticut State Grange, Litchfield, Conn.
Vinyl Fabrics Institute, New York, N. Y.
New London County Rural Letter Carriers Association, Old Lyme, Conn.
Pontiac Manufacturers' Association, Pontiac, Mich.

An Oregon Editor Speaks Up Against Postal Rate Increases

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. PORTER. Mr. Speaker, as you know I have vigorously opposed postal rate increases when I felt them unnecessary. Therefore, I should like to call to the attention of my colleagues the following editorial from the Illinois Valley News of August 15, 1957, which clearly states the beliefs of a good many people. The Valley News is published in Cave Junction by Mr. James M. McDermott.

THE POSTAGE RATES

The House in Washington has passed and sent to the Senate a bill which would increase postage rates. We sincerely hope that the measure never sees the light of day in the Senate.

By order of the Postmaster General recently, all the rates which are fixed by regulation were boosted including the parcel post insurance.

The present measure, if it should become a law, would boost the first class letter rate from 3 to 4 cents, and the airmail rate from 6 to 7 cents.

The contention is that the Post Office Department does not have sufficient revenue to pay its costs of operation. If this is a fair contention, then what about the Department of Agriculture or the Department of Commerce? These agencies of the Government which provide services to the farm population and the industries, do not and never have paid their costs of operation. No one ever expected them to do so.

There is nothing wrong with the principle of Government charges for special services to individuals. Those who receive direct benefits may expect to pay something toward the cost—but in very few cases do they pay all the cost. Government fees for various individual services in almost all instances fall far short of doing this.

It is not reasonable to expect one department of the Government to "pay as you go", when others operate with huge deficits.

Hiking postal rates may mean nothing to some people and business organizations. The increased cost is absorbed and cannot even be detected in the profit and loss statement at the end of the month, or a year. It is however, a burden of increased costs to retired people, and others who are living on limited fixed incomes and students away from home for study. It is another step on the inflation ladder.

It is the very people who benefit the least from other Government services who will feel the burden of increased postal rates.

Greater Utilization of Forest Products Conserves Our Timber Supply

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. MACK of Washington. Mr. Speaker, on Monday I presented for the information of Members of Congress, part of a paper read before the American Society of Mechanical Engineers by Mr. W. D. Hagenstein, of Portland, Oreg. Mr. Hagenstein is an expert on forestry management, and the subject of his remarks was conservation and management of our timber resources.

The second half of Mr. Hagenstein's remarks which I present now deals with the great strides being made by Northwest forest industries in utilizing slabs, edgings, and other materials formerly wasted.

New logging methods and equipment have also helped increase the Northwest timber supply. Until 1940 the bulk of the logs harvested were yarded and loaded by steam equipment and transported by railroad. Today, trucks are almost universally used for getting the logs down out of the woods, either directly to the mill, for reloading on railroads or dumping in the water for towing to the plants. Practically all logging is done by internal combustion engine machinery. Timber is no longer felled and bucked by hand, as thousands of power saws have made Northwest woods sound like any accessible lake on a Sunday afternoon with the pop-pop-pop of their outboardlike motors. No longer are roads built by steam shovels but are pioneered by Diesel shovels and bulldozers, earth moved in 10- to 20-yard tractor-drawn pans, rippers and rollers used for clearing and compacting, and motor graders for maintenance. As much as 2 to 3 railroad carloads of logs are hauled on single truck and trailer units.

In a region with heavy timber stands—300 to 500 tons per acre—large trees and logs, steep ground and a limited construction and logging season because of rain, snow, wind, and fire weather, the revolution in road building and logging equipment has helped overcome many engineering problems.

A major problem in the changeover from steam to internal combustion engines and from iron muscle to motor-driven saws has been maintenance. Gas and Diesel engines require a lot more monkey wrenching and spare parts than did the steam behemoths of yesteryear. Initial and maintenance costs of equipment must continually be improved for economic service in the logging woods.

Many innovations in logging equipment are appearing in the woods to handle the great variety of logging shows. Portable mast-type and tubular steel spars are used in the place of spar trees, particularly for logging small timber and for relogging and prelogging. Mobile loaders are commonplace and are so much easier to use than old conventional methods of rigging a loading boom on a tree or various crotch-line-spreader-bar loading assemblies. Many mobile loaders are used for yarding and loading where short yarding distances are possible.

Power saws have been continually improved by lighter weight and better engines, chains and bits. The main problem with power saws is their fire hazard. Safer operating practices are helping overcome this.

With the great buildup in the region's wood pulp, hard-soft-chip and particle board industries has come another adidtional timber supply through the use of lumber and plywood leftovers. For years, most pulp mills derived their raw material in the form of logs, generally the lower grades which were less desirable for lumber and plywood. The region's pulp and board mills are getting 42 percent of their raw material from slabs, edgings and trim and veneer clipings and peeler cores. The log scale equivalent of chips being used by the pulp and board mills is 1¼ billion board feet annually. This is free wood in the sense that it doesn't debit the region's timber inventory. Several years ago the writer predicted that in less than 20 years the pulp and board industries would be getting 75 percent of their wood from materials which other wood-using plants could not profitably convert.

The leftovers of a highly integrated wood-using industry which uses 200,000 tons of wood each day is staggering. The 1¼ billion board foot log scale equivalent now being recovered in the form of chips is only the beginning. There is still enough leftover wood at primary wood-using plants in the region to produce upwards of 1½ million tons of wood pulp per year. In some localities these leftovers are being used for boiler fuel for steam-generated electricity but much is still being disposed of as a nuisance at a cost.

Chips are worth an average of $15 per bone dry unit, which is approximately 2,400 pounds or one cord of wood delivered at the point of use. From 25 to 65 percent of the total delivered value is freight. This means that if a sawmill can ship chips on a $7 per unit freight rate, it has an approximate return of $16.00 per thousand board feet for the chips at its plant rather than spending $2.00 per thousand to dispose of them. And every thousand feet of chips recovered allows a thousand feet in a standing tree to increase its volume through growth.

Chips are hauled by truck, rail, barge and, in several instances, by conveyor to their point of use. Freight rates are the limiting consideration as to whether many sawmills and plywood plants can afford the capital investment of equipment necessary for chipping their leftovers.

Two significant demonstrations of the importance of chips to the wood-using industry is that the two newest kraft pulp mills in the region do not have wood rooms as they get all their raw materials as chips.

Another important development to increase chip supply was installation 5 years ago of a central chipping plant at Eugene, Oreg., by a pulp and paper company with a conversion plant at Longview, Wash., 160 miles away. Bark-free slabs, edgings, trim, and low-grade lumber and veneer clippings and peeler cores from nearby plants are chipped for rail shipment. The plant can handle 50,000 units of wood annually.

More recently another Columbia River pulp and paper company installed a barking and chipping plant near two of its tree farms to handle extremely small hemlock logs and broken chunks from thinning, prelogging, and relogging. Material is chipped which would be uneconomic to ship as logs. The plant has a capacity of 10 million board-feet annually and chips are blown directly into barges for shipment.

One discouraging development of the chip boom has been its effect upon intensive management of young forests by thinning. Thinning has been going on for a dozen years but has been a marginal operation at best because the region's big log industry with its big logging and manufacturing equipment is not yet geared generally to handle the relatively small logs which come from thinnings of 30- to 60-year-old forests. Light yarding equipment and reappearance of old Dobbin, air-tong loading and bundling of small pieces for transportation by truck, rail, and water, have facilitated thinning while the industry is studying its economics.

Another discouraging influence of the use of sawmill and plywood leftovers for chips is that many relogging shows at the outer radius of transportation from the pulp mills become uneconomic. Wood logs have been utilized for kraft pulp at an increasing rate during the past 5 years, but as chip supplies increased with some 200 primary manufacturing plants now producing them, the tendency has been to pass over relogging shows much beyond 40 to 50 miles haul.

This shows the influence of chips upon both the market for low-grade logs from relogging and high-grade material, in the form of very small, high-cost pieces, from thinning. Determination as to what intensity of relogging and thinning is possible is entirely one of economics.

The chip supply in many areas in time will level off as producing mills go out of business due to markets, timber supply or other considerations. When this occurs, it is the writer's belief that more intensive relogging will return and that thinning of young forests will increase by leaps and bounds. It is also the writer's opinion that portable barking and chipping equipment to be used in the woods for handling the smaller pieces harvested in thinning and in utilization of rough tops and large limbs from old-growth logging slash on more favorable topography will come about. The economics of timber supply should force this in the next 5 years. The heavy investments in pulp mills require relatively cheap wood. With timber prices on a relatively high plateau, pulp mills, with their requirement of small chips as raw material, offer the best promise of cleaning up the woods and greatly increasing the region's timber supply through the use of material down to a 2-inch top from thinning of tens of thousands of young forests each year.

The wood-using industries of the Douglas fir region are going through a rapid revolution of wood use and wood-converting methods. Large investments are being made in plants to utilize each kind and size of wood for the highest value product it will make. Forest management, through tree farming on private lands and under public policies on Government lands, is moving ahead rapidly to provide the wood-using industry with an assured and continuing supply of raw material. The importance of this to the economy of the Douglas fir region is apparent from the basic payroll of $700 million which can be pushed close to a billion dollars annually through further product refinement and greater realization of the tree-farming potential.

In these days of soft markets for forest products, many operators wonder about their future. To students of the forest economy of the Douglas fir region it is clear that there will be more integration of wood use which offers the best promise of diversification of industry for more jobs and payrolls. Whether this will come about depends largely on the Congress and the State legislatures which determine the general business climate taxation and other public policies. Temporary setbacks because of unsound policies are bound to occur, but in the long run the necessity of our increasing population for more jobs and more products will result in policies which will allow successful forest management and a permanent wood-using industry.

AFL-CIO Cooperation in Probe Merits Approval of the Public

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Reading (Pa.) Times:

AFL–CIO COOPERATION IN PROBE MERITS APPROVAL OF THE PUBLIC

The McClellan Committee, officially known as the Senate Select Committee on Improper Activities in the Labor or Management Field, is now in the second phase of its work. The first phase uncovered the misuse of union funds by union officials. This second phase is disclosing how racketeers have squeezed into some unions, most of them small and some of them not even bona fide unions at all.

George Meany, president of the American Federation of Labor and Congress of Industrial Organizations, was asked at an executive committee meeting of the AFL–CIO in Chicago the other day how he felt about the activities of the McClellan Committee thus far. Said Meany: "My attitude is that there should not be any change in our policy of cooperating with any committee that is turning up corruption. We shall cooperate legislatively and every other way but we will resist any attempt to fasten restrictive laws on labor as a whole because of the sins of a few."

Mr. Meany added his opinion that the committee has done "a good job as far as it went; exposing corruption is good for labor as well as anybody else. I don't think the things that have been exposed are things that people in the labor movement can be proud of."

In its simplest terms, this merely means that the great body of organized labor will continue to help the McClellan committee ferret out corruption but will not hold still for restrictive legislation which would shackle the free American trade union movement. If it is asked why the AFL or the CIO or both did not undertake the job the committee is now doing, the answer is simple. It could not have done so without committing suicide. For constitutionally, the AFL–CIO and each of these organizations singly, before the merger, was at best a loosely knit confederation which had slight authority, to investigate or to do anything else about member-unions which were suspected of wrong-doing. It lacked the authority of a Senate committee or a court to issue subpenas and its only ultimate weapon against proved wrongdoing was dismissal. Dismissal of subordinate national or international unions would have had no effect except to be divisive and divisiveness in labor unions merely means more labor strife. Thus, it remained up to the Congress to do the current investigating and the AFL–CIO showed its good faith by cooperating in a job it could not do itself.

Then what of Mr. Meany's promise to resist any attempt to place additional restrictions upon labor as a whole because of the misdeeds of a few unions? Well, it would depend upon the kind of restrictions Congress may want to place on labor after the McClellan committee record is complete. If it should be the mandatory publication of the accounting of union funds, operating and welfare, there should be no complaint at all from labor, for two reasons. Most national and international unions and, indeed, many local unions and central delegate bodies have laid their financial cards out on the table for a good many years, for anybody who is interested to examine.

If, on the other hand, proposals such as are now being heard—a Federal right-to-work law or the extension of antitrust laws to embrace labor unions as well as business and management—come out of the McClellan committee hearings, that, it seems to us, would be another story. For in our view the committee—thus far, at any rate—has adduced no testimony bearing upon the open shop or the closed shop or the need for drawing unions into the antitrust laws. And so far as we know, the committee has not set forth among its objectives an examination into the needs for such laws. Thus, if the committee should so far exceed its stated purpose, it would merely bring down upon it the anger and indignation of the majority of honest and conscientious unions which are now cooperating with it to the fullest extent.

Only time will tell, of course, what legislative recommendations will come from the Senate Select Committee on Improper Activities in the Labor or Management Field. We hope that those which do will come within the committee's stated scope and title.

The Case for Conciliation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert the following article from the Washington Post of August 21, 1957, entitled "The Case for Conciliation" in the CONGRESSIONAL RECORD:

THE CASE FOR CONCILIATION

House Republicans are being very foolish, we think, in falling in with the efforts of Representative HOWARD SMITH to prevent action on the civil-rights bill. There might be some transient political advantage, it is true, in insisting on a stricter bill and refusing to accept the Senate version (which, with the jury-trial amendment narrowed, could be passed without difficulty). But the issue of voting rights for all Americans ought to be beyond considerations of petty political gain. What the Republicans, including the President, must decide is whether they want to kill the chance of any progress because they can't get everything they want.

It is easy to sympathize with the disappointment of some Negro leaders over what they view as weaknesses and inadequacies in the Senate bill. The real question, however, is whether there is any reasonable prospect of obtaining a stronger bill that would actually secure the rights sought—a bill that would promote compliance. Minor adjustments are always possible, but the prospect for any major amendments is minimal. Such a move undoubtedly would be strangled by filibuster in this session of Congress; and in the next session the arduous process would have to be undertaken again with loss of the good will generated by the recent effort. Even if a stronger bill could be passed over southern protest, moreover, it would invite a search for evasion.

A very strong case exists, in our opinion, for acting now with a conciliatory bill. The great need in the South is to divert energies from defiance to compliance. The civil-rights bill, which concentrates on voting rights, points the way. The issue of voting rights does not arouse the same antagonism in parts of the South as the segregation-integration controversy. There is recognition among all but the extremist fringe that the denial of voting rights guaranteed by the Constitution is morally wrong. Thus there would be considerable pressure for compliance with the voting-rights bill—and we'll bet that the jury-trial provision in cases of criminal contempt would be very little used.

If this were the only step being taken in the field of civil rights it would not be enough. But the noisy reaction to the Supreme Court school-desegregation decision and such items of hard-core resistance as the disgraceful gerrymandering in Tuskegee have clouded some of the adjustments being made. A gradual approach to school desegregation is proceeding in many parts of the South, the most recent examples being in North Carolina. Desegregation on buses has taken place in several cities and there are indications that it will be carried out quietly elsewhere. Change is happening, more slowly in some areas than in others, but it is happening.

The trouble is that the rancor of the bitter-enders has all but silenced the voices of moderation. For that reason, especially, it seems to us that the conciliatory Senate bill has much to commend it. For it would give law-abiding southerners something they could afford to support and thereby would help restore respect for law. The exercise of voting rights would not automatically secure other rights (and, indeed, it might be some time before the franchise were more widely exercised); but the protection of voting rights would create a better climate for the exercise of other rights. It should, indeed, lead to a situation in which the Supreme Court decision seemed less of an ogre.

Certainly the approach of conciliation is more consistent with President Eisenhower's past attitude on racial matters than the hard and fast line Minority Leader MARTIN is taking. And as a practical matter the interest of the Republicans in civil rights would seem a bit cynical if they were to frustrate the chances of the only workable bill in sight.

Gen. Douglas A. MacArthur Could Ease the Taxpayers' Burden Himself

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, at a recent meeting of stockholders of the Remington Rand Corp., Gen. Douglas A. MacArthur had some very curious things to say which provoked an outburst on the part of those in attendance which was widely reported in the newspapers. One of the stockholders, a woman of courage declared that she loved America, loved to pay taxes, and altogether considered herself very lucky to be an American. Indignant at the general's remarks, and filled with a fighting courage which outshone that of General MacArthur's, the lady put in words what will be remembered as the feelings of most Americans about our beloved country.

What provoked the outburst? These are the words of Gen. Douglas A. MacArthur which produced the spontaneous reaction by the stockholders:

Our Government has kept us in a perpetual state of fear—kept us in a continuous stampede of patriotic fervor—with the cry of grave national emergency. Always there has been some terrible evil at home or some monstrous foreign power that was going to gobble us up if we did not blindly rally behind it by furnishing the exorbitant funds demanded. Yet, in retrospect, these disasters seem never to have happened, seem never to have been quite real.

The Trentonian, Trenton, N. J., a leading newspaper of New Jersey, points out that the reason for the high taxes stems in part from the generous emoluments given General MacArthur. The Trentonian says:

We have been reminded that the complainant turned in his military uniform upon his return from the Pacific to accept a job as chairman of the board of a large industrial firm at a reported salary of $100,000 a year. In addition, it has been pointed out to us, General MacArthur receives $15,543.36 per year in various forms of emoluments from the Federal Government, plus an office in New York City staffed by a chief warrant officer and a master sergeant whose yearly salaries and allowances aggregate approximately $12,000.

Admittedly we're in no position to say whether the aforementioned Federal expenditures are excessive, nor would we stick our necks out and venture the opinion that the general is carrying the water on both shoulders.

It might be mentioned in passing, however, that one of MacArthur's former subordinates—Dwight D. Eisenhower by name—gave up all of his military emoluments when he turned in his uniform to accept a job at $75,000 per year.

It seems clear that Gen. Douglas A. MacArthur could save the American taxpayers—for whom he professed to speak—a very large sum by following President Eisenhower's example and giving up all of his emoluments and the special gifts bestowed upon him. It is certainly within the general's power to set an example now that he has called public attention to the special favors he has been receiving from the American taxpayers.

I shall await his decision in this important matter.

Included here is the Trentonian editorial to which I have just referred:

[From the Trentonian, Trenton, N. J., of August 21, 1957]

A Bit Confusing

Gen. Douglas A. MacArthur recently issued a blast to the effect that high taxes and excessive Government spending would bring about our ruination and result in the establishment of a social state. The Trentonian commented favorably on the distinguished general's statement at the time and still feels that there is more truth than poetry to his prediction.

On the other hand, we have been reminded that the complainant turned in his military uniform upon his return from the Pacific to accept a job as chairman of the board of a large industrial firm at a reported salary of $100,000 a year. In addition, it has been pointed out to us, General MacArthur receives $15,543.36 per year in various forms of emoluments from the Federal Government, plus an office in New York City staffed by a chief warrant officer and a master sergeant whose yearly salaries and allowances aggregate approximately $12,000.

Admittedly we're in no position to say whether the aforementioned Federal expenditures are excessive, nor would we stick our necks out and venture the opinion that the general is carrying the water on both shoulders.

It might be mentioned in passing, however, that one of MacArthur's former subordinates—Dwight D. Eisenhower by name—gave up all of his military emoluments when he turned in his uniform to accept a job at $75,000 per year.

The fact that the firm with which General MacArthur is now associated does business extensively with the Federal Government is a factor which might also merit passing mention.

Eisenhower Doctrine in Trouble in the Middle East

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the sudden move by the Communists in Syria has precipitated a crisis in the Middle East. This is most unfortunate and calls for prompt action by our State Department and the President.

Mr. Speaker, this move by the Communists was undoubtedly made by subversive elements within Syria and it raises the question as to the effectiveness of the so-called Eisenhower doctrine in that area. While there has been no obvious military moves which would warrant military action on our part, the end result is the same. Once again the Communists have reached their objective without firing a shot or losing a soldier.

Under leave to extend by remarks, I am including an editorial that appeared in the Wall Street Journal on August 21:

Subversion in Syria

The United States is being urged to do something about the unpleasant developments in Syria. Well, what is there to do?

As a matter of fact the United States had hoped to prevent this sort of thing—the transformation of any Middle East state into a Soviet satellite. The Eisenhower doctrine is aimed mainly at direct military aggression sponsored by international communism, but it was thought that a by-product might be to thwart Soviet subversion as well. Thus Syria, for example, looking at the nearly $200 million of Eisenhower doctrine aid going to Middle East nations taking an anti-Communist stand, might see the practical virtue of doing likewise.

This hope has apparently proved vain. It may be premature to write off Syria completely—events can turn around suddenly in the Middle East—but for the time being it seems firmly in the Communist grip. Since no outside troops were involved in what amounted to a military coup within Syria, there is no basis for United States action under the Eisenhower doctrine.

The Soviets were nonetheless busy in Syria. They have been selling that government arms; more recently they offered economic and technical assistance. The place is full of Soviet "technicians" and "advisers" pretending to be helping the Syrians while in fact cooking their goose.

So some are saying that the United States should have beat the Soviets to the punch, selling the Syrians arms and giving them aid before the Soviets got so well entrenched. In other words, this country should have subverted the Syrian ruling clique first. We do not believe that subversion is a policy the United States can profitably adopt.

The fact is that there are limits to what the United States can do in the world. The moral basis of our society precludes our adopting Soviet tactics such as subversion. And foreign aid is a dubious and unreliable instrument of policy.

What the United States has been able to do is to prevent the outbreak of a major war; there are few places in the world the Communists can attack with impunity and they seem to know it very well. What the United States cannot do is buy up every nation in the world. Nor can it assume responsibility for every happening everywhere. The trouble is that the United States Government too often appears to be accepting responsibility for everything.

If the limitations of foreign policy were better understood, there would be less consternation and less clamoring for "action" in a case like that of Syria. The loss of Syria may be a temporary Soviet "victory." But if the United States were to start running its foreign policy on the basis of duplicity and cynical imperialism, that would be a far bigger Soviet victory.

Quitclaiming of Title to Barcelona Lighthouse Site, Portland, N. Y.

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. REED. Mr. Speaker, it is a source of great satisfaction to have H. R. 1678 pass the House of Representatives and the Senate of the United States, because this legislation will clear the title to six-tenths of an acre of land upon which stands a lighthouse that was abandoned by the Government in 1859. This abandoned and deserted lighthouse was sold in 1872 and later restored as a dwelling. It has been in the hands of a very prominent family, the Crandalls, for many years. Mr. G. Patterson Crandall and Mrs. Nellie B. Crandall, his wife, had every right to assume that they had full title not only to the lighthouse, which was purchased from the Government, but also the site of six-tenths of an acre on which it stood. It was only recently that the United States Government claimed any title to the land. There was little value in the property, both land and tower, because it sold for $102 in 1872. Whatever value has developed in the property is due to the improvements made in it by Mr. and Mrs. Crandall. I introduced a bill to clear this title, which bill has just passed the House of Representatives with a Senate amendment; the amendment having been placed upon the bill by Senator Wayne Morse of Oregon. This amendment requires, in order to clear the title to the six-tenths of 1 acre on which the lighthouse stands, according to the General Services Administration the payment of

the market value without the value of improvements to the property. The good faith of the Crandalls in believing they had the title to the real estate is indicated by the fact that they have paid the taxes on this real estate since 1910.

The Government has never spent 1 cent on this property for the last 100 years. I cannot help but feel the irony of requiring these people to pay the present fair market value to the Federal Government to clear the title when billions of dollars are appropriated and sent to every imaginable boondoggling project abroad.

I am gratified, however, that the title can be cleared by the enactment of this bill and its ultimate signature by the President of the United States.

Milwaukee Leads the Way to a Better Police Force Through Its Police Aid Program

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. REUSS. Mr. Speaker, Milwaukee has a national reputation for outstanding police work. A good police system, however, cannot rest on its laurels.

Many metropolitan areas, faced with increasing burdens for their police, will find the Milwaukee police aid program a useful way to recruit promising young men and help to share the heavy load borne by every metropolitan police force.

Mr. Richard Block, chairman of the Milwaukee Police and Fire Commission, some years ago saw the need for encouraging outstanding high school students to serve as police officers. He is generally credited with evolving the plan which works successfully in Milwaukee and is now being installed in other localities.

The following article by the chief of police for Milwaukee, Mr. Howard Johnson, explains how this police aid program works:

POLICE AID PROGRAM—MILWAUKEE POLICE DEPARTMENT

(By Howard O. Johnson, chief of police)

The police aid program was primarily inaugurated so that this department would have available competent and efficient clerical help especially for night work. Twelve outstanding young men were recruited from local high schools and were appointed to the department as police aids July 1, 1952. They attended the Vocational High School for instruction in typing and shorthand for 4 hours per day, at the city's expense, and were assigned 4 hours each day in the various districts, offices, and bureaus of the department. In this manner they became acquainted with the administration of these various offices and bureaus. As soon as they became familiar with the functions of one bureau or office they were rotated to another bureau or office so that eventually each of these police aides will have worked in every bureau and office in the department.

For several years prior to this program this department had encountered difficulties in filling the positions of desk sergeants due to the unwillingness of regular patrol sergeants to accept desk positions at the same pay. Most of them preferred to remain assigned to outside work. Further, we had difficulties filling clerical positions on the night shifts in the various offices and bureaus. The salaries for the male help were inadequate and the female help could not be obtained due to the reluctance of accepting night employment.

As a result of this situation a police aid training program was set up with the cooperation of the Board of Fire and Police Commissioners of the city of Milwaukee. Various principals of high schools in the city were informed that young men who wished to make law enforcement and police work their career could do so by including in their regular curriculum courses in shorthand, typing, and related subjects. In order to be eligible for this program these young men had to be 18 years of age, of excellent character and integrity, possessing further requirements as to height and weight and medical standards. Those who qualified would then be appointed to the Milwaukee Police Department as police aids (official title).

As aforestated, the first group of police aids was appointed on July 1, 1952. These young men have made excellent progress and on July 1, 1953, they were assigned to permanent duties, full time, in a clerical capacity in the various offices and bureaus of the department. They will function in such capacity until they reach the age of 22. If their services have been satisfactory up to that time then they will be appointed full-fledged patrolmen.

This system has provided the badly needed clerical help within the department especially on the night shifts and it will solve the clerical help problem for the future plus the fact that it will relieve police patrolmen from clerical duties for street patrol. It will also add to the efficiency of the department as these young men are highly skilled typists and stenographers whereas the average patrolman does not possess these skills.

These skills will be of particular value when these men are assigned to regular duties as patrolmen and especially so when conducting investigations and interviewing witnesses. With their knowledge of shorthand, these officers will be able to take down the statements of witnesses involved in accidents and in criminal investigations. This will be of great value and serve as a timesaver and in many instances it will eliminate ordering witnesses into the station for statements by a superior officer as is being done at the present time.

At the present time the common council of the city of Milwaukee has authorized 48 positions of police aides on this department. In addition to the first group, appointed July 1, 1952, we appointed 9 more police aides on July 10, 1953; 15 on July 6, 1954; 13 on July 5, 1955; 10 on July 12, 1956, and 18 on July 8, 1957. This last group is now going through the preliminary training period of attending school for 4 hours and working in the various offices and bureaus of the department for 4 hours each day. Our department numbers 1,843 persons at the present time and we can comfortably employ a total of 48 such police aides. We plan to continue this program at the rate of about 15 per year.

All the police aides are uniformed to the extent of wearing a regulation police department cell blue poplin shirt and black four-in-hand tie and blue trousers while on duty. They also wear a small numbered badge with the wording "Milwaukee Police Aid." By the uniform they are easily distinguished and cause an impression on the public.

This program is working out very satisfactorily. This is, of course, a slow process but the net results will be of great value to the department because the department will have a reservoir of men that are efficient in typing and shorthand plus the fact that all of these young men will gain a general knowledge of the fundamentals of police administration and procedures and techniques that are used in the various bureaus and offices throughout the department. They will do a better job when they become full-fledged police officers on the street because they understand the inner workings of the department. Further, they will be better material for promotional examinations and eventually will become competent and capable executives of the department. The most important factor in this case is that the department is obtaining the services of young men who have just completed their high-school education and who are interested in police work. These young men will not have been working in other fields of endeavor and will not have become accustomed to the environment of the job to the extent that they do not desire to leave it. These young men are indoctrinated with law-enforcement philosophy at an early age and as a result should develop into efficient police officers.

It is my firm belief that we in the Milwaukee Police Department are on the right track and that the police-aid program is a very valuable assets to every law-enforcement agency in the Nation. This police-aid program, as established in Milwaukee, will eventually improve the quality of our department and will to an extent solve our recruiting problem. As a result of this program the citizens of our community will have the benefit of better trained and more efficient police department.

Headline of the Year: Eisenhower Administration Is Not Against Big Business

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the humor magazines regularly carries a department which it calls the Headline of the Week. This morning's Wall Street Journal carries a headline which is much too good, from the standpoint of its humorous content, to be classed as merely the headline of the week. Some of the Members will, I am sure, agree with me that it deserves the designation "Headline of the Year," or possibly the "Headline of the 4½ Years Following January 20, 1953."

The headline tops a news story on a speech by Victor R. Hansen who holds the position in the Eisenhower administration as chief trust buster. The headline is: "Antitrust Chief Hansen Denies Administration Is Against Big Business."

I think the Members will agree with me that this message from Mr. Hansen is most exhilarating, if not somewhat intoxicating. It had never been my impression that any notion had gotten abroad that the Eisenhower administration is against big business. Consequently, I had been overlooking the great need for denying such a notion, a need which Mr. Hansen has now squarely met. But perhaps I have not had my ear to the ground but, like Alice in Wonderland, have had my ear on the ceiling.

Now since we have all received the exhilarating news that the Eisenhower administration is not opposed to big business, then comes the question of what the Eisenhower administration is opposed to. I call the Members' attention to Mr. Hansen's answer. According to the Wall Street Journal account, Mr. Hansen, and I quote, "declared the Eisenhower administration opposes 'the misuse of the economic power which big business is able to wield.'"

That is a most interested statement. The present deadly and widespread misuse of big business power is driving small business people in all lines of trade to the wall and they have been pleading, for more than 3 years now, to have the situation corrected by the passage of the equality of opportunity bill, H. R. 11. This bill would strengthen the Robinson-Patman Act against price discrimination, and it would thus place a moderate check on an ancient and well-known form of big business' misuse of power. On each and every occasion that this legislation has been up for consideration in Congress, however, the Eisenhower administration has opposed it. The Department of Justice has opposed it, and the Eisenhower administration's chief trustbuster, Mr. Hansen, himself, has opposed it.

Interestingly enough, Mr. Hansen's speech of last Tuesday was delivered to a convention of the National Congress of Petroleum Retailers. This is an organization of small independent retail gasoline dealers who have been presenting Congress with their urgent and pleading request to pass the equality of opportunity bill.

There is no line of trade in which small business people have been more unmercifully crushed by big business' abuse of power than in the retail gasoline business. Retail gasoline dealers in all parts of the United States are continually the victims of price discrimination which is, as we know, the most deadly method by which big business can abuse its inherent power. During the last Congress, officials of the National Congress of Petroleum Retailers—the group which Mr. Hansen was addressing—presented to the Select Committee on Small Business studies showing that one-third of all the independent retail gasoline dealers in the United States go out of business each year, as a result of the major oil companies' price discriminations.

I am fully persuaded of the truth of the Wall Street Journal's headline—the Eisenhower Administration Is Not Against Big Business. The record does not, however, support the claim that the Eisenhower administration is opposed to big business' abuse of power.

I include here an article from the Wall Street Journal of August 21, 1957:

ANTITRUST CHIEF HANSEN DENIES ADMINISTRATION IS AGAINST BIG BUSINESS—HE TELLS PETROLEUM RETAILERS THAT EISENHOWER OPPOSES MISUSE OF ECONOMIC POWERS

CINCINNATI.—Antitrust Chief Victor R. Hansen declared the Eisenhower administration opposes the misuses of the economic power which big business is able to wield.

He denied, however, that the administration is against big business. He claimed the administration has pursued a middle-of-the-road enforcement program, attacking monopolization and restrictive practices as they arise and wherever they may be found.

Mr. Hansen told a meeting of the National Congress of Petroleum Retailers, Inc., that this even-handed policy of antitrust enforcement * * * is fair to all.

"We are not against big business," he asserted. "We are against the misuse of the economic power which big business is able to wield—the power to exclude others, the power ruthlessly to trample the shoots of competition growing from the fertile land of small business. Our goal is to promote a climate of free markets in which all business can prosper and grow."

GOAL CITED

The antitrust laws, he added, "seek to insure that competitive markets, not Government regulation, guide our economic growth. * * * Antitrust is Government action aimed at avoiding necessity for Government control."

Mr. Hansen said the antitrust laws prohibit any combination which tampers with the price structure, even though such a combination might have desirable aims. As an example, he cited the gasoline price wars which so frequently plague petroleum retailers.

"Without going into the rather mysterious origins of price wars," he told the retailers, "let us assume that one starts in your town. Successive reductions have brought the profits from sales of gasoline to next to nothing. Even with the cooperation of your supplier, you still cannot meet the price of the station around the corner.

"In desperation, some one points out that a price war is a battle that no one is winning. A meeting of your local association agrees that the only sensible course is for everyone to return his price to that prevailing before the price war started. Right at that moment * * * the antitrust laws may come into play."

INVESTIGATIONS CONTINUE

The antitrust chief said Government investigations of the oil industry continue unabated. In fact, he said, one-fourth of the antitrust division's legal staff is working on pending cases or new investigations in the petroleum industry.

One of these investigations already has gone before a Federal Grand Jury in Alexandria, Va. Mr. Hansen said he wasn't permitted to disclose details of this inquiry, but declared, "I can tell you that it is authorized to consider the pricing structure of the entire petroleum industry."

He reviewed the history of Government antitrust action in the petroleum industry and said of the 1911 case which broke up the old Sandard Oil empire, that had the Government not won that case, there would today be but one crude oil purchaser, one refiner, one wholesaler * * * and, for that matter, maybe only one retailer, Standard Oil, for whom you would all be working."

The Giveaway Program

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 22, 1957

Mr. DAVIS of Georgia. Mr. Speaker, I have received today a letter from Vice President George J. Burger, of the National Federation of Independent Business, which contains some very sound statements regarding a continuance of foreign aid.

In his letter Mr. Burger quotes a telegram sent on August 21 to members of the Senate Appropriations Committee, and another telegram sent on August 19 to members of the Senate Foreign Relations Committee.

These telegrams represent a poll of some 100,000 independent business and professional people and the consensus of opinion of this segment of small-business people.

I take pleasure in inserting Mr. Burger's letter as follows:

AUGUST 21, 1957.

Hon. JAMES C. DAVIS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DAVIS: I think it can be said that the average man in the street and also coming from the grassroots the great majority are opposed to this continued foreign aid or the giveaway program.

Sure, after the termination of World War II, there was real justification, through the generosity of the American taxpayers, for our Government to assist many nations throughout the world as their economic conditions were in a deplorable state due to war activities. But, I believe there is a time to call a halt or for a real examination for curtailment.

The National Federation of Independent Business, we believe, has the largest individual membership, all voting members, of any business organization in the Nation and the federation membership, comprising independent business and professional men, has been repeatedly polled on continuance of foreign aid. Bear in mind, in presenting this subject matter to our nationwide membership, arguments for and arguments against were presented to the member and the member must then decide in his own mind what is best for the future of our Nation and for healthy conditions throughout the world.

In each instance, when this poll has been made, the vote disclosed that the great majority of our membership favored curtailment and, carrying out the expressed mandate of our members, we repeatedly appeared before the Foreign Affairs and Foreign Relations Committees of the Congress and advised them accordingly.

We believe the recent action of the House on foreign aid is a step in the proper direction and it's our hope, in behalf of the American taxpayers and the people we represent, independent business, that the Senate will concur in the action of the House.

You will note the following telegram which was sent to all members of the Senate Appropriations Committee today:

"Prior to our appearances before Foreign Affairs and Foreign Relations Committees our membership comprising 100,000 were repeatedly polled on continuance of foreign aid. Results of these polls disclosed majority vote favored curtailment of foreign aid, and we so testified before committees.

"Present House action is a start for long overdue correction and we urge your support to House action which will give some long overdue relief to American taxpayers and small business."

Also note the following telegram which was sent on August 19 to all members of the Senate Foreign Relations Committee:

"In our repeated appearances before Foreign Affairs and Foreign Relations Committees of the Congress, carrying out the direct mandate vote of our nationwide member-

ship, all independent business and professional men, all voting members, no groups—the majority vote has been overwhelmingly in favor of curtailment of foreign aid.

"The ever increasing tax load, and the more serious aspect due to excessive Government spending of the ever increasing spiral of inflation in our domestic economy, if it continues may go a long way in destroying the future of our Nation's economy.

"Curtailment of foreign aid appropriations as voted by the House should be acceptable to the Senate and we trust the Senate will concur in the necessary cut of the appropriations made by the House of Representatives.

"Speaking for small business, will you make our views known on the floor of the Senate?"

With very high regards,

Sincerely yours,

GEORGE J. BURGER,
Vice President.

Do-Nothing Congress

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. NEAL. Mr. Speaker, if the 1st session of the 85th Congress deserves this sobriquet, it can be construed to mean the public will be the principal beneficiary.

It is true that the main efforts of this session have been directed toward making appropriations for domestic activities, Defense Establishment, and various programs of aid to foreign nations. Aside from attention to civil rights, no other major legislation of far-reaching effect on the national economy has been approved. This is a good omen. Congress for many years has been besieged by minority groups seeking legislation designed to relieve or materially benefit their special problems, resulting in added administrative agencies and a maze of Government intrusion into the affairs of helpless citizens.

The immediate result has been big government, heavy taxation, overgrown budgets, and inflation, to say nothing of the tendency to encourage evasions and dishonesty on the part of many citizens.

The average citizen no longer enjoys the freedom to engage in any enterprise without first employing an attorney to explore the possibilities of defeat or failure through the application of some public law. The prohibitions imposed by laws enacted and presently on the statute books are contributing more and more to discourage initiative, not only individual, but corporate. There is just too much law interfering with the proverbial freedom of progressive minded individuals and groups who up to now have succeeded in making America the outstanding creative Nation of the world.

Reviewing our international relations during the past decade reveals less than satisfactory success in challenging Communist influence in many parts of the Old World. It approaches the point of alarm when we see the trends in areas of our own hemisphere, the Caribbean, Central and South America, becoming more and more tolerant to the guiles of communism. Congress and the administration should manifest more direct concern for the stabilization of governments in these areas where our influence offers more assurance of creating and maintaining democratic strength to oppose the Communist threat through our back doors. The Old World has been the seat of power struggle during all history and we see no visible reason to expect anything different in the future. It is not to be expected that in the usual course of human experience, Russian communism can succeed in holding so many divisive peoples under her yoke for long.

The spirit of national freedom initiated in our Declaration of Independence and frequently enunciated through all our international contacts, has become altogether too strong among the smaller free nations to permit foreign domination and mass enslavement.

American democracy can be the instrument through which Communist philosophy will cease to appeal to civilized people, provided we discard our fears of Russian strength, unite and solidify the forces of our continental neighbors, and return to a national policy of economy, thrift, less exorbitant taxation, and a sound dollar of consistent value. A strong America of determined people need entertain no fear of Old World supremacy.

The Dam That Never Was

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from an article written by Pat Munroe, which was printed in the August 15, 1957, issue of the Deseret News and Telegram, Salt Lake City, Utah:

THE DAM THAT NEVER WAS

The flow of Snake River waters through Hells Canyon the past decade has long been rivaled by the torrent of words pouring forth from Capitol Hill for and against a Federal dam.

Most Congressmen concede that any chance of a high dam ever being built passed some years ago. Yet each year, new statistics, arguments, and histrionics are carted out for the annual performance in the public against private power fight.

Next year the scene may change, with a move underfoot to outfit the aging issue as an Army engineers project. The extravagant claims and charges will probably be heard all over again, but with a special election year tang.

Yet it is unlikely that the debate will be able to match this season's show, which had all the elements of good melodrama.

On the Senate side, Senator WATKINS dryly laid down the Republican position while his Democratic colleagues ad libbed enough vivid metaphors to keep the press gallery typewriters rattling.

But the real show came in the House, where the dam's death scene was stalled for several weeks as Interior Committee Democrats used parliamentary tricks, quick exits, meeting boycotts, and protests over a lady's honor (Representative GRACIE PFOST, of Idaho) to extend the run.

When the final vote came, Representative JOHN SAYLOR, Republican, Pennsylvania, said the dam was extinct as the dodo. The liberal Washington Post ornithologically reported the dam was more like the phoenix—a legendary bird that rose from the ashes of its funeral pyre with renewed youth.

But the Post failed to add that the phoenix was also a myth—a purely fictitious bird.

Maybe it was a pretty good comparison after all.

Straight Talk

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. DAVIS of Georgia. Mr. Speaker, I have received a reprint of Tom Anderson's column "Straight Talk" in the September 1957 issue of Farm and Ranch magazine, Nashville, Tenn.

His column in the September issue of that magazine deals with the United States Supreme Court, which in recent years has been brazenly usurping legislative functions, and has gone far afield from its constitutional jurisdiction in its efforts to amend the Constitution and make new laws.

Mr. Anderson, as is the case with many thoughtful people all over our country, is concerned over these shocking and amazing decisions. He feels, as do hundreds of thousands of people from Maine to California, that this Court has justified the terms "Black Mondays" and "Red Mondays" as applied to its Monday decision days. Mr. Anderson, as so many other people are, is alarmed at the disastrous effects of these black Monday and red Monday decisions. He correctly says:

The Supreme Court members have forfeited their right to life tenure and should be made directly responsible to Congress and the people. Since the Court is making policies it should be accountable to somebody. The political justices are now accountable to no one but themselves.

Mr. Anderson's article should have thoughtful attention and consideration, and under unanimous consent granted, I insert the article as follows:

STRAIGHT TALK

(By Tom Anderson)

In ancient days the king could do no wrong. But this is 1957, and the Supreme Court can. The Supreme Court is not divine. God didn't create it. The people did.

The belief that the Supreme Court is a holy, final, supreme authority is a fairy story unsupported by facts, history, or the Constitution. The Constitution provides only that "the judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress

may from time to time establish." Nothing is said about the number of courts or justices, nor their pay, duties, or limitations.

Let those who seem to feel that resistance to any decision of the Supreme Court is a polite form of treason remember Abraham Lincoln's challenge to the Court: "We propose so resisting it (the Dred Scott decision) as to have it reversed if we can, and a new judicial rule established upon this subject." And Andrew Jackson cried, "The Supreme Court has handed down its decision: now let them enforce it." Alexander Hamilton wrote in the Federalist: "* * * the judiciary is, beyond comparison, the weakest of the three departments of power * * * though individual oppression may now and then proceed from the courts of justice, the general liberty of the people can never be endangered from that quarter: I mean so long as the judiciary remains truly distinct from both the legislative and the executive * * *."

MODERN COURTISM

But Franklin D. Roosevelt, Truman, and Eisenhower all packed the Court with political lawyers who were sympathetic to the aims of their administrations and connived to have the Court do their will. What the great Hamilton saw as a threat to liberty, the union of the executive and judiciary, we are now up to our necks in.

For about 165 years the Supreme Court did what the Constitution told it to do: Said what the law is. The Warren court now makes, and unmakes, the law. In the field of civil rights and civil liberties dedicated left-wingers of the Supreme Court are remaking the Constitution and our lives. The Court is now the combined creature of New Dealism and Modern Republicanism, bent on changing our constitutional government into a centralized, all-powerful, socialist-labor welfare state.

QUIZ GAMES WHAT'S THE LAW TODAY?

Thousands of lawyers and judges throughout the Nation are fumbling their way through a maze of confusing and contradictory Supreme Court pronouncements based not on Constitution and precedent but on which way the social political winds are blowing. And based on which Justices' hearts are bleeding for what social reforms and which Justices have what chips on their black-robed shoulders.

The historic "Black Monday" segregation decision in 1954 was just the beginning. It has been followed by a series of lawmaking liberal decisions limiting the power of States and Congress.

Turning from Black Mondays to Red Mondays, the Supreme Court has just turned loose 5 of 14 convicted California Communists (the other 9 will get a new trial) but it won't turn loose the sovereign States of the South to run their own affairs as the majority of their citizens want them run. The Court has ruled that Government workers, unless they're in "sensitive" jobs, cannot be fired just because they're security risks. Thus "nonsensitive" Communists may rub elbows daily with Government employees whose jobs involve our very lives. The Court has virtually denied Congress its historic right to conduct investigations.

In the recent Steve Nelson case, the Supreme Court nullified sedition laws of 42 States and now permits the Federal Government alone to prosecute Communists for plotting the Government's violent overthrow. The Court has recently opened FBI files to criminals and Communists.

The supreme sociologists have declared in effect that communism is merely another political party deserving of the same protection as Democrats or Republicans. Thus our Supreme Court suggests that communism may not be subversive, after all, even though we're spending billions fighting it around the world. These rulings comprise the greatest Communist victory since America mistakenly saved Russia from Hitler. Come to think of it, have the Communists lost any cases before the present souped-up Court?

LET'S AMEND THE COURT

The Supreme Court office is granted for life, but only during good behavior. Thus Congress and the President have the power to curb or oust Supreme Court Judges. The Supreme Court members have forfeited their right to life tenure and should be made directly responsible to Congress and the people. Since the Court is making policies it should be accountable to somebody. The political Justices are now accountable to no one but themselves.

We the people have amended the Constitution 22 times. Let's amend the Supreme Court. Instead of Congress having to spend so much time correcting Court decisions, why not correct the Court? Amendments 11, 13, and 15 were adopted to overrule Court decisions. The Court needs curbing. Seems to me the best long-range plan to insure getting the best judges, not crusaders, on the Court might be to limit their selection to judges who've served at least 10 years on circuit courts of appeal. Thus we'd get men who've been dealing with legal problems instead of dealing with politicians. Men who are disassociated from politics and the local political scene. And even then, maybe Congress should have to confirm by a two-thirds majority instead of a simple majority. But most important, let's amend the Constitution to limit the term of each judge to, say, 9 years, with 1 new judge replacing, each year, the judge with the longest tenure: first on, first off.

What Is the Civil-Rights Bill and What Does It Mean to You?

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. DAVIS of Georgia. Mr. Speaker, Tom Anderson's column Straight Talk, a regular feature of Farm and Ranch magazine, from time to time presents some very sound views on current problems. In the August 1957 issue of that magazine he presents an analysis of the so-called civil-rights bill.

His sound views on this iniquitous and vicious bill are well worth reading, and under unanimous consent previously granted, I insert this article herewith:

STRAIGHT TALK

(By Tom Anderson)

What is the civil-rights bill, and what does it mean to you?

"Civil rights" means that if you're a Protestant who hires only Protestants, or a Jew who hires only Jews, or a Catholic who hires only Catholics, you can be prosecuted by the Federal Government. It means you could be forced to hire the same number of Swedes as you do Italians or be punished for discrimination against national origin.

It means if you run a dancing school you could be forced to hire a qualified Negro instructor or face possible subpena to appear before a United States district judge (they're appointed for life by the President) in a distant city at your own expense and prove yourself innocent. It means that if a school, park, public restroom (private homes and clubs are exempt, so far) is desegregated and you try to interfere or prevent it, you are subject to arrest and imprisonment for contempt of court. It means integration would be enforced by army bayonets and martial law.

Under the civil-rights bill the Attorney General of the United States could bring legal actions in your name whether you desired to go to court or not, and the Civil Rights Commission could summon you on 24 hours' notice from any part of the United States to any place it might designate to defend yourself against charges of which you were ignorant until you got the subpena.

CONFORM OR BE CARPETBAGGED

Under the civil-rights bill now proposed, the Justice Department could get a Federal court injunction against anyone who is "about" to take away another's civil rights or voting rights. If you defied the Government when it told you you had to hire a qualified Negro as your secretary, or as a salesman, or as a lifeguard at the swimming pool, you would be tried on criminal contempt charges without a jury. "Civil rights" means perhaps the beginning of the end of State government and individual freedom in America.

That eminent Socialist-turned-Democrat, Walter Reuther, says, "The problem of civil rights in the United States is an international issue * * * the key issue in the world."

We must pass civil-rights legislation, the Reuthers, Harrimans, and Kefauvers profess, to keep Russia from exploiting against us our archaic horse-and-buggy conceptions of constitutional law, trial by jury, and other freedoms guaranteed by the Bill of Rights.

Imagine. We must impress Russia, where the only people who vote are the 11 men in the Kremlin * * * where American soldiers with hands tied behind their backs, were tried by being machinegunned into a common grave. * * * Russia, which has butchered 20 million of its own citizens.

Or, are we trying to impress England, where aristocracy and colonialism still reign * * * or South American countries where military dictators reelect themselves without opposition with guns? Or, maybe it's the African cannibals, or the untouchables of India we're trying to impress?

The same liberals whose hearts bleed so profusely for minority groups are now trying to kill the right to filibuster, which is the right of unlimited debate unless two-thirds of the Senators vote to cut off debate. The two-thirds requirement is adequate safeguard against the abuse of free speech and is in itself a protection of the minority.

Few northerners, even the worst bleeding hearts, if they knew and understood deep-South areas where backward blacks outnumber whites in some areas 2 and 3 to 1, would favor integration and full voting privileges. As in backward colonial dependencies, a people has to earn equality. To thrust it on them is to guarantee chaos. The beleaguered, back-to-the-wall South is not defying the Constitution, but upholding it. The Supreme Court, not the South, is guilty. The Court is guilty of unlawful and unconstitutional judicial and prejudicial tyranny. The New Dealers, modern Republicans, and crusading Justices are forcing us down the road to a centralized Socialist-labor welfare State, in which individual States and individuals are under the heel of an all-powerful Federal autocracy.

LET ALL AMERICANS VOTE ON CIVIL RIGHTS AMENDMENT

Under the civil-rights bill an enlarged army of Federal bureaucrats and FBI agents will march through Georgia laying waste to the southern way of life and leaving in their wake swarms of civil-rights carpetbaggers to intimidate the people and supplant local law with Federal law. Lower court justices, who hate to be reversed, are already being

intimidated. A civil rights law will be ignored, evaded, ridiculed and hijacked by the people no less than was the prohibition amendment, which was at least voted in (and out) by the people. All the American people should be allowed to vote on a civil-rights amendment to the Constitution.

No court can successfully ban and bury the historic customs and beliefs of a sovereign people. A law cannot be effectively enforced when it does not have the approval and support of a majority of the people.

The civil-rights bill denies fundamental rights guaranteed everyone by the Constitution: the right to own, manage, and enjoy property; the right of trial by jury; the right to be presumed innocent until proven guilty; the right of appeal; and the rights guaranteed to the people and the States in the 9th and 10th amendments, limiting the Federal Government to the specific powers, except only those which the Constitution forbade the States to exercise.

FORCED EQUALITY IS CIVIL WRONG

We are chasing an illusion of equality under socialism instead of the reality of freedom under States rights and local self-government. Many have been deluded into a fuzzy morality which holds that equality and equal rights are the same thing. Forced equality contradicts the dream to excell; smothers individuality; restricts rights; removes freedoms; legislates mediocrity; waters down courage, thrift, self-reliance and initiative; and nurtures tyranny. Civil rights, like socialism, doesn't level up—it levels down. An all-powerful Federal Government is a mass denial of freedom.

This land of the free was conceived by our Founding Fathers to preserve the inequalities of its people by a minimum restriction of their liberties. But this land where anybody could be an eagle is being forced to become a land where everybody must become an oyster.

FTC Drops Case Against Giant Stores

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 15, 1957

Mr. MULTER. Mr. Speaker, the recent ruling by the Federal Trade Commission dismissing the complaint against one of the large chain stores of the country indicates that there are some fatal defects in existing statutes that need immediate attention.

These big retail chains have already succeeded in driving enough small merchants out of business so as to be in complete control of many retail outlets. Having attained that station in our economy, they are now striking out at and taking advantage of the consuming public.

In that connection, I direct our colleagues attention to the following item which appeared in the Washington Post and Times Herald of August 15, 1957:

FTC DROPS CASE AGAINST GIANT STORES

The Federal Trade Commission ruled yesterday that Giant Food Shopping Center, Inc., prepares sausage and meat loaf and therefore is a packer and outside of FTC jurisdiction.

The ruling enabled Giant Stores to go from FTC to Agriculture Department jurisdiction. The FTC thus had to drop charges against Giant of inducing illegal promotional allowances.

FTC Examiner Frank Hier said "intellectual honesty" compelled him to rule that "if any part of a person's business is within the definition of 'packer' (under the Packers and Stockyards Act), no matter how small or insignificant, all of his activities are beyond regulation by the Commission."

It's not the "cutting up, slicing, grinding, trimming, and wrapping meat that makes Giant a packer but the grinding up meat, mixing it with spices (as), in the case of sausage, to make meat products," Hier said.

The Commission had charged Giant with demanding illegal favors from suppliers for promotion of an anniversary sale. Dropping the complaint reluctantly but firmly, the FTC warned that the decision might be reviewed.

Statement by Hon. John Lesinski, of Michigan, on Federal Aid to States

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. LESINSKI. Mr. Speaker, some States continually complain about the Government making aid available to the States. However, these States never object to accepting all the money the Government will grant them. The State of Indiana is probably one of the best examples of the foregoing statement, and under these circumstances I thought a letter which Mr. Andrew Jacobs, Jr., wrote to the Honorable MIKE KIRWAN, was very illustrative of this fact. Under leave to extend my remarks, I should like to insert the letter and its enclosures in the RECORD:

INDIANAPOLIS, IND., *August 14, 1957.*

Hon. MICHAEL KIRWAN,
Member of Congress,
Washington, D. C.

DEAR MR. KIRWAN: I hope you will not carry out your intentions to deprive Indiana of Federal aid, as reported by the enclosed Associated Press dispatch. It is true our Governor has condemned Federal aid, and so has our general assembly.

However, I think you, as a good Irishman, should appreciate any glimmer of GOP humor.

Almost in the same breath Governor Handley demanded Federal relief for Hoosier flood victims.

The enclosed facsimile pages from the official 1947 acts of our general assembly proves it was merely having its little joke. Note that chapter 377 condemning Federal aid is followed by chapter 378 demanding it, and this all occurred after chapter 178 had made full provision to grasp every Federal dollar in reach.

The index page indicates the several subjects upon which the general assembly prescribed acceptance of Federal aid.

You understand boys will be boys and things are somber enough in Indiana. Don't punish us because our GOP officials occasionally show a sense of humor.

Even if our GOP officials were not trying to be funny, let's be charitable. The dollar sign confuses them and their inconsistency, if not excusable, is at least understandable to men of good will, which we Democrats claim to be.

Governor Handley has a brilliant plan for stopping excessive Federal taxation; that is, to grab our money before Uncle Sam can get it. He has made some progress.

Sincerely,

ANDREW JACOBS, Jr.

[From the Indianapolis Star, August 14, 1957]

UNITED STATES AID FOR STATE RAPPED

WASHINGTON—A veteran Democratic Congressman said yesterday he will oppose appropriating money for new Federal public works projects in Indiana.

Representative KIRWAN (Democrat, Ohio), a ranking member of the House Appropriations Committee, told a reporter the reason for his stand is the Indiana Legislature's opposition to Federal aid to the States.

When told of KIRWAN's position, Representative BRAY (Republican, Indiana) said, "I believe MIKE KIRWAN is confused." He said Indiana Republicans do not oppose Federal grants in such fields as flood control and rivers and harbors projects, but do not want aid extended to new areas such as education.

But Representative DENTON Democrat, of Indiana, a member of the Appropriations Committee, said "KIRWAN does illustrate the ridiculousness" of Hoosier Republicans fighting Federal aid.

Both BRAY and DENTON argued Indiana is entitled to Federal aid in any event since its taxpayers contribute money for the grants.

Previously, KIRWAN had said he would oppose public works appropriations for Nebraska. The Nebraska Legislature this year adopted a resolution opposing Federal grants to the States.

"They passed the same kind of thing in Indiana several years ago," said KIRWAN. BRAY and DENTON said they knew of no such action.

Republican Gov. Harold W. Handley of Indiana repeatedly has attacked the system of Federal grants to the States.

KIRWAN indicated his stand would have no immediate applications.

"But some day," he added, "I will be sitting on a conference committee and if I can cast the vote that will kill a public works appropriation for Indiana, I will do it. I don't want to presume on their legislature."

KIRWAN was a member of a Senate-House conference committee that last week eliminated $25,000 in planning funds for the proposed Monroe Reservoir in Indiana. But the elimination was automatic because the appropriation had not been authorized by Congress.

"Indiana pays its proportion of the taxes in the country," BRAY said in criticizing KIRWAN'S position.

[From the Indianapolis Star of August 14, 1957]

BEGIN WITH A START

A committee of State governors and Federal aides is making some progress in an effort to draft an actual plan for transferring some functions from the Federal Government back to the States. The proposal to do so has been made by President Eisenhower.

There is no reason why it can't be done. All kinds of things which the Federal Government is now doing are things which States could do just as well or better. A great many of them are things which could be done by the communities, once control of them is restored to the States.

One vital need is to be practical in planning the first step. Functions should be chosen for transfer which the States can readily grasp and administer. The transfer plan, in short, must work.

Preliminary agreement has been reached on a list of items which meet this requirement. Included are school-lunch aid, disaster relief, vocational education, old-age as-

sistance on a need basis, and sewage waste treatment. These are things which could be transferred without any great disruption of services and without creating any great problems of administrative machinery for the States. They also are items in which consideration of need on a State basis is highly pertinent.

Another vital condition is that Federal taxes be lifted or cut in specific and accurate relation to the transfer of functions to State control. The actual cost to the Federal Government of each function, including administration and other overhead should be detailed. Tax changes to reduce Federal revenues by the same amounts should be made at the same time the functions are transferred.

Once the initial transfer is planned, it will be necessary for the people of each State to make sure that their own representatives in Congress understand the wisdom and importance of what is being done. Some will have to do some adjusting in thinking of themselves as representatives of a State.

The hardest task will be in conditioning both legislators and planners in Washington to the possibility that every State may not wish to continue every program over which the Federal Government relinquishes to State control.

There is the new sewage-treatment aid program, for instance. Indiana communities received grants totaling $996,00 in the year ending June 30 to help them build sewage-treatment plants. The cost of the projects involved totaled $3,662,954, the rest of the money coming from local sources. The projects receiving this aid represented about half of the sewage-treatment development in the State during the year, the total costing about $7 million. But spending for this purpose amounted to more than $20 million in Indiana in each of the 3 previous years, before the Federal program was set up. Indiana progress in this field under the stimulation of Federal aid has been about a third of what it was without Federal aid.

The important thing is to make a start in shifting responsibilities and functions from the Federal Government back to the States. The example needs to be set. The procedure needs to be worked out and used. Then it will be possible to select other functions for transfer. With each succeeding step the process will become easier and smoother. With each step the States will become stronger and more able to take the next step. With each step the Federal Government, relieved of a few more of its conglomeration of interests and activities, will become more able to function effectively in its proper field.

Equal Rights Amendment

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. GUBSER. Mr. Speaker, on July 19 several Members spoke in favor of the equal-rights amendment. I regret that I was unable to participate in the discussion at that time and under leave to express my remarks would like to again reiterate my unqualified support for an equal-rights amendment.

One argument against the equal-rights amendment on which great stress is laid by opponents is that the passage of the amendment would cause endless confusion and litigation. Our whole history refutes such fear.

We have always believed that a bad law should be changed in the interest of freedom, liberty, and democracy. The equal-rights amendment to the Constitution would not be accomplished in a day, and every State would have time to amend her own laws before the amendment actually went into effect.

Of course there would be litigation, for every new law is subjected to litigation necessary to establish its constitutionality, interpretation, and application to our lives. Why should fear of changing laws prevent passage of the equal-rights amendment granting full citizenship to more than half our population?

I sincerely hope that Congress will recognize its responsibility and cause early passage of the equal-rights amendment.

Secretary Gates and the Corona Hospital Closing Hassle

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. HOSMER. Mr. Speaker, although I much regret the closing of Corona Naval Hospital, and favor installation of a naval hospital in the Long Beach-Los Angeles port area where many thousand service personnel and dependents urgently need it, I feel Secretary of the Navy Thomas S. Gates has been subjected to unwarranted abuse in connection with the matter. Hostile and unfounded stories appeared in newspapers in the vicinity of Corona regarding an interview with the Secretary by a local group. These were transplanted wholesale into a nationally syndicated column. Subsequently columnist Bob Considine wrote a column in closer coincidence to Secretary Gates' statement of the facts as follows:

GATES' VERSION OF CORONA INCIDENT

(By Bob Considine)

NEW YORK, August 19.—"This is the first time I've ever been operated on without an anesthetic," Secretary of the Navy Tom Gates said to a friend in the wake of a recent snafu over the announced closing of a naval hospital.

Gates, one of the smartest, best-natured and courteous men on the Eisenhower team, was widely accused lately of being rude and arrogant to a delegation of Californians who converged on San Diego to discuss with him the scheduled closing of the 750-bed Corona Naval Hospital. It was charged he brushed them off with a handshake or two and disappeared "in the midst of a swarm of rear admirals."

SILENT SAUND

Actually, Gates says he was never told he was expected to meet with the group. Congressman DALIP SAUND, Democrat, of California, who later joined in roasting Gates for snubbing the group, was a guest aboard Gates' plane.

Not once during the flight from Washington and return did SAUND mention he had alerted his people about a meeting with the Secretary, according to Gates' story.

Gates had just undergone a press conference in which he explained why the hospital and many other drains on the Navy's appropriation dollar had to be lopped off, when—upon leaving for his next appointment—SAUND asked him to say hello to a group. There was still no mention of a meeting. Gates shook hands all around, posed for pictures, bid them a cordial farewell, and went on about his business.

"NOT AWARE"

He is quoted as saying he was not aware until the next day that after a talk with SAUND, the group had become embittered enough to issue blasts at the Secretary and threats of repercussions at the polls.

Teapot tempest? Perhaps, but it is a sample of the pain and ruffled political feelings that attend any shrinkage in Federal spending. The Secretaries of the several branches of the Armed Forces, for example, are the likeliest targets of any vote-conscious Congressman whose district has been affected by a cutback.

The Corona Naval Hospital is a peace casualty, and the area can no longer count on income from the hospital's doctors, nurses, and patients. The Navy says there will be no hardships, medically speaking. There are hospitals at San Diego and Pendleton, as well as at Long Beach.

The irony of the attacks on Gates and men like him is that Congress itself ordered the cuts which individuals in the Congress decry when the orders are carried out. A further irony is that quite frequently a Congressman who has beat his breast in righteous indignation over the shutdown of some profitable installation in his district will—having made his show in front of his constituents—call up the Secretary and say, "I know you had to do what you did."

OTHER CUTS

Gates tried to explain on the coast that he will effect savings in the Navy's investment in his home State, Pennsylvania, just as readily as anywhere else.

To protect the Navy's shrinking funds, and keep its hardware ahead of the enemy's, Gates recently lopped 18,000 civilians off the payroll and mothballed 60 more outmoded ships. For port merchants, the retirement of those ships were as if 60 full payrolls were lost.

So Gates gets rapped.

Shortly after a nationally syndicated columnist rapped him last week, Gates' Pentagon phone rang. Sherman Adams of the White House was on the phone.

"Welcome to the club," said the greatest punching bag of them all.

List of Offenses Triable Without a Jury in the District of Columbia

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 22, 1957

Mr. KEATING. Mr. Speaker, in connection with the proposal requiring a jury trial in voting rights cases, the following table lists some of the offenses which may be prosecuted in the police court of the District of Columbia without a jury:

D. C. Code section	Nature of offense	Maximum penalty
2-130	Offenses connected with practice of the healing art, except for practicing medicine without a license.	$100 or 90 days.
2-409	Violation of laws with respect to registration of nurses.	$200 or imprisonment in workhouse for 60 days.
5-631	Violation of laws with respect to insanitary buildings.	$100 or 90 days (each day's violation a separate offense.)
6-119h	Violation of laws or regulations relating to quarantine.	$300 or 90 days or both.
6-304	Violations re reporting requirements for births.	$200 or 90 days or both.
6-508	Violation of garbage disposal laws	$100 or 60 days or both.
9-125	Offenses on Capitol grounds (no damage to public property exceeding $100).	Do.
22-1107	Unlawful assembly; profane and indecent language.	$250 or 90 days or both.
22-1112 (a)	Indecent exposure, not before minor	$300 or 90 days.
22-1115-6	Interferring with foreign diplomatic and consular offices, officers, property.	$100 or 60 days or both.
22-1120	Sale of tobacco to minors under 16	$10 or 20 days.
22-1121	Disorderly conduct (breach of peace)	$250 or 90 days or both.
22-1307	Wearing or using insignia of certain organizations by nonmember.	$20 or 30 days or both.
22-1406	Sale or concealment of property by conditional vendee with intent to defraud.	$100 or 90 days.
22-2701	Inviting for purpose of prostitution	$250 or 90 days or both.
22-3302, 3304	Vagrancy	$300 or 90 days or both.
22-3414	Use for advertising purposes or mutilation of flag.	$100 or 30 days or both.
22-3421	Sale of unwholesome food	$300 or 90 days.
25-128	Drinking alcoholic beverage on street park or parking lot, or in vehicle thereon, or in unlicensed public place, or during prohibited hours; being drunk in such places or at such times; being drunk and disturbing the peace of any person any time.	1st offense: $100, 30 days, or both. 2d offense: $200, 60 days, or both.
36-215	Employing minor in violation of child labor laws and regulations, or hindering their enforcement.	1st offense: $100, 30 days, or both per day. 2d offense: $200, 90 days, or both per day.
36-442	Violating provisions of chapter or regulations regarding industrial safety.	$300 or 90 days.
40-104	Violating provisions of chapter or regulations regarding registration of motor vehicles.	$300 or 30 days or both.
40-605 (d)	Operating vehicle faster than regulations permit.	$300 or 90 days.
40-609	Hit and run driving involving substantial property damage.	1st offense: $100, 30 days, or both. 2d offense: $300, 90 days, or both.
43-909	Destroying or interfering with any apparatus owned, operated by, or in charge of the Public Utilities Commission or its agents.	$100 or 30 days or both.
46-319 (a)	Knowingly falsifying or not disclosing a material fact to obtain or increase unemployment compensation payments to self or another.	$100 or 60 days or both, and repayment of amount illegally received.
46-319 (c)	Willful violation of provisions of chapter regarding unemployment compensation for which no penalty specified.	$200 or 60 days or both per day.
47-2207	Violating provisions of chapter regarding public auction permits.	$200 or 60 days or both.
47-2347	Violating provisions of chapter or regulations regarding general license law; failing to file information required therein.	$300 or 90 days.

The Communist Collectivist System Will Destroy the Individual

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, there has come to my attention some interesting observations by a member of the Bavarian Landtag, Dr. Walter Becher, Secretary General of the Sudeten German Council. Dr. Becher cites interesting statements made by one Walter Wannenmacher, a Sudeten German journalist and economist, who after World War II was detained for 10 years at forced labor in Communist Czechoslovakia. Mr. Wannenmacher has written a book entitled "The Country of the Office-Desk Pyramids," published in 1956 after his release from the forced labor organization in Czechoslovakia.

Mr. Speaker, Dr. Walter Becher sets forth his conclusions in an interesting and clear manner and I commend this material to the House Members.

The articles follows:

THE FAILURE OF THE COMMUNIST ECONOMIC SYSTEM

On these pages I want to leave aside the horrors of the Communist system, the secret police, the political persecution, the terror and the fear in which the slaves of Communist dictatorship are living, and which are the main characteristics of a Communist system. I merely want to discuss here one side of this criminal system—namely its economic side.

The Communist and collectivist economic system perverts all human sides of character. It is an unnatural, antinatural, antirational way of life. It is therefore no wonder that the Communist economy has failed in every State under Red rule (not only Poland, but all Communist states need Western help), and that misery and low-economic standard are inherent characteristics of communism.

Mr. Wannenmacher writes:

THE REASONS FOR FAILURE ARE INHERENT TO THE SYSTEM

"It would be an instructive task to divide, for the years 1938 and 1955, the number of produced units of goods by the number of existing office desks in any one of the factories in Czechoslovakia. The result would be that a much inferior output of production would fall to the share of each office desk.

"An office desk, if the same is placed protectively in front of you, is a good thing, a much better thing than a shovel. If you do not move this instrument, this sudorific instrument, not one kilogram of coal will get from the wagon to the pitheap. And it is merely this kilogram, thrown from the wagon and landing on the pitheap without, of course, rolling back on the tracks, for which you will be paid in the nationalized industries, owned by the people. The office desk, however, justly belongs to the desired achievements of a socialist production. You need not to move it. All you have to avoid is to fall asleep, if somebody may notice it. If only some piece of paper lies in front of you, you will have an alibi, and if you cover the same with numbers and letters, it means work—work without damage to heart and lungs, without a feeling of weariness in arms or legs, work, by which a man may support himself better than by using a shovel. Work, the meaning of which nobody will ask for, since every questioner would have to lose such an office-desk position himself. You are imbedded in the joint mass of the office-desk owners, who certainly plot among each other, but never to such a degree that the procreative instinct inherent to the office desks would be hindered or stopped, on the contrary, the true aim is to further this instinct by replacing one desk owner, removed by means of intrigues, by two new ones. If you have become a member of the working intelligentsia, the great number of those small lice troubling the workers has been increased by one. Well, you will think yourself, they do not notice it—considering these hundreds of thousands of small lice. The main thing is that there are no political objections to your person, that you make a bow to the ruling doctrine. Whoever intends to become a small louse, has to grow crooked at an early time.

"The manner in which mothers feed their babies with pablum is known to everybody: there is 1 spoon for father, 1 for mother, 1 for the little sister, and now 1 for the pussycat * * * A witty young man of the Skoda Works had to shovel out molding sands, many hundreds of shovels. In the manner mothers do it at home, the man whispered, rhythmically, the names of the profiteers of this his activity: 1 shovel for me, 1 for the confidant, 1 for me, 2 for my comrade the deputy director, 1 for me, 3 for the SNB (Corps of the National Security), 1 for me, 4 for the comrades in the ministry. It would have been a pleasure to send Karl Marx personally to him as auditor. No doubt that the man enormously exaggerated the percentage of profiteers' shovels to their total number, but he has nevertheless quoted so many of the typical profiteers that we are able to group them immediately; there is the group of office desks belonging to the field of action of police or public administration; there are the party as well as the field of action creating public opinion; there are the office desks belonging to the fields of economy, planning, production, transportation, financing, and distribution. In order to maintain all those sitting behind office desks, which were newly installed in the last 10 years, people have to devote part of their sweat for that purpose. Indeed, anyone who shovels has to move so many shovels a day as a tribute to the office-desk owners."

THE SECOND REASON FOR THE FAILURE IS THE INABILITY OF THE OFFICE DESK HOLDERS, ALSO INHERENT TO THE SYSTEM

But there is still another decisive quality inherent in this collectivist bureaucratic system of Communist economy. It is a fact that this bad, inferior, and irrational system is necessarily advocated and carried out by the inferior part of every nation concerned, by this nation's worst elements and individuals. Only these feel themselves comfortable in such a system, while all capable, intelligent, and decent men are being distanced, handicapped, and repelled by this system.

Miss Ira Wolffert, after having visited Communist Czechoslovakia, wrote in Esquire, January 1957:

"A society that is not designed to bring out the best of its members is valueless to those who live in it. But the Communist society now installed in Prague is designed to bring out the worst in its members."

This is true equally for the political system as well as for the economic system of communism. Mr. Wannenmacher states the same in his own words:

"This systematized economy needs hundreds of thousands of office desks, it alone needs an army of staff officers, each of whom should be a genius. Geniuses, however, are born in a limited number only, and the geniuses actually born are mostly caught in the different sieves of selecting systems before they are able to reach the decisive posts.

"Indeed, we may maintain: There is not one office desk imaginable to be missing. That surplus value rooting in the number of office desks is bound to system. Hardly lower, however, is the number of shovels which must be moved by the laborers to cover the damage caused by the people at the desks owing to their incapability. Is it unimaginable that this system could be borne by other people? * * * Therewith we reach the problem of selecting men. * * *

"Selection of men means to decide whom to give power over people and to what degree. As for capitalism, the customer determines the sum the contractor will earn. Who earns much, will get power over many people. He alone will be incapable for the task, he will have to give part of power to subordinates. These vassals of financial power the employer will select with regard to their individual capability to multiply the amount of money. This system finally results in a selection according to the abilities of the single person with regard to an increase of sale and reduction of costs. The books register the result of cleverness—it is easy to measure it. But there is no concrete measure for ability in the Socialist 'one-party state.' Behind the decision on the smallest amount of power to be imposed upon somebody, there is the question: What is he going to do with this power? Will he use it in such a way that he will cause as little harm to me as possible? Selection according to common profit, as demanded by the theory of the Marx-Leninism, is in distinct contrast to the actually practiced selection according to the harmlessness of the people in question. Common profit cannot be measured exactly—harmlessness, however, can be measured correctly. So it can be measured whether the person concerned has adopted himself to the necessary doctrines of the Marx-Leninism or not. If the man seems to be well informed concerning the valid political conceptions, his harmlessness as to his political line is rather probable. And this probability is still increased when receiving satisfactory results after investigating the man's past. * * *

"The most effective recommendation for the harmlessness of the candidate will be therefore his dependence on his sponsors as well as his talent not to become disagreeable to them. Being far too efficient, might be dangerous. The best chance for being selected in the Communist system have those people who distinguish themselves by servility, diligence, discipline, good behavior, and an unobjectionable past—that is the type of the untalented, servile career-hunter. One must be able to praise, with the same routine, Chrustchow today, as having praised Stalin yesterday.

"The routine is more important than the head. A skillful, sly routinist will keep his head on his shoulders, a 'full' head rolls more easily.

"In case the servile careerist will be admitted to the circle of profiteers, the better his conduct, the easier his advance will be. A man of conduct does not say the truth all the time, on the contrary * * *.

"Thus we discover that the selecting system of the Communist favors the career-hunter with blinkers. Nobody will expect to find among men of this type especially objective talents. * * * Due to the kind of selecting system the results cannot be different from what we find behind the office desks. * * *

"There is no confidant, no member of the industrial council, no functionary of the party, who has not become superior to another, appointed to this position. Nobody will reach this circle of profiteers, who has not been coopted. In this way the selected will remain between themselves, a 'private circle,' which demands that its rules be silently respected."

As for the rulers in the Communist system Mr. Wannenmacher says the following:

"The men commanding the top pushbuttons of the 'switchboard of power' excel the average by their intensive desire for predominance, vanity, courage (it is no bagatelle to balance yourself on the ladder's high rungs), and by their exquisite slyness."

They, in no case, excell by some actual talent or any creative abilities. Mr. Wannenmacher furthermore declares about the Communist type in general:

"It is a paranoid type. He pursues, because he feels himself pursued. His world of imagination is so loaded with enormous energies that he will not face facts which do not fit in it. * * * He is an artist of dialectical hairsplitting, he has sold himself to the ideology, because he is addicted to an inordinate desire for power; he will remain a demoniac all his lifelong. One has nothing to do but to look at the photographs of the men in question and you will find out that according to this diagnosis, it is easy to get on with these faces.

"Let us think of an assembly of such paranoid types, laying down guiding principles according to which people of similar type should live and act. These principles will not be drawn up according to facts but to 'jargon.' For, in cases in which the facts contradict the jargon, nobody will dare to expose himself in front of his enemies by putting his finger on this sore point, thus proving his ability for heresy. The people for whom these principles are valid, will do nothing for their part which could commit themselves in the eyes of their employers. They would, less than ever, acknowledge facts conflicting the 'jargon,' they would remain within the framework of the orders dictated and never move a finger out of their own initiative. Therewith, we have revealed the roots of the intellectual sterility in the East. Each initiative needs a permit of the competent 'profiteer.' Who does not think independently, cannot run great risk."

CONCLUSIONS

This is the Communist economic system in present Czechoslovakia as the Sudeten German journalist, economist, and author Walter Wannenmacher sees it. This system is common to all Communist states. It is only one part of the criminal Communist system, the other sides, the terror, the secret police, the proaganda and so forth are left aside on these pages as mentioned before.

The Communist economic system, the collectivist system is bad and inferior in itself, in the first place. Secondly, only inferior elements can work within this system, all able men are being handicapped by it. The inseparable sign of this system will be always: economic misery, and suppression of freedom.

All those who suffer under this Communist economic system are decent men: the workers, the able handicraftsmen, those, who understand business and organization, all gifted men, who in any normal human society are producers, organizers and leaders. With Communism, however, they, in reality, are all slaves of a dull and inhuman antinatural and collectivist system, which suppresses all good sides and ingenuity, and cultivates all bad sides of character, elevating bad men only.

The decent men are all inmates of one huge concentration camp, a forced labor camp, which, indeed, has along its boundary-lines barbed wire fences and machine gun towers in order to prevent escape, much alike to the forced labor camps, which, after all, are still numerous in the Communist countries. But not only the inmates of these camps—all inhabitants of a Communist State are slaves.

When the free world maintains business relations with Communist countries it receives goods, fabricated by slave laborers. No doubt, the Communist rulers can trade only because they force the people to work in misery. Thus any trade of the free west with Communist countries helps to uphold the slave-owner system of Communism. So does any economic aid given to Communist States, such as Yugoslavia or Poland.

As far as Czechoslovakio is concerned, the Communists know very well why they entirely expelled those 3.3 million Sudeten Germans and suppressed all Czechs and Slovaks of the parties of the center and the right. These people understood the perverseness of the Communist system and hated it. From the Communist standpoint they had to be removed.

In Czechoslovakia the Communists, after 1945, offered the possibility to work with them in the National Front regime to the Czech leftists only. These leftists, together with the Communist Party, installed the above pictured system and enabled the Communists to fully seize the power in 1948. Later on they were permitted to go to the West, where the majority of them keep leading positions in Radio Free Europe. Certainly the Free Europe Committee knows today, what the Communists in Czechoslovakia knew before, namely why it supports the leftists and National Fronters of Czechoslovakia, while suppressing and distancing all decent Czechs, Slovaks, and all Sudeten Germans.

In Radio Free Europe the National Front leftists, of course, preach their own economic policies—not too much different from the Communist ones—resolutely declaring that no return to the economic state of affairs prior to the Communist takeover is possible.

We fully disagree with these disastrous policies. We believe that propagators, coauthors and former profiteers of the system pictured above should not be supported by free men, and that not only the Sudeten Germans, but also the Czechs and Slovaks deserve to live once again in full political and economic freedom.

We believe that both support for a collectivist way of life in exile as well as trade with the Communists slave owners should be discontinued, and that the free world should embark in abolishing the Communist system and misery, and in bringing full genuine freedom to the slaves of communism.

Commentary on Supreme Court Decision in the Du Pont Case

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 6, 1957

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a reprint from Ed

Wimmer's column which appeared in the Cincinnati Enquirer.

The reprint follows:

FORTUNE ATTACK ANSWERED IN PUBLISHER'S OWN WORDS—GM CASE DEFENDED

The present trend to economic turncoatism showed up at its worst in a recent editorial in Fortune magazine, in which Supreme Court Justice William Brennan was accused of being antibig business, for his part in the Court's decision ordering a divorcement of General Motors from Du Pont control.

According to Fortune, Justice Brennan (who wrote the majority opinion) ignored 40 years of precedent and administrative experience—enunciating radical new concepts of antitrust theory—and placing virtually every big company under a cloud of suspicion.

Fortune wept over this decision coming at a time when the people seem to have accepted bigness as a source of efficiency, and solemnly pronounced that the Justice Department may now proceed against any big business without even bothering to prove monopoly or restraint under the Sherman Act.

No foundation whatsoever exists upon which any of these charges can be based, and I think that Fortune editors know it. They should know it, because even high-school students are aware that the Sherman Act was passed by Congress to prohibit the control of one corporation by another—wherever there is a tendency to substantially lessen competition. They know also, that the Congress tried to strengthen the purposes of the Sherman Act by passing the Clayton Act, Robinson-Patman Act, and other laws, and that all Justice Brennan and his associates on the Court were trying to do, was to uphold the law.

Furthermore, Fortune states that if the Court's decision is accepted as public policy, then the United States is placed in the position of equating bigness with badness, which is the reddest of red herrings now so widely used to associate needed economic reform with wild-eyed radicalism. Consider, please, the words of Mr. Henry Luce, himself, publisher of Fortune, who said in his own publication in 1933:

"If neither business nor Government makes any move whatsoever in breaking down business into smaller, more compact, more mobile units; if bigness is to remain the standard concept of the economy * * * we must prepare ourselves for a different order of things; an order in which the powers of Government are not limited; in which the right to risk and profit is not clear; and in which the making, the selling, and the buying of the biggest show on earth, are all mysteriously controlled from above."

Later, in 1944, John K. Jessup, chairman of the board of editors of Life, Time, and Fortune, said:

"Fifty years ago, all corporations were limited in their right to own other corporations. They can be limited again. A law providing for some form of Federal incorporation could change the whole course of corporate development. Such a law would be unwise if it reduced the size of business units below maximum efficiency, but many businesses are too big for their own good.

"No government can ever locate that point exactly for every industry, but ours can make a start. We can oppose unnecessary gigantism, and demand that corporations prove that they need to be as big as they are."

General Motors is the largest corporate combine in the world. Its sales may reach $12 billion this year. Assets over $8 billion. Net profits last year nearly $1 billion. It has 629,000 stockholders. Over 600,000 employees. Admits to more than 50,000 dependent suppliers. If closed down for any lengthy period by labor strife, this one company could spark a depression.

We believe that Henry Luce was thinking straight when he called upon big business to unwind—and we believe, with the Court, that General Motors is a corporate combine far too big for any other corporate combine to control.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The National Security Training Commission and Edgar G. Shelton, Jr.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 23, 1957

Mr. JOHNSON of Texas. Mr. President, one of the finest instruments of Government which has been created in recent years has been the National Security Training Commission. This body has been under the leadership of some of our ablest Americans, including Gen. David Sarnoff.

On June 30 of this year, the Commission wound up its work and voluntarily ended its operations. Mr. President, I may say that is an unusual thing for a Government commission to do.

I am proud of the Commission for many reasons. One is that its Director was Edgar G. Shelton, Jr., a young man from my State, who for a period of time was associated with me, as a member of my staff. He did an outstanding job, in keeping with the high standards he has set for himself all his life.

Mr. President, I ask unanimous consent that a statement summarizing the Commission's activities be printed in the Appendix of the RECORD, so that Americans may have full knowledge of the faithful service the Commission has performed.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATIONAL SECURITY TRAINING COMMISSION

I wish to pay tribute to the National Security Training Commission, which on June 30 concluded its task, filed its final report with the Congress, and voluntarily closed its door. Seldom is it that a permanent Government agency voluntarily goes out of business when its task is completed. Few agencies have faced difficulties of the magnitude which faced this Commission—and few have achieved the degree of success the National Security Training Commission has achieved. I believe that this is due largely to the caliber of the men who served on the Commission over the years.

Some of the most outstanding Americans of our age have given freely of their time and effort—without compensation—to serve as members of this Commission.

The National Security Training Commission was created by the Universal Military Training and Service Act of 1951 and came into being on June 19, 1951.

Under the chairmanship of the late Senator James W. Wadsworth in 1951–52 the Commission began its activity and submitted its first report. Under the acting chairmanship of the late well-known scientist, Dr. Karl T. Compton, the Commission was kept alive in 1952–53. The late Maj. Gen. Julius Ochs Adler, of the New York Times, who served as Chairman from 1953 to 1955 provided the leadership which led to 20th Century Minute-Men, the 1953 report to the President which became the basis for the Reserve Forces Act of 1955. The late Lt. Gen. Raymond S. MacLain, of Oklahoma, who was a member from 1951 until his death in 1954, was one of the great civilian soldiers of our time. My fellow Texan and statesman, William L. Clayton, who is well known to all of us, was a member from 1951 to 1953.

One of the most distinguished admirals in history, Thomas C. Kinkaid, served on the Commission from its beginning to its end. Warren H. Atherton, past national commander of the American Legion, served from 1953 to 1957. Albert J. Hayes, president of the International Association of Machinists, served from 1954 to 1957. In 1955 Gen. Walter Bedell Smith was appointed to the Commission and in 1955 one of the almost legendary figures of American industry, Gen. David Sarnoff, president of RCA, became the Commission's final Chairman.

With men such as these it is little wonder that the Commission accomplished great things when faced with many obstacles. It is due largely to this group that we today have an effective, growing, trained Reserve.

The Commission's task was born of the danger with which we were faced in 1950—unpreparedness. No nonveteran reserves were trained between World War II and June 1950. Then came the Korean war. Over 600,000 veterans of World War II were recalled to active duty in place of the men whom we had failed to train.

The conscience of America was shaken.

The UMTS Act was passed in 1951.

The NSTC was created. Its purpose was to help build a trained, nonveteran Reserve through the promotion of a 6-month Reserve training program.

The Commission, on October 29, 1951, submitted legislative recommendations to the Congress.

These recommendations were reported favorably by the two Armed Services Committees, but the House of Representatives recommitted the legislative proposal.

The Commission did not give up. On December 1, 1953, the members submitted to the President a report entitled "20th Century Minutemen," which became the basis for the Reserve Forces Act of 1955. From 1953 through 1955 the Commission was instrumental in developing the national Reserve plan, which after numerous and almost insurmountable executive and legislative problems became the Reserve Forces Act of 1955 on August 9, 1955.

The Reserve Forces Act of 1955 wrote into law the three basic objectives of the NSTC report of 1953. They were:

1. A 6-month Reserve training program.

2. The replacement of veterans in the Ready Reserve by trained nonveterans to the greatest extent possible under the requirements of the national security, thus permitting veterans to transfer to the Standby Reserve if they so desire.

3. Selective recall of the Standby Reserve in the event of emergency, to do away with the inequities which existed in the recall of veterans during the Korean war.

It should be noted that the Reserve Forces Act of 1955 did not require war veterans to participate involuntarily in the Ready Reserve. And, as of July 1 of this year about 700,000 Army veteran reservists have been transferred to the Standby Reserve. One of the main reasons this has been possible is the success of the voluntary 6-month Reserve training program.

The Reserve Act of 1955 did not give the authority to draft young men into the 6-month program even though the Commission and the Defense Department had requested such authority. The program was entirely voluntary.

In December 1955, Gen. David Sarnoff, newly appointed as Chairman of the Commission, decided that the American public must be told about the new Reserve program. He suggested that an entire week in the spring of 1956 be set aside for the purpose of an educational campaign through all public media such as radio, television, newspapers, magazines, and motion pictures. He secured the wholehearted cooperation of the radio-television industry.

The National Security Committee, a private citizens' group, sponsored what became known as Military Reserve Week, April 22–28, 1956.

Military Reserve Week set off the most intensive educational campaign on behalf of the Reserve in peacetime history. The campaign was supported by private organizations and the radio-television industry.

Over a period of only a few months there were 173 special radio programs broadcast at least 12,725 times; 19 special television programs shown at least 5,885 times—5 of which were seen and heard 14,200,000 times; radio spot announcements were broadcast locally at least 175,938 times. TV spot announcements were shown locally at least 50,744 times. Over 6,000 radio-TV spots were broadcast on the 3 networks or their affiliates and heard and seen 995,200,000 times. One hundred and fifty-six plugs by radio-TV stars on the 3 networks were heard and seen 928 million times. The public-service radio-TV time (not counting talent) used to plug the Reserve program was worth nearly $3 million.

This is to the everlasting credit of the Nation's free television-radio industry.

After Military Reserve Week the Reserve program began to grow.

Today the program is a success.

This is due in large measure to the continual educational program which was waged from the day the Reserve Forces Act of 1955 became law to the present time. The Armed Forces, the many private organizations, public-spirited individuals, the free radio-television industry, and the press deserve the Nation's thanks for their persistent and effective effort in helping to build a strong Reserve.

On February 5, 1957, the Commission reassessed its role and wrote to the President stating in part, "Now that the Reserve program is well underway, the members of this Commission feel that our mission has been accomplished. * * * We recommend, therefore, subject to your approval, that the Commission terminate its activities on June 30, 1957, and thus make a contribution, even though small, toward reducing the expenses of Government."

On March 25, the President, reluctantly accepted the Commission's proposal.

On June 30, the Commission closed its doors.

On July 15 the Congress received their final report.

Where does our Reserve stand today?

Before World War II, our entire military Reserve consisted of about 400,000 men, many of them inactive and untrained. To-

day we have some 2,500,000 ready reservists with nearly 1 million of them in active drill-pay status, plus some 700,000 standby reservists.

On June 30, 1950, just as the Korean war broke, the Army Reserve and Army National Guard in active drill-pay status numbered 384,000. Three years later, June 30, 1953, just prior to the Commission's report to the President they numbered only 373,000. Today they number 678,000, an all time high.

On June 30, 1954 over 78 percent of all reservists were veterans. In the Army Reserve alone 98 percent were veterans. Today this imbalance is being remedied by the tens of thousands of nonveteran 6-month trainees who are entering the Ready Reserve, permitting veterans to move to standby status.

In the first 6 months of this year, the Reserve components of the Armed Forces have grown more rapidly than in any comparable period in peacetime. Particularly gratifying was the upsurge of enlistments in the 6-month Reserve training program. In the spring of 1956 there were only about 600 enlistments per week. Then came Military Reserve Week. By June 1956 enlistments were up to about 1,000 per week. By April 1957, the rate had increased to more than 4,000 a week—equivalent to an annual rate of well over 200,000.

This is not the result of accident. The success which has become apparent during the last few months didn't just happen. It has taken an incredible amount of work over a period of 6 long years to accomplish this.

Full credit should go to all, both in and out of the Government, who have worked so hard on the program. Certainly, however, there would have been no 6-month Reserve training program without the Commission and its outstanding members.

Due to their efforts in creating our 20th Century Minutemen the Nation is more secure. With the ever growing strength furnished by our Reserve the chances of world peace will be improved.

The NSTC can well be proud of its contribution.

Inflation and What Congress Might Do About It—Statement by Roger M. Blough

---

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, August 23, 1957

Mr. DIRKSEN. Mr. President, during the course of the testimony of Mr. Roger M. Blough, chairman of the board, United States Steel Corp., before the Senate Antitrust and Monopoly Subcommittee, the distinguished Senator from Wyoming [Mr. O'MAHONEY] asked Mr. Blough as to some of his ideas in combating inflation.

Mr. Blough has submitted a prepared statement entitled "Inflation and What Congress Might Do About It." With the statement are two exhibits: First, excerpts from an address by Mr. George Meany, president AFL–CIO; and, second, a lead editorial from the Economist of July 20, 1957.

I believe that the Members of Congress would be very much interested in this material, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement and exhibits were ordered to be printed in the RECORD, as follows:

INFLATION AND WHAT THE CONGRESS MIGHT DO ABOUT IT

(Statement by Roger M. Blough, chairman of the board, United States Steel Corp., before the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary, Washington, D. C., August 1957)

Several times during this hearing, Senator O'MAHONEY has asked me for a personal opinion regarding what the Congress should do about inflation.

I cannot profess any great competence in many phases affecting this problem, although we are painfully familiar with some aspects of it. Nevertheless, if these hearings are going to have a constructive purpose it is evident that only at the level of inquiry suggested by Senator O'MAHONEY will that purpose be achieved. Accordingly, I here outline my thoughts.

The first and foremost contribution the members of Congress can make toward curtailing inflation is to understand it. This is not easy. Yet those responsible for passing or refraining from passing legislation—and in either case the responsibility is equally great—cannot carry out their individual responsibilities in the matter without a reasonably clear understanding of the problem. To this I quickly add that business, too, must, in turn, do all it can to understand the matter so that we may likewise carry out our respective responsibilities.

It is, of course, almost impossible in a short space of a few paragraphs to discuss the problem adequately; but nevertheless I will try to the best of my ability.

Economic forces are set in motion when an excessive supply of money or credit is seeking less than enough goods and services. At times, although not currently, a part of this excess supply of money may be caused by the Government spending more than its income. It is an oversimplification to say that the most direct remedy for this type of situation is for the supply of money or credit to be restricted, for the deficit spending to end and for the supply of goods and services to increase.

Deficit spending and balancing budgets is a political matter involving many complex aspects of taxation, national defense, national welfare and a host of other problems with respect to which observations of mine would be of little moment in the present situation.

Likewise, I believe that everyone in Congress is familiar with the efforts of the Federal Reserve Board with respect to the supply of money and credit, which is its special function.

On the other aspect of the matter, the supply of goods, I perhaps can throw some light.

It is common knowledge that what we as a Nation produce is all we have to divide among ourselves, money being the medium of exchange with which we make the division. As workers, what we can buy with our pay, rather than the number of dollars, is the crux of the matter.

We in steel can do something in the steel part of the general supply picture to increase the supply of steel. That our corporation and the steel industry has been doing. To do this requires savings from people who earn wages, savings from those who invest and receive dividends and interest, and savings in the form of income reinvested in the business by the corporation itself. For steelmaking requires many costly furnaces, machines of great size, raw material development at home and abroad, and many other extensive and expensive items of plant and equipment. Only from those savings can the great results which come from a fertile combination of men and machines be achieved. Only in this way can we increase the supply of goods and thus add to the total wealth of all of us.

We in management can do our part in the training of manpower, securing better equipment, and many other things, all of which will improve what is commonly called productivity. This is really little more than a short-hand way of referring to constant product improvement and constant cost reduction.

It is when we come to cost reduction that the shoe pinches. Because the largest costs of all which we must pay in the conduct of our business are employment costs, whether these costs relate directly to our employment cost or to our suppliers.

As we have demonstrated in the hearings by reference to our published figures, our corporation's employment costs per hour have increased at the annual rate of 8.1 percent on the average for the past 17 years. Our total costs have risen during the same period at the rate of 8.8 percent. The best we can indicate for the improvement in output or productivity is between 2 and 3 percent. (Incidentally, a widely accepted figure for annual improvement of productivity nationally is closer to 2 percent.)

Holding in abeyance for a moment the alternates which Congress may have in this situation, as a corporation we have in the main just two alternatives. The first is to reduce cost as rapidly and effectively as we can. Mr. Hood has indicated in his statement some of the things we are trying to do about this. We believe that we have had some success.

The second alternative for us is to increase prices. The consequences of not increasing prices within competitive limits has been shown in Mr. Tyson's statement.

We have done both these things in an attempt to overtake our rising costs. Our price increases have averaged 5.6 percent annually during this 17-year period. The difference between this and our cost increases has been made up with greater efficiency, primarily brought about by investment of savings. Putting it simply, our price increases have reflected primarily an inflation in our costs which we were unable to overcome with greater efficiency.

While the figures will differ, other American businesses are in much the same situation.

Now Congress clearly cannot correct this situation by legislating greater efficiency—by legislating a greater annual productivity. This is the job of each individual enterprise and can only be done individually.

But can Congress do anything about the wage-cost increase aspect of the matter? This, I believe, is a thorny problem which is not of easy solution.

I know that many believe that the greater the power of labor, and its control over costs, the more likely it is that there will be overreaching by labor of any productivity improvement. This, I think, is a matter for Congress to determine in its own way after hearing from all concerned.

To avoid, however, giving a disproportionate share of the total product of an industry or of the country to labor, one of two things must happen: The first is necessary price increases, which have the effect of converting the money gains of labor into lesser gains in real wages. This results in the real wage increases more nearly approximating productivity gains. If this is done, capital investment is less likely to be stifled and that investment, which is the only real source of improving the lot of everyone, including labor, will not dry up.

The other alternative is to lessen the control labor has over increasing costs.

What Congress can or wishes to do in this field is, of course, a serious political question of great import. Congress is now investigating various phases of labor and will, of course, be in the best position to weigh the relationship between the existing forms of labor organizations and the bargaining power thus obtained. Against this it will also be able to weigh the many reasons advanced by advocates of large labor organizations for such form. It is, as before noted, a complex political and practical problem, the solution of which I do not attempt to forecast.

But of this much I am confident. Congress cannot and should not attempt to solve the matter of wage pressures by enacting wage controls, whether or not accompanied by price controls. Such controls have accomplished relatively little even under the stress of national emergency and in my view would have no chance at all in peacetime. Nor would such controls be desirable in a vital, growing peacetime economy which must have flexibility both for labor and industry if that economy is to remain healthy.

Attempts to control wages or prices or both of them would be the surest way yet devised to inject the virus of degradation and decay into the greatest industrial economy on the face of the earth.

This is not to say, however, that reducing the degree of inflation is a hopeless task. There are a number of ways to work at the matter productively.

With the passing of the postwar period of shortages, it seems to me that natural pressures are beginning to make themselves felt in many segments of the economy and will constantly be more and more noticeable as a factor in slowing down general inflation.

In the light of this subtle change in our economic picture the monetary policy of restraint on money and credit now being pursued by the Federal Reserve Board may have a constantly growing effect. To what extent that policy should be followed is, I believe, a matter to which Congress has been giving much attention. I can suggest nothing to help the competent hands of those in charge of it.

Additional evidence of this pressure against inflation, even the wage-cost type, is the catching up of more and more industries from a supply point of view. In the presence of a greater understanding by employers and unions and employees of the inflation spiral—an understanding we are earnestly trying to achieve in our own situation—this fact should also have an increasingly beneficial effect.

A beneficial role which Congress can undertake is this. Although it is recognized that Congress has many political pressures upon it, nevertheless individual Members of Congress can consciously examine every proposal from this point of view: What effect will it have on the amount of savings and the investment of those savings in the sources of production from which comes our constantly improving output.

If a given measure will increase savings, it is almost sure to increase production and productivity. If it does so, it is bound to decrease inflationary tendencies and at the same time improve the standard of living for everyone. If the measure adopted by Congress hurts savings, it cannot possibly help in the struggle against inflation.

This constant look at savings is the most important contribution Congress can undertake, I believe, and it is a never-ending one affecting many of the measures which Congress is constantly making whether such measures relate to taxes, appropriations, or almost anything else.

A third, and I believe the most productive long-range measure which involves no legislation and in which each one of us can help, is this. Let us keep on trying the American way of telling the people and of having them understand. If they understand they will help, for after all they have the greatest stake. I believe that the people of this country have their own way of taking care of great national problems such as inflation. If they can understand it, the problem is half solved.

There are attached to this brief statement two other statements which are worthy of particular note. The first is a recent statement by Mr. George Meany, which recognizes the problem and I believe also at least portrays an attitude which if we all had it would help solve the matter.

The second is the lead editorial from the Economist of July 20, 1957, which more clearly than I can do it discusses inflation, its causes and possible solutions. It also shows that other countries have much the same problem as we do.

To sum it up, I believe that with increased productivity, greater production, more public understanding and with voluntary restraints on the part of all of us—employers, unions, consumers, and every important segment of our economy, the threat of inflation can, at the very least, be slowed down.

EXCERPT FROM ADDRESS BY GEOGRE MEANY, PRESIDENT, AFL–CIO, BEFORE THE CHICAGO FEDERATION OF LABOR AND THE CHICAGO ASSOCIATION OF COMMERCE AND INDUSTRY, JULY 9, 1957

But let me point out to you that the real internal threat to our way of life lies perhaps in the subject mentioned a few moments ago by Mr. Block when he speaks of inflation, prices, wages. All of these things have to do with the maintenance of the American economy. And the real threat, the thing that the Russians have been looking fondly forward to for many years is the collapse of the free enterprise system. In fact, they have been preaching the idea to their students for many years that there must be a collapse in the American economy. Their thinking is based upon two apparent weaknesses in our economy. First, the constant danger of inflation followed by deflation. Secondly, the clashing interests of management and labor.

These two problems are closely inter related. In the very nature of the free enterprise system, production is geared to a basic incentive. On the one hand, capital and management want more; on the other hand, labor wants more. Both want more constantly. These desires are natural and healthy and possible of attainment if pursued with commonsense and intelligent self-restraint.

As the dynamic economy of ours keeps going, it keeps growing and greater rewards are available for those who contribute to the processes of production. But labor cannot make progress at the expense of the rest of the economy and business cannot make progress at the expense of the rest of the economy. Neither can take out more than they put in. Let me put it another way. Labor can't put the fellow out of business who fills the pay envelope and then still have a filled pay envelope. The employer cannot overprice the customer beyond the customer's means and still expect to have a customer. Both labor and management have a responsibility to each other, to the community and to the Nation as a whole. Only through the exercise of such responsibility can we avoid the pitfalls of inflation and eliminate some of the labor-management conflicts which have plagued us in the past.

[From the Economist of July 20, 1957]

NON POSSUMUS?

On Monday Mr. Thorneycroft hastened again to the microphone to explain what he did not mean by his warning words last week. There is, after all the flurry, no crisis; "Exports are rising, production is going up. There is a large volume of investment and a good outlook of a trade surplus with the rest of the world." All this is true. Why, then, did the Chancellor of the Exchequer decide to sound the alarm last week? There may well be doubts about the wisdom and the timing of the way he did it, but the answer is very simple. He was drawing attention, not to any present crisis, but to the continuing crisis of our times, the fall in the value of our money.

Inflation is like sin. Everybody is against it, but it goes on. The only remarkable thing about the present public fuss over inflation—stirred up as it has been by the recent rash of price rises—is that it has taken the public so long to get to this point of apprehension.

It is fair enough to ask the Chancellor, after his crying havoc last week, what he proposes to do to stop the rot; the Government, after all, controls not only the public purse but the supply of money in the public's pockets as well. It is, however, altogether unfair not to recognize that any effective remedies that Mr. Thorneycroft might now propose are likely to be wildly unpopular among large sections of the community, including some of his most vehement critics. There are, in fact, two questions to be asked about any proposal to halt the chronic propensity to inflation. The first—"What will do the trick?"—is economic. The second—"Can't it be done?"—is political.

The fall in the value of money is a simple fact, only too visible to every citizen and only too easy to grasp. The economist's explanation of how it comes about is more complicated and full of nice distinctions. Even so, its gist can be simply put. There are, broadly, two kinds of inflation. There is the inflation that is caused by "too much money chasing too few goods," that is, by excessive demands at existing prices for the goods and resources available; and there is the inflation caused when (above all) wage costs persistently and generally rise faster than output. In practice, of course, the distinction between "too much money" and "too much wages" as the cause of inflation cannot be pressed too far: in each case the consequence is a general rise in prices, either pulled up by excessive demands or pushed up by excessive costs; and the so-called cost inflation could not continue if there were not enough money about to enable the ever-higher wages and the ever-higher prices to be paid.

With the reservation, it is obviously useful, when looking for the appropriate remedies, to diagnose what variety of the inflationary infection has now to be treated. (One or the other has been with us, under all kinds of governments, almost continually since early in the Second World War.) There can be little argument about the guise in which the infection presents itself for treatment at this moment. It is cost inflation, and overwhelmingly the largest cause of it is the way in which the trade unions are exploiting the present strength of their bargaining position; the Chancellor's critics are, in effect, asking: What are you going to do about wages? It is not now, primarily, the pressure of total demand that sparks the present and prospective troubles. Two or three years ago it was different. Then it seemed evident that the leading cause of the inflation, with the consequent climb in prices, distortion of production, diversion of resources, delays in trade, deficit in oversea payments, and drain on the reserves, was excessive demand. And the Government set out to contain the demand inflation by making money dearer and scarcer. Some will say that the tight money policy has been disappointingly slow and partial in its effects—not surprisingly when the public sector of the economy is so large and, relatively, so undisciplined financially. But the fact is that the policy has succeeded in its main objective; to check the growth in demand and safeguard the balance of payments.

The volume of demand in Britain has not in fact increased at all, until now, in the last 2 years. But, in consequence, after rising by about 4 to 5 percent a year until mid-1955, industrial production has, until now, not increased—even though investment in the capacity to produce has grown all the time. This is the price that has been paid, and the argument for constraining demand still further, in order to hold back inflation, is not, on these facts at any rate, strong. Indeed, it is hard to believe that this country can either escape from its dilemmas or seize its modern technical opportunities by putting a permanent ceiling upon its output. It is practically, as well as theoretically, true that the only constructive way out of the impasse is by producing to the top of our bent. But the vital rider to this truism is that cost and prices shall not outstrip, as they are outstripping, our rate of production. Cost (or wage) inflation is plainly the present foe.

This is by no means yet out of bounds; but it is becoming, and will become, still more apparent. Last year, while industrial production did not rise at all, personal incomes rose by some 7 percent; and under the pressure of wage increases we look like having at least that degree of cost inflation this year. Moreover, Britain achieved last year what, in view of these wage increases, was a relative stability of prices (the cost of living has risen by only 3 percent in the past year, and 2 percent of this has come in the last two months.) The reason for this halt was that, with relatively slack demand for their products, industrialists have been absorbing some of the wage increases by a cut in their profit margins. They are not likely to go on doing this much longer. The Post Office, as well as other public and private bodies, seem inclined, in determining their inevitably higher charges, to discount the future, as well as the present, inflation in costs. The reason for this trend is that demand is already beginning to pick up. The seasonally adjusted index of industrial production was about 1½ percent higher in April than in January; and in the absence of fresh restraints in demand, industrial production by the end of the year might be expected to be running 4 to 5 percent higher than at the beginning. Even then demand would be no more than half way back to what should be, after recent investment, our full capacity to produce. But the brutal question must be: at what cost is expansion possible in terms of prices at home and, competitively, abroad.

What can the Government do about wages? The question, it should be repeated, is even more political than it is economic. It has to be put to public opinion, and particularly to the trade unions, at least as bluntly as to Mr. Thorneycroft and his colleagues. The choices, at any rate, can and should be stated. The first and most desirable—but on the present showing of, say, Mr. Cousins' utterances, the least likely—is the complete revolution of thought in the trade unions that would put production, earnings and the workers' real income before the unending, and unsatisfying, race for larger money wages. It is presumably in pursuit of the hope of influencing union members (not necessarily union leaders) toward this course that Mr. Thorneycroft and Mr. Macleod are still pressing the project for an impartial—and trusted—body to hand down the tablets of economic truth. They are right at any rate in assuming that, when the pinch of continued inflation at last does outweigh the meretricious gains of overfull employment and stuffed pay packets, it is the climate of public opinion that will be decisive.

The second choice, too, depends upon public opinion. It is to refuse wage demands where they should not be afforded, and first of all in those nationalized undertakings that are overmanned and in deficit—and where, in one way or another, the easy way out is to find the money and pass on the cost. It means being will, if need be, to stand up to strikes instead of buying them off. And the third and harshest choice, which goes to the heart of the economics of inflation, is to make it impossible, even at the cost of continuing to rein in the economy and at the risk of disproportionate unemployment, for employers, whether public or private, to find the money to meet extravagant claims and pass on their cost.

The Chancellor can justly ask which one or more of these remedies his critics, and his followers, want. Central control of wages is surely ruled out; and price control is no remedy at all. Both he and they know perfectly well where the real interests of every section of the community lie: in a high-producing and high-earning economy, unimpeded by inflation of any sort; in a steady increase of output and productivity, with earnings and profits, investment and (indispensably) savings, going up in, and not out of, step. The Government cannot escape the responsibility of leadership. But the remedy cannot simply be imposed. This country and its people face great opportunities. Those of every class and doctrine who will the end of ridding this country at last of the blight of inflation must themselves will the means. Or are we to say that we cannot help ourselves?

Need for Industrial Development in the South

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, August 23, 1957

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by an outstanding and forward-looking citizen of my State, Mr. R. E. Dumas Milner, dealing with the need for industrial development in the South. Mr. Milner is a member of the executive committee of the Mississippi Agricultural and Industrial Board. A young man of 40, he is one of our State's and the South's leading businessmen. I take this opportunity to commend Mr. Milner on his effort in behalf of the South and its industrial growth, efforts which are of great value to our Nation as well. This statement is sound, and is a challenge to our national thinking.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A FAIR SHARE

(By R. E. Dumas Milner)

The expanding industrial potential of the South is not being fully realized today by the Government Federal procurement program. This is a situation which is not only harmful to the South itself but also damaging to the economy and welfare of our Nation. Whenever a major portion of our country's population and resources are not efficiently utilized, the country as a whole, its economic health and its ability to defend itself is weakened.

The Federal Government is the largest single customer for American business in our economy. It, therefore, plays a major role with respect to the welfare of American business. It is a role which has its effect on the living standards of our people. It is a role which the South must fully appreciate.

America's Southland is no longer a wasteland. In every State, county, and nearly every city new industries and businesses are springing up almost overnight. In Mississippi alone, nearly 10,000 new industrial jobs were created in 1956—a reflection of the progressive thinking of the State that is helping itself achieve a logical balance of industry and agriculture.

The South is responding to the needs of the 20th-century America. In order to promote increased industrialization, it is overhauling its educational system. The sharecropper is rapidly being replaced by the skilled machinist and technician. Those of us who live and work in the South are proud of the progress that we have made. We are fully persuaded that we are ready, willing, and immediately able to contribute to our national defense program as competently and as fully as any other area of our Nation.

It is, therefore, unfortunate that the South has to date not received its full and fair share of Government business. We do not in the slightest wish to place ourselves in the position of in any way minimizing the importance of other areas in this Nation but we do know that the lack of heavy industry in the South is holding the South back. We know, furthermore, that the Government defense contracts are vital to the development of such heavy industry. In this fiscal year it is expected that some $30 billion of defense contracts is being awarded by Uncle Sam. Only a minute part of this total is being awarded to southern business. We deserve our fair share and we are not getting it.

Growing industrialization in the South would not only assist the South and strengthen our national defenses, it will also accelerate unity in our country which would bode well for the future of America. Traditionally the strength of America lies in its solid middle class community. These are the people who make and consume the bulk of our Nation's goods. They are the ones who pay the most taxes, who do the most work and upon whom the living standards of an area rest. They are indeed the heart and backbone of America.

Without ever-increasing industrialization the South cannot provide the jobs and the incomes so necessary for the growth of the middle class. American large-scale industrialization is necessary for this growth.

The Federal Government must act so as to correct the present contractual imbalance which keeps the South from sharing fully in our country's development and prosperity. This is a national problem and merits the attention of all Americans whether they live in the North, East, South or West. It specifically calls for growing awareness and mobilization in the South itself.

The solution that I propose is the formation by Presidential appointment of a committee to coordinate the requirements of the Federal agencies with the industrial capacity of the Southern States. Such a committee composed of legislators and businessmen, should have the responsibility to advise Federal agencies of the proposed facilities and potentialities of each State. It should coordinate its activities with the State Development Boards of each State. In this way the Southern industries will get the backing and support that they need to contribute "the mostest and the fastest" to the economy of the country.

This is not a request for special privilege. This is not a request for Government subsidy. This is rather a request by the South for an intelligent, coordinated national plan to strengthen the South and thus strengthen the Nation.

Every Southern State has its own development board. Some are more effective than

others but all of them stress their ability and desire to use their own energies to strengthen themselves. What they need is an opportunity to share equally and fairly in Government contracts and in utilizing the advantages of Government programs. In my own State of Mississippi, the Agricultural and Industrial Board is working around the clock to attract new industries within its borders but many of these new industries cannot take advantage of the raw materials, the labor and the power facilities of the South until such time as the Federal Government itself realizes those potentialities and acts to make them a reality.

The South today is at a crossroad in its progress. With contractual equity it can continue to expand and produce industrial and consumer items for the use of America and the rest of the free world.

The Appointment of Ambassadors

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial from the Baltimore Sun, and to associate myself with the puzzlement of the professor who has tried to impress his students with ideas on the exacting qualifications for an ambassador outlined in a book on diplomacy by another Secrteary of State, John W. Foster, grandfather of John Foster Dulles, our present Secretary. And despite Secretary Dulles' recent disparagement of these qualifications, I find myself in closer agreement with his grandfather as I look at the serious problems the United States is facing all over the world.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of August 14, 1957]

ON MAKING DIPLOMATS

Last week the Secretary of State, defending the recent appointment of a heavy Republican campaign contributor to an ambassadorial post, said:

"Now the question of the selection of any particular person depends primarily upon whether he has integrity of character, whether he has a sharp and quick intelligence and whether he is genuinely devoted to the public service. We believe that out of those three qualities can be made a competent and efficient ambassador."

Mr. Dulles was speaking at a press conference and so perhaps could not heed the maxim of François de Callières that the diplomat must resist the longing to speak out before he has thought out what he intends to say. That he didn't think it out fully in this case, is suggested by a recent letter to the New York Times from Dr. Hans J. Morgenthau, director of the University of Chicago's Center for the Study of American Foreign Policy.

Dr. Morgenthau observes that for 25 years "I have tried to impress upon my students how exacting the qualifications of an ambassador are" and how much knowledge and power of judgment an ambassador needs. To support his position, Doctor Morgenthau quoted from a book, "The Practice of Diplomacy," written by the Secretary's grandfather, John W. Foster, who had also served as a Secretary of State. Mr. Foster, he pointed out, had spoken of the baneful influence of political favoritism in making diplomatic appointments and had also quoted, approvingly, from a Senate report of 1868 to the effect that no man can pass from other pursuits directly into the higher grades of diplomatic and consular service and comprehend clearly the nature and scope of his duties. But, Doctor Morgenthau adds:

If I take Mr. Dulles seriously, the only thing I need to tell my students now is: "Boys, be of good character, intelligent and devoted to public duty." Class dismissed. Next time Mr. Dulles expatiates in general on what's needed to make an ambassador he will presumably see to it that the rug on which he stands has been firmly tacked down at all four corners.

The Cordiner Report

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. KUCHEL. Mr. President, only 13 percent of the men in the Armed Forces with special technical skills are reenlisting. That is another way of saying that 87 percent of the men in the Armed Forces of the United States with special technical skills are not reenlisting. In 1955, 4,000 pilots left the Air Force. That represented a loss to the people of the United States of $480 million.

There is no comfort in these similar figures for the people of the United States. There is a great deal of comfort in these figures for the leaders of international communism. The Cordiner Committee calls the statistics shocking. So do I.

One of the excellent newspapers in the State of California, the San Diego Union, asks Congress to enact the recommendations of the Cordiner Committee. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the San Diego Union of August 20, 1957]

TIME, MONEY IS WAITING—ENACT THE CORDINER REPORT

Little time remains this session for Congress to remedy a chronic weakness in United States national defense.

Only 13 percent of the men with special technical skills are reenlisting. A special Committee, headed by Ralph J. C. Cordiner, who is president of General Electric Co., spent more than a year studying the military manpower problem.

Its findings established that unless skilled technicians are offered greater financial incentives in military service they will continue to be lured to civilian life and the greater incentives offered by private industry.

Mr. Cordiner calls the armed services' loss of manpower shocking. His committee was able to document a $5-billion-a-year loss to the country. The 4,000 pilots who left the service in the fiscal year 1955 represent a training loss of $480 million alone.

Waste of the taxpayers' money is serious enough, but by no means exhausts the dangers arising from the present system. Equally dangerous is the degree to which the attrition of specialists lowers United States combat readiness.

It is a dangerous fallacy to assume that advanced weapons alone will produce an adequate defense and deterrent to war. They can't, of course. Unless the armed services have officers and men trained to operate modern weapons, these highly complicated devices are useless.

The Cordiner Committee proposed a radical change in Armed Forces pay; it would alter the longevity system that this country took over from the British after the War of 1812.

The so-called Methuselah system, based on years of service and seniority, would be replaced by the establishment of "compensation systems that bear a direct relation to the effort of the individual * * * with compensation levels reasonably comparable to those paid people employed elsewhere in similar positions and occupations."

After initial opposition by the Bureau of the Budget, there is widespread support in the administration and in Congress for the Cordiner recommendations. Senator STUART SYMINGTON, Democrat, of Missouri, has introduced a bill embodying the Cordiner report. This bill was endorsed by Senator BARRY GOLDWATER, Republican, of Arizona, and is now known as the Symington-Goldwater bill. Companion legislation has been introduced in the House.

This country can't hope to maintain armies to equal the massed peasant armies of Russia and China. But we can have qualitative superiority. A proficiency pay system will provide this advantage.

Price Discrimination Continues in Absence of Enactment of H. R. 11

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. PATMAN. Mr. Speaker, in urging the Congress to enact H. R. 11, I have explained that its provisions would serve to prevent a variety of competitive inequities which prevail today due to the present language appearing in section 2 (b) of the Robinson-Patman amendment to the Clayton Act. In connection therewith my attention has been invited to a letter written by the owner of a Sunoco gasoline station located in Elizabethtown, Pa., which illustrates quite effectively the need for the proposed legislation.

In his letter the owner of the Elizabethtown Sunoco station explains that his business has dropped 25 percent because the Sunoco stations in Lancaster, Pa., 18 miles away, are offering gasoline to consumers at 3 cents a gallon below his cost but earn 4 cents a gallon profit in so doing. Of course, the explanation is quite simple because the Sun Oil Co. is requiring the Elizabethtown dealer to pay 7 cents per gallon more than the Lancaster dealers.

This letter of the Elizabethtown dealer is also noteworthy in that it points out that the Sun Oil Co. would grant the

same low price in Elizabethtown if the Elizabethtown dealer would surrender control of his own business to the Sun Oil Co. by becoming a consignment dealer.

Since this letter portrays so clearly the inequities and unfair burdens that must be borne by small business until H. R. 11 is enacted, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR MR. AND MRS. SUNOCO CUSTOMER: For some time now you have been asking me: "Reinhold, why don't you sell your gasoline as cheap as the dealers in Lancaster?"

I have been asking a similar question of my Sun Oil Co. salesman and district manager, namely: "Why can't I buy my gasoline as cheap as the dealers in Lancaster?"

As of this date I am paying 23.3 cents per gallon for my gasoline. (This includes 5-cent State tax and 3-cent Federal tax.) Sun dealers in Lancaster are retailing Sunoco gasoline for 19.9 cents per gallon. This looks as if they are selling at a loss of 3.4 cents per gallon. This, however, is not the case. Lancaster Sun dealers at the present are realizing a 4-cent-per-gallon profit, which means that they are paying only 15.9 cents per gallon. (Five-cent State and three-cent Federal tax.) If you take the price I am paying for gas, 23.3 minus 15.9 (Lancaster dealers' cost) equals a difference of 7.4 cents per gallon. Is it any wonder that you can buy Sun gas cheaper in Lancaster, in fact 3.4 cents per gallon cheaper than I can buy it from the company in quantities of 4,000 to 6,000 gallons at one time?

Printed below is a letter to Mr. C. A. Sparks, regional manager, Sun Oil Co., Philadelphia, Pa., trying to find out why and how a situation like this can exist:

ELIZABETHTOWN, PA., *August 12, 1957.*

Mr. A. C. SPARKS,
Regional Manager, Sun Oil Co.,
Philadelphia, Pa.

DEAR SIR: Allow me to introduce myself. My name is Leroy F. Reinhold. I am a Sunoco dealer, located at 735 South Market Street, Elizabethtown, Pa., and operating under the name of Reinhold's Sunoco Service. I became associated with Sun Oil Co. in January 1946, when my brother Herman assumed operation of said station, and hired me as a helper. This job was on a part-time basis because I was attending college at the time. I continued working for my brother after I had completed my college course, which was in the summer of 1947. After working for Herman about a year, I was approached by the Sun Oil salesman about a station of my own. As things turned out, Herman took over a station in Harrisburg, and I became proprietor of Reinhold's Sunoco Service. I was very proud of this fact. I was a free and independent businessman.

It was at this time that I decided to follow the policies which I had seen brother Herman set forth and practice, namely:

1. Always sell quality products.
2. Be competitive.
3. Operate a clean station.
4. Give good customer service.
5. Employ top quality personnel.
6. Treat your employees fairly.

Mr. Sparks, I can say without any hesitation that I have followed this policy faithfully for the past 9 years, with but one exception—the past 2 years there have been periods of time when I have not been competitive with the price of gas that I've been posting.

It all started a little over 2 years ago when we had a situation arise in Lancaster, Pa., a distance of 18 miles from Elizabethtown, called a gas war. At the time of this gas war, I was realizing 4 cents on each gallon of gasoline that I sold. My price had been competitive and my business prospered. However, since dealers in Lancaster began selling gasoline cheaper than I, my gallonage started to drop. In fact, as much as 25 percent in 1 month. Naturally this situation alarmed me. I contacted my Sun Oil salesman and also had numerous talks with the Harrisburg district manager. Result, no help from Sun Oil Co. As a last resort, to hold my customers, I dropped my gas price and instead of making 4 cents per gallon, I found myself making only 2 and 2.5 cents per gallon.

You know Mr. Sparks, the thing that I couldn't understand 2 years ago and still can't understand today is that Lancaster dealers had been paying the same price for gasoline as I had been in Elizabethtown, but when the gas war started, they were underselling me by several cents a gallon, still making 4 cents per gallon profit. I couldn't meet their price even when I cut my margin to 2 and 2.5 cents per gallon. It was at this time I threw one policy out the window, namely: No. 2. Be competitive. I remained competitive on everything except gasoline. I found out that I couldn't be competitive on gas price when the company sold me gas at one price, and sold it cheaper to other dealers.

What a sorry mistake I made 2 years ago when I decided to change my policy of being competitive when Sun Oil Co. decided it could lower its gasoline price to Lancaster dealers and not to me. The situation we had 2 years ago is mild compared to the situation today.

Mr. Sparks, at the present time I pay 23.3 cents tax included for a gallon of gasoline. This same gas is being sold at the retail level at 19.9, 3.4 cents cheaper than I buy it. In other words the Sun Oil Co. is selling its gasoline 7.4 cents per gallon cheaper to Lancaster dealers than to me. I have asked the company repeatedly for a competitive buying price on the gasoline which I buy. At all times the Sun salesman and the district manager have offered me commission consignment. Your company representatives and I have discussed this plan at great length many times. You offer me help if I agree in turn to give up my right to own any gasoline.

As I see it, Mr. Sparks, you are asking me to sell to Sun Oil Co. my right as a free and independent businessman in exchange for some temporary relief.

Yes, Mr. Sparks, as the contract now reads, a dealer has the right to break it whenever he wishes. Show me one dealer that will break this contract when he knows that by so doing he will have to pay 23.3 cents instead of 15.9 cents per gallon. I have repeatedly asked my district manager for assurance that the minimum profit per gallon as listed in the contract would be guaranteed for perhaps a period of 1 year instead of 5 days. He can give me none. Some of the things which I fear with commission consignment are:

1. This temporary contract is a stepping stone for permanent commission consignment.

2. I am afraid that the minimum profit per gallon will be lowered at the company's discretion.

Mr. Sparks, I would like to have some answers to several questions which customers have been asking me.

1. What is a gas war?

2. What is a depressed area?

3. Who starts a gas war?

4. What caused the gas war in Lancaster, Pa.?

5. How many dealers in Lancaster County, Sunoco or competitive brands are paying 23.3 cents per gallon for gas?

6. Why must a Sunoco dealer sign a consignment contract before his price is lowered?

In all fairness to the company, I will arrange to have your reply to my letter also published in the local paper. I would appreciate that reply by August 19 for this reason.

Sincerely yours,

LEROY REINHOLD,
Reinhold's Sunoco Service.

Dispelling the Economic Fog

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. VURSELL. Mr. Speaker, it is estimated for the year 1957 that the total value and production of goods and services of the United States will reach an alltime high, of about $450 billion.

Since this great expansion of business, increased wealth and prosperity has made it possible to employ 67 million people at the highest wages on record, it would seem that the millions of men and women throughout the Nation who invest their capital in business enterprises, and the leaders of business as well, ought to be shown greater apprecation by the people generally, and by the Members of Congress, than has been shown in the last few years.

Mr. Speaker, I make this statement because groups and organizations have developed in our country which, through false publicity and propaganda, constantly try to deceive the people and prejudice them against business leaders—both large and small.

Those most active in making such acusations of exorbitant profits made by business are largely followers of the ADA political group, and in addition most of the so-called liberals and the Socialist-fringe crowd. They, and their organized groups, constantly quote the volumn of gross profits made by corporations, but they never tell the public about the small net profit remaining with which pay the stockholders and to continue the business that furnishes the employment—in fact the intent of this repeated propaganda and misstatements is to deceive the great bulk of the American people.

Mr. Speaker, may I illustrate my point by referring to the recent rise in the price of steel? The price of steel went up on August 3, 1956, when the United States Steel Corp., after holding out 34 days against a strike—at the loss of millions of dollars—finally had to agree to a 3-year labor contract, which would give their employees about 21 cents an hour wage increase each year. When August of this year came, steel had to raise its prices because of this 21 cents an hour increase in the cost of labor.

An investigation has recently been conducted in the other body by the Antitrust and Monopoly Subcommittee, which has had the United States Steel

officials before it, trying to determine why it was necessary to raise steel prices.

It seems obvious that any corporation, or an individual businessman, who had been forced to sign a contract to raise the wages of his employees 21 cents an hour each year, for 3 years, would most likely be compelled to raise the price of the product sold in order to remain in business.

Now, Mr. Speaker, to give some real facts: The records show that from 1940 through 1956, United States Steel's employment cost per employee-hour went up 250 percent while the materials they had to buy, all their taxes and other costs rose 315 percent. United States Steel's cost per employee-hour rose 284 percent over this period of time.

In contrast, United States Steel held down the price of finished steel mill products, according to the Bureau of Labor Statistics, to an increase of only 138 percent. The difference between the total cost and the increase in price was absorbed by United States Steel over the years through greater efficiency and operation, and at the expense of billions of dollars in modernization and improvement of its facilities, and partly, too, by lower profits.

Mr. Speaker, it might surprise you to learn that United States Steel Corp., emerging from the depression in 1940, made a profit of 9½ cents on each dollar of sales; that last year their profit on dollar sales was 8$\frac{7}{10}$ cents.

In 1956, United States Steel had left for reimbursement in the business 4$\frac{7}{10}$ cents of the sales dollar, and paid out 4 cents of each sales dollar in dividends.

Mr. Speaker, now the same propaganda has been put out about the enormous profits made by the International Harvester Corp., John Deere, and other concerns manufacturing farm implements.

Let me illustrate by quoting from International Harvester's annual report to stockholders in 1956:

Each dollar gross receipts of a total of $1,270,275,000 was distributed as follows:

For cost of materials, supplies, and other expenses, 56$\frac{9}{10}$ cents.

For wages, salaries, social-security taxes, and employee plans, 35½ cents.

For taxes, Federal, State, local (excludes social security), 3$\frac{8}{10}$ cents.

Dividends to shareholders, 2$\frac{9}{10}$ cents.

Retained for use in the business, 1$\frac{9}{10}$ cents.

Mr. Speaker, you will note that the dividends going to the shareholders who furnish the investment to keep this great production going, with hundreds of thousands of people employed, only received 2$\frac{9}{10}$ cents out of each dollar of receipts and, in addition to that, stockholders must pay Federal income taxes on dividends received.

You will further note that the company was able to hold out only 1$\frac{9}{10}$ cents, which they retained for use in the business for the coming year.

Mr. Speaker, about the same ratio applies to Allis-Chalmers, John Deere, and other manufacturers of farm equipment.

Now, the so-called liberals, leftwingers, and Socialist fringe, among the people and in the Congress, make the same charges about the exorbitant profits of General Motors.

Mr. Speaker, they never tell the people that all of the large corporations are taxed about 52 percent of their net earnings. They don't reveal that General Motors on a $10,910,000,000 gross business netted last year only 7¾ cents profit on each gross dollar of sale. They do not tell that 5¼ cents was paid out of these net profits to their over one-half million stockholders in dividends, who finance the corporation and make possible employment for over one-half million people.

Mr. Speaker, they do not tell the public that the General Motors Corp. out of that gross dollar of sales retained for facilities and working capital only 2½ cents of every sales dollar.

Now, Mr. Speaker, I am not speaking for business by reason of the fact that I own stock in these corporations; in fact I must confess I own no stock in any of them. I am making these statements because the private-enterprise system has helped to make this the most powerful Nation in the world, supplying the finest equipment in every line in the world, and furnishing employment for 67 million people who have the highest standard of living and the highest wages of any people in the world.

Mr. Speaker, in my humble way I am trying to shed the light of truth and justice on the businessmen of the Nation in the hope of giving such facts as will penetrate, and maybe partially dispel the fog of misrepresentation and the false statements that are directed against the business interests of our country.

Postal Pay Increase

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. WIER. Mr. Speaker, in the August 1957 edition of Branch Nine News, National Association of Letter Carriers, there appeared a prayer offered by Rabbi Lewis N. Ginsburg, 1230 James Avenue North, Minneapolis, Minn. It illustrates the difficult problems encountered by our postal employees and their struggle to make such ends meet on their present inadequate salaries.

The prayer so beautifully expresses the plea of our postal workers that I should like to call it to the attention of the Members of the House. Therefore, I ask that it be printed in the Appendix of the RECORD.

Rabbi Ginsburg's prayer is as follows:

THE POSTAL WORKER'S PRAYER

Eternal Father, in their hour of need as in their hour of thanksgiving, in their hour of stress as in their hour of joy, men and women of faith turn unto Thee in prayer and entreaty. There is hope in their hearts, trust in their souls, for they are Thy children and Thou art a kindly Heavenly Father.

They are cognizant that prayer is not a sentiment or a theory, but rather a working instrument, which is to do certain things, just as a pen is to write, or scissors to cut.

We come to Thee in the early hours of the morning prior to embarking on the tasks of the day to beseech Thy guidance in our cause. We turn to Thee not with the audacity that would seek to make our will Thine, but in unassuming petition that merit, righteousness and justice be characteristic of our undertaking so that we may be worthy of walking humly at Thy side.

We are public servants, O Heavenly Father, serving our great country and our brethren. We take humble pride in our role. Grant us, we pray, Thee, the dedicated spirit to fulfill the honored tradition we represent—that naught will stay us from the swift completion of our appointed rounds.

We have felt the stress of economic pinch. Our bid for relief by legislation has seemingly been shunted aside. Leaders of our great land talk of closing the door upon us. Men may overlook us, but our Heavenly Father will not forget. Unto Him do we turn.

Make us aware, we beseech Thee, that even as we ask for an increase in our earnings, increased earnings are not an end in themselves. Let us not become victims of the vanities of life. Let us seek increased earnings only as a means of better serving our families and our fellow human beings—and thereby serving Thee.

If our cause be just, O Heavenly Father, then afford Thy great guidance to our lawmakers and to the President of these United States. If our endeavors culminate in success, grant that we may have the wisdom to come to Thee in thanksgiving even as we have come to Thee in petition.

If our cause lacks merit in Thy wise sight, grant us the moral courage to accept that decision and to be grateful unto Thee, even in an hour of disappointment, for having listened to our plea.

Above all, guide us, inspire us, enthuse us for our daily tasks. Make us dedicated servants unto our brethren—loyal children unto Thee.

We pray unto Thee as children of faith in our hour of need for we are aware that "more things are wrought by prayer than this world dreams of." Amen.

Statistics Pertaining to Corn

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statistics relating to corn:

UNITED STATES
DEPARTMENT OF AGRICULTURE,
COMMODITY STABILIZATION SERVICE,
GRAIN DIVISION,
Washington, D. C., August 16, 1957.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR CONGRESSMAN BECKWORTH: Enclosed please find copies of the 1956 corn data as computed for the 23 States then in the commercial corn area. You requested that information in letters of May 10 and May 21, 1957.

The data for rice and wheat for 1956 were submitted to you July 12, 1957.

Sincerely yours,

CLARENCE D. CALMBY,
Director.

"Punching Bag" Gates

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bob Considine which appeared in the New York Journal American, dated August 20, 1957:

"PUNCHING BAG" GATES

(By Bob Considine)

"This is the first time I've ever been operated on without an anesthetic," Secretary of the Navy Tom Gates said to a friend in the wake of a recent snafu over the announced closing of a naval hospital.

Gates, one of the smartest, best-natured, and courteous men on the Eisenhower team, was widely accused lately of being rude and arrogant to a delegation of Californians who converged on San Diego to discuss with him the scheduled closing December 31 of the 750-bed Corona (Calif.) Naval Hospital. It was charged that he brushed them off with a handshake or two and disappeared in the midst of a swarm of rear admirals.

Actually, Gates was never told he was expected to meet with the group. Congressman DALIP SAUND, who later joined in roasting Gates for snubbing the group, was a guest aboard Gates' plane. Not once during the 3,000-mile flight from Washington did SAUND mention that he had alerted his people about a meeting with the Secretary.

HOW IT HAPPENED

Gates had just undergone a press conference in which he explained why the hospital and many other drains on the Navy's appropriation dollar had to be lopped off, when—upon leaving for his next appointment—SAUND asked him to say hello to a group. There was still no mention of a meeting. Gates shook hands all around, posed for several pictures, bid them a cordial farewell, and went on about his business.

He was not aware until the next day that after a talk with SAUND, the group had become embittered enough to issue blasts at the Secretary and threats of repercussions at the polls.

When it was time for the Gates plane to start its flight back to Washington, SAUND and Mrs. Saund stepped aboard as if nothing had happened. SAUND has said there will be an "investigation" of the closing of the hospital.

Teapot tempest? Perhaps, but it is a sample of the pain and ruffled political feelings that attend any shrinkage in Federal spending. The Secretaries of the several branches of the Armed Forces, for example, are the likeliest targets of any vote-conscious Congressman whose district has been affected by a cutback.

The Corona Naval Hospital is a peace casualty, and the area can no longer count on income from the hospital's doctors, nurses and patients. The Navy says there will be no hardships, medically speaking. There are still hospitals at San Diego and Pendleton, as well as hospital ships at Long Beach.

CONGRESS ORDERED CUTS

The irony of the attacks on Gates and men like him is that Congress itself ordered the cuts which individuals in the Congress decry when the orders are carried out. A further irony is that quite frequently a Congressman who has beat his breast in righteous indignation over the shutdown of some profitable installation in his district will—having made his show in front of his constituents—call up the Secretary and say, "I know you had to do what you did."

Gates tried to explain on the coast that he will effect savings in the Navy's investment in his home State, Pennsylvania, just as readily as anywhere else. To protect the Navy's shrinking funds, and keep its hardware ahead of the enemy's, Gates recently lopped 18,000 civilians off the payroll and mothballed 60 more outmoded ships. For port merchants, the retirement of those ships were as if 60 full payrolls were lost.

So Gates gets rapped.

Shortly after a nationally syndicated columnist rapped him last week, Gates' Pentagon phone rang. Sherman Adams was on the phone.

"Welcome to the club," said the greatest punching bag of them all.

U. S. S. "Arizona" Memorial

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. TALLE. Mr. Speaker, I would like to add my vigorous support to H. R. 5809, a bill to authorize the construction of a U. S. S. *Arizona* memorial at Pearl Harbor, T. H. Such a shrine will serve as a lasting tribute to the 1,102 valiant men of the *Arizona* who lost their lives on that disastrous Sunday morning, December 7, 1941, and who are still entombed in that sunken ship.

Included in this group are five men from the Second Congressional District of Iowa which I have the honor to represent in the Congress and I would like to pay tribute to them at this time. They are Lawrence Donald Anderson, Waukon, Allamakee County; Karl Anthony Giesen, Decorah, Winneshiek County; Richard Henry Eulberg, Garnavillo, Clayton County; John William Lincoln, Norway, Benton County; and Robert Denzie Taylor, Sabula, Jackson County.

Having served in the Navy myself during World War I, I feel a special kinship for these brave Iowans who died so that America might live. This memorial will serve as a constant reminder to us all that liberty and freedom cannot be retained cheaply, but must be constantly guarded and, if necessary fought and even died for.

As approved by the House without opposition, H. R. 5809 provides:

That the Secretary of the Navy be authorized to cooperate with the Pacific War Memorial Commission of Hawaii in developing a design for a memorial and museum to be built at or near the site of the hulk of the U. S. S. *Arizona* in Pearl Harbor, T. H.

That the Secretary of the Navy may—

(1) Accept contributions for the construction of a memorial and museum to be located on the hulk of the U. S. S. *Arizona* or adjacent United States property in Pearl Harbor, T. H.;

(2) Authorize Navy activities to furnish material to the Pacific War Memorial Commission for use in national promotion of a public subscription campaign to raise funds for a U. S. S. *Arizona* memorial;

(3) Authorize Navy activities to assist in conceiving a design and in determining the construction cost for the memorial;

(4) Undertake construction of the memorial and museum when sufficient funds have been subscribed for completion of the structure; and

(5) Provide for maintenance of the memorial and museum when completed.

Mr. Speaker, as you are aware, this memorial will be paid for from contributions of private citizens and at no cost to the Federal Government. Despite the last-minute rush of business before adjournment, I hope the Senate will take time to act favorably on this memorial honoring the valiant men of the U. S. S. *Arizona*.

Flood Protection for the Communities in the Merrimack River Valley

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Brig. Gen. Alden K. Sibley:

AUGUST 17, 1957.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: I greatly appreciate your telephone call of the 14th advising that the appropriation bill as passed by the Congress included funds for the Hopkinton-Everett project. It is only through continued and persistent efforts such as you have expended toward the furtherance of this project, that adequate flood protection can be provided for the communities in the Merrimack River Valley.

One of my engineers has discussed the studies of the Suasco Watershed Association with a representative of the State headquarters of the Soil Conservation Service. The studies on the Concord, Sudbury, and Assabet Rivers include consideration of ledge removal at Talbot Mills in Billerica and at Fordway Bar where route 3 crosses the Concord River. The studies also include investigation of impoundments at other locations in the watershed. It appears that the studies have not advanced to a point where conclusions or recommendations are available. The representatives of the Soil Conservation Service are aware of the possible downstream effects that might result from channel improvement at Billerica and assure us that their studies will give full consideration to any increase in flows on the lower Concord or Merrimack Rivers.

There is a close coordination between my staff and representatives of the Soil Conservation Service in this area which should insure a compatability of measures recommended by the two agencies.

ALDEN K. SIBLEY,
Brigadier General, United States Army, Division Engineer.

In Support of the Establishment of a Lincoln Sesquicentennial Commission

SPEECH
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. DENTON. Mr. Speaker, I rise in support of House Joint Resolution 351, to establish a Lincoln Sesquicentennial Commission. Abraham Lincoln is one of the most typical of Americans, and it is certainly apropos that this Commission be established to plan an appropriate observance of the 150th anniversary of his birth.

Abraham Lincoln was, to use his own words, born in "the most humble walks of life" in a log cabin in Hardin County, Ky. In 1816 when he was 7, his family crossed the Ohio River into southern Indiana, following a newly blazed trail to their new home in Spencer County, in the district I have the honor to represent. There Lincoln spent most of his youth, and it was not until he was 21 that the family moved once again in the year 1830, to Macon County, Ill.

The formative period of Lincoln's life was, therefore, spent in Indiana. Life in this frontier area was hard. The family was poor, and the country but little developed. The first winter Lincoln and his family lived in a mere shelter of poles, brush, and leaves enclosed on three sides. When Lincoln's father got around to building a cabin, it had no floor.

In 1818, Lincoln's mother, Nancy Hanks Lincoln died, unaware of the great destiny which awaited her son. The State of Indiana has established a State park where his mother is buried, in the midst of the rugged and beautiful country where Lincoln lived as a young man.

It is reported that Lincoln once said, "The Lord prefers common-looking people. That is the reason He makes so many of them." Much has been made of the fact that Lincoln was by origin a common sort of man. It is the nature of our system, that uncommon men such as Lincoln can rise above their surroundings and put the superior talents and superior ability with which they are endowed to use.

Life on the American frontier, it has been said, was an important formative influence in the development of our way of life. Where all find themselves in a condition of equality, where all face common difficulties, there, it is argued, a truly democratic spirit will prevail.

It is certain that Lincoln never lost the common touch acquired on the Indiana frontier. His formal education was meager. In Indiana he attended log schools, to which he had to walk long distances, for several years. In all, it is estimated, however, his attendance at school did not exceed 1 full year. His education was largely a matter of intellectual interest and application. His reading was largely in a few classics and in the miscellany of books which found its way to backwoods Indiana—the Bible, of course, Robinson Crusoe, Pilgrim's Progress, Aesop's Fables, Weem's Life of Washington, and a few others. His home might have been a rude frontier cabin—yet he did not lack contact with the great cultural traditions which have so strongly influenced the development of Western society and our own civilization.

The nearby Ohio River strongly attracted Lincoln. He operated a ferry over Anderson River at its mouth in Perry County, Ind., which county is also in the Eighth District. He also earned an occasional dollar by rowing passengers from the Indiana shore to passing steamers on the Ohio River. In 1828 he journeyed from Indiana down the Mississippi River into New Orleans. An early ambition was to become a steamboatman, but instead he stayed at home and worked on the family farm.

If life on the frontier was in many ways an enobling force, it was also for those who lived on it, as did Abraham Lincoln and his family, a time of great trial and challenge. The poverty and physical hardships of the frontier are often forgotten. It is well to remember that a man's greatness is measured not only in his accomplishments, but also in the moral and intellectual distance he has come. Lincoln's achievement was all the greater when we consider the great obstacles he overcame in achieving his place as one of the great leaders in our history and in the history of the world.

I am glad to speak in support of the establishment of a Lincoln Sesquicentennial Commission, which would do honor to this great man who spent the formative years of his life in the State of Indiana and in the Eighth District, which I represent.

Doom Song

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 20, 1957

Mr. REED. Mr. Speaker, the Democrats have taken up the sad refrain of ruin, despair, and desolation at a time when the United States is at the all-time peak of peace, full employment, and prosperity. They have joined those prophets of doom whose predictions have never come true, predictions such as the following:

In 1801 Wilberforce said:

I dare not marry—the future is so unsettled.

In 1806 Pitt said:

There is scarcely anything round us but ruin and despair.

In 1848 Lord Shaftesbury said:

Nothing can save the British Empire from shipwreck.

In 1849 Disraeli said:

In industry, commerce, and agriculture there is no hope.

In 1852 the dying Duke of Wellington said:

I thank God I shall be spared from seeing the consummation of ruin that is gathering about us.

In 1860 President Buchanan said:

Indeed all hope seems to have deserted the minds of men.

On May 13, 1904, in a speech he made in Birmingham, Joseph Chamberlain said:

The day of small nations has passed away; the day of empires has come.

The Maid of Orleans said:

Against stupidity the very gods themselves contend in vain.

The Commodity Credit Corporation

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 23, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from a speech made by Mr. John H. MacMillan, Jr., chairman of Cargill, Inc., and an article published in the New York Times of August 3, 1957, entitled "United States Said To Rule the Grain Trade."

Mr. MacMillan is a Minneapolis grain merchant, and represents one of the great companies in the grain industry. Mr. MacMillan's thesis or complaint is that the Commodity Credit Corporation goes far beyond what is its duty and its right under its charter.

Mr. MacMillan complains that the Commodity Credit Corporation—and I believe his complaints are justified—frequently seeks to supplant private trade rather than to supplement it. I rise again in the Senate to say that the duty of the Department of Agriculture is not to socialize; the duty of the Department of Agriculture is not to supplant normal free trade operations. Its duty is to supplement and to support and to aid and to assist. When the Commodity Credit Corporation goes beyond that point, it goes beyond its charter and beyond the intent of Congress.

I call the attention of the Department of Agriculture to this speech by Mr. MacMillan, which I am placing in the Appendix of the RECORD. While I have not always agreed with Mr. MacMillan, and surely not always with his company, I must say that he points up a weakness in Government practices which need immediate correction.

There being no objection, the speech and article were ordered to be printed in the RECORD, as follows:

REMARKS BY JOHN H. MACMILLAN, JR., CHAIRMAN, CARGILL, INC., NORFOLK, VA., AUGUST 2, 1957

I would like to direct my remarks this morning to the thesis that Cargill is a great deal more than a grain dealer—and a great deal less than independent.

At the outset, Cargill was purely and simply a grain dealer. But that "outset" was nearly 100 years ago—in 1865. Within 10 years Cargill had started on its own unique course, as an innovator and creative handler of grains, with the invention by James F. Cargill of today's type of country elevator. In an effort to devise a less expensive, more efficient and larger volume means of handling grain, he built a tall wooden-cribbed structure capable of withstanding great pressure from the weight of the grain. This construction remains the basis for country elevators today, and for many terminal and subterminal elevators as well.

As early as this, with the construction of Cargill's first elevator, the company itself put aside some of its independence but it did so of its own choice, and it did so in favor of responsibility. For Cargill recognized then, as it does today in Norfolk, that ownership or operation in any particular area implies a responsibility to that area, and to the farmers, business people, and others who live there.

Today, in small towns throughout the farm belt, there are some 55 Cargill country elevators. At central locations and at port cities, the company has more than 50 terminal and subterminal elevators.

Our 20-million-bushel house in Chicago is one of the world's largest. We have large-scale export facilities at Albany, Portland, Seattle, Baton Rouge, San Francisco, Port Arthur, and now at Norfolk. And we have big-capacity terminal elevators at virtually every grain-handling center in the interior.

These physical holdings, plus the inland waterway fleets of Cargo Carriers, Inc., our transportation subsidiary, comprise the broad base of Cargill's grain procurement and handling operations. But side by side with this network are others, also of importance to the Nation's agriculture.

Nutrena Mills, Inc., Cargill's animal feed manufacturing subsidiary, is one of the Nation's leading formula feed makers, with 14 modern mills—the newest of which is in North Carolina—providing feed to farmers of 24 States. Cargill's vegetable oil division, with nine processing and extracting plants, is one of the country's largest producers of soybean and linseed oils and, at its San Francisco installation, is a major processor of coconut oil. Cargill is also an important factor in hybrid corn research and production, in molasses importation and distribution, and in other agricultural fields.

Five years ago Cargill embarked upon a multi-million-dollar expansion program of seaport facilities. Completion of our elevator here in Norfolk marks its full accomplishment.

That program, a cooperative effort by our company and some of the port authorities involved, was designed to provide greater efficiency and improved service to foreign and domestic markets, and to better implement the export of agricultural surplus commodities.

Our decision to carry out such large-scale expansion was based on our belief that expanded markets at home and abroad constitute a vital part of the answer to our Nation's agricultural surplus problem.

* * * * *

Our responsibility, as we see it, is to provide the most modern, most efficient and least costly handling, storing, merchandising, processing, and exporting of grain possible. To the extent that we succeed in this we will profit, and to the same extent the farmer and the ultimate consumer, the port city and the shipowner, the railroad and the trucker, all will profit.

But today we find it increasingly difficult to discharge our responsibility because of the burdens placed on us by various agencies of our own Government. Since grain export has now become important to many of you, I would like to explain some of these unnecessary bureaucratic restrictions.

I refer, in particular, to certain of our differences with the Commodity Credit Corporation.

You must understand that we do not criticize Government simply because it is Government, or CCC because it is CCC. On the contrary. We recognize that under the present crop-subsidy program there are created certain responsibilities which we cannot undertake. We cannot, for example, administer the crop loan itself, or generate within ourselves the large subsidy necessary to sell our produce in export at world market prices. These tasks are CCC's, and rightly so.

But we object, and strenuously, to CCC's taking unto itself any responsibility beyond its rightful area. For in our rightful area we are best qualified to do the job. No governmental organization can move grain, or store it, or clean it, or merchandise it, or perform any of a dozen other services upon it, more efficiently and cheaply than we. Our physical equipment, our personal training, and our long experience make this an irrefutable fact.

Our specific objections to CCC's present role are many.

Basically, the problem is that CCC has far overreached its original functions to the point that today it has virtually complete control over every aspect of the grain business. And in many areas it is in direct competition wtih private firms. This is despite Congress' directive that CCC use the private trade's facilities "to the maximum extent practicable."

If one considers all our areas of concern—that is, each one of the grains, feeds, oils, seeds, and various other commodities—our objections are so many as to take all day. So I will limit myself to four points, each one of considerable importance to our future here in Norfolk, and elsewhere.

Cargill feels, and most of the grain trade agrées, that a single uniform subsidy for wheat should replace CCC's present multi-subsidy system. Under the present system, as you may know, export is controlled and its direction altered by daily raising and lowering of separate subsidy rates at the Atlantic, Pacific, and Gulf coasts.

In contrast, a single uniform subsidy—which would apply to all wheat at all coasts—would allow CCC to make adjustments to increase or decrease the total volume of wheat exports; but it would require that these adjustments be the same on all coasts. Thus, while the volume would be affected, the flow pattern of wheat would be determined by traditional supply-and-demand factors.

Such a system would make impossible a repetition of what has happened during the past year. Within that period, CCC so "tilted" the economic machinery as to cause enormous amounts of wheat to move off the Pacific coast, to the virtual exclusion of many ports along the Atlantic, including Norfolk. This "tilt" was so great as to result in the export of some 33 million bushels from the west coast to Europe—completely bypassing normal European supply ports on the Atlantic.

In place of this a uniform single subsidy would assure that, however much wheat makes up the total of exports, that wheat will flow in its normal directions, through its normal ports and to its normal customers. It is in the expectation of such a supply-and-demand situation that export facilities such as this one at Norfolk are built. It is only in the continued expectation of that situation that they can survive.

So much for the single subsidy. On three other objections to CCC policy, I will be very brief.

First, we feel that subsidy scrip—which is received by exporters from CCC to make up the difference between domestic and world prices—should be made redeemable in grain

immediately upon consummation of a foreign sale rather than upon actual export of the wheat in question. To do otherwise is to tie up stock that is rightfully ours, to reduce the chance of exporting that stock at all, and to unnecessarily encumber the efficiency of the total operation. If CCC requires assurance of actual exports this could be obtained in the form of a bond or letter of credit.

Second, Cargill believes that this scrip—now issued only for wheat—should be redeemable also in other surplus grains. Such a policy would recognize the economic fact that, whereas an export market might exist today for an original sale of wheat, such a market might not exist tomorrow for the sale of the wheat received in subsidy. It would also recognize that, while wheat is in surplus and must be exported with all promptness, other grains also in surplus must find their way to foreign markets by the most efficient and practical means.

Third, Cargill feels that exporters having scrip in hand should be allowed to redeem it wherever in the Nation surplus stocks are held, be it along a coast or at an interior location. Similarly, the sale for export of any Government-held grain—be it wheat or some other—should be made to the trade at storage locations in the interior.

What we see today is a vast network of Government functionaries duplicating and competing with private marketing and transportation firms whose skill, experience, and facilities have time and again proved their ability to do the most efficient job. And, as always, the taxpayers are footing the extra costs.

In these areas, I repeat, no one can do the job so well as the private grain trade. This is not surprising. For these areas are our specialty, our very reason for being. In short, they are our responsibility. And we will not rest until they are returned to us.

[From the New York Times of August 3, 1957]

UNITED STATES SAID TO RULE THE GRAIN TRADE—INDUSTRY LEADER DEPLORES CONTROL AT DEDICATION OF NORFOLK ELEVATOR

NORFOLK, VA., August 2.—The chairman of the board of Cargill, Inc., Minneapolis grain company, said today that the Agriculture Department's Commodity Credit Corporation had "far over-reached its original function to the point where it exercised virtually complete control over every aspect of the grain business."

John H. MacMillan, Jr., spoke at a luncheon here in connection with the dedication of a 2,100,000-bushel grain elevator.

"The problem today," Mr. MacMillan told a group of business and Government leaders, "is that the Commodity Credit Corporation, merchandising arm of the Agriculture Department, has far overreached its original functions to the point where it exercises virtually complete control over every aspect of the grain business. In many areas, CCC is in direct competition with private firms."

FOUR UNITED STATES STEPS URGED

He recommended four steps for the Government in enabling the grain trade to resume the exercise of skill and efficiency in the surplus disposal program. They are:

1. A single subsidy for exporting wheat at all coasts in place of the multisubsidy system.

2. The subsidy, designed to adjust domestic prices to lower world markets, should be obtainable upon proof of foreign sale rather than upon actual export so that immediate markets could be found for grain received in subsidy.

3. The subsidy should be redeemable in other surplus grains as well as in wheat, as is now the case.

4. Subsidy grain should be redeemable in the interior rather than only at seaboard.

Mr. MacMillan said that taxpayers were bearing the cost of a Government network that competed with private concerns in the movement of grain to seaboard.

"I am a fourth-generation grain merchant," Mr. MacMillan told the luncheon group, "and those of us in the trade for a long time fail to see how these newcomers in the field, such as these bureaucrats, can hope to do as well as we."

He said this move had developed "despite Congress' directive that CCC use the private trade's facilities to the maximum extent practicable."

Mr. MacMillan said completion of the Norfolk elevator marked the "full accomplishment" of an expansion program started 5 years ago. He said Norfolk was chosen partly because of its location "ideally suited for an export base to European ports."

In Death of Ted Simmang Texas Lost a Good Citizen

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. YARBOROUGH. Mr. President, Texas and the Nation lost a fine citizen last July 6, 1957. Mr. E. T. (Ted) Simmang, Jr., of Giddings, Tex., was accidentally killed on his farm near Giddings.

This courageous citizen, whose life included 2 years as a midshipman at the United States Naval Academy, and practice of law before the United States court at Tiensten, China, for 2 years, was devoted to good government in America.

Three times in the last 3 years, he managed our campaigns for Lee County, Tex., in our fight on the entrenched and corrupt Texas political machine. Ted Simmang loved his country, and sacrificed to help keep it a better land. He was dedicated to honest government.

Lee County and Texas will miss him. The Democratic Party will miss him. I have lost a trusted and true friend. The close-knit family which mourns him has the sympathy of all who knew Ted Simmang.

I ask unanimous consent that a tribute paid Mr. Simmang in the Giddings News, a leading Lee County, Tex., nawspaper on July 11, 1957, be printed in the Appendix to the RECORD with these remarks:

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

TRACTOR MISHAP FATAL TO LOCAL ATTORNEY

Citizens of the entire county were shocked and grieved to hear of the untimely death of Emil Theodore Simmang, Jr., known to all all of us as Ted.

Ted was on his farm about 8 miles northwest of Giddings, where his car became stuck in the sand about 5 o'clock Saturday afternoon, July 6. He got his tractor and was in the process of pulling his car out when the tractor turned over backward on him, crushing his chest and killing him instantly.

Ted was born on August 20, 1901, to Emil Theodore Simmang, Sr., and Matilda Simmang. He was educated in the public schools of Giddings and was appointed to the United States Naval Academy at Annapolis, Md., by the late J. P. Buchanan in 1917. He attended Marion Institute of Marion, Ala., for a year in preparation for taking his entrance examination at Annapolis, which he passed with a very high average.

He spent 2 years in Annapolis, Md., and was forced to resign his commission as a midshipman because of a lung infection which had materially impaired his health. He returned to Giddings and after partially regaining his health entered the law department of the University of Texas. On January 12, 1925, he was admitted to the practice of law in the State of Texas. Shortly thereafter he moved to Tientsin, China, where he was admitted to practice law in the United States Court of China on September 28, 1925. He remained in China for approximately 2 years, and because of the internal situation there, returned to Texas.

He opened a law office in Corpus Christi, where he practiced until about 1941. When he moved back to Giddings, engaging in the practice of law here at such time.

On the 25th day of August 1933, he was united in marriage with Miss Dorothy Harp, of Corpus Christi.

Surviving him, besides his wife, are his mother, Mr. Emil Theodore Simmang, Sr., his sisters, Mrs. Milton York, Mrs. Eileen Robertson, and Mrs. Dorothy Allert; his brothers, John S. Simmang and Q. W. Simmang, and several nieces and nephews.

Rev. H. L. McLerran conducted funeral services at the First Baptist Church on Monday afternoon, July 8, and he was buried in the City Cemetery. Pallbearers were Monroe Hannes, C. W. Fields, John W. Waythe, Ernest Mutschink, Otto Aschenbeck, and Thad Knittel.

Ted was always a friend of those in need, giving of his time and talent in order to protect the rights and property of those who sought his advice and council. It was immaterial to him whether or not they were able to pay for such services. At the time of his death, he was serving as city attorney of the city of Giddings.

Great Northern Railroad Recognition of Economic Value of Federal Power Projects

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. NEUBERGER. Mr. President, the incomparable value of water resources of the Pacific Northwest which have been tapped by massive Federal dams is receiving increased recognition by American industrial concerns. Falling water is one of the great assets of the Columbia Basin region. The Columbia provides low-cost power and an abundant flow to serve the needs of industry. The attractive uses to which this resource has been put through the construction of Federal dams has been used to beckon new business by one of the railroad networks serving this region—the Great Northern Railway.

I was pleased to note in a recent full-page advertisement of this progressive

railroad in the August 9, 1957, issue of U. S. News & World Report, the recognition given Federal dams on the Columbia as an advantage in the Northwest region. I ask unanimous consent to have printed in the Appendix of the RECORD a portion of the Great Northern Railway advertisement.

There being no objection, the excerpt from the advertisement was ordered to be printed in the RECORD, as follows:

WHY DON'T YOU PICK YOURSELF A DAM SITE?

If power or water is a vital ingredient in your manufacturing enterprise, why gamble with shortages or declining underground levels? Along Great Northern's transcontinental route, power and water are found in abundance. Read the roster of mammoth dams, on or near our line: Garrison, Fort Peck, Hungry Horse, Grand Coulee, Chief Joseph, Bonneville, McNary—and many more whose press has not been so large.

That's why, for the past 10 years, a new business has located along our route on an average of once a day.

Write E. N. Duncan, director, industrial and agricultural development, Great Northern Railway, St. Paul 1, Minn.

The Chief of Staff Concept

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Carlsbad Current-Argus of August 4, 1957, entitled "Chiefs of Staff."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHIEFS OF STAFF

"One of the most persistent issues of modern times is the controversy over defense organization at the seat of Government," writes Col. J. D. Hittle, United States Marine Corps, in the July issue of United States Naval Institution Proceedings.

"In essence the issue is a clearcut one and centers on the question of whether or not our Nation should discard the Joint Chiefs of Staff as the top military planning agency and replace it with the Prussian-German-type single chief of staff and supreme general staff system," he stated.

In 1947, Congress established the joint chiefs of staff system and specifically forbade adoption of the supreme general staff system. Ever since, efforts have been made to change the law and authorize the appointment of a single chief of staff.

As Colonel Hittle points out, there may be superficial attractions in this plan. And one danger, in his view, is that "It decieves because it offers what so many seek—an easy, simple solution to a very complicated problem."

For instance, the fact that in actual combat, troops require a single commander is used as an argument in support of the single chief of staff concept. But field commanders—no matter how high their rank or important their command—are not responsible for determining the Nation's basic strategy. They implement it.

"This," he writes, "points up the very fundamental difference between planning at the national and lower levels—planning at the seat of government originates the national strategy. Subordinate theater commanders carry out such strategy as it applies to their respective commands." Moreover, determination of the basic national strategy involves far more than military decisions alone. It is always influenced by many other diverse elements—political, industrial, economic. * * *

The great military successes of Frederick the Great are cited in favor of the single chief proposal. Frederick was a monarch whose authority was absolute, and who was supreme commander in war.

Hittle's theory is that Frederick operated under vastly different conditions of warfare. He had ground forces only, and faced none of the problems resulting from the need to coordinate ground, air and naval forces. At his greatest battle his army numbered but 36,000 men—about the size of two present-day divisions. As war became more and more complex, Colonel Hittle finds, the single chief of staff or single commander system failed to keep pace. He believes that the ultimate defeat of Napoleon, another supreme commander with absolute power, was due to that failure, and that the emporer did not comprehend sea power or naval problems.

"The JCS system assures full development of land, sea, and air warfare doctrines and material, because no one service can dominate another," Colonel Hittle states. "All are partners in national security. The single chief of staff permits 1-man and 1-service control of the armed forces and leads to stifling of progress and service initiative."

Some City Folks Don't Seem To Know the Cost and Work of Egg Production

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mrs. KNUTSON. Mr. Speaker, a recent letter from a farm woman tells the story about the city woman who asked the farm woman why she charged anything for eggs "cause all she had to do was go out and pick them up." Under leave to extend my remarks I request permission to insert in the RECORD this letter from a farm women in Danville, Ill., which includes her conclusion that "I guess that must be what the big men think, since we get so little for all our hard work—but have to pay so dearly for things we need":

DANVILLE, ILL., *August 19, 1957.*

DEAR MRS. KNUTSON: There was an article in our daily newspaper, the Commercial News, concerning your crusade for more egg money. I wish to commend you for it. We farm women do need more for our eggs. We get 22 cents per dozen for eggs but what can we buy at the grocery stores for 22 cents? I belong to a home bureau organization and enjoy it very much. One day one of the ladies was telling about a city woman who buys eggs from her, who asked why she charged anything, cause all she had to do was go out and pick them up. I guess that must be what the big men think, since we get so little for all our hard work—but have to pay so dearly for things we need.

Sincerely,

MRS. CARRIE INGALSBE.

Protect the Security of America

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. POFF. Mr. Speaker, I, for one, refuse to vote for adjournment of Congress until legislation is enacted to reverse the Supreme Court decision opening FBI files to Communists and other criminals in the Federal courts. The recent indictment of the Russian Colonel Abel, the boss of the Soviet espionage system in America, serves to dramatize once again the threat of Communist infiltration and internal subversion, and any further delay in plugging this hole opened in the dike of our national security may prove disastrous.

In conjunction with several other Members of Congress, I have introduced a bill (H. R. 8423) designed to reverse the Supreme Court decision in the Jencks case. That decision, which decided that an accused Communist or other Federal-law breaker had the right to rummage through the FBI files to determine what evidence the prosecutor had against him, literally blew the lid off the law enforcement agencies of the Federal Government. Other Government departments charged by law with the protection of the security of America have been thrown into utter confusion by this calamitous decision. In effect, the decision gave to the accused criminal a right to conduct a fishing expedition through Government files—a right which is not enjoyed even by the elected representatives of the people.

FBI Director J. Edgar Hoover called for corrective legislation, and the bills which we have introduced have the approval of the Department of Justice. Under these bills, the defendant has the right to see only those documents signed by the prosecuting witness and relating directly to the subject matter about which the witness is testifying. Even these documents are subject to the prior scrutiny of the judge trying the case. The judge is given the power to determine the relevancy of the documents and to refuse to show them to the defendant if they contain any security data which, if disclosed, would jeopardize national security interests. Under the bill, all other documents in the possession of the United States are exempt from the subpena power.

The passage of this legislation would do much to restore stability to the criminal procedure of the Federal courts and to protect the vital interests of the Nation and its people. The Jencks decision was applauded by the Daily Worker, the Americans for Democratic Action, the Communist Party of the United States of America, and many other similar organizations and publications. They described it as "a great blow struck for individual liberty." Individual liberty is, of course, our most priceless American heritage. However, the phrase "individual liberty" has never been properly

defined to include unbridled freedom to thwart the criminal laws of the land. The Bill of Rights did not guarantee the right of one individual to trample upon the rights of his fellow citizens. It is the function of every well-ordered government to protect society against those few individuals who would misuse and abuse the individual freedom guaranteed to all men. Society cannot be protected if the lawbreaker is to be allowed unlimited access to the law-enforcer's files.

A Report on Hawaii, United States of America

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. BURNS of Hawaii. Mr. Speaker, Hawaii recently was privileged to have among its visitors members of the American Society of Newspaper Editors who made a postconvention tour and met in Honolulu.

In the Rockford Morning Star of August 14 and 15, Mr. C. H. Jalmar Nelson wrote two articles about Hawaii. Mr. Nelson's observations conclusively demonstrate an incisive perception, broad understanding, and outstanding reporting.

I believe that his reports merit the consideration of every Member of Congress since they are as unbiased and as intelligent as I have had the pleasure to see. I, therefore, include them for printing in the RECORD.

The articles follow:

[From the Rockford Morning Star of August 14, 1957]

STATEHOOD FOR HAWAII?

(By Hal Nelson)

We used to think of Hawaii as a sort of semibarbaric paradise. It didn't particularly bother us that Hawaii's pleas for statehood were passed over by Congress year after year—since 1900, in fact. After all, Hawaii was a long way from Rockford.

But now that we've visited Hawaii—all four major islands, in fact—we feel differently. We feel that, maybe, we're cheating these half million people, who've been trying to become one of the United States for more than half a century.

There's nothing backward or barbaric about Hawaii. Honolulu is as modern a city as Chicago or Milwaukee or Rockford. The people of Hawaii have voted that they want to become a state. A state constitution has been drawn and approved. Three years ago, 116,000 people signed a huge petition seeking statehood.

Hawaii is a modern and progressive part of the United States. Its business exceeds a billion dollars a year.

We were surprised and pleased with the large number of modern churches, libraries, and schools we saw on the islands. Christianity came to the islands in 1820—and today there are more than 250 Christian churches on the island of Oahu (that's where Honolulu is located) alone. Virtually every faith is represented.

In every community we noted a modern library. We asked about this and were told that Hawaiians are eager for books.

Hawaii's public schools are rated among the best, with more than 38 percent of the territory's 1955–57 budget appropriated for schools.

And Hawaiian citizens—85 percent of the population are citizens—are proud of their right to vote. More than 85 percent of them go to the polls.

Why does Hawaii want statehood?

For half a century Hawaiians have fulfilled obligations of citizenship without enjoying all the privileges. They pay taxes like the rest of us and serve on battlefronts equally—and with great valor, by the way—but have no voice in tax or draft legislation.

Today, Hawaiians have a governor appointed by the President. They cannot vote for President; they cannot elect their governor, nor choose their judges.

Sponsors of statehood—they include all of Hawaii's leaders—believe that statehood would be an example before the world of American democracy in action; that it would bolster Hawaii's defense role in the Pacific; that it would make Hawaii a center where Pacific peoples could study American traditions.

They believe that Hawaii is a community of Americans who have proved that east and west can live and work together, in peace and war, under the flag of freedom.

And, after 3 weeks in Hawaii, we are personally very much inclined to agree.

[From the Rockford Morning Star of August 15, 1957]

SERPENT IN PARADISE

(By Hal Nelson)

Most Hawaiian residents expect Congress to grant Hawaii statehood within the next year.

The major bugaboo that has been raised against making Hawaii our 49th State is the charge that Hawaii is Communist dominated through the powerful International Longshoremen's and Warehousemen's Union. But that charge appears to have been pretty well dissipated.

Hawaiian statehood is being vigorously supported by Samuel Wilder King, a conservative Republican who was Governor of Hawaii until a few weeks ago; by William Quinn, the youthful lawyer named by President Eisenhower to succeed King; by Mayor Blaisdell, of Honolulu, a leading Republican vote getter; by Riley Allen, able, longtime editor of the Honolulu Star-Bulletin; by Lorrin P. Thurston, publisher of the Honolulu Advertiser; by many other civic and business and industrial leaders. We heard some of these people talk about statehood, and the case they presented was a plausible one.

Yet, strangely, we discovered that the very nearness of statehood is inducing a case of jitters among some residents. We heard people in varying walks of life say, "Certainly, I'm for statehood. But not now. We're not ready for it."

These folk seem to be afraid. Afraid of what? we asked.

The answer wasn't easy to get.

Hawaiians are proud that whatever their color or racial origin, they've learned to live together, work together, play together, and study together in Hawaii, which has proven for many to be a land of economic prosperity and social opportunity.

Now—if statehood is granted—Hawaiians for the first time would be able to elect their own governor. They've never had that right.

Faced with this prospect, there suddenly has come fear that they will not choose wisely.

It isn't a question of Republicans or Democrats. For the last 4 years, Hawaii has had a Republican governor. Before that, Hawaii had two Democratic governors. Pretty soon, a new Republican governor will be sworn in.

And it isn't fear of Communist domination. Nor union domination. Communists and their preachings are not popular.

Rather, it is a fear that the people of Hawaii, of many races and colors and creeds, will at the crucial moment forget everything they have learned over the years and vote by racial blocs in electing a governor.

We do not claim to have gained political astuteness through spending 3 weeks in Hawaii. But to us this fear seems an unreasoning one. Yet, an ambitious politician, determined to win at any price, could prove to be the serpent who'll destroy the paradise that is Hawaii.

Political Opinion Believed Swaying United States Appeals Courts

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, the people of the United States are becoming more and more alarmed over the current trend on the part of the Supreme Court to decide cases, not on what the law is, but rather on what they think the law should be. The Court is overtly usurping the legislative prerogatives of the Congress, and is fast losing the confidence and respect of our people. I consider these actions by the Court to be the most dangerous assault ever made against our Constitution and our form of Government, and I believe that unless some curbs are placed on the Court by the Congress that we may live to see the day when this Nation will no longer enjoy a representative form of government.

In this connection, Mr. Speaker, I am including an article written by Maj. Frederick Sullens, appearing in the August 19, 1957, issue of the Jackson (Miss.) Daily News:

POLITICAL OPINION BELIEVED SWAYING UNITED STATES APPEALS COURTS—LONG-DRAWN-OUT GOLDSBY CASE IS CITED AS GLARING EXAMPLE

(By Frederick Sullens)

It has long been said, with much measure of truth, that the United States Supreme Court "follows the trend of political opinion," regardless of the law, and that seems to be the present-day trend in our Federal appellate courts.

Verification for this is found in some recent rulings of the United States District Court of Appeals at New Orleans, one being in the celebrated Southern Bell dynamiting case, wherein four persons were convicted of dynamiting property of the public utility during a strike of the Communication Workers of America in this city.

New trials were ordered for two of the defendants because the court allegedly permitted the confession of the dynamiters who had turned state's evidence to be used in bringing about the conviction of these two defendants—a decision as devoid of commonsense as the ruling of the United States Supreme Court that persons charged by the Federal Government with crime shall be given free access to the records of the De-

partment of Justice, including the files of the FBI.

That decision is even now being hailed by the Communists as a great victory and is the cause of much rejoicing among the Reds, both in the United States and Russia.

In the William Wetzel case, perhaps Mississippi's most prominent and procrastinating criminal prosecution now pending, it is being seriously contended that the noted desperado who cut the throat of another convict in the Parchman Penitentiary should not have been convicted because the evidence against him came from the lips of convicts.

Now comes another case showing how, if you happen to be a Communist, a Negro, or some desperate criminal, it is quite easy to escape the clutches of the law, no matter how deeply your hands may be dyed with blood, if you happen to have the backing of a lawyer skilled in the flimsy technicalities of the criminal law, or can command the influence of some radical organization to put up cash for the defense.

Latest glaring illustration of the law's interminable delays is the stay of execution granted by the United States District Court of Appeals at New Orleans to Robert Lee Goldsby, one of the most cold-blooded murderers who ever stained Mississippi soil with the blood of human beings—a delay based on the flimsy protense of Goldsby's self-appointed Negro lawyer that he had not been allowed sufficient time in which to prepare his brief, although he had actually had from the 11th of last February until this month in which to prepare his brief.

It is senseless delays of this character that cause growing disrespect for courts and laws thoughout the land and is in a goodly measure responsible for the waves of crime now sweeping the country. It is so easy to delay or defect justice if you have a lawyer with the know-how.

GOLDSBY'S COLD-BLOODED CRIME

Goldsby committed a cruel, cowardly, cold-blooded murder. On that point there is no doubt. Furthermore, it was committed on September 4, 1954—nearly 3 years ago. Goldsby should have long since paid his visit to the gas chamber.

The crime occurred at a filling station at the little town of Vaiden, in Carroll County. A carload of drunken Negroes from Chicago disembarked from their automobile at the station and immediately started a reign of terror. Robert Lee Goldsby, ringleader of the crowd, shot and wounded Bryan Helms, owner of the station and when Mrs. Helms rushed to the aid of her husband she was shot and killed.

At the following November term of court Goldsby was tried and convicted for the murder of Mrs. Helms and sentenced to death. It was a clear and conclusive case of guilt, with no extenuating circumstances. The sentence was affirmed by the Mississippi Supreme Court on March 16, 1955 and Goldsby sentenced to die on May 13 of that year.

DID THE NAACP INTERVENE?

When Goldsby was arraigned in the circuit court of Carroll county a shifty-eyed Negro attorney from Chicago appeared and introduced himself as Goldsby's counsel, saying he had been employed by some relative of Goldsby in Indiana, but there was a strong suspicion in the courtroom that he had been sent there by the NAACP in Chicago. This was on November 8, when Goldsby was arraigned, but when the case was called for trial on November 10 Leighton informed the court he had withdrawn from the case.

It seems that relatives of Goldsby in Vicksburg, feeling that the sense of a Negro lawyer for the defense would hurt rather than help his case, employed Mr. John Prewitt, a very able Vicksburg lawyer, as his counsel. These relatives frankly told Mr. Prewitt that they did not want a Negro lawyer to appear for the defense, that they had not employed him and did not desire him to take any part in the proceedings.

The record shows Leighton told Judge Rodgers he was withdrawing from the case. In order to make sure Goldsby would have plenty of counsel to defend him Judge Rodgers appointed Rupert Ringold, an able attorney at Winona, to assist with the defense.

The two attorneys were active and conscientious. They put up the best defense possible for Goldsby under the circumstances, and this statement is substantiated by the written record of the trial. They did not see fit to raise the flimsy contention that in the trial court no Negroes served on the grand jury that indicated Goldsby or served on the trial jury that tried and convicted Goldsby.. The case was appealed to the Supreme Court of Mississippi where these same attorneys filed elaborate briefs and orally argued the case. After the supreme court affirmed the conviction and sentence, these same attorneys filed a suggestion of error, which was overruled, at the conclusion of which, these attorneys concluded that they had exhausted all recourse in the courts. Moreover, they well know that their client was guilty beyond all possibility of doubt, and they had no funds with which to carry the case on appeal into the Federal courts.

NEGRO LAWYER REAPPEARS

On May 11, 1955, 2 days before the date fixed for Goldsby's execution the Negro lawyer Leighton again came into the case with a petition for appeal to the United States Supreme Court, which appeal was granted by the chief justice of the Mississippi Supreme Court, thereby staying the date of execution set for May 13, 1955.

On December 12, 1955, the Supreme Court of the United States denied Goldsby's petition for writ of certiorari, which is the same as denial of petition for appeal.

The Attorney General of Mississippi again filed a motion in the Supreme Court of Mississippi to set a new date for execution, which date was set by the Supreme Court of Mississippi for February 24, 1956.

On February 21, 1956, 3 days before the date fixed for execution Leighton filed a petition for writ of error coram nobis, a very unusual legal procedure, rarely resorted to in the courts.

In the filing of a petition for appeal to the supreme court it was alleged that the systematic exclusion of Negroes from grand jury panels and petit jury panels of the State of Mississippi was well known and that by virtue thereof Goldsby did not receive a fair and impartial trial, and was denied due process under the 14th amendment to the Constitution of the United States.

APPEAL AGAIN DENIED

In his petition for writ of error coram nobis he again alleged these same facts. His petition for coram nobis was denied by the Supreme Court of Mississippi on March 5, 1956, and petitioner again presented an appeal to the Supreme Court of the United States and secured a stay of execution pending said appeal. Upon receipt of this appeal by the United States Supreme Court that Court directed the Attorney General of Mississippi by letter to file a response to petitioner's allegations and "particularly the issues of systematic exclusion from the grand and petit jury panels and the State's procedure for raising the question in a post-conviction proceeding."

Attorney General Joe Patterson, in compliance with this directive from the United States Supreme Court, filed an extensive brief in answer to this allegation, and on December 10, 1956, the United States Supreme Court denied Goldsby's petition for writ of certiorari. The Attorney General then filed another petition in the Supreme Court of Mississippi to set a new date for execution of the death penalty, which motion was sustained and February 12, 1957, set as the date for execution.

On January 26, 1957, Attorney General Patterson was advised of the filing of a petition for writ of habeas corpus in the United States District Court for the Northern District of Mississippi. This petition was heard by Judge Allen Cox, United States district judge at Oxford, on January 29, 1957. In this petition, Goldsby's attorney again alleged the "systematic exclusion of Negroes from grand and petit jury panels" in Carroll County, Miss.

RULING OF JUDGE

In passing on the case, Judge Cox stated:

"It appears from statement of counsel of both sides of this litigation and from the opinion of the Supreme Court of Mississippi, which has been read to me in full, that present counsel for petitioner was for a time employed in this case but for reasons satisfactory to him and to the kinspeople of the petitioner here he withdrew from the case. What may or may not have happened before that time I do not think is relevant here.

"Petitioner's own kin people employed for him a lawyer whom the Supreme Court of Mississippi designated as an intelligent and capable lawyer, and in addition the lower court appointed a lawyer whom the Mississippi Supreme Court says was a competent and able lawyer to defend him.

"They did not raise on the trial of this case the question sought to be raised here, and I do not think any man, white or colored, and color certainly should make no earthly difference in making that decision, has a right to accept a jury and take his chances before it and then later on say 'I was tried by a jury which was not a competent jury.' The question should have been raised by the counsel there. In my judgment, it is too late to raise it now."

NO SHOWING OF MERIT

Judge Cox denied a certificate of probable cause which amounted to a denial of appeal to the Federal circuit court of appeals. Leighton then went before Judge Borah, of the fifth circuit court of appeals seeking a stay of execution and a granting of appeal to that court.

In passing upon this petition Judge Borah, among other things, concluded his opinion by saying:

"Whereupon, and after a careful examination of the record and on the basis of the authorities, I have concluded that no meritorious showing has been made which would warrant the issuance of, either a certificate of probable cause or a stay of execution, and it is ordered that the petition be denied."

This matter came up while Attorney General Patterson was in Washington to appear before the Judiciary Committee against the civil-rights bill, and he was notified by telephone of the filing of this petition. He directed two of his assistants in Jackson to proceed immediately to New Orleans by plane in order to present the State's case before Judge Borah the following day.

CHIEF JUSTICE INTERFERES

On February 11, 1956, one day before the date for execution, Chief Justice Earl Warren, on an ex parte petition, entered an order as follows:

"Upon consideration of the application of counsel for the petitioner,

"It is ordered that the execution and enforcement of the sentence of death imposed upon petitioner by the Circuit Court of the Second Judicial District of Carroll County, Miss., be and the same is hereby, stayed until petitioner has had an opportunity to exhaust his Federal rights in this proceeding."

On the 13th day of August 1957, Tuesday of this week, this office received a notice that

a motion was being presented to the court of appeals for an order extending the time for filing the brief until September 16, 1957. It is interesting to note that the attorney, although he has had since February 11 of this year to file his brief, gave as his reason for requesting additional time that he was "engaged in preparing a reply brief in a case in the Supreme Court of Illinois," and that he was also "engaged in preparing a brief to the United States Supreme Court."

Attorney General Patterson, of course, opposed this motion, setting up the facts of the long drawnout history of this case, and pointing out that petitioner had had every opportunity to present his case available to him under the law. However, the circuit court of appeals saw fit to grant appellant's motion for extension of time to file his brief in the above case, stating: "An extension of time to and including September 16, 1957, has been granted appellant within which to file his brief, since the above case will not be called for a hearing until the month of December, or the early part of next year."

In extenuation of the action of the circuit court of appeals in granting an extension of time for filing a brief by the Negro Leighton it is probably safe to say that if the court had not done so Chief Justice Warren would have been again appealed to and the extension granted. Our Chief Justice dearly loves the colored folks.

Leighton seems to have plenty of money with which to prosecute appeals and journey to the circuit court of appeals in New Orleans and the United States Circuit Supreme Court in Washington. It is certain he is not being supplied with money by the Vicksburg relatives of the Negro murderer and thus far no trace has been found of that "relative in Indiana" who is allegedly putting up money for this costly game of making a sad joke of our courts.

Outstanding Atomic Research Work of Midwest Universities Research Association

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. WILEY. Mr. President, I have previously commented, on several occasions, on the splendid research work which is being performed by the Midwest Universities Research Association, in preparing the preliminary plans for what will be the world's biggest atom-smasher.

I am glad to advise that the Wednesday, August 21, Wisconsin State Journal reported that a working model of the proposed Midwest Universities Research Association atom particle accelerator was actually put into operation at the end of last week, and that this working model worked on the very first try.

If all present plans proceed as expected, the giant Midwest Universities Research Association accelerator will be built at a site in the Madison area. The accelerator will provide around 30 billion electron volts in collision.

Naturally, it is difficult for a layman, such as my colleagues or myself, to appreciate the full significance of this project as physicists have described it.

Nevertheless, even a layman can understand that miracles of peactime application of nuclear energy for a wide variety of research purposes will become possible, once this accelerator is built.

I earnestly hope, therefore, that the Atomic Energy Commission will see its way clear toward providing full funds at the earliest possible date for completion of this work.

The Big Ten institutions, including the University of Wisconsin, which comprise Midwest Universities Research Association, should be given every possible encouragement.

I ask unanimous consent that the text of the article from the State Journal be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MURA GAINS IN ATOM-SMASHING ROLE

(By John Dutton)

A significant step forward in designing the world's biggest atom-smasher has been made by the MURA scientists in their laboratory on University Avenue.

A working model of the proposed MURA atomic particle accelerator was put into operation late last week. The Midwestern Universities Research Association (MURA) research headquarters are located in the old Nash garage, University Avenue at Allen Street.

MAJOR PROGRESS

The model—which embodies the new principle on which the MURA accelerator will be based—represents major progress toward the goal of designing the biggest and the best atomic accelerator in the world.

The MURA group has recommended to the Federal Atomic Energy Commission (AEC) that the giant accelerator be constructed at a proposed site in the Madison area. The AEC, however, has not yet decided whether the final machine will be built.

WORKS THE FIRST TIME

The model of the accelerator was unique—and highly successful—in that it worked the first time it was tried. Usually weeks and weeks of tinkering are necessary to get such models to work, MURA scientists said.

This model provides additional proof of the validity of Prof. Keith Symon's fixed-field alternating gradient theory on which the revolutionary accelerator design is based.

Professor Symon, of the University of Wisconsin physics department, will take over as technical director of the MURA research group September 1, the same time when Prof. Ragnar Rollefson, also of the Wisconsin physics department, assumes directorship of the group.

TO STUDY PROBLEMS

The model is not being used to smash atomic particles, Professor Symon explains, but to study problems of accelerator physics.

In this way the model is contributing not only to the design of the big accelerator, but also to basic knowledge about the problems of accelerating particles and holding them in a track with magnets.

The model uses curved spiral magnets to hold the speedy particles on course as they are accelerated.

NEAR SPEED OF LIGHT

The model uses a magnetic core to push the particle as it comes around the track, but the big accelerator will use radio-frequency pulses to get the protons being studied to move so fast that they approach the speed of light—186,300 miles a second.

MURA people will now start working on another, larger model which will test another idea. They hope to be able to accelerate two particles in opposite directions so that they can be made to collide at the peak of their velocity.

This way much greater energies can be obtained than by having one particle collide with a stationary target. And energy is what is needed.

MASS TO ENERGY

As Professor Symon put it, the the whole process depends on the modern principles that mass can be converted to energy, or energy converted to mass, and that speed represents energy.

Thus the fantastically fast particles represent great amounts of energy. When this energy is suddenly stopped, it must form mass.

And included in the possibilities that this mass can take are the subatomic particles which compose a proton. It is the structure of a proton that the scientists are attempting to study.

An atom is composed of a nucleus, which includes both positively charged protons and neutral-charged neutrons, and negatively charged electrons which orbit around the nucleus like the moon orbits around the earth.

SIMILAR SYSTEM

Recent studies have shown that the proton represents a somewhat similar system, with the major mass of the proton surrounded by a cloud of even smaller particles called mesons.

The giant MURA accelerator—expected to provide approximately 30 billion electron volts at collision—will form these tiny particles in such a way that they can be studied.

At present, MURA plans call for two huge accelerator tracks going in opposite directions. The particles will be taken from each track and collided together producing more energy than any other accelerator in the world can provide. It is possible, however, that the plans may be changed and one track with protons going in opposite directions—like in the model now being planned—may be built instead.

AEC MAN VIEWS

One of the first people to see the new model in operation was Dr. Willard F. Libby, Commissioner of the AEC who visited MURA on Saturday. He was here to review MURA progress.

The MURA group is composed of 15 midwestern universities, including the University of Wisconsin and all the Big 10 institutions.

The final accelerator—which will be for the use of physicists at these universities and will give them an advantage over other physicists in this country and the rest of the world—will cost many millions of dollars.

Since the final appropriation will have to be made by Congress itself, it is not known for sure that it will be built.

But the AEC has assured MURA of money to continue design work next year and to build the next model.

Madison may well end up the world's leading center of advanced atomic physics.

Old Dark Joseph

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. DORN of South Carolina. Mr. Speaker, under the leave to extend my

remarks in the RECORD, I include the following newspaper item:

[From the Washington Post and Times Herald of August 1, 1957]

OLD DARK JOSEPH

Sisyphus has a cinch compared with the task undertaken by the National Broadcasting Co. and the Columbia Broadcasting System. These two networks have decided to delete from the songs of Stephen Foster as rendered over their transmitters such words as "mammy," "darkie," and "black" (in relation to the color of skin, not of eyes, hair or other parts of the anatomy). The reasoning behind this editorial vandalism is, of course, entirely amiable and is designed, as we understand it, to avoid giving any offense to Negroes. It is pretty certain, however, to give a great deal of offense to adult human beings of all races who have sentimental associations with Kentucky or the Swanee ribber—er, that is to say, river—and who object, on principle, to any sort of doublethink or brainwashing. We suspect that CBS and NBC have let themselves in for a lot of static.

Consider, for instance, the anguished outcry that has already come from Fletcher Hodges, Jr., curator of the Stephen Foster Memorial at Pittsburgh. Slavery and the Civil War, he says, are inextinguishable facts of history and of the American past. "It is pointless," he said pointedly to the broadcasters, "to turn back the clock." We surmise, moreover, that Negro sensibilities sustain no injury from the affectionate and tender words with which the Foster songs evoke a bygone era. After all, the era was one concerning which only white Americans, not Negroes, need to feel ashamed.

How is Stephen Foster's idiom to be translated, in any case? There is a certain validity to "All de world am sad and weary, Eb'ry-where I roam, Oh! darkies, how my heart grows weary, Far from the old folks at home" which is unlikely to be retained by making it more grammatical. The ineradicable fact of the matter is that the old Kentucky home is quite as far away, in time if not in space, as Foster said it would be. And massa, together with everything he stood for, is just as deeply interred in the cold, cold ground as if he were referred to in the song as master or mister. The broadcasters could more constructively turn their attention, we think, to contriving some intelligible lyrics for Elvis Presley.

[From the Washington Evening Star of August 14, 1957]

RULINGS BY HIGH COURT ELATE REDS, PROBE TOLD

A New York policewoman told the Senate Internal Security Subcommittee today the Communists are rejoicing over recent Supreme Court decisions.

Miss Stephanie Horvath testified at a hearing conducted by Senator JENNER, Republican of Indiana, on his bill to strip the Supreme Court of authority to hear appeals in various kinds of subversive cases. The subcommittee's approval of the bill was announced last week.

Miss Horvath said that in 1942 she joined the Communist Party as an undercover agent for the New York police department. She said she was expelled from the party in 1947 but still is assigned to keep abreast of its activities.

She testified that the Communist Party has been given a revitalizing shot in the arm by the Supreme Court's decision overturning the convictions of California Communist Party leaders and by other court rulings.

RED CONVICTIONS UPSET

The court on June 17 overturned the convictions of 14 California Communists who had been convicted of violating the Smith Act. Five were freed and 9 were ordered given new trials.

The court held that it is not a crime to preach abstractly the forcible overthrow of the Government, saying that those to whom the advocacy is addressed must be urged to do something, now or in the future, rather than merely to believe in something."

In support of her testimony, Miss Horvath quoted statements she said were made by John Gates, Eugene Dennis, and other Communist leaders at a meeting in Carnegie Hall in New York on July 24. She said she attended the meeting and quoted from notes she took.

SMITH ACT UNDER FIRE

She testified that a steady decline in Communist membership set in after the Smith Act conviction of 11 national Communist Party leaders. She said the No. 1 goal of the Communists has been the repeal or weakening of the Smith Act.

Miss Horvath also referred to two other Supreme Court decisions she said pleased the Reds. In one of them, the Court ruled that defendants in criminal cases are entitled to examine statements made by Government witnesses to the FBI or other investigative agencies.

In the other case the Court overturned a contempt of Congress conviction on the ground that congressional investigating committees must show the pertinency of their questioning.

Muscoda Has Lost Two of Its Finest Young Men; They Will Be Remembered

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 23, 1957

Mr. WITHROW. Mr. Speaker, under unanimous consent to revise and extend my remarks I include a brief editorial from the June 7 Muscoda Progressive. I join the editor in his eulogy of these two fine citizens with both of whom I was intimately acquainted.

MUSCODA HAS LOST TWO OF ITS FINEST YOUNG MEN; THEY WILL BE REMEMBERED

Muscoda lost two of its most respected and promising young men last week, and this week the Progressive editor would like to attempt to put into words the thoughts which are in the minds of all Muscoda residents. No words can fill the heartbreaking void left by the deaths of Frank Drone and Dick Azim, but the Progressive editor knew and admired them both, and would like to express his feelings.

Frank Drone was a newcomer to Muscoda. His job here was to enforce the law, a duty not always greeted with friendliness and cooperation. But not only did Frank gain respect for his performance as police chief, but gained also the respect of all of us for his tireless efforts to see to it that our young people were given every opportunity to find enjoyable and constructive recreation.

Frank was devoted to his job. This devotion, however, was tempered with a very human consideration for his fellow man. He was lenient when leniency was deserved, and firm when firmness was warranted. He brought to our village a respect for the law which had been lacking before his arrival. His liaison with the village board was close and informative, and board members were surprised and pleased at the strikes taken during his 6-month tenure as police chief.

His cooperation with police officials in neighboring communities was gaining the recognition and appreciation of all of them.

Frank was definitely on his way up the ladder of success in his chosen field of endeavor, and only death could have stopped his climb.

We can only express our most sorrowful regret at the death of this young man, a man whose life was cut short when it was just beginning. We knew Frank and liked him. To his family we can only express our most sincere condolances and the reminder that they may have deep pride in the manner in which their husband, father, and son conducted himself during his life.

Young Richard Azim had yet to embark on the real road of life, but during his 16 years he had established a foundation which would have served him well had it been allowed to reach fruition.

Perhaps the most illustrative opinion of Dick was given by Frank Drone, who died with him. In speaking of the minor difficulties local teen-agers had been getting into a few months ago, Frank said, "There's one youngster nobody has to worry about. He's one of the best kids I know, and I can set my watch by the time he goes home each night. He's been brought up right."

Dick was brought up right, and his upbringing was characterized by the friendliness and affection he enjoyed from all who knew him, youngsters and adults alike.

He was quiet without being antisocial His quietness was the type which is usually found in those who find communion with the outdoors. In the woods and on the streams in the Muscoda area he found his greatest satisfaction. We have known youngsters like Dick in the past, who love to roam the woods and explore the streams, and we have seen them profit by their relationship with nature.

It is sad indeed, that so young a man with so great a lust for life and nature, should die. But Dick's parents and friends will always know that during his life he was a credit to them and to their way of life, which has always been one of strict adherence to the real basis of family life.

It is admirable when so young a man can leave behind him a message for those who remain, and Dick did just that. We can all hope that we can raise our children to be as well mannered, as well intentioned, as was Dick Azim.

Two of our youngest and finest citizens have died. They lived their short lives in credit to themselves and to their families, and for that they will not soon be forgotten.

Immigration Corrections Are Possible

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 21, 1957

Mr. PORTER. Mr. Speaker, legislation which would provide minor corrections in existing immigration laws will come before this House early next week, I am told.

While these items are perhaps not as sweeping as many of us would prefer, they offer needed revisions which I believe this Congress should approve.

The bill offered by my colleague from Pennsylvania [Mr. WALTER] contains a section which would permit entry into this country of an unlimited number of orphans for a 2-year period. It con-

tains language which would permit these visas to be valid up to 3 years in the case of children adopted by United States citizens residing abroad temporarily on business or in the military or civilian services of the United States. This language does not appear in the Senate immigration bill which passed that body earlier this week. I believe it is desirable and should be retained.

H. R. 8123 contains other humanitarian sections. I urge its support.

For general information purposes I should like to include in the RECORD at this time an article which appeared in the August 22, 1957, edition of the Christian Science Monitor:

IMMIGRATION CHANGES—AN INTIMATE MESSAGE FROM WASHINGTON

(By Josephine Ripley)

There will be no major revision of the McCarran-Walter Immigration Act this year as urged by the administration. Congress has made this clear in the bills which have emerged from committees on both sides of Capitol Hill.

These bills propose no change in the immigration quota formula; do nothing to adjust the status of Hungarian refugees paroled into the country and ineligible for citizenship under those conditions; nor do they set up machinery for regular parolee admissions in similar emergencies. But they do constitute some liberalization of present legislation, and will result in a limited increase in immigration.

The Senate bill is almost identical to the Walter bill. This is no accident, since nothing else, it is clear, would stand any chance of passage in the House.

The work put in by the Senate Judiciary Committee on the legislation, plus its general conformity to the House bill, indicates a serious intent on the part of the legislators to act on this matter before adjournment, if possible.

The legislation, as it stands, would permit entry into the United States of some 18,000 relatives of immigrants already here; allow for some 8,000 additional admissions a year by canceling the mortgages on quotas incurred under the old Displaced Persons Act; make available some 18,000 unused visa numbers which expired under the Refugee Relief Act; permit the unlimited immigration of orphans over a 2-year period.

The unused visas under the Refugee Relief Act would be reallocated under the Senate bill as follows; 2,500 to Germany; 1,600 for Dutch refugees; nearly 14,000 for refugees or escapees from Communist-dominated or Communist-occupied countries and refugees from racial, religious, or political persecution in Middle East nations; and finally 500 for refugees, mostly white Russians, in the Far East.

The provision for Middle East refugees is the only major departure from the House version.

Cancellation of the displaced persons mortgages does not increase the set immigration quota of the countries affected. But it does mean that instead of being allowed only half their normal quota until the mortgage is paid off, the country may revert to its full quota. Some countries with small quota allowances for admission to the United States have been mortgaged up to the year 2100.

Admission of orphans (under 14 years of age) is limited to those adopted by United States citizens, or who have assurance of adoption when they arrive. This takes care of the situation created by the adoption by American families living abroad of Korean and other orphans.

The highly publicized fingerprinting requirement, of which the Russians have made propaganda capital, would be revised somewhat, to get the United States off what has been a rather uncomfortable hook.

Such fingerprinting would be waived in the case of nonimmigrant aliens (visitors) if the foreign country concerned waives fingerprinting of United States nonimmigrant aliens. Fingerprinting of short-time visitors is more or less a gesture anyway, since the alien would be in and out of the country before the FBI had time to run through a fingerprint check.

This does not mean the elimination of all fingerprinting, however. Testimony before the Senate committee indicated that people from Communist countries have entered under false names. In such case a fingerprint check would be the only way to identify the real individual.

The proposed new legislation, amending the McCarran-Walter Act, would also give asylum to diplomats who for one reason or another—generally a revolt at home—are prevented from returning. Some 50 persons in this category would benefit from the provision.

Around 15,000 Ukrainians, mostly in the Chicago area, would come under a provision waiving charges for having falsified immigration documents for fear of being sent back to Communist-dominated countries or of political reprisals there.

There are various other provisions to eliminate snags in the current law and take care of special situations which now prompt the filing of hundreds of private bills.

The proposed legislation is far from the sweeping revisions sought by the administration, but it would remove many inequities and obviously constitute an improvement in the present law.

The Importance of Education

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 23, 1957

Mr. HARRISON of Virginia. Mr. Speaker, by request, I am inserting in the Appendix of the CONGRESSIONAL RECORD a thoughtful address on the vital importance of public education made by Mr. Tyler Fulcher, division superintendent of public schools of Amherst County, Va., on the occasion of the dedication of a new high school in that county.

ACCEPTANCE ADDRESS, AMHERST COUNTY HIGH SCHOOL

August 28, 1956 is a great day for the public-school system of Amherst County and of the Commonwealth of Virginia.

It is a day of dedication, a day in which Mrs. Shrader, chairman, has dedicated the Amherst County High School to the high principles for which it was built.

It is a day of appreciation, a day in which we adult citizens show our appreciation for our past privileges and opportunities by making the same and better available to the young people of the county.

It is a day of reaffirmation—a day in which we reaffirm our faith in our country, State, and county by providing better means for our youth to grow and develop into worthy and contributing members of society.

It is a day of thanks—a day in which we thank the Amherst County School Board and the Board of Supervisors for their leadership, and the people for their support.

It is a day in which we thank the State department of education for their guidance and cooperation in the realization of this objective.

It is a day in which we should pause to pay tribute to the memory of my predecessor in office—the late Mr. A. J. Camden, whose vision, industry, and efforts played an important part in the initiation of this great project.

It is a day of welcome—a day in which we welcome the Amherst County High School into the family of Amherst County public schools.

My part this evening is to extend this welcome.

Activity is an inherent urge of man. Throughout the ages, he has directed his energies to either constructive or destructive ends. The urge to build has over the years exceeded the urge to destroy. In the ancient city state of Athens, the youth upon entering into citizenship took the following oath: "Never to disgrace his holy arms, never to forsake his comrade in the ranks, * * * to leave his country, not in a worse, but in a better state than he found it."

Of course, in this great country of ours no oath is taken. It is our unwritten law that each generation should contribute to the advancement of our country, and thereby leave it a better place than they found it. Every united effort of the American people and every singular effort of each American citizen is presumed to be stamped with the stamp of progress. This concept of the American people led to victory over a vast wilderness and the establishment of the most prosperous, most powerful, and most respected country on earth.

Great, indeed, was and is this philosophy. We are debtors of the past, builders of the present, and contributors to the future. Many bonds connect and bind us to the past, present, and future, among those, perhaps the most fundamental is education or training.

The preservation of the achievements of the past is a necessity. The accumulation of knowledge, resulting from the mental and physical labors of many over periods reaching from the beginning of history to the present, has been recorded and preserved. A point of view to the contrary, and action accordingly, would require each generation to begin at the point of progress of the last preceding generation. Man would, as of now, be a cave or cliff dweller.

When man began to keep written records, civilization is said to have started. It was through written records and other such means, the knowledge and achievements of the peoples of all periods were preserved. The simple life of early times required little. The father taught his son, the mother, her daughter, and the chief, his tribesman. As the intelligence of man interacted with nature's surroundings, new things were learned, inventions and discoveries were made, and life began to assume a complicated aspect.

With the accumulation of knowledge and the growth of civilization, education of the youth became a concern not only of the home, the individuals, partnerships, and private corporations, but of the public. It was then, public school education entered history's story.

On the subject of public school education, many comments have been made, and among those, the following: "In a republic, education is indispensable. A republic without education is like a creature without imagination; a human being without a soul," Charles Sumner.

We who have chosen as our profession the training of the youth know that we deal with more intangible things than perhaps any other professional person.

At the end of the day we can only measure a small part of the results of our efforts, and at the end of our careers we may not be able to measure but a slightly larger portion. Quantitative measurements of achievement

have been skillfully devised in the form of standardized tests which objectively determine how successfully a portion of the instructional program has been taught. Immeasurables cannot be measured, attitudes and ideals are parts of the personality of the youth which do not lend themselves to mathematical formulas.

The trained mind, with knowledge and skills, understandings and wisdom, positive attitudes and high ideals are among our chief objectives. These are in the most part intangible and immeasurable, but of an enduring quality. In this connection, Daniel Webster once said this: "If we work on marble, it will perish; if, on brass, time will efface it; if we rear temples, they will crumble into dust; but if we work upon immortal minds, and imbue them with principles, with the just fear of God and love of our fellowmen, we engrave on those tablets something that will brighten to all eternity."

In every phase of life, in every area of human endeavor, skills and scientific knowledge are used. Consequently, because of all of our advancements, the needs are greater, and the call comes for more and more skills and scientific knowledge. One of the answers is public school education. Because of the advancements in industry, the needs are greater, and the call again comes for more and more skills and scientific knowledge, and again our chief answer is public-school education. The same is true in all other major divisions of work, and the same answer is forthcoming.

Amidst the crest of events for many years in our history, in peace and in war, and in the forefront of national emergencies, and, as a consequence, at Okinawa, at Iwo Jima, at the summit of Sarabachi, on D-day across the channel, and on the Siegfried line, in Berlin, public-school education was present. On the ocena waves, in the air, on land, and under the sea, public-school education was there. In the drafting of peace terms, in the periods of readjustment, and during the smooth flow of current events, public-school education is present. It is an integral part of our social structure and a powerful influence in the determination of events.

The bonds which unified our people as the world's greatest nation were in no small degree forged in our public schools. From Jamestown to 1956, of great Americans and of great American events, the story is told in our public schools. The underlying philosophy and basic principles of the actions of men and movements of history are taught in the public schools. The analysis of economic and social trends is a part of public school education. Yes, public school education stands as a beacon light, among others, in the preservation and enrichment of the American way of life.

It appears to be an innate characteristic of man to wish to secure for himself a place in the future, some type of terrestrial immortality. His best opportunity for this achievement is an acquaintance with and a knowledge of the past, a devotion to the challenge of the present, and an intense faith in the future. In public school education, he finds a key to this desire.

This evening the Amherst County High School joins a great heritage and assumes its proportionate responsibilities. We cannot foresee the history of this school, as it takes its place among other schools in Amherst County and in Virginia; it is yet to be written, but this we know—the school which is well organized, administered, and supervised in accordance with a sound philosophy, cooperatively developed and definite objectives clearly stated, characterized by good esprit d'corps; a school in which the child is the center of interest, and standards are a means to an end rather than an end in themselves; a school in which standards are high and failures few; a school in which the conflicting interests of some will be submerged in the common welfare of all; a school in which the child's achievements approximate his capacity to achieve, his ideals are high and 100 percent American; a school in which the child is trained to have the courage to meet the adversities of life and the skills and abilities to solve its problems; a school in which the democratic set of values are developed and lived as the basis of good American citizenship; a school which pulsates to the challenges of the time, conscious of the past, lives in the present, and prepares for the future; a school which realizes itself to be a dynamic part of the school system of Virginia and of America, and feels itself competent to equal or excel other units in fulfilling its responsibility as an institution of learning; a school which has given its pupils the know-how, the ability to do, the knowledge of when and how to do; a school in which loyalty, honesty, goodwill, fair play, and other such values are standards for action; a school which stands as evidence of a thrifty, intelligent, and industrious people, fully aware of its responsibility to the present and its obligations to posterity; a school whose doors are the gateways to learning, whose corridors are the avenues to wisdom, whose classrooms are the sources of knowledge, whose stairways are the paths to understanding, and whose walls are the symbols of stability, fortitude, and strength is imbued with hope and promise. This we accept as our school, a school in which the native capacities of the youth may be emancipated; the County of Amherst enriched; the State of Virginia benefitted; America strengthened, and in which the high principles of the Divine Creator may be practiced.

Investment Lending by Country Banks

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 23, 1957

Mr. HUMPHREY. Mr. President, in the July issue of Burroughs Clearing House, a publication for financial institutions, there appears an interesting and informative article entitled "In Mora, Minn.: Big Returns From Small Loans." This article is written by Mr. Frank P. Powers, president, Kanabec State Bank, Mora, Minn.

The author, Mr. Powers, is one of the leading citizens of the State of Minnesota. He is an independent banker of unusual talent and ability. He has made his bank a service institution for the people of his community. He has been willing to explore and try new banking practices.

The report on consumer credit on the part of an independent bank in a rural community demonstrates the role that the banking structure of the United States plays in our economic system.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN MORA, MINN.: BIG RETURNS FROM SMALL LOANS

(By Frank P. Powers)

What can installment lending mean to a country bank? It can become one of the most profitable activities in the earnings picture. It can be one of the greatest services a bank can provide the entire community. And, it can continually attract new customers to the bank. After 33 years of actively promoting installment financing in this small rural Minnesota town, the Kanabec State Bank has enjoyed all of these benefits; and we look for even more profitable years to come in the highly attractive installment credit field.

We have seen the farmers, the village, and our bank grow steadily from a type of progressiveness that other banks have regarded as too risky. To a degree, we have had to sell residents of our area on the advantages of installment buying and we have, in the past, been instrumental in promoting farm mechanization and property improvements. But there is real satisfaction in seeing surrounding farms successfully develop a diversified farming industry, in knowing that our merchants have used our financing services to build successful businesses, in knowing farmers and townspeople alike are enjoying modern automobiles and appliances, and, finally, in watching bank earnings climb. Installment lending has been largely responsible for the giant strides taken by the entire area's economy.

When we point to 33 years of experience in the installment loan field, we look back to a beginning period when this means of financing was all but unheard of in banking. While operating a bank in a tiny hamlet near Mora, we first became interested in handling the financing of new automobiles. After the money problems of 1921, the public was turning to a term basis of paying for new cars with the auto dealers selling the paper to the finance companies. In 1924, we convinced a few local dealers that our bank could serve their customers more economically and conveniently. We instituted the program by obtaining dealer guarantees on the loans, and by setting up dealer reserve accounts which we could control in the event of an emergency. (Finance companies later added this reserve account practice to their operations.) At the time, our bank's deposits stood at $140,000 in Quamba, a community of less than 100 people.

We were immediately impressed with the promptness of installment payments. Still unfamiliar with this type of financing, we nevertheless doubled our efforts to gain more new car contracts. In 3 years' time, our installment loans totaled $250,000.

Even our veteran bank examiner became appalled at the volume of loans we had built up under this "new and untried" means of financing. He questioned the credit rating of several of our borrowers, cautioned us against further lending, and predicted dire results from the risks we were taking. On his visit 6 months later, he was unmoved in his predictions, seeming to doubt that payments were being made regularly. Still another 6 months later he admitted his amazement over the apparent success of our program and for years expressed his wonderment over the activities that he first believed were somewhat less than sane, let alone sound. Neighboring banks, and, for that matter, banks throughout the country, were just as skeptical of our operations and for many years refused to recognize this profitable installment credit field.

We soon realized that floor-planning dealer inventories of new cars, while not always profitable, was an integral part of the plan to help the dealer. Used car inventories, a real problem if the dealer was unable to keep tradein allowances in his favor, and a greater problem if he was not equipped to move cars promptly, still remained as one of the more profitable aspects of installment financing. More used cars are sold on a time basis than are new models, offering the bank a greater volume of contracts, and con-

tacts with new customers, plus a higher rate of income.

In 1932, the bank was moved 7 miles to Mora, a town of 2,500 today. At the time, deposits stood at $317,000. A year earlier, auto dealers had suffered financial problems and we were particularly fortunate to have a good-sized volume of installment loans on the books at the time. Payments continued on a regular basis during this period when many country bankers could find little money to lend. The negligible number of loans that did go bad were covered by reserves.

When the Federal Housing Administration's National Housing Act was enacted in 1934, we were ready to qualify immediately for this type of financing. With a history of successful installment lending behind us, we welcomed this opportunity to fatten bank earnings while aiding our present and potential customers. I was named a liaison officer for the FHA in the State of Minnesota and spent considerable time discussing the advantages and opportunities of the newly-created Government guaranteed loans. Still I found the same apathy among country bankers who opposed installment lending and were unwilling to promote actively loans that they continued to believe represented a radical departure from conventional banking.

Unmoved by this skepticism, we publicized title I and II loans and approved loans for people with little credit rating. On title I loans during the first 12 years of the program's existence, our claims amounted to less than $200 on over $125,000 in paper. The people who were given loans on virtually no credit status are now loyal customers and many of them are substantial depositors.

Title II loans have been equally successful. Only one mortgage had to be foreclosed on $200,000 in loans during this initial 12-year period.

Again, promotion of FHA loans introduced many new customers to the bank. Opponents of the Government programs who find fault with the alleged redtape in the Government programs are, I believe, merely building a case for their stand against this method of financing. We have found the FHA administrators particularly cooperative. But more important, we have been able to assist many area residents through this program. So well received has been the FHA plan that our customers now insist on it.

In 1938, we expanded our installment loan activities to include the financing of home appliances and farm equipment. Again we were pleased to find that our judgment had been well-founded. In the first year of handling farm equipment paper, installment loans totaling $75,000 were handled without a single incidence of trouble.
